Parallel gives SpaceX the best balance of accuracy, cost and speed. 4 providers tie on accuracy, so cost and speed decide.

What this is

100 hard SpaceX questions (Compliance: licenses, spectrum, insurance, and non-English primary law), each run through 6 web-search setups with the same agent model (x-ai/grok-4.7), the same system prompt and the same budget. A judge model (anthropic/claude-sonnet-5.5) graded every answer against a written reference answer.

The result

Keenable router is statistically tied with the most accurate provider. Parallel answered 61 of 100 fully correct; Keenable router answered 48. With 100 prompts that gap is within chance (paired McNemar test, Holm-corrected). The providers in the tie are Parallel (61/100, $0.440 per prompt), Exa (60/100, $0.674 per prompt), Grok native (56/100, $0.865 per prompt), Keenable router (48/100, ~$0.455 per prompt).

Keenable search (43/100) and Keenable SELECT (45/100) are not in that tie on their own; Keenable router gets there by picking between them question by question.

How to read it

The first part summarises the result: ranking, cost, sources and method. The second half prints every one of the 100 prompts in full: the question, the reference answer the judge graded against, and each provider's complete answer with its grade, the judge's note and the sources it cited. ✓ correct · ◖ partly correct · × wrong. Each prompt in the Prompts table links to its full page.

Summary

MOST CORRECT

Parallel: 61 of 100

Tied within chance with Exa, Grok native and Keenable router.

CHEAPEST OF THE MOST CORRECT

Parallel: $0.440 per prompt

61 of 100 correct.

FASTEST

Exa: 43.9s median

60 of 100 correct.

Ranking

Value score combines accuracy, cost and speed per prompt (wrong = 0). Weights: accuracy 60, cost 25, speed 15.

#	Provider	Value score	Correct	$ / prompt	Time
1	Parallel	65	61/100 tied	$0.440	56.7s p90 5.1m
2	Exa	63	60/100 tied	$0.674	43.9s p90 5.0m
3	Grok native	57	56/100 tied	$0.865	44.5s p90 4.8m
4	Keenable router	55	48/100 tied	~$0.455	3.6m p90 12.4m
5	Keenable search	53	43/100	~$0.548	1.2m p90 9.0m
6	Keenable SELECT	50	45/100	~$0.571	4.6m p90 15.5m

green marks the best on this table. A tie means the accuracy gap is within chance (paired McNemar test, Holm-corrected, vs Parallel). ~ = priced from a list price.

Accuracy vs cost

Up and left is better. Dot size = median time. Ringed = Pareto front: no other provider is both at least as accurate and at least as cheap.

Cost & sources

Cost break-even vs Exa

A cheaper price per request only wins if the agent doesn't need proportionally more requests. A provider is cheaper on search than Exa when its **request ratio** (its requests per prompt ÷ Exa's) is below its **price advantage** (Exa's price per request ÷ its own). Requests = searches + page fetches (+ SQL queries for SELECT). Model tokens are excluded here; they are in the ranking.

Provider	Price / 1k requests	Requests / prompt	Price advantage	Request ratio	Search $ / prompt	Search $ / correct answer
Exa	$2.29	20.3	1.00×	1.00×	$0.0463	$0.0772
Parallel	$1.99	15.7	1.15×	0.77×	$0.0314	$0.0515
Keenable search	~$3.88	33.1	0.59×	1.63×	~$0.1283	~$0.2984
Keenable SELECT	~$3.57	24.1	0.64×	1.19×	~$0.0858	~$0.1908
Grok native	$3.02	15.6	0.76×	0.77×	$0.0472	$0.0843
Keenable router	~$3.70	23.1	0.62×	1.14×	~$0.0855	~$0.1781

By prompt type: request ratio vs price advantage

Green = cheaper on search than Exa for that type (request ratio below price advantage).

Type	Parallel	Search	SELECT	Grok	Router
Multi-hop · 23	0.75× / 1.12×	2.08× / 0.85×	1.58× / 0.96×	1.10× / 1.07×	1.48× / 0.89×
List-building · 31	0.87× / 1.14×	1.53× / 0.39×	1.21× / 0.43×	0.71× / 0.68×	1.14× / 0.42×
Regulation · 46	0.61× / 1.00×	1.57× / 0.83×	0.92× / 0.87×	0.69× / 0.69×	0.93× / 0.85×

Sources each provider's answers cite

Domains cited in final answers. "Only here" = domains no other provider cited anywhere in this audit, a rough measure of index coverage. "Uncited answers" = answers with no source, out of the runs that produced an answer (runs with no run, no answer, or a tool-error tag are excluded). "Wrong, uncited" = wrong answers with no source at all (often answered from memory after search failed).

Provider	Sources / answer	Distinct domains	Only here	Uncited answers	Wrong, uncited	Most cited
E Exa	21.0	467	151	0/96	0/16	docs.fcc.gov 51, fcc.gov 39, fcc.report 35, govinfo.gov 32, federalregister.gov 28, faa.gov 23
P Parallel	22.3	404	191	0/100	0/12	docs.fcc.gov 56, fcc.gov 43, facebook.com 35, govinfo.gov 30, federalregister.gov 26, satellitetoday.com 21
K Keenable search	4.0	122	9	1/98	2/18	docs.fcc.gov 49, fcc.gov 12, ecfr.gov 11, faa.gov 9, govinfo.gov 9, federalregister.gov 7
K Keenable SELECT	3.8	116	10	0/99	1/18	docs.fcc.gov 47, ecfr.gov 10, govinfo.gov 10, fcc.gov 9, faa.gov 9, fcc.report 7
G Grok native	20.8	434	118	0/94	0/19	docs.fcc.gov 48, fcc.gov 41, govinfo.gov 31, fcc.report 29, federalregister.gov 26, faa.gov 23

How we measured

Setup

Prompts	100 · run 2026-10-09
Agent model	x-ai/grok-4.7 pinned in the audit config
Judge model	anthropic/claude-sonnet-5.5
Budget per answer	max tool calls 100, max seconds 1800
Cost of this audit	$366.61

Providers

E Exa	OpenRouter openrouter:web_search + openrouter:web_fetch, engine=exa $0.007 per search, $0.001 per fetched page (OpenRouter list price for Exa)
P Parallel	OpenRouter openrouter:web_search + openrouter:web_fetch, engine=parallel $0.005 per search, $0.001 per fetched page (OpenRouter list price for Parallel)
K Keenable search	Keenable REST /v1/search + /v1/fetch as function tools $0.004 per request (Keenable list price)
K Keenable SELECT	Keenable SELECT MCP (https://select.keenable.ai/mcp); the agent writes the SQL the tool describes, plus Keenable fetch $0.004 per request (Keenable list price)

G Grok native	OpenRouter openrouter:web_search + openrouter:web_fetch, engine=native Passed through inside the OpenRouter completion charge. No separate list price for native search.
K Keenable router	Jev, the router model, answers one choice, search or select. The agent then has only that tool $0.004 per request (Keenable list price)

CAVEATS

- Every provider ran the same prompts with the same pinned agent model, system prompt and temperature (0.2).
- Budget per run: 100 tool calls and 1800 seconds; runs that hit it were forced to answer and are flagged.
- Exa, Parallel and Grok native ran as OpenRouter server tools (openrouter:web_search and web_fetch), so OpenRouter's own loop decides how often they search inside one model call. Keenable ran as function tools in our own agent loop. The server-tool providers' search cost is what OpenRouter billed, split from the model cost when OpenRouter reported the split, otherwise estimated from list prices (marked ~).
- Keenable search and SELECT are priced at the list price of $0.004 per request. Requests that failed are priced at $0, so an effective rate can sit below list.
- Keenable SELECT is experimental: the agent is given a research skill and writes DuckDB SQL (WEB_SEARCH, SEM_EXTRACT) in the query argument. The other providers do not get that skill. A failed query still counts toward the tool-call budget and is priced at $0, since it is not known whether Keenable bills it.
- Keenable router asks Jev (typesafe/jev-1.13, a small decision model served through OpenRouter) one choice question, search or select, and returns the answer that arm already gave, plus the cost and time of the Jev call. A prompt where either arm failed has no router run and counts as wrong.
- Prompt ids run past 100 with gaps: on 2026-10-09 the 45 prompts that every provider had answered correctly were removed, since they could not separate anyone, and the same number of harder cross-document prompts were added. Ids are never reused.
- Exa: 4 returned no answer, of 100 runs; Grok native: 6 returned no answer, of 100 runs; Keenable search: 1 run errored and 11 hit the budget, of 100 runs; Keenable router: 5 hit the budget, of 98 runs; Keenable SELECT: 1 run errored and 7 hit the budget, of 100 runs. A run that errored or returned no answer counts as wrong; a run that hit the budget was made to answer and graded like any other.
- Judge: anthropic/claude-sonnet-5.5, bundle judge-v3, temperature 0, sees the reference answer.
- One run per prompt is the scored trial. Rerun the audit before treating the ranking as current: providers, models and the web change. About 100 prompts is the smallest set with a real chance of detecting a 10-point accuracy gap. A tie on fewer prompts means the sample was too small to see that gap, not that the providers are equal. The set is 100 prompts because each provider run costs real money; a gap of a few points here is a lead to test at a larger size, not a verdict.
- The judge was not calibrated against hand-graded answers in this audit, so treat small accuracy gaps between providers with care.

Prompts

All 100 prompts. ✓ correct · ◖ partly · × wrong. Best value = highest value score on that prompt at the default weights; — = no provider was fully correct. × also marks the 2 router cells with no run (see Judge). Click a prompt to jump to it in full, with every answer, at the end.

1	Amazon asked the FCC to extend the Gen1 50% deployment milestone by 24 months, to 30 July 2028. Did the June 2026 order grant that extension? If not, what did it grant, how many satellites is the 50% figure, and what happens to Gen1 satellites that are not deployed and operational on 30 July 2026? Include whether the final milestone moved.	Regulation	✓	✓	◖	✓	✓	✓	Grok
2	Amazon's Gen2 and Polar systems were authorized in February 2026. Do they have the same 50% and 100% deployment deadlines as Gen1? Give the deadlines and the satellite counts.	Regulation	✓	✓	✓	✓	◖	✓	Exa
4	The Commission voted on 22 July 2026 to replace Part 25 with Part 100. For a license that cites a Part 25 section, what rule applies the day after the vote, and when does Part 25 actually end?	Regulation	✓	◖	✓	✓	✓	✓	SELECT
6	On 9 January 2026 the Space Bureau acted on SpaceX's Gen2 upgrade. SpaceX had asked for authority covering 29,988 satellites. How many Gen2 satellites does that order authorize in total, how many of those are the new tranche, and what did the Bureau expressly defer rather than grant?	Regulation	✓	✓	◖	✓	✓	✓	Exa
7	Using the 9 January 2026 Gen2 grant stamp, list every authorized orbital shell with altitude and inclination, including shells that may keep operating only while satellites are lowered. For the shells where the stamp gives a plane count and a satellites-per-plane count, give those numbers. Where the stamp gives a choice of inclination, say what the choice depends on. Do not treat a news summary as the stamp.	List-building	✓	◖	✓	✓	✓	✓	Exa
8	Read DA-26-36 (9 January 2026) together with DA-26-398 (23 April 2026). After the April order, what is the status of SpaceX Gen2 operations in the Big LEO bands and in the L band, inside and outside the United States? Separately, what is the status of 2 GHz MSS outside the United States, and of SpaceX's application to use 2 GHz MSS inside the United States? Name the call signs if the orders do.	Multi-hop	◖	◖	✓	✓	◖	✓	SELECT
11	Starlink asked Ofcom for UK gateway authority in Ka band at two urban sites, and earlier for E-band at three existing sites. For each, state the sites, the frequencies and direction if the decision gives them, whether the authority is a decision to grant, a licence already issued, or a temporary licence, and the end date if there is one. Note anything that still has to happen before a Ka licence is in force, and whether the E-band decision promises access after it expires.	List-building	◖	◖	◖	×	◖	◖	—
12	SpaceX Services received a special temporary authority for a quad-band gateway in Eloy, Arizona, file SES-STA-20260511-01297. As of 8 October 2026, is that STA still in force? What did it authorize (antennas, call sign, term), on what interference basis, and what happened to Iridium's objection?	Regulation	✓	×	×	◖	×	◖	Exa
14	For a licensed orbital launch, what does 14 CFR Part 440 actually require on insurance amounts, how long the cover has to last, and whether the licensee can cut the limits by giving the FAA 30 days' notice? Separate the statutory ceilings from the amount the FAA sets for a given launch.	Regulation	✓	✓	◖	✓	✓	◖	Parallel
15	FCC-26-47, adopted 22 July 2026, replaces Part 25 with Part 100. The day after the vote, does a license that cites a Part 25 section have to be rewritten, and after Part 25 sunsets what does that citation mean?	Regulation	✓	×	✓	×	✓	✓	Search
18	On the ACMA register, Starlink Australia holds area-wide FSS licences 11240792 (Bulla Bulling, Western Australia) and 11240791 (Calrossie, New South Wales). For each, give the date of effect, the date of expiry, and the geographic band limits shown. As of 8 October 2026, which term has already ended?	List-building	✓	×	×	×	✓	×	Exa
19	ACMA considered interim W-band earth-station transmitters for Starlink at Melbourne, Perth, and Sydney. What happened to each city, on what interference basis, for how long, and does the Australian Radiofrequency Spectrum Plan allocate W band to the fixed-satellite service?	Regulation	✓	✓	×	×	✓	×	Exa
21	These four SpaceX file numbers are easy to conflate: the Gen2 call sign, the direct-to-cell constellation application, the orbital data-center application, and the Eloy earth-station STA. For each, give the call sign or file number, what was requested, and whether the Bureau granted it, deferred it, dismissed it, or only accepted it for filing.	List-building	×	×	×	×	×	×	—
23	The FAA said legacy launch licenses had to move to Part 450. What was the deadline, did Falcon 9, Falcon Heavy, and Dragon make it, and what does one Part 450 license cover that the old rules split up?	Regulation	✓	✓	✓	✓	◖	✓	Search

#	Prompt	Type	Exa	Parallel	Search	SELECT	Grok	Router	Best value
26	L'Arcep a-t-elle autorisé Starlink à utiliser en France le réseau UIT USASAT-NGSO-3X? Quelle décision, quels réseaux sont réellement autorisés, dans quelles bandes et quel sens, et le terminal est-il protégé contre le brouillage?	Regulation	✓	✓	◐	✓	✓	✓	Exa
28	A petitioner asked the FCC to hold a hearing on whether SpaceX could be an EchoStar-spectrum licensee, on the theory that Elon Musk is controlled by the Chinese Communist Party. Did DA-26-471 refuse the assignment on that ground?	Regulation	✓	✓	✓	◐	✓	◐	Grok
29	The 8 March 2024 E-band order, DA-24-222, is often described as giving Starlink E-band. How many satellites does it actually cover, does it add any satellites, what did it do about a processing round, and were the tracking beacons granted that day?	Regulation	◐	◐	◐	◐	◐	◐	–
30	What did the D.C. Circuit do with the 29 November 2022 Gen2 grant, what was still pending at the Commission after that, and did the 26 November 2024 order let SpaceX put all 29,988 requested satellites into the 340 to 360 km shells?	Multi-hop	◐	◐	◐	◐	◐	◐	–
35	For each of these Starlink authorizations, say whether the operator may claim protection from interference, and the date or event that ends the authority if the document gives one: the Canadian E-band decision, the UK E-band gateway licences, the French user-terminal decision of December 2024, the Australian W-band earth stations at Perth and Sydney, the Brazilian alteration in Acórdão 91, and the Eloy STA.	List-building	✓	✗	✗	✗	✓	✗	Exa
37	In March 2024 the Space Bureau acted on SpaceX's application to add mobile-satellite service to Gen2 in the Big LEO bands, the 2 GHz bands, and 2020-2025 MHz uplink. Was that application accepted for filing, was it held in abeyance while SpaceX's rulemaking petitions were pending, and what file number was dismissed?	Regulation	✓	✓	◐	✓	✓	✓	Exa
42	On 29 June 2026 SpaceX filed written representations with ICASA on the draft amendment of the Radio Frequency Spectrum Fees Regulations. Did that filing grant Starlink a South African spectrum licence, and for what term? What equity rule does SpaceX say the draft leaves unresolved?	Regulation	✓	◐	◐	◐	✓	◐	Exa
43	SpaceX was first authorized for a separate V-band constellation of up to 7,500 satellites. Did that separate constellation survive, and what did the 26 November 2024 order actually allow at 340 to 360 km? Was the later request to change the V-band bond and milestones already granted on that date?	Multi-hop	✓	✓	✓	✓	◐	✓	Exa
44	In 2018 the Commission dismissed SpaceX's request to operate in 51.4-52.4 GHz and deferred 50.4-51.4 GHz. Does the January 2026 Gen2 grant still exclude both of those uplinks?	Multi-hop	✓	✓	◐	◐	✓	◐	Exa
45	El decreto de 9 de enero de 2025 otorga a Starlink Chile SpA una concesión de servicio intermedio de telecomunicaciones. ¿Por cuántos años corre, desde qué fecha, y la banda 27,5-28,35 GHz autoriza cualquier estación terrena en la ciudad? ¿La publicación del 21 de marzo de 2026 en el Diario Oficial ya autorizó el gateway adicional?	Multi-hop	✓	✓	◐	◐	✓	◐	Parallel
47	On 1 December 2022 the Commission partially granted the Gen2 application and authorized 7,500 satellites. Did that increase the number of satellites SpaceX was allowed to have on orbit, and were E-band and the tracking beacons included?	Regulation	✓	◐	✓	✓	✓	✓	Search
48	The 1 December 2022 Gen2 partial grant put the 7,500 satellites at 525, 530, and 535 km. Did that order let one of those satellites use two co-frequency beams on the same area, and did it let them operate at or above 580 km?	Regulation	✓	◐	✓	✓	✓	✓	Search
50	La décision Arcep n° 2022-1102 du 25 mai 2022 autorisait-elle déjà les stations terriennes en mouvement? Quelle décision a ajouté les ESIM, pour quel seul système UIT, et quelle PIRE maximale leur est imposée?	Regulation	✓	✓	✓	✗	✓	✗	Exa
51	Heeft de RDI in 2025 aan SpaceX Netherlands B.V. een concessie verleend voor heel Nederland? Wat gebood de inspectie in juni 2024, waarom werd de aanvraag van 26 juni 2024 afgewezen, en welke vennootschap kreeg daarna voor welke eilanden en voor hoe lang een concessie?	Multi-hop	✓	◐	◐	◐	✓	◐	Exa
52	The December 2022 Gen2 grant required SpaceX to coordinate with earlier NGSO systems and to make a specific report about the ITU's EPFD finding. Does a favorable finding on one Gen2 ITU filing satisfy that report, and may SpaceX keep deploying if satellite failures exceed the threshold in the order?	Regulation	◐	◐	✓	◐	◐	◐	Search
53	In early March 2026 the FCC acted on several SpaceX Services earth-station files. Were those actions ordinary licenses still in force on 8 October 2026? For the special temporary authorities with an end date, what basis were they granted on, when did the term end, and which two actions that same week were instead continuing-operations grants under section 1.62?	List-building	✓	◐	◐	◐	✓	◐	Exa
55	New Zealand decided in 2026 how 27.5-28.35 GHz would be shared between mobile and fixed-satellite gateways. Do satellite gateways get that band inside cities on the same footing as mobile? When could an existing interim gateway apply for a long-term licence, and when did applications for a new gateway open?	Regulation	✓	◐	◐	◐	◐	◐	Exa

#	Prompt	Type	Exa	Parallel	Search	SELECT	Grok	Router	Best value
56	Section 25.146 required a favorable or qualified-favorable ITU finding on EPFD limits before an NGSO system could start operating. Did the 1 December 2022 Gen2 partial grant make SpaceX wait for that finding, and did the waiver erase the conditions in the same order?	Regulation	○	○	✓	✓	✓	✓	SELECT
57	Under the Communications Authority of Kenya's telecommunications market-structure review, may a foreign satellite operator keep delivering cross-border connectivity to Kenyan networks with no landing-rights authorization? From when does the transitional note say applications for the new categories are made, and does that note grant Starlink one?	Regulation	✓	✓	○	○	○	○	Exa
58	The Nigerian Communications Commission register lists SpaceX against 6,000 satellites and an end date of 31 December 2028. Is that landing permit a licence for 6,000 satellites running as long as Starlink's Nigerian gateway licences, and is the Ka-band uplink a continuous 27.5-30 GHz block?	List-building	✓	✓	✓	✗	✓	✓	Exa
60	SpaceX's Gen2 application proposed tracking beacons in the 137-138 MHz and 148-150.05 MHz bands. Did the 1 December 2022 partial grant authorize those beacons, and which direction did the application assign to each band?	Regulation	✗	✗	✓	✓	✗	✓	Search
61	In October 2025 the FAA adopted the environmental impact statement for Falcon launches at Vandenberg and selected redevelopment of SLC-6 plus a higher cadence at SLC-4. Did that record of decision issue the license, and what still has to be satisfied before a license for those operations can be granted?	Regulation	✓	✓	○	○	✓	○	Exa
62	The FAA's commercial-space waiver notice, docket FAA-2026-8614, lists the National Environmental Policy Act among laws to be waived for launch licenses. Has that notice already waived NEPA for a Falcon license?	Regulation	○	✓	○	○	✓	○	Parallel
63	The Vandenberg Falcon decision raises the launch cadence to 100 a year. Is that 100 Falcon 9 launches from SLC-4, with Falcon Heavy counted on top? How many Falcon Heavy launches does the decision describe, had Falcon Heavy launched from Vandenberg before, and does the number itself issue the FAA license?	Multi-hop	✓	○	✓	○	✓	○	Grok
64	The October 2025 Vandenberg record of decision studies a higher Falcon cadence. Does it find that the change causes no environmental harm? What unavoidable impacts does it name, and when do the mitigation measures bind SpaceX?	Regulation	✗	✓	○	○	✓	○	Grok
67	After the insurance policy on a licensed Falcon launch expires, does the United States still pay only the layer above that policy? And did the rule that names a space flight participant as an additional insured expire on 30 September 2025?	Multi-hop	○	○	○	○	○	○	–
68	If third-party claims from a licensed Falcon launch exceed the required insurance, does the United States automatically pay the next $1.5 billion? Does that statute cover an experimental permit, or a loss caused by the licensee's willful misconduct?	Regulation	✓	✓	✓	○	✓	✓	Search
69	A space flight participant, or a third party, wants to sue in state court for injury from a licensed Falcon launch. Does federal law allow that forum, and does the same sentence cover an experimental permit?	Regulation	✗	✗	✗	✗	✗	✗	–
70	A suborbital licensed flight is insured on the same clock as an orbital launch: coverage runs until 30 days after payload separation. Is that the rule, and when does the coverage attach?	Regulation	○	○	○	○	○	○	–
72	Is every property-damage claim by the United States on a licensed launch paid from the $100 million government-property cover? If the operator shows financial responsibility without buying a policy, when is that evidence due, and is a certificate of insurance enough on its own?	Regulation	✓	✓	✓	○	✓	✓	Search
73	Does the insurance on a launch license protect only the licensee? Does a customer's contractor have to pay the United States for its own cover?	Regulation	○	○	✓	○	○	✓	Search
76	Did the FAA's finding on a higher Starship cadence at Boca Chica license 25 launches a year, including night landings back at the pad?	Regulation	✗	✓	✗	✗	✗	✗	Parallel
77	Does the April 2025 finding on a higher Starship cadence let Boca Chica beach stay closed for as long as the launch campaign needs, including summer weekends?	Regulation	○	○	○	○	○	○	–
78	Did the later Boca Chica airspace study authorize Starship to land back at the pad at night, and is the closed airspace only over the Gulf?	Regulation	○	○	○	○	○	○	–
83	Does a favorable FAA determination for the communications-satellite class clear every satellite on the next launch, including the parts the FCC regulates?	Regulation	○	✓	○	○	✓	○	Grok
85	Crew training is an allowed use of an experimental permit. Can the permittee charge a passenger for the flight, or fly a customer's payload for a fee?	Regulation	✓	✓	✓	○	✓	✓	Grok

112	Build a status table, as of 9 October 2026, of SpaceX's space-station filings that the Space Bureau placed on public notice or acted on during 2026: the orbital data center application, the first-generation minimum-elevation STA request, the Gen2 modification for new downlink bands, the 100,000-satellite application, and the direct-to-device constellation. For each give the ICFS file number, the call sign where one is assigned, what was requested in one line, the public notice or order (report number or DA number and date) and its status. Be careful to distinguish accepted-for-filing from granted, and say which parts of the one granted item were deferred.	List-building	✗	✗	✗	✗	✗	✗	–
113	SpaceX Services' quad-band Gen1/Gen2 gateways in Roma, Harlingen, Hidalgo, Falfurrias and Dallas, Texas have been running on 60-day STAs since July 2026 while the permanent licence applications work through ICFS. For each of the five sites give the call sign; every STA granted in 2026 with file number, date of action and term; the permanent licence application file number and the site ID in it; and the date the Bureau accepted that application for filing. One site missed the September re-grant that the others received, and the acceptance notice carries a ruling on an Iridium request; state both.	List-building	✗	✗	◐	◐	✗	◐	–
114	SpaceX Services holds call sign E240163 for a single-antenna V-band gateway in Redmond, Washington that talks only to Starlink Gen2 (S3069). List every action the Space Bureau took on STA requests for E240163 during 2026 through 9 October 2026: file number, date filed, date of action, term if any, and the bands authorized. Three of the actions were taken on the same day; explain what distinguishes them. Do not assume every STA grant carries a 60-day term.	List-building	✗	✓	✗	✓	✗	✓	Parallel
115	Using the FCC Experimental Licensing System records as filed, build a table of SpaceX's 2026 STA applications for Starship vehicle communications from Starbase, Texas: Test Flight 13, the Orbital Return Demo, and Test Flight 14. For each application give the call sign on the form (or note it is blank), the requested operating period, the prior ELS grant the form says it builds on, and what the request adds, including the specific frequencies where the form lists them. Note which forms are for ground uplink antennas at South Padre Island and the Starbase office rather than the vehicle.	List-building	✗	✗	✗	✗	✗	✗	–
116	On 28 September 2026 the Space Bureau granted SpaceX Services a batch of 60-day STAs limited to the 42.0-42.5 GHz downlink with Starlink Gen2 at eight gateway sites. For each site give the call sign and the 42 GHz STA file number, and then state which other SpaceX Services STA for the same call sign was in force on 9 October 2026 (file number, date of action, term) or that none was. Two of the eight sites had no other STA in force on that date; identify them and say what else is pending for them. Do not mix in the separately licensed dual-band Atlanta station or the second Phoenix call sign.	List-building	✗	✓	✓	◐	✗	◐	Parallel
117	DIRECTV sought reconsideration of FCC 26-26, the April 2026 order in SB Docket 25-157 that replaced the EPFD limits with performance-based GSO protection criteria for NGSO systems such as Starlink. When did DIRECTV file, which public notice listed the petition and under what report number, on what date was that notice published in the Federal Register, and what were the resulting opposition and reply deadlines? Which two parties filed oppositions on the opposition deadline? Finally, as of 9 October 2026, has the Space Bureau begun reviewing compatibility showings under the new section 25.146(a)(3), and why or why not? Do not assume every rule in the order took effect on the order's Federal Register effective date.	Multi-hop	✗	✓	✓	✓	✗	✓	Parallel
118	In April 2026 the Space Bureau dismissed Satelio IoT Services USA's (Sateliot's) second petition for US market access in the 2 GHz MSS band, in the same order that dealt with SpaceX's Gen2 MSS requests. Give that order's DA number and the ICFS file number it dismissed, and identify the earlier Bureau order that had disposed of Sateliot's first 2 GHz petition (DA number, date, and the ground). Then trace what happened next: did Sateliot seek Commission review, on what date, and which two companies filed oppositions and when? Also note the erratum the Bureau issued four days after the April order and which two ordering paragraphs it rewrote. Do not confuse Sateliot's 2 GHz request with Kepler's Big LEO request dismissed in the same order.	Multi-hop	✓	✓	◐	✓	◐	✓	Exa
119	SpaceX's petition for rulemaking to revise the 1.6/2.4 GHz 'Big LEO' MSS sharing plan was put out for comment in March 2024. Give the RM number, the public notice's DA number, the comment and reply dates, and say what the Kuiper letter cited in that notice actually objected to. Then find the 2026 order that disposed of the petition: which rule section did the Bureau rely on, what did it do with Iridium's parallel petition and had that one ever been put on public notice, and what happened to the oppositions that Globalstar and others had filed against SpaceX's petition? A news story saying the Commission 'rejected' the petition on the merits is not precise enough; state the procedural disposition.	Multi-hop	✓	✓	✓	✓	✓	✓	Search

#	Prompt	Type	Exa	Parallel	Search	SELECT	Grok	Router	Best value
120	In DA-26-36 (9 January 2026) Kuiper and Telesat asked the Space Bureau to remove a condition on SpaceX's Gen2 licence that automatically halts deployment once failed satellites exceed a certain number of 'object years'. What is the numeric threshold, what two reasons did the Bureau give for leaving the condition in place, and whose petition for reconsideration, filed against which order and on what date, keeps the condition before the full Commission? Then go to that original order and state what the threshold roughly corresponds to in failed satellites and what SpaceX must obtain before deploying again if it is triggered. Does the condition apply to the 7,500 satellites authorised in January 2026, and did SpaceX itself ask for it to be removed?	Multi-hop	✗	✓	◐	✓	✓	✓	SELECT
121	FCC-26-47 replaced Part 25 with Part 100 but left the Part 100 effective date to be set later. As of 9 October 2026, has the Space Bureau set that date? Find the Bureau's October 2026 guidance on moving milestone and surety-bond obligations to Part 100 and report: the three eligibility conditions an operator must meet, how long after the effective date it has to notify the Bureau and how, the new de-escalating bond formula, and which category of licensees keeps its existing six- and nine-year milestones without doing anything. Also identify the September 2026 erratum to the order and the two table-of-contents paragraph numbers it corrected. Reports that Part 100 'took effect' with the July vote are wrong; grade on the order, the erratum and the public notice.	Multi-hop	✓	✓	✓	✓	✓	✓	Parallel
122	Environmental groups sued the FAA in 2023 over the Starship/Super Heavy programmatic environmental assessment at Boca Chica, and SpaceX intervened. Identify the court, docket number and judge; say what the September 2025 ruling actually decided, naming by ECF number which motions were granted and which denied; and then trace the procedural steps by which the case reached a final, appealable judgment, including the date of the final order, what it dismissed and on what basis, and the earlier minute order that had held two theories of relief in abeyance and why. News reports that the judge 'dismissed the lawsuit' in September 2025 are imprecise; explain why.	Multi-hop	◐	✓	◐	◐	◐	◐	Parallel
123	FCC 26-26 adopted an initial dataset of GSO reference links that NGSO systems such as Starlink must protect in their compatibility showings. How many links were in the initial set and from what sources were they drawn? Trace the follow-on: the Space Bureau's May 2026 public notice seeking comment on the dataset (DA number and Federal Register citation), and then the September 2026 public notice that revised it. For the September notice, state which GSO operators' new links were added, what class of legacy links was removed and why, what unavailability C/N upper bound was set for non-ACM user-terminal links and who had proposed it, and when the notice takes effect. Do not confuse this track with the DIRECTV reconsideration petition in the same docket.	Multi-hop	✓	✓	◐	◐	✓	◐	Exa
124	In May 2025 the Space Bureau opened a docket on whether EchoStar was actually using the 2 GHz MSS band. Give that public notice's DA number, docket number and comment dates, and the two EchoStar subsidiaries and their satellites' call signs that it named. What did SpaceX argue in its comments and on what date did it file them? Then find the 2026 order that terminated the inquiry: what reason did it give, and did it accept SpaceX's suggestion that the band be opened to new applicants? Finally, in DA-26-471, were the DBSD and Gamma 2 GHz MSS market-access grants among the authorisations that needed prior Commission consent, and what notification rule applies to them instead? Chairman Carr's September 2025 letter is not the document that closed the docket.	Multi-hop	✓	✓	✓	✓	✓	✓	Search
125	The chair and ranking member of the House Science, Space, and Technology Committee wrote to the FCC twice in 2026 about the Space Modernization (Part 100) proceeding. Give the dates of both letters and what the July letter asked the Commission to do before its 22 July vote. Then find Chairman Carr's reply: its date, what he said changed in the draft Order after the February letter, and the four categories of Communications Act authority he said the Part 100 licensing authority rests on, including which one he described as ancillary and the 2004 order he cited for it. Does the reply say that applications satisfying Part 100 are presumed to serve the public interest, and did the Commission postpone the vote as asked?	Multi-hop	✓	✓	◐	✓	✗	◐	SELECT
126	On 22 July 2025 Ofcom published a joint application from Inmarsat Global Limited and Space Norway for a UK NGSO network licence for the GX10 system. From the annex to that application, give the ITU filing names under which GX10 operates, the Ofcom licence number the annex records for Starlink Internet Services Limited, and the four operators with which Space Norway says it had executed ITU coordination agreements covering those filings. Then find Ofcom's decision: what did it decide, on what date, how many consultation responses did it receive, and which Ka-band frequency ranges does the licence cover? One of the four coordination partners is named differently in the decision than in the annex; explain why that is not a discrepancy.	Multi-hop	✓	✓	◐	◐	✓	◐	Parallel

133	SpaceX asked the FCC to let its D2D constellation use the 2000-2020 MHz band as a space-to-Earth (downlink) band in the United States, reversing the U.S. Table's Earth-to-space allocation. In the 6 October 2026 authorization, where exactly is the downlink waiver granted, where is the band uplink-only, and is the adjacent 2020-2025 MHz request granted? Also list what the order defers rather than grants in the Ka-band and in the 1429-2690 MHz range outside the United States, and which requests it dismissed as moot. Do not answer from a press list of 'spectrum granted'; the grant conditions and footnotes distinguish granted, deferred and moot.	Regulation	✓	✓	✓	✓	✓	✓	Parallel
134	Under the 6 October 2026 D2D authorization, SpaceX will provide supplemental coverage from space on its own unpaired AWS-3 (1695-1710 MHz) and AWS-H Block licenses without any terrestrial partner. From the order itself: which rules were waived to allow that, what SpaceX must do before enabling handsets to transmit in 1695-1710 MHz near the federal earth stations, which 911 rule is imposed on SpaceX even though it is not a CMRS provider, and what the out-of-band emission limit and band-edge window are for the AWS-H and PCS G Block downlinks. Press coverage says the FCC 'waived the spectrum leasing rule'; the conditions are more specific than that.	Regulation	◐	◐	◐	◐	◐	◐	—
135	On 5 June 2026 the Space Bureau opened a third Ku/Ka-band processing round and a third V-band processing round (DA-26-552, corrected by an erratum on 16 June 2026). For SpaceX specifically, which Gen2 frequency bands from the January 2026 upgrade grant were placed into those third rounds, which SpaceX-authorized bands were left out of any round, are the original 7,500 V-band Gen2 satellites in the third V-band round, and what is the status of the 14,988 additional satellites SpaceX requested? Give the cut-off date. Law-firm summaries of the Part 100 bond and annual-window regime do not describe this round.	Regulation	✓	✓	✓	✓	✓	✓	Parallel
136	Starlink routers were affected by the FCC's March 2026 addition of foreign-produced routers to the Covered List. Using the FCC public notice that lists the Starlink conditional approval (July 2026): which agency actually issued the conditional approval, what the FCC's own role was, the start and termination dates of the Starlink approval, the date routers went on the Covered List and the notice that added them, and whether the conditional approvals for uncrewed aircraft systems in the same appendix carry a termination date. Press reports say 'the FCC granted SpaceX a carve-out'; check who the notice says granted it.	Regulation	✓	✓	✓	✓	✓	✓	Parallel
137	The FCC adopted new NEPA rules on 30 September 2026 declaring that space-based operations are not major federal actions, and six days later it authorized SpaceX's 15,000-satellite D2D constellation over DarkSky International's environmental objection. Did the Bureaus apply the new NEPA rules to that authorization? Explain which rule framework they used, how they treated DarkSky's letter, when the new rules take effect, what the new rule text (section 1.1302) says about launches, and who the order says is responsible for launch and re-entry effects. News reports describe a 2-1 vote; check what the order's caption says about the dissent.	Regulation	◐	✓	◐	✓	✓	✓	Parallel
138	The FCC's April 2026 NGSO-GSO sharing order replaced EPFD limits with performance criteria and added a minimum GSO-arc avoidance angle. For a SpaceX analyst: what is the rule's minimum avoidance angle and the equivalent exclusion zone, in which bands does it apply, may an NGSO operator start service while its compliance demonstration is still pending, and what are the three numerical protection criteria? Then compare that with the GSO-arc exclusion the 6 October 2026 D2D grant actually imposes on SpaceX until the new rules are effective. Finally, when do the rules take effect and which two sections are carved out? Do not conflate the rule's angle with the angle in SpaceX's waiver condition.	Regulation	◐	✓	◐	◐	◐	◐	Parallel
139	The FCC adopted its Satellite Spectrum Abundance order on 30 September 2026 (released 1 October 2026, FCC-26-65). Press says it 'unlocks 1,050 MHz' including '550 MHz for downlinks to consumer dishes' in 12.7-13.25 GHz. From the order itself: how many megahertz does the Commission say it unlocks in the 12.7 GHz band, what may NGSO systems do in the band and on what interference footing relative to uplink earth stations, which uplinks remain allowed and from whom, what happens to the application freeze in 12.7-12.75 GHz versus 12.75-13.25 GHz, and when do grandfathered fixed and mobile licensees drop to secondary status. Also give the 42 GHz allocation direction and earth-station licensing type, and the effective-date rule with its exceptions. Note whether Starlink can use the band immediately.	Regulation	◐	✓	⊗	✓	◐	✓	Parallel
140	The FAA signed a Record of Decision for Starship-Super Heavy at Launch Complex 39A in late January 2026. From the ROD, not the news: what is the signature date, which alternative did the FAA select and which did it identify as environmentally preferable, which three impact categories are listed as unavoidable and significant, how many closure hours per year the ROD gives for tests versus launches and reentries and what share is at night, the NPS annual fee-loss range, the Section 4(f) finding, and how the mitigation measures bind SpaceX. Do not report the draft-EIS '60.5 beach-closure days' as the ROD's number, and do not say the ROD issued a launch license.	Regulation	✓	✓	✓	✓	✓	✓	Parallel

#	Prompt	Type	Exa	Parallel	Search	SELECT	Grok	Router	Best value
141	List every Federal Register notice the FAA published in 2026 that concerns SpaceX: FR document number, publication date, docket number, the action it announces, the vehicle and site, and the date and official in the signature block. Include notices of intent, draft documents and comment-period extensions, not only final decisions.	List-building	✓	✓	✓	✓	✓	✓	Parallel
142	Trace the FAA environmental review for Starship-Super Heavy at Kennedy Space Center LC-39A through its Federal Register and decision documents: for the notice of intent, the draft EIS notice, the comment-period extension, the final EIS/ROD notice and the ROD itself, give the document number or title, publication or signing date, docket, the comment deadline it set (where any), and the signing official. State the launch and landing cadence the ROD covers. The ROD and the Federal Register give different dates for the draft-EIS notice; report both.	List-building	✓	✓	✓	✓	✓	✓	Parallel
143	Compare the two Florida sites proposed for Starship-Super Heavy as of 9 October 2026. For LC-39A at Kennedy Space Center and SLC-37 at Cape Canaveral Space Force Station give: the lead agency for the EIS, the date the record of decision was signed and by whom, the launches and landings per year analysed, what the ROD actually authorises, and the FAA's next procedural step with its docket number and deadline. Be careful: news stories say SpaceX was 'cleared' for 76 Starship launches at SLC-37; check what the DAF ROD conditions on.	List-building	✓	✓	✓	✓	✓	✓	Search

Failure modes

How each provider's answers went wrong across all 100 prompts (the judge's main reason per answer).

The FAA's commercial-space waiver notice, docket FAA-2026-8614, lists the National Environmental Policy Act among laws to be waived for launch licenses. Has that notice already waived NEPA for a Falcon license?	Regulation	✓	○	Incomplete list	21.8s · 32.2s
The October 2025 Vandenberg record of decision studies a higher Falcon cadence. Does it find that the change causes no environmental harm? What unavoidable impacts does it name, and when do the mitigation measures bind SpaceX?	Regulation	✓	✗	Incomplete list	1.4m · 1.1m
Did the FAA's finding on a higher Starship cadence at Boca Chica license 25 launches a year, including night landings back at the pad?	Regulation	✓	✗	Incomplete list	17.5s · 20.0s
Does a favorable FAA determination for the communications-satellite class clear every satellite on the next launch, including the parts the FCC regulates?	Regulation	✓	○	Incomplete list	20.6s · 12.2s
Between 2022 and 2024 Ofcom granted, then saw surrendered, then varied Starlink's UK Ka-band gateway licences. From Ofcom's November 2022 statement, its April 2024 consultation and its 1 August 2024 statement, list: the six sites granted in 2022 and how many UK gateways SpaceX had before and after; the two sites surrendered and when; the four licences varied in 2024 with their licence numbers, the antenna count before and after at each, and the Ka-band ranges stated in 2024; which company name holds the Isle of Man licence; and who responded to the 2024 consultation. Do not merge these with the 2025 E-band or 2026 Harlow decisions.	List-building	✓	○	Incomplete list	44.3s · 2.6m
SpaceX Services runs two dual-band gateways on rolling special temporary authority: Hillsboro, Oregon (call sign E250202) and Atlanta, Georgia (call sign E250226). From the Space Bureau's weekly Actions Taken notices, list every STA the Bureau granted for those two call signs during 2026 up to 9 October 2026: file number, date filed, date of action, and the authorized term if the notice gives one. Flag any grant that has no term because it was made under section 1.62 to cover continuing operations. Do not confuse the Atlanta dual-band station with SpaceX's separate quad-band Atlanta STA (call sign E260426).	List-building	✓	○	Incomplete list	4.8m · 11.3m
In spring 2026 SpaceX Services filed two rounds of modification applications for its seven Ku-band blanket user-terminal and ESIM earth-station licences: one round to conform minimum elevation angles and conditions to the upgraded Gen2 (S3069) space-station grant, and a second round to add the 13.75-14.0 GHz and 14.5-14.75 GHz uplink bands. For each call sign give the blanket site ID, the file number of each round, the public notice that accepted each for filing, and, as of 9 October 2026, whether the Bureau has granted it and the licence term shown on the grant. One call sign's second-round application was accepted a week before the others; say which.	List-building	✓	✗	Tool error / timeout	8.0m · 7.2m
SpaceX Services holds call sign E240163 for a single-antenna V-band gateway in Redmond, Washington that talks only to Starlink Gen2 (S3069). List every action the Space Bureau took on STA requests for E240163 during 2026 through 9 October 2026: file number, date filed, date of action, term if any, and the bands authorized. Three of the actions were taken on the same day; explain what distinguishes them. Do not assume every STA grant carries a 60-day term.	List-building	✓	✗	Incomplete list	4.1m · 6.7m
On 28 September 2026 the Space Bureau granted SpaceX Services a batch of 60-day STAs limited to the 42.0-42.5 GHz downlink with Starlink Gen2 at eight gateway sites. For each site give the call sign and the 42 GHz STA file number, and then state which other SpaceX Services STA for the same call sign was in force on 9 October 2026 (file number, date of action, term) or that none was. Two of the eight sites had no other STA in force on that date; identify them and say what else is pending for them. Do not mix in the separately licensed dual-band Atlanta station or the second Phoenix call sign.	List-building	✓	✗	Tool error / timeout	6.3m · 5.0m

Prompt	Type	Parallel	Exa	Failure	Time
DIRECTV sought reconsideration of FCC 26-26, the April 2026 order in SB Docket 25-157 that replaced the EPFD limits with performance-based GSO protection criteria for NGSO systems such as Starlink. When did DIRECTV file, which public notice listed the petition and under what report number, on what date was that notice published in the Federal Register, and what were the resulting opposition and reply deadlines? Which two parties filed oppositions on the opposition deadline? Finally, as of 9 October 2026, has the Space Bureau begun reviewing compatibility showings under the new section 25.146(a)(3), and why or why not? Do not assume every rule in the order took effect on the order's Federal Register effective date.	Multi-hop	✓	✗	Tool error / timeout	1.3m · 2.8m
In DA-26-36 (9 January 2026) Kuiper and Telesat asked the Space Bureau to remove a condition on SpaceX's Gen2 licence that automatically halts deployment once failed satellites exceed a certain number of 'object years'. What is the numeric threshold, what two reasons did the Bureau give for leaving the condition in place, and whose petition for reconsideration, filed against which order and on what date, keeps the condition before the full Commission? Then go to that original order and state what the threshold roughly corresponds to in failed satellites and what SpaceX must obtain before deploying again if it is triggered. Does the condition apply to the 7,500 satellites authorised in January 2026, and did SpaceX itself ask for it to be removed?	Multi-hop	✓	✗	Tool error / timeout	44.3s · 9.7m
Environmental groups sued the FAA in 2023 over the Starship/Super Heavy programmatic environmental assessment at Boca Chica, and SpaceX intervened. Identify the court, docket number and judge; say what the September 2025 ruling actually decided, naming by ECF number which motions were granted and which denied; and then trace the procedural steps by which the case reached a final, appealable judgment, including the date of the final order, what it dismissed and on what basis, and the earlier minute order that had held two theories of relief in abeyance and why. News reports that the judge 'dismissed the lawsuit' in September 2025 are imprecise; explain why.	Multi-hop	✓	◐	Incomplete list	3.8m · 2.2m
The FCC adopted new NEPA rules on 30 September 2026 declaring that space-based operations are not major federal actions, and six days later it authorized SpaceX's 15,000-satellite D2D constellation over DarkSky International's environmental objection. Did the Bureaus apply the new NEPA rules to that authorization? Explain which rule framework they used, how they treated DarkSky's letter, when the new rules take effect, what the new rule text (section 1.1302) says about launches, and who the order says is responsible for launch and re-entry effects. News reports describe a 2-1 vote; check what the order's caption says about the dissent.	Regulation	✓	◐	Incomplete list	48.5s · 4.7m
The FCC's April 2026 NGSO-GSO sharing order replaced EPFD limits with performance criteria and added a minimum GSO-arc avoidance angle. For a SpaceX analyst: what is the rule's minimum avoidance angle and the equivalent exclusion zone, in which bands does it apply, may an NGSO operator start service while its compliance demonstration is still pending, and what are the three numerical protection criteria? Then compare that with the GSO-arc exclusion the 6 October 2026 D2D grant actually imposes on SpaceX until the new rules are effective. Finally, when do the rules take effect and which two sections are carved out? Do not conflate the rule's angle with the angle in SpaceX's waiver condition.	Regulation	✓	◐	Incomplete list	35.8s · 28.3s
The FCC adopted its Satellite Spectrum Abundance order on 30 September 2026 (released 1 October 2026, FCC-26-65). Press says it 'unlocks 1,050 MHz' including '550 MHz for downlinks to consumer dishes' in 12.7-13.25 GHz. From the order itself: how many megahertz does the Commission say it unlocks in the 12.7 GHz band, what may NGSO systems do in the band and on what interference footing relative to uplink earth stations, which uplinks remain allowed and from whom, what happens to the application freeze in 12.7-12.75 GHz versus 12.75-13.25 GHz, and when do grandfathered fixed and mobile licensees drop to secondary status. Also give the 42 GHz allocation direction and earth-station licensing type, and the effective-date rule with its exceptions. Note whether Starlink can use the band immediately. Implementation guide

Derived from this audit's results. On this audit Parallel is the most accurate provider; this section is how SpaceX would wire Keenable if it chose it, with Parallel as the fallback.

Keenable setup for SpaceX

One search tool for SpaceX's agents. Jev classifies each call. A prompt type goes to SELECT only when SELECT was clearly better than search on it (paired test, $p < 0.05$); otherwise it defaults to search, which is cheaper and faster.

Multi-hop · 23	→	Keenable search — default, no clear SELECT win
List-building · 31	→	Keenable search — default, no clear SELECT win
Regulation · 46	→	Keenable search — default, no clear SELECT win

Multi-hop: Parallel scored 13 points higher than the Keenable route on this type (default weights). If these prompts matter most, route them to Parallel.

List-building: Parallel scored 18 points higher than the Keenable route on this type (default weights). If these prompts matter most, route them to Parallel.

Regulation: Parallel scored 7 points higher than the Keenable route on this type (default weights). If these prompts matter most, route them to Parallel.

Router config

```
from searchaudit.router import JevRouter

router = JevRouter(
    classify="typesafe/jev-1.13",  # Jev, the decision model, via OpenRouter
    routes={
        "multihop": "keenable-search",  # Multi-hop: no clear SELECT win, search by default
        "wide": "keenable-search",  # List-building: no clear SELECT win, search by default
        "domain": "keenable-search",  # Regulation: no clear SELECT win, search by default
    },
    default="keenable-search",
    fallback="parallel",  # the most accurate other provider, used on a Keenable error
)
results = router.search(prompt)
```

No prompt type routes to SELECT on this data.

Per-prompt routing did better than this per-type rule: Jev choosing per prompt (the Keenable router column) got 48 correct against 43 for search alone and 45 for SELECT alone. The per-type rule above is the conservative version; the per-prompt choice is what the router column measured.

Where one call is the table

Two prompts from this set, two generic examples, and two in a customer's shape. Exa and Parallel return ranked links. They find a page. A table whose rows live on different pages is the SELECT job: one SQL call, not a loop of three searches.

From	The question	Why a short search loop stops
Example	List every orbital launch attempt by a Chinese rocket in September 2026, with the date and the vehicle.	The rows are a month of launches, not one headline.
Example	Which countries signed the Artemis Accords between 1 January and 30 September 2026? List them in order of signing.	Seventeen signings, each its own announcement.
SpaceX	Every special temporary authority granted to SpaceX Services for the Hillsboro and Atlanta gateways in 2026: file number, grant date, term and basis.	Eight rows across four weekly FCC notices. A snippet shows one.
SpaceX	For Guernsey, Jersey, Cayman, Turks and Caicos and the Falklands: Starlink's licensee entity, licence class, date and one distinctive condition.	Five regulators, five documents, no roundup page.
Any customer	For each of the six largest US banks: Q2 net interest income, the credit provision, and the 10-Q URL.	Three searches cover three filings.
Any customer	Series A rounds in European legal-AI companies announced this year: company, lead, amount, and the announcement from the company or the investor.	Three searches return the same two news posts.

The same table, as of a date

Search takes `query_time` and reads the index as it stood then. Exa can bound the same question with `start_published_date` and `end_published_date`, or pin a stored page with `snapshotAsOf`. Parallel can set `after_date`. A list that already sits on one page is still a lookup: fetch that page. These rows are the job. They are not a score on this audit.

Ask it as of	The question
1 May 2026	Which countries had signed the Artemis Accords by then, in order.
28 September 2026	The OFAC Sinaloa designations, the day before the action.
The prior quarter's filing date	The same six-bank table, from the filings that existed then.

Monthly cost at your volume

Search + agent model per prompt, from this audit, times prompts per month. ~ = at least one input priced from a list price.

Setup	100k prompts / mo	1M prompts / mo	10M prompts / mo
E Exa	$67k	$674k	$6.7M
P Parallel	$44k	$440k	$4.4M
K Keenable search	~$55k	~$548k	~$5.5M
K Keenable SELECT	~$57k	~$571k	~$5.7M
G Grok native	$87k	$865k	$8.7M
K Keenable router	~$46k	~$455k	~$4.6M
Keenable router, this setup	~$55k	~$548k	~$5.5M

The "this setup" line equals Keenable search, because every prompt type routes to search under this rule.

Rollout

Week 1	Shadow 5% of search calls through the router; log both answers.
Week 2	Grade a 5% sample with the same judge. Gate: share correct at or above this audit's lower 95% bound for each route.
Week 3	Move to 50%, then 100%. Keep Parallel as the error fallback.
Monthly	Re-run this audit on real prompts from logs; routes update from the results.

Judge

An AI judge graded all 598 answers against the reference for each prompt. This is how far to trust it.

Judge model	`anthropic/claude-sonnet-5.5`
Agreement with human graders	Not measured. No answers in this audit were hand-graded.
Agreement with a second judge	77% agree on correct vs not, 75% on the exact grade (Cohen's κ 0.61), over 598 answers re-graded by `openai/gpt-6.1-sol`. Scope: every answer, graded against the same checklist as the primary judge.
Missing runs or judgments	2 (counted as wrong: prompt 105 Keenable router, prompt 115 Keenable router)

Rubric

Each prompt's reference is turned once into a checklist of core, required and context facts, plus traps (wrong claims to watch for). The judge marks every item. ✓ = every core and required fact present and nothing contradicted · × = a core fact missing or contradicted, or a trap asserted · ◖ = anything in between. The four checks below are recorded for each answer as a summary.

1. Answers the prompt
2. Facts correct
3. Sources support it
4. Up to date

Partial credit

◖ counts half in value scores and as not correct in the paired accuracy tests, so a tie is never won on half-right answers.

Closest calls

Prompts where providers split most evenly between right and wrong: the judge's decision there moves the ranking most. Worth a human look.

DA-26-36, released 9 January 2026, grants SpaceX's request to remove the condition that limited operations to one co-frequency, co-polarization beam in any given location in the 12.2-12.7 GHz and 19.7-20.2 GHz bands. What cap replaces that condition, in which band does the order state the new cap, and what GSO arc exclusion does the same waiver require? Answer from DA-26-36. The December 2022 one-beam condition is the condition being removed.	List-building	◖	◖	◖	✓	✓	✓

Every prompt in full

One prompt per page group. Providers appear in the same order on every prompt. The four judge checks are Answers the prompt · Facts correct · Sources support it · Up to date. In the judge's notes, "DATA" means the pages the agent retrieved, and "fact n" or "trap n" point at items on that prompt's checklist.

PROMPT 1 · REGULATION · FACTS AS OF 2026-10-08

Amazon asked the FCC to extend the Gen1 50% deployment milestone by 24 months, to 30 July 2028. Did the June 2026 order grant that extension? If not, what did it grant, how many satellites is the 50% figure, and what happens to Gen1 satellites that are not deployed and operational on 30 July 2026? Include whether the final milestone moved.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grade DA-26-553 (adopted and released 5 June 2026, ICFS File No. SAT-MOD-20260129-00065, call sign S3051), not a news story. Light Reading on 8 June 2026 says the FCC granted the 24-month extension. That sentence is wrong.

The order did not grant the extension to 30 July 2028. It granted a limited waiver of the automatic-termination rule in 47 CFR 25.161(a)(2) for the interim milestone only. Paragraph 12: that waiver does not extend to the final milestone. If Amazon misses 30 July 2029, the authorization is reduced to the satellites operational on that date.

The 50% figure is 1,616 satellites by 30 July 2026, out of 3,232 (the authorization was reduced from 3,236). 1,618 is the figure in Amazon's request, measured against the original authorization. The order's figure is 1,616.

Ordering clauses 22 and 23: as of 30 July 2026, authorized Gen1 satellites that are not deployed and operational temporarily lose the priority they had in the 2020 Ka/Ku-band processing round and the 2021 V-band processing round. The loss lasts 20 months, until 30 March 2028, or until 50% of the constellation is launched and operational, whichever is first. It shortens to 15 months (30 October 2027) if Amazon certifies that it has constructed the satellites needed for 50% and secured the launches to deploy them.

Ordering clause 20 cites a waiver of 25.164(b)(2). Paragraph 12 limits the automatic-termination waiver to the interim milestone in 25.164(b)(1) and says it does not extend to the final milestone. A correct answer follows paragraph 12 and clauses 21-23. An answer that says the 24-month extension was granted is wrong. An answer that says the license is cancelled on 30 July 2026 is wrong.

Source: https://docs.fcc.gov/public/attachments/DA-26-553A1.pdf

E Exa ✓ Correct — 32.0s · $0.065 · 2 searches · 2 fetches

Judge: All core and required facts are correct. Only the context facts are missing: the Light Reading error (fact 2) and the 1,618 figure in Amazon's request (fact 8). The answer also omits the ICFS file number and call sign from fact 1.

No. The FCC Space Bureau's June 5, 2026 order (DA 26-553) did not grant Amazon Leo's request to push the Gen1 50% milestone out 24 months to July 30, 2028. It left that extension request neither granted nor denied, and instead granted a limited waiver as alternative relief.

What was granted. The order waives, with conditions:
- automatic termination under 47 CFR § 25.161(a)(2) as applied to the interim milestone in § 25.164(b)(1), so Amazon's authority is not capped at the number of Gen1 satellites in orbit and operating on July 30, 2026; and
- the part of § 25.164(b)(2) that makes meeting the 50% milestone a prerequisite to complying with the final milestone.

It did not waive the surety-bond rule. If Amazon misses the 50% milestone on July 30, 2026, it must forfeit its surety bond under § 25.165.

50% figure. 1,616 satellites (half of the 3,232 Gen1 satellites authorized after a later reduction from 3,236). The final milestone remains 3,232 satellites by July 30, 2029.

Satellites not deployed and operational on July 30, 2026. Authority to launch and operate them does not terminate. Those satellites temporarily lose the earlier-round priority from the 2020 Ku-/Ka-band and 2021 V-band processing rounds and are reassigned to a later priority until the earlier of (1) March 30, 2028 (20 months) or (2) the date Amazon deploys and operates 50% of the constellation. Amazon can shorten that to 15 months (October 30, 2027) by certifying that it has built the satellites needed for 50% and procured launches sufficient to deploy them. After that date, or once 50% is deployed and operational, those satellites regain their original priority.

Final milestone. It did not move. The 100% deadline stays July 30, 2029. Missing that date would still reduce the authorization to the number of satellites operational on that date.

Source: FCC DA 26-553 (June 5, 2026).

Cited: 1. docs.fcc.gov · 2. satellitetoday.com · 3. lightreading.com · 4. arstechnica.com · 5. thenextweb.com · 6. cdn.arstechnica.net · 7. theregister.com · 8. satnews.com

P Parallel ✓ Correct — 39.2s · $0.060 · 3 searches · 1 fetches

Judge: Only context facts are missing: the answer omits the Light Reading error and the 1,618 vs 1,616 distinction, and does not flag the clause 20 inconsistency. It states that the answer waived part of 25.164(b)(2), which is in line with the cited source. All core and required facts are correct.

No. The Space Bureau's June 5, 2026 order (DA 26-553) did not grant Amazon Leo's request to push the Gen1 50% milestone out 24 months to July 30, 2028. It left that modification request neither granted nor denied and instead granted narrower alternative relief.

What it granted. A limited waiver, with conditions, of:
- 47 C.F.R. § 25.161(a)(2), so missing the interim milestone does not automatically cap the Gen1 authorization at the number of satellites in orbit and operating on July 30, 2026; and
- the part of § 25.164(b)(2) that makes meeting the 50% milestone a prerequisite to complying with the final milestone.

The Bureau did not waive the surety-bond rule. If Amazon misses the 50% milestone on July 30, 2026, it is in default and must forfeit the bond under § 25.165.

The 50% figure is 1,616 satellites (half of 3,232 authorized Gen1 satellites). The final milestone remains 3,232 satellites by July 30, 2029; it did not move. Missing that date still reduces the authorization to the number operational on July 30, 2029.

Satellites not deployed and operational on July 30, 2026 keep launch-and-operate authority, but they temporarily lose earlier-round priority in the 2020 Ku-/Ka-

band and 2021 V-band processing rounds. That demotion lasts until the earlier of (1) March 30, 2028 (20 months) or (2) the date Amazon deploys and operates 50% of the constellation. Amazon can shorten the period to 15 months (October 30, 2027) by certifying that it has built the satellites needed for 50% and procured launches sufficient to deploy them. During the demotion, those satellites must coordinate or operate on a non-interference basis; the Bureau waived only the § 25.261(d) compatibility-showing filing for that temporary reassignment.

K Keenable search — Partly correct — Incomplete list — 21.8s · ~$0.072 · 3 searches · 2 fetches

> **Judge:** The answer omits the paragraph 12 consequence that missing the 2029 milestone reduces the authorization to the satellites operational on that date. It also omits the Light Reading error, the 1,618 vs 1,616 distinction, and the ordering clause 20 citation discrepancy, which are context items.

No. The Space Bureau's June 5, 2026 order (DA 26-553) did not grant Amazon Leo's request to push the Gen1 50% milestone out 24 months to July 30, 2028. It granted a limited waiver, in part, instead.

What it granted. Amazon had asked either for that extension of 47 CFR § 25.164(b)(1) or, in the alternative, a waiver so it could keep authority to launch satellites not yet up by July 30, 2026. The Bureau waived, on its own motion and with conditions, the automatic-termination/cap rule in § 25.161(a)(2) as applied to the missed interim milestone. That lets Amazon keep launching the rest of Gen1 rather than having the authorization cut down to whatever is in orbit on the milestone date. It did not waive the surety-bond default: if Amazon misses 50% on July 30, 2026, it is still in violation of § 25.164(b)(1) and must forfeit the bond under § 25.165. Source: DA 26-553.

The 50% figure is 1,616 satellites — half of the modified Gen1 authorization of 3,232 (down from the original 3,236). The interim date remains July 30, 2026. Source: DA 26-553.

Satellites not deployed and operational on July 30, 2026 are not cancelled, but they temporarily lose earlier-round processing priority (2020 Ku-/Ka-band and 2021 V-band rounds). That demotion lasts until the earlier of (1) March 30, 2028 (20 months after July 30, 2026) or (2) the date Amazon has deployed and is operating 50% of the constellation. Amazon can shorten the 20 months to 15 (restoration as early as October 30, 2027) by certifying that it has built all satellites needed for the 50% mark and procured launches sufficient to deploy them. During the demotion, those satellites have the same coordination status as systems licensed after those processing rounds. Source: DA 26-553.

The final milestone did not move. Full Gen1 deployment — 3,232 satellites — is still required by July 30, 2029. Source: DA 26-553.

Cited: 1. docs.fcc.gov

K Keenable SELECT — Correct — 3.2m · ~$0.055 · 2 searches · 1 fetches

> **Judge:** Fact 2 (Light Reading's wrong claim) and fact 8 (the 1,618 figure in Amazon's request) are not mentioned. Fact 12 is not stated as such; the answer instead describes a 25.164(b)(2) waiver as an actual grant, which is not flagged as an inconsistency.

No. The Space Bureau's June 5, 2026 order (DA 26-553) did not grant Amazon Leo's request to push the Gen1 50% milestone out 24 months to July 30, 2028. It neither granted nor denied that modification, and said a conditioned waiver was a better approach than the extension. Source: https://docs.fcc.gov/public/attachments/DA-26-553A1.pdf

What it granted. A limited waiver, with conditions, of the milestone rules for the Gen1 authorization (call signs S3051/S3105; ICFS File No. SAT-MOD-20260129-00065):

- Waiver of the automatic termination/capping rule in 47 CFR § 25.161(a)(2) as applied to the interim 50% milestone in § 25.164(b)(1), so authority for satellites not yet up on July 30, 2026 is not cut back to the number then in orbit and operating.
- Waiver of the § 25.164(b)(2) rule that meeting the 50% milestone is a prerequisite to complying with the final milestone, so Amazon can keep launching toward full deployment.

50% figure. 1,616 satellites (half of the modified Gen1 authorization of 3,232, down from the original 3,236). Due July 30, 2026.

Satellites not deployed and operational on July 30, 2026. They keep their authorization, but:

- They **temporarily lose earlier-round processing priority** from the 2020 Ku-/Ka-band round and the 2021 V-band round, and are reassigned to a later priority status.
- That demotion lasts until the earlier of **March 30, 2028** (20 months) or the date Amazon has launched and is operating 50% of the constellation. It shortens to **15 months (October 30, 2027)** if Amazon certifies it has constructed all satellites needed for the 50% milestone and procured launches sufficient to deploy them. After that period, or once 50% is certified deployed, those later satellites regain original priority.
- If the 50% milestone is missed, Amazon must **forfeit its surety bond** under § 25.165(d). The order does not state the bond dollar amount.

Final milestone. It did not move. Amazon must still deploy and operate **100% (3,232 satellites) by July 30, 2029.** The waiver of automatic termination applies only to the interim milestone; missing the final milestone would still reduce the authorization to the number operational on that date.

G Grok native — Correct — 37.5s · $0.042 · 2 searches · 1 fetches

> **Judge:** All core and required facts are correct. Only context facts are missing: the Light Reading error (2), the 1,618 figure in Amazon's request (8), and the tension between ordering clause 20 and paragraph 12 on 25.164(b)(2) (12). The answer also claims a waiver of part of 25.164(b)(2) without flagging that paragraph 12 limits the waiver to the interim milestone.

No. The FCC Space Bureau's June 5, 2026 order (DA-26-553) did not grant Amazon Leo's request to extend the Gen1 50% milestone by 24 months to July 30, 2028. It left that modification request unresolved and instead granted alternative, limited waiver relief.

What was granted. The Bureau waived, with conditions:
- the automatic-termination rule (47 C.F.R. § 25.161(a)(2)) as applied to the interim milestone, so authority for satellites not yet in orbit does not end on July 30, 2026; and
- the part of § 25.164(b)(2) that makes meeting the 50% milestone a prerequisite for complying with the final milestone.

It did not waive the surety-bond default rule. If Amazon misses the 50% milestone on July 30, 2026, it must forfeit the bond under § 25.165.

50% figure. 1,616 satellites (half of the Gen1 authorization; the order also states a final obligation of 3,232 satellites by July 30, 2029, out of a 3,236-satellite constellation).

Satellites not deployed and operational on July 30, 2026. They keep launch-and-operate authority, but temporarily lose the earlier-round priority from the 2020 Ku-/Ka-band and 2021 V-band processing rounds and are reassigned to a later priority. That demotion lasts until the earlier of March 30, 2028 (20 months) or the date 50% is deployed and operational. Amazon can shorten it to 15 months (October 30, 2027) by certifying that it has built the satellites needed for 50% and procured enough launches. After that date, or once 50% is up, those satellites regain original priority.

Final milestone. It did not move. It remains July 30, 2029. Missing the interim milestone does not bar Amazon from meeting that final deadline; missing the final deadline would cut the authorization to the number of satellites operational on that date.

PROMPT 2 · REGULATION · FACTS AS OF 2026-10-08

Amazon's Gen2 and Polar systems were authorized in February 2026. Do they have the same 50% and 100% deployment deadlines as Gen1? Give the deadlines and the satellite counts.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

No. DA-26-553 paragraph 3 and footnote 8. Gen1 is 1,616 satellites by 30 July 2026 and 3,232 by 30 July 2029. Gen2 (3,212 satellites) and Polar (1,292 satellites) have a separate schedule: 50% no later than 10 February 2032 and 100% no later than 10 February 2035. Applying the Gen1 dates to Gen2 or Polar is wrong.

Source: https://docs.fcc.gov/public/attachments/DA-26-553A1.pdf

Exa — Correct

46.5s · $0.084 · 3 searches · 1 fetches

Judge: All facts are stated correctly and match the FCC DA 26-553 footnote 8 in the DATA. The answer does not apply the Gen1 dates to Gen2 or Polar.

No. Gen2 and Polar have a separate milestone schedule from Gen1.

Gen2 and Polar (FCC grant of February 10, 2026):
- Gen2: 3,212 satellites — 50% by February 10, 2032, 100% by February 10, 2035
- Polar: 1,292 satellites — same dates: 50% by February 10, 2032, 100% by February 10, 2035

Gen1 (for comparison, not the same dates): 3,232 satellites, with 50% (1,616) by July 30, 2026 and 100% by July 30, 2029.

Sources: FCC DA 26-553 (footnote 8 states the Gen2/Polar schedule and counts); February 10, 2026 grant stamp (conditions 12b and 12c). The Polar condition text in that stamp repeats “Gen2 system” in the 100% sentence; the FCC order treats Polar as having the same February 10, 2032 / February 10, 2035 milestones.

Judge: All facts are stated correctly, including the separate Gen2/Polar schedule, the Feb 10, 2032 and Feb 10, 2035 deadlines, and the Gen1 counts and dates. The answer cites DA 26-553 and does not apply Gen1 dates to Gen2 or Polar.

No. Gen2 and Polar do not share Gen1’s deadlines. The FCC’s February 10, 2026 grant gives them a separate six- and nine-year schedule from that grant date.

Gen2 (3,212 satellites) and Polar (1,292 satellites) — Conditions 12b and 12c of the February 10, 2026 grant:
- 50% launched, in assigned orbits, and operating by February 10, 2032
- 100% by February 10, 2035

Those conditions apply separately to each system. The grant does not state the exact satellite integers for the 50% marks (50% of 3,212 and of 1,292).

Gen1, for comparison (3,232 satellites): 50% (1,616 satellites) by July 30, 2026, and 100% (3,232) by July 30, 2029. The February 2026 grant kept those dates for Gen1, including added V-band use (Condition 12a). A later June 5, 2026 order waived automatic termination if Gen1 misses the July 30, 2026 interim mark; it did not move the July 30, 2029 final deadline and did not change the Gen2/Polar dates.

Sources: FCC grant stamp, Feb. 10, 2026 (Conditions 12a–12c); FCC DA 26-553 (June 5, 2026).

Keenable search — Correct

42.3s · ~$0.138 · 8 searches · 2 fetches

Judge: All facts are stated correctly and match the sources. The answer rejects the Gen1-dates trap. The 'same milestone structure' phrasing and the 1,606/646 half-counts are flagged as arithmetic, not as errors.

No. Gen2 and Polar use the same FCC milestone structure as Gen1 (50% in six years, 100% in nine years from grant), but not the same calendar dates.

The Space Bureau authorized them on February 10, 2026 (ICFS File Nos. SAT-LOA-20211104-00145 and SAT-AMD-20250311-00068). A later FCC order states that Gen2 and Polar have a separate milestone schedule from Gen1: 50% by February 10, 2032, and 100% by February 10, 2035. The grant applies those dates separately to each system (conditions 12b and 12c).

System	Authorized satellites	50% deadline	100% deadline
Gen2	3,212	Feb. 10, 2032 (1,606)	Feb. 10, 2035
Polar	1,292	Feb. 10, 2032 (646)	Feb. 10, 2035
Combined	4,504	—	—

Gen1, by contrast, is 3,232 satellites, with 1,616 (50%) due July 30, 2026, and the full constellation due July 30, 2029. Those Gen1 dates come from the July 30, 2020 grant (later reduced from 3,236 to 3,232). They are not the Gen2/Polar deadlines.

Sources: FCC DA 26-553 (June 5, 2026), footnote 8 and paragraph 3; Feb. 10, 2026 grant stamp, conditions 12b and 12c. The 1,606 and 646 figures are half of the authorized counts; the grant states the 50% requirement, not those integers.

Cited: 1. docs.fcc.gov · 2. cdn.geekwire.com

Keenable SELECT — Correct

4.8m · ~$0.110 · 6 searches · 1 fetches

Judge: All facts are stated correctly and the Gen1 dates are not applied to Gen2 or Polar. The DA 26-553 footnote 8 data supports the main claims. The answer's description of DA 26-

552 as confirming the 4,504-satellite grant is not shown in the DATA window, but this does not affect the core claims.

No. Gen2 and Polar do not share Gen1's 50% and 100% deadlines. The Space Bureau authorized them on February 10, 2026, on a separate milestone schedule.

System	Authorized satellites	50% deadline	100% deadline
Gen1	3,232 (reduced from 3,236)	July 30, 2026 (1,616 satellites)	July 30, 2029
Gen2	3,212	February 10, 2032	February 10, 2035
Polar	1,292	February 10, 2032	February 10, 2035

Gen2 and Polar together are 4,504 satellites (3,212 + 1,292). Their 50% and 100% dates are six years and nine years after the February 10, 2026 grant, not Gen1's July 30, 2026 and July 30, 2029 dates.

Sources:
- FCC DA 26-553 (June 2026 waiver order), footnote 8, citing the Amazon 2026 V-band Grant, Conditions 12b and 12c: https://docs.fcc.gov/public/attachments/DA-26-553A1.pdf
- FCC DA 26-552 (June 5, 2026), confirming the February 10, 2026 grant of 4,504 additional Gen2 and Polar satellites (ICFS File Nos. SAT-LOA-20211104-00145 and SAT-AMD-20250311-00068): https://docs.fcc.gov/public/attachments/DA-26-552A1.pdf

The underlying grant stamp itself was not retrieved as a standalone public PDF; the milestone dates above are the Space Bureau's description of Conditions 12b and 12c of that grant. Secondary reporting matches those dates and counts (for example, Jason Rainbow's account of the Feb. 10 approval). A January 2026 "4,500 satellites" figure in some trade coverage is a rounded combined count, not a separate authorization.

Cited: 1. docs.fcc.gov · 2. docs.fcc.gov

> **Judge:** The answer never states the Gen1 50% satellite count of 1,616, giving only 3,232 for Gen1. It also cites DA-26-553A1 but not paragraph 3 and footnote 8 specifically, so fact 2 is not committed.

No. Gen2 and Polar were authorized on February 10, 2026, with a separate milestone schedule from Gen1.

Gen2 (3,212 satellites) and Polar (1,292 satellites) — conditions 12b and 12c of the February 10, 2026 Space Bureau grant:
- **50% launched, in assigned orbits, and operating by February 10, 2032**
- **100% by February 10, 2035**

Those dates apply separately to each system (50% of Gen2's 3,212 and 50% of Polar's 1,292), not as one combined pool.

Gen1 is different. The same grant restates Gen1's earlier milestones (condition 12a): **50% by July 30, 2026 and 100% by July 30, 2029**, for 3,232 satellites. The 15-year Gen1 license term ends October 6, 2038.

Sources: FCC grant (hosted copy); FCC DA-26-553A1 (confirms Gen2 3,212 and Polar 1,292, with 50% by February 10, 2032 and 100% by February 10, 2035).

PROMPT 4 · REGULATION · FACTS AS OF 2026-10-08

The Commission voted on 22 July 2026 to replace Part 25 with Part 100. For a license that cites a Part 25 section, what rule applies the day after the vote, and when does Part 25 actually end?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FCC-26-47, Space Modernization for the 21st Century, adopted 22 July 2026, released 23 July 2026. The Commission adopts Part 100, Space and Earth Station Services, in place of Part 25. Part 25 sunsets when Part 100 becomes effective. The vote and the release are not that effective date. The day after the vote, Part 25 still applies.

After the sunset, a Part 25 citation in an existing authorization continues to mean the corresponding Part 100 rule unless the order addresses that citation otherwise. The order says the operational and technical requirements largely stay the same. Part 100 separates application rules (subpart B), operations (subpart C), and compliance (subpart D).

Wrong: Part 25 was repealed on 22 July 2026. Wrong: existing licenses must be rewritten before the effective date. Do not invent a Federal Register effective date; the order ties the sunset to the effective date and this reference does not fix that date.

Source: https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf

Exa — Correct

4.4m · $0.458 · 14 searches · 9 fetches

> **Judge:** Facts 6 and 7 are not stated: the answer never says the requirements largely stay the same and never describes the subpart B/C/D structure. Those are context items only. The core and required facts are correct and no trap is asserted.

The day after the vote, the cited Part 25 section still applies. Part 25 does not end on the vote or the release.

The Commission adopted FCC 26-47 on 22 July 2026 and released it on 23 July 2026 (SB Docket No. 25-306). Adoption and release do not make Part 100 effective. An FCC earth-station authorization citing paragraph 420 of that order states that the Part 100 changes "are not yet effective and will not become effective until the date announced by the Space Bureau via publication of a document in the Federal Register," and that "[u]ntil then, part 25 remains in effect." So on 23 July 2026 a license condition that cites a Part 25 section is still governed by that Part 25 section.

Part 25 ends when Part 100 becomes effective. The order says the Commission will sunset Part 25 once Part 100 becomes effective. That date is not the vote date. Paragraph 420, as applied in that authorization, ties effectiveness to the date the Space Bureau announces in the Federal Register.

Secondary summaries add a split that the order text itself should be checked against, because the full ordering clause was not independently readable here:

- DLA Piper reports that the order is effective 60 days after Federal Register publication, except §§ 9.10, 9.18, and 100.1–100.34, which wait for OMB review and a Space Bureau Federal Register announcement.
- A communications-law newsletter reports that portions are effective 60 days after Federal Register publication, but that the substantive Part 100 rules include information collections, so the Space Bureau will announce the Part 100 effective date after OMB review. It also says applications granted before that date are considered under Part 25, and that on the effective date licensees generally must comply with Part 100, subject to existing license terms.

After that effective date, a Part 25 citation in a current authorization is not treated as obsolete. Paragraph 28 says those citations remain subject to the corresponding Part 100 rules, unless the order addresses them otherwise, and existing license terms and conditions still apply.

One narrower exception is already in force and is not the general rule for a Part 25 citation: the order immediately relieves non-processing-round licensees of the surety-bond requirement.

Claim not in sources

3.7m · $1.354 · 11 searches · 3 fetches

> **Judge:** The answer contradicts fact 5 by saying a Part 25 citation is read as the posted Part 25 text rather than the corresponding Part 100 rule; the fact sheet DATA says the opposite. It also does not mention Part 100's name, the unchanged technical requirements, or the subpart structure.

The day after the July 22, 2026 vote, the cited Part 25 rule still applies. Part 25 does not end until the later "Part 100 Effective Date," which the Order does not set as a calendar date.

The Commission adopted FCC 26-47 on July 22, 2026, and released it on July 23, 2026. Adoption does not itself replace Part 25. The Order sunsets Part 25 only once Part 100 becomes effective, and operators remain under the existing rules until that date. (FCC 26-47, paras. 28, 327, 332)

Part 25 actually ends on the Part 100 Effective Date: the date Part 100 takes effect, when Part 25 is removed from Title 47 of the CFR. The Space Bureau must announce that date by public notice. The Order is generally effective 60 days after Federal Register publication, but §§ 100.1–100.304 (and related §§ 9.10 and 9.18) are delayed until OMB finishes any Paperwork Reduction Act review; the Bureau then announces those effective dates in the Federal Register. If rules take effect on different days, the effective date is rule-specific. (FCC 26-47, paras. 28, 320 & n.969, 322; ordering clause 420)

After that date, a pre-effective-date license that cites a Part 25 section is read as citing the Part 25 text the Space Bureau posts on its transition page, not as automatically switching to the corresponding Part 100 section, unless the Order says otherwise. (FCC 26-47, para. 322)

> **Judge:** Facts 6 (requirements largely stay the same) and 7 (subparts B/C/D) are context facts not stated in the answer; all core and required facts are correct and no traps are asserted.

The day after the vote, the cited Part 25 section still applies. Part 25 does not end on the vote or the next day.

On 22 July 2026 the FCC adopted *Space Modernization for the 21st Century* (FCC 26-47, SB Docket No. 25-306), released 23 July 2026. It replaces Part 25 with a new Part 100, but the order says the Commission will **sunset Part 25 only once Part 100 becomes effective**. Adoption and release are not that effective date. As of the sources reviewed, Part 100 was not yet in force, and commentary states that **Part 25 remains the governing rule set until the Space Bureau announces the Part 100 effective date by public notice**. Until then, a license citation to a Part 25 section is still a citation to that Part 25 rule.

When Part 25 actually ends: on the future **Part 100 effective date** that the Space Bureau will announce by public notice—not on 22 or 23 July 2026. No fixed calendar date for that sunset was set in the materials reviewed. Federal Register publication is part of making the rules effective; under 47 CFR § 1.427, Commission rules are generally effective no sooner than 30 days after Federal Register publication unless the order specifies otherwise.

After that effective date, a Part 25 citation in an existing authorization does not become a dead reference. The order says Part 25 rules cited in current authorizations remain subject to the **corresponding Part 100 rules**, unless the order addresses that requirement otherwise. The Space Bureau is to post the text of Part 25 as it existed on the effective date and a chart mapping each Part 25 rule to its Part 100 counterpart. Existing licensees must comply with Part 100 from that date, subject to the terms of their existing authorizations.

> **Judge:** Facts 4, 6 and 7 are not stated: the answer never names Part 100 as 'Space and Earth Station Services', never says the requirements largely stay the same, and never mentions the subpart structure. These are context facts only. The core and required facts are correct and no trap was asserted.

The day after the 22 July 2026 vote, the license is still governed by the Part 25 section it cites. Part 25 does not end on the vote date. It sunsets only when Part 100 becomes effective.

The Commission adopted *Space Modernization for the 21st Century*, FCC 26-47 (SB Docket No. 25-306), on 22 July 2026 and released it on 23 July 2026. The order says the Commission will sunset Part 25 once Part 100 becomes effective, and that Part 25 citations in existing authorizations stay intelligible and enforceable, mapped to the corresponding Part 100 rules unless the order says otherwise. The Space Bureau must announce the Part 100 effective date by public notice. Secondary write-ups also say most of the order takes effect 60 days after Federal Register publication, with information-collection sections (including §§ 100.1–100.34) delayed until OMB review. As of the sources checked, that publication date had not been set, so no calendar end date for Part 25 can be stated.

> **Judge:** Core and required facts are correct. Context facts 4, 6 and 7 (Part 100 title, requirements largely the same, subpart structure) are not stated in the answer.

I'll look up the Commission's 22 July 2026 vote replacing Part 25 with Part 100 and the effective-date rules for licenses that cite Part 25.**The day after the vote, the cited Part 25 section still applies. Part 25 does not end on the vote or the release date.**

The Commission adopted the Space Modernization Report and Order (FCC 26-47, SB Docket No. 25-306) on 22 July 2026 and released it on 23 July 2026. That item adopts new Part 100 and says the Commission will sunset Part 25 only once Part 100 becomes effective. Adoption is not the effective date, so on 23 July 2026 a license condition that cites a Part 25 section is still governed by that Part 25 section. Source: https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf

Part 25 actually ends on the later effective date of Part 100, which the Space Bureau is directed to announce by public notice. That date follows Federal Register publication and, for rules that are new or modified information collections, any required Office of Management and Budget approval. It is not 23 July 2026, and no fixed calendar end date has been set in the order itself. Sources: https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf and https://www.jdsupra.com/legalnews/ground-control-to-major-reform-fcc-6667524/

After that effective date, an existing license's citation to a Part 25 section is read as the corresponding Part 100 rule, unless the order addresses that requirement otherwise. The Bureau is also to post the Part 25 text as it stood on the effective date and a Part 25-to-Part 100 mapping chart. Sources: https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf and https://www.jdsupra.com/legalnews/ground-control-to-major-reform-fcc-6667524/

PROMPT 6 · REGULATION · FACTS AS OF 2026-10-08

On 9 January 2026 the Space Bureau acted on SpaceX's Gen2 upgrade. SpaceX had asked for authority covering 29,988 satellites. How many Gen2 satellites does that order authorize in total, how many of those are the new tranche, and what did the Bureau expressly defer rather than grant?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

DA-26-36, adopted and released 9 January 2026, call sign S2992/3069. Granted in part and deferred in part.

The order authorizes 15,000 Gen2 satellites in total. That is the previously authorized 7,500 plus a second tranche of 7,500, which is to operate with the same frequencies and orbital parameters authorized for the first tranche. SpaceX asked for action on a 29,988-satellite constellation. Paragraph 5 says the Bureau proceeds incrementally and does not grant that request.

Footnote 6 defers three things: MSS operations outside the United States in additional frequencies in the 1429-2690 MHz band; operations in 20.2-21.2 GHz and 30.0-31.0 GHz; and any Gen2 satellites beyond the 15,000.

Wrong: the full 29,988 were granted. Wrong: the January order only authorized the original 7,500. Wrong: nothing was deferred.

Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

Exa — Correct

16.3s · $0.070 · 2 searches · 1 fetches

Judge: Facts 5 (same frequencies and orbital parameters for the second tranche) and 7 (paragraph 5 incremental approach) are not stated, though they are only context. All core and required facts are correct, and no traps were asserted.

The January 9, 2026 Space Bureau order (DA 26-36) authorizes 15,000 Gen2 Starlink satellites in total. Of those, 7,500 are a new second tranche; the other 7,500 were already authorized. SpaceX had sought action on its full proposed constellation of 29,988 satellites.

The Bureau expressly deferred, rather than granted, authorization of the remaining 14,988 proposed Gen2 satellites, including those proposed for operations above 600 km. In the same partial grant it also deferred SpaceX's request for MSS operations outside the United States in additional frequencies in the 1429–2690 MHz band, and its request to operate in the 20.2–21.2 GHz and 30.0–31.0 GHz bands.

PROMPT 7 · LIST-BUILDING · FACTS AS OF 2026-10-08

Using the 9 January 2026 Gen2 grant stamp, list every authorized orbital shell with altitude and inclination, including shells that may keep operating only while satellites are lowered. For the shells where the stamp gives a plane count and a satellites-per-plane count, give those numbers. Where the stamp gives a choice of inclination, say what the choice depends on. Do not treat a news summary as the stamp.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

DA-26-36 grant stamp and footnotes 2 through 5. One table, not a single shell.

Authorized shells: 340 km at 53 degrees; 345 km at 48; 350 km at 38; 355 km at 43; 360 km at 96.9; 365 km at 28 or 32; 475 km at 28 or 32; 480 km at 53; 485 km at 43.

Continued operations, while satellites are lowered: 525 km at 53 degrees, 530 km at 43, and 535 km at 33. The scope says satellites at 525, 530, and 535 km are lowered to 480, 485, and 475 km respectively. Footnote 5: they may keep operating in the old shells while those maneuvers happen. An answer that says 525/530/535 were cancelled on 9 January is wrong.

Plane counts in footnote 2: 340, 345, 350, 355, and 365 km, up to 72 planes and 144 satellites per plane. 480 and 485 km, up to 56 planes and 120 satellites per plane. The footnote does not state a plane count for 360 km or for 475 km, and it does not state one for the continued 525/530/535 shells. Inventing 72 planes for 360 km is wrong.

365 km and 475 km: 32 degrees if the FAA allows Starship launches from Starbase at Boca Chica on that inclination, otherwise 28 degrees. A single fixed inclination for those two shells is wrong.

Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

Exa Correct ✓ ✓ ✓ ✓ 13.7s · $0.071 · 2 searches · 1 fetches

Judge: All checklist facts are stated correctly and no trap is asserted. The shell list, plane counts, and FAA-dependent inclination choice match the checklist.

I'll look up the 9 January 2026 Gen2 grant stamp itself and pull the authorized orbital shells from that document, not from news summaries.The FCC text of DA 26-36 is the stamp. I'll read that attachment so the shell list, plane counts, and inclination choices come from the grant itself.From the FCC grant stamp in DA 26-36 (adopted and released 9 January 2026), not a news summary: 15,000 Gen2 Starlink satellites are authorized in these shells. Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

Operating shells

Altitude	Inclination	Planes / satellites per plane
340 km	53°	up to 72 planes, up to 144 satellites per plane
345 km	48°	up to 72 planes, up to 144 satellites per plane
350 km	38°	up to 72 planes, up to 144 satellites per plane
355 km	43°	up to 72 planes, up to 144 satellites per plane
360 km	96.9°	stamp gives no plane or satellites-per-plane count
365 km	28° or 32°	up to 72 planes, up to 144 satellites per plane
475 km	28° or 32°	stamp gives no plane or satellites-per-plane count
480 km	53°	up to 56 planes, up to 120 satellites per plane
485 km	43°	up to 56 planes, up to 120 satellites per plane

Continued operations only while satellites are lowered

The stamp lists these as continued operations while satellites already there are lowered into the new shells (525 km to 480 km, 530 km to 485 km, and 535 km to 475 km). It does not give plane or satellites-per-plane counts for them.

Altitude	Inclination
525 km	53°
530 km	43°
535 km	33°

Inclination choice. For both the 365 km and 475 km shells, the stamp authorizes 32° to accommodate Starship launches from Starbase at Boca Chica, Texas, or 28° if the FAA does not allow Starship launches at 32°.

Cited: 1. fcc.gov · 2. fcc.gov · 3. docs.fcc.gov · 4. reuters.com · 5. arstechnica.com · 6. docs.fcc.gov · 7. fcc.report · 8. cbnc.com · 9. fcc.report

Parallel Partly correct ✓ ✓ ✓ ✓ Incomplete list 21.8s · $0.118 · 2 searches · 1 fetches

Judge: Fact 15 (footnote 5, that satellites may keep operating in the old 525/530/535 km shells while lowering) is only implied by the heading 'continued operation only while satellites

> are lowered', so the judge marked it missing. The rest is correct, and no trap was asserted.

From the FCC Space Bureau grant stamp in DA 26-36 (adopted and released 9 January 2026), not a news summary: DA-26-36A1.txt.

The stamp authorizes 15,000 Gen2 satellites in these shells, plus continued operation only in three older shells while satellites are lowered.

Authorized shells

Altitude	Inclination	Planes / satellites per plane (only where the stamp states them)
340 km	53°	up to 72 planes, up to 144 satellites per plane
345 km	48°	up to 72 planes, up to 144 satellites per plane
350 km	38°	up to 72 planes, up to 144 satellites per plane
355 km	43°	up to 72 planes, up to 144 satellites per plane
360 km	96.9°	not stated
365 km	28° or 32°	up to 72 planes, up to 144 satellites per plane
475 km	28° or 32°	not stated
480 km	53°	up to 56 planes, up to 120 satellites per plane
485 km	43°	up to 56 planes, up to 120 satellites per plane

Continued operation only while satellites are lowered

Altitude	Inclination	Lowered to
525 km	53°	480 km
530 km	43°	485 km
535 km	33°	475 km

The stamp does not give plane or satellites-per-plane counts for the 360 km, 475 km, 525 km, 530 km, or 535 km shells.

Inclination choice. For both the 365 km and 475 km shells, the stamp records SpaceX's request to operate at 32° to accommodate Starship launches from Starbase (Boca Chica, Texas), or 28° if the FAA does not allow Starship launches at 32°.

Keenable search · Correct

21.5s · ~$0.076 · 5 searches · 2 fetches

> **Judge:** All checklist facts are stated correctly and no traps are asserted. The 535 km shell is given as 33° in the answer, which matches the checklist. The answer cites the FCC stamp itself, not a news summary.

The 9 January 2026 FCC grant stamp (DA 26-36, adopted and released that day) authorizes up to 15,000 Gen2 Starlink satellites in these shells, plus temporary continued operation of three higher shells while satellites are lowered. Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf (same text in https://docs.fcc.gov/public/attachments/DA-26-36A1_Rcd.pdf).

Authorized operating shells

Altitude	Inclination	Planes / satellites per plane (where the stamp states them)
340 km	53°	up to 72 planes, up to 144 satellites per plane
345 km	48°	up to 72 planes, up to 144 satellites per plane
350 km	38°	up to 72 planes, up to 144 satellites per plane
355 km	43°	up to 72 planes, up to 144 satellites per plane
360 km	96.9°	not stated in this stamp
365 km	28° or 32°	up to 72 planes, up to 144 satellites per plane
475 km	28° or 32°	not stated in this stamp
480 km	53°	up to 56 planes, up to 120 satellites per plane
485 km	43°	up to 56 planes, up to 120 satellites per plane

The stamp's footnote 2 and the order text give plane and satellites-per-plane counts only for 340, 345, 350, 355, and 365 km (72 / 144) and for 480 and 485 km (56 / 120). They do not give those counts for 360 km or 475 km.

Inclination choice. For both the 365 km and 475 km shells, the stamp authorizes 32° to accommodate Starship launches from Starbase (Boca Chica, Texas), or 28° if the FAA does not allow Starship launches at 32°.

Shells that may keep operating only while satellites are lowered. Footnote 5 and condition 13c allow continued operation of satellites already in these shells only

while SpaceX maneuvers them down; SpaceX must notify the Commission within 30 days after lowering of all satellites in the 500 km shells is complete:

- 525 km, 53° → lower to 480 km
- 530 km, 43° → lower to 485 km
- 535 km, 33° → lower to 475 km

The stamp does not assign plane or satellites-per-plane counts to these three continued-operation shells.

Cited: 1. docs.fcc.gov · 2. docs.fcc.gov

K Keenable SELECT ✓ Correct ✓ ✓ ✓ ✓ 3.4m · ~$0.140 · 8 searches · 2 fetches

> **Judge:** All checklist facts are stated correctly and no trap is asserted. The only DATA support for the shell details is the plane counts and continued-operations text; the 32/28 FAA condition and the lowering mapping are plausible from the stamp but not visible in the truncated window.

From the FCC grant stamp in DA 26-36 (adopted and released January 9, 2026), not a news summary. Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf (FCC Record text: https://docs.fcc.gov/public/attachments/DA-26-36A1_Rcd.pdf).

The stamp authorizes 15,000 Gen2 satellites in these shells:

Altitude	Inclination	Planes	Satellites per plane	Status
340 km	53°	up to 72	up to 144	operating shell
345 km	48°	up to 72	up to 144	operating shell
350 km	38°	up to 72	up to 144	operating shell
355 km	43°	up to 72	up to 144	operating shell
360 km	96.9°	not stated	not stated	operating shell
365 km	28° or 32°	up to 72	up to 144	operating shell
475 km	28° or 32°	not stated	not stated	operating shell
480 km	53°	up to 56	up to 120	operating shell
485 km	43°	up to 56	up to 120	operating shell
525 km	53°	not stated	not stated	continued operations only while satellites are lowered
530 km	43°	not stated	not stated	continued operations only while satellites are lowered
535 km	33°	not stated	not stated	continued operations only while satellites are lowered

Plane counts are only where the stamp's footnote gives them: up to 72 planes and 144 satellites per plane in the 340, 345, 350, 355, and 365 km shells; up to 56 planes and 120 satellites per plane in the 480 and 485 km shells. The stamp does not give those counts for 360 km, 475 km, or the three continued-operations shells.

The 28°/32° choice applies to both the 365 km and 475 km shells. The stamp says SpaceX requested 32° to accommodate Starship launches from Starbase in Boca Chica, Texas, or 28° if the FAA does not allow Starship launches at 32°.

The three higher shells are not new operating shells. The stamp says SpaceX may keep operating satellites already deployed at 525, 530, and 535 km while it lowers them into the new shells (525→480 km, 530→485 km, 535→475 km), as conditioned in the grant.

> **Judge:** All checklist facts are stated correctly and no trap is asserted. The answer cites the primary DA-26-36A1 document, though the DATA window is truncated and shows only part of the shell list.

The 9 January 2026 Space Bureau grant stamp (DA 26-36) authorizes 15,000 Gen2 Starlink satellites in these shells, plus continued operation of three higher shells only while satellites are lowered. Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

Authorized operating shells

Altitude	Inclination	Planes / satellites per plane (only where the stamp states them)
340 km	53°	up to 72 planes, up to 144 satellites per plane
345 km	48°	up to 72 planes, up to 144 satellites per plane
350 km	38°	up to 72 planes, up to 144 satellites per plane
355 km	43°	up to 72 planes, up to 144 satellites per plane
360 km	96.9°	not stated
365 km	28° or 32°	up to 72 planes, up to 144 satellites per plane
475 km	28° or 32°	not stated
480 km	53°	up to 56 planes, up to 120 satellites per plane
485 km	43°	up to 56 planes, up to 120 satellites per plane

Footnote 2 of the stamp, and paragraph 6 of the accompanying order, give plane and satellites-per-plane counts only for 340, 345, 350, 355, and 365 km, and for 480 and 485 km. They do not give those counts for 360 km or 475 km.

Inclination choice. For both the 365 km and 475 km shells, the stamp authorizes 32° to accommodate Starship launches from Starbase at Boca Chica, Texas, or 28° if the FAA does not allow Starship launches at 32°.

Continued operations only while satellites are lowered

Altitude	Inclination	Lowered to
525 km	53°	480 km
530 km	43°	485 km
535 km	33°	475 km

Footnote 5 and condition 13c allow operation in the 525, 530, and 535 km shells only for satellites already deployed there, while they are maneuvered into the new shells. The stamp does not give plane or satellites-per-plane counts for these three shells.

PROMPT 8 · MULTI-HOP · FACTS AS OF 2026-10-08

Read DA-26-36 (9 January 2026) together with DA-26-398 (23 April 2026). After the April order, what is the status of SpaceX Gen2 operations in the Big LEO bands and in the L band, inside and outside the United States? Separately, what is the status of 2 GHz MSS outside the United States, and of SpaceX's application to use 2 GHz MSS inside the United States? Name the call signs if the orders do.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Two orders. The January grant does not survive unchanged.

DA-26-36 authorized SpaceX to communicate outside the United States on 1980-2000 MHz and 2000-2020 MHz (Earth-to-space) and 2180-2200 MHz (space-to-Earth), with up to 7,500 satellites. It deferred other MSS frequencies in 1429-2690 MHz outside the United States. It did not grant Big LEO or L-band.

DA-26-398, adopted and released 23 April 2026, dismisses with prejudice the Gen2 requests to operate in 1525-1559 MHz, 1626.5-1660.5 MHz, 1610-1626.5 MHz, and 2483.5-2500 MHz, inside and outside the United States. Ordering language covers ICFS files including SAT-LOA-20200526-00055 and SAT-MOD-20250611-00144, call sign S2992/3069. The same order dismisses with prejudice the Big LEO portion of the separate D2C application outside the United States, files SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339, call sign S00735, GN Docket No. 25-340.

The April order says the January partial grant did authorize 2 GHz outside the United States, and this dismissal does not un-grant that 1980-2020 / 2180-2200 outside-US authority. The application for 2 GHz inside the United States, SAT-MOD-20250514-00119, remains pending. The April order says it does not address that file.

In this order, L band means 1525-1559 and 1626.5-1660.5 MHz, and Big LEO means 1610-1626.5 and 2483.5-2500 MHz. Wrong: Big LEO outside the US is still an open deferral. Wrong: 2 GHz inside the US was dismissed with prejudice in DA-26-398. Wrong: 2 GHz outside the US was never granted.

Sources: https://docs.fcc.gov/public/attachments/DA-26-36A1.txt and https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

E Exa · Partly correct · Incomplete list · 1.3m · $0.359 · 12 searches · 3 fetches

Judge: The answer omits the D2C application's Big LEO dismissal outside the US (S00735, SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339, GN 25-340). It also does not mention that DA-26-36 deferred other MSS frequencies in 1429-2690 MHz outside the US. It names only SAT-MOD-20250611-00144 among the dismissed Gen2 files, not SAT-LOA-20200526-00055, though the call sign S2992/3069 is right.

After DA-26-398, SpaceX Gen2 (call sign S2992/3069) has no authority in the Big LEO or L bands, inside or outside the United States. Those requests are dismissed with prejudice. The January 2 GHz MSS grant outside the United States is left in place. The separate application to add 2 GHz MSS inside the United States remains pending and is not decided.

Big LEO and L band (Gen2), inside and outside the United States. DA-26-36 had continued to defer, not grant, Gen2 MSS in the 1.5 GHz (L) and 1.6/2.4 GHz (Big LEO) bands. DA-26-398 then dismisses with prejudice SpaceX's Gen2 requests to operate in 1610–1626.5 MHz and 2483.5–2500 MHz (Big LEO) and 1525–1559 MHz and 1626.5–1660.5 MHz (L band), both in the United States and outside the United States. That covers the Gen2 upgrade files and related Gen2 modifications, including SAT-MOD-20250611-00144, which is dismissed in its entirety. Call sign: S2992/3069.

2 GHz MSS outside the United States. DA-26-36 authorized Gen2 MSS outside the United States, including up to 7,500 satellites in 1980–2000 MHz and 2000–2020 MHz (Earth-to-space) and 2180–2200 MHz (space-to-Earth). Its frequency list also includes 1980–2010 MHz (Earth-to-space), 2010–2025 MHz (Earth-to-space, Region 2 only), 2160–2170 MHz (space-to-Earth, Region 2 only), and 2170–2200 MHz (space-to-Earth). DA-26-398 does not revoke that grant. It cites it and describes it as authority outside the United States in 1980–2010 MHz and 2010–2025 MHz. The April order dismisses other parties' 2 GHz requests (AST outside the United States; Sateliot for U.S. market access), not SpaceX's January outside-U.S. authorization.

2 GHz MSS inside the United States. SpaceX's Gen2 modification to add 2 GHz operations inside the United States, SAT-MOD-20250514-00119, remains pending. DA-26-398 says it does not address that application. The orders do not assign that file a separate call sign; Gen2 remains S2992/3069.

Sources: DA-26-36; DA-26-398. An April 27, 2026 erratum does not change these holdings.

P Parallel · Partly correct · Incomplete list · 1.0m · $0.191 · 3 searches · 2 fetches

Judge: The answer never names SAT-LOA-20200526-00055 as part of the Gen2 dismissal. It also omits the separate D2C application outside the US (S00735, SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339, GN Docket 25-340) whose Big LEO portion was dismissed with prejudice.

After DA-26-398, SpaceX Gen2 has no authority in the Big LEO or L bands, inside or outside the United States. Those requests were dismissed with prejudice. The January outside-U.S. 2 GHz grant was not revoked. SpaceX's separate request to use 2 GHz MSS inside the United States remains pending.

Big LEO and L band (Gen2). Call sign S2992/3069. DA-26-398 defines Big LEO as 1610–1626.5 MHz and 2483.5–2500 MHz, and L band as 1525–1559 MHz and 1626.5–1660.5 MHz. DA-26-36 had deferred, not granted, the broader pending MSS request in 1429–2690 MHz, including these bands. DA-26-398 then dismissed with prejudice SpaceX's Gen2 requests to operate in both sets of bands in the United States and outside the United States, including the Gen2 upgrade files and SAT-MOD-20250611-00144 (the 1.5 GHz and 1.6/2.4 GHz modification, dismissed in its entirety). The bands are treated as unavailable for an additional MSS system, inside or outside the United States. https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf; https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf

2 GHz MSS outside the United States. DA-26-398 defines 2 GHz MSS as 2000–2020 MHz (Earth-to-space) and 2180–2200 MHz (space-to-Earth). DA-26-36 authorized Gen2, call sign S2992/3069, up to 7,500 satellites, to communicate outside the United States in 1980–2000 MHz and 2000–2020 MHz (Earth-to-space) and 2180–2200 MHz (space-to-Earth), and listed outside-U.S. MSS in 1980–2010 MHz (Earth-to-space), 2010–2025 MHz (Earth-to-space, Region 2 only), 2160–2170 MHz (space-to-Earth, Region 2 only), and 2170–2200 MHz (space-to-Earth). DA-26-398 did not dismiss that grant. It describes the January order as having authorized 2 GHz outside the United States, and notes the 1980–2010 MHz and 2010–2025 MHz outside-U.S. authority. It declines to consider additional U.S. commercial systems for international 2 GHz operations and dismisses with prejudice AST's outside-U.S. request in 2000–2020 MHz and 2180–2200 MHz (call sign S3065). https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf; https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

2 GHz MSS inside the United States. SpaceX's modification to add 2 GHz operations on Gen2 inside the United States, ICFS File No. SAT-MOD-20250514-00119, remains pending. DA-26-398 expressly does not address it and does not assign that file a separate call sign. https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

> **Judge:** Fact 7 is missing: the answer never says DA-26-36 deferred other MSS frequencies in 1429-2690 MHz outside the US. It also omits SAT-LOA-20200526-00055 and the GN Docket number, though it gives the call signs and the key dismissal files.

After DA-26-398 (April 23, 2026), read with DA-26-36 (January 9, 2026), the status is as follows. Gen2 is call sign S2992/3069. The separate direct-to-cell (D2C) application is call sign S00735.

Big LEO (1.6/2.4 GHz: 1610–1626.5 MHz and 2483.5–2500 MHz). Not authorized, inside or outside the United States. DA-26-36 had deferred these Gen2 requests. DA-26-398 dismisses them with prejudice, including outside the United States, and states that these bands are not available for an additional MSS system either inside or outside the United States. It also dismisses SpaceX's Big LEO rulemaking petition (RM-11975) and, with prejudice, the Big LEO portion of the D2C application (S00735) for operations outside the United States. https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf

L band (1.5 GHz: 1525–1559 MHz and 1626.5–1660.5 MHz). Not authorized, inside or outside the United States. DA-26-398 dismisses with prejudice the Gen2 requests to add those frequencies both inside and outside the United States, dismisses in its entirety the Gen2 1.5 GHz and 1.6/2.4 GHz modification (SAT-MOD-20250611-00144, call sign S2992/3069), and dismisses with prejudice the L-band portion of the D2C application (S00735). https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

2 GHz MSS outside the United States. Still authorized for Gen2. DA-26-36 granted authority to use 1980–2000 MHz (Earth-to-space), 2000–2020 MHz (Earth-to-space), and 2180–2200 MHz (space-to-Earth) outside the United States on up to 7,500 satellites (call sign S2992/3069). DA-26-398 cites that grant and does not revoke it. It instead dismisses other operators' requests that would constrain the U.S. 2 GHz licensee abroad (including AST's request for 2000–2020 / 2180–2200 MHz outside the United States). https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

2 GHz MSS inside the United States. SpaceX's Gen2 modification to add 2 GHz operations inside the United States, ICFS File No. SAT-MOD-20250514-00119, remains pending. DA-26-398 expressly does not address it. https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

Cited: 1. docs.fcc.gov · 2. docs.fcc.gov

K Keenable SELECT ✓ Correct 4.3m · ~$0.159 · 9 searches · 0 fetches

> **Judge:** All nine facts are stated correctly and none of the traps is asserted. The answer says the Big LEO deferral was converted into a dismissal, keeps the January 2 GHz outside-US grant in place, and says SAT-MOD-20250514-00119 remains pending.

After DA-26-398 (23 April 2026), read with DA-26-36 (9 January 2026):

Big LEO (1610–1626.5 MHz Earth-to-space and 2483.5–2500 MHz space-to-Earth), Gen2 call signs S2992 and S3069. Dismissed with prejudice, both inside and outside the United States. The same dismissal covers the Big LEO portion of SpaceX's separate D2C application (call sign S00735; ICFS File Nos. SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339). SpaceX's petition to revise the Big LEO NGSO MSS sharing plan, RM-11975, is also dismissed. DA-26-36 had not granted these bands; it deferred the broader 1429–2690 MHz MSS request except for the 2 GHz grant below. DA-26-398 says that deferral included the 1.6/2.4 GHz bands, and then dismisses the requests rather than leaving them deferred. https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

L band (1525–1559 MHz space-to-Earth and 1626.5–1660.5 MHz Earth-to-space), same Gen2 call signs S2992/S3069. Dismissed with prejudice, both inside and outside the United States, including the L-band portion of the D2C application. The SpaceX Gen2 1.5 GHz and 1.6/2.4 GHz Modification application is dismissed in its entirety. Ordering clause file numbers: SAT-LOA-20200526-00055, SAT-AMD-20210818-00105, SAT-AMD-20221215-00175, SAT-AMD-20241017-00228, SAT-MOD-20230207-00021, SAT-AMD-20240322-00061, SAT-MOD-20240111-00224, and SAT-MOD-20250611-00144. https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

2 GHz MSS outside the United States. Still authorized. DA-26-36 granted SpaceX authority to communicate outside the United States in the 2 GHz band on up to 7,500 Gen2 satellites (call signs S2992/S3069). DA-26-398 leaves that grant in place and describes it as authority to provide MSS outside the United States in the 1980–2010 MHz and 2010–2025 MHz bands. The January grant text itself lists MSS outside the U.S. as 1980–2010 MHz (Earth-to-space), 2010–2025 MHz (Earth-to-space, Region 2 only), 2160–2170 MHz (space-to-Earth, Region 2 only), and 2170–2200 MHz (space-to-Earth); the narrative authorization line is written as 1980–2000, 2000–2020, and 2180–2200 MHz. The PDF text is OCR-broken, so those two formulations should be checked against the original PDF rather than treated as a clean single list. https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

2 GHz MSS inside the United States. Not authorized. SpaceX's application to modify the Gen2 constellation to add 2 GHz operations inside the United States, ICFS File No. SAT-MOD-20250514-00119, remains pending; DA-26-398 expressly does not address it. (Separately, DA-26-36 did authorize SCS inside the United States at 1910–1915 MHz and 1990–1995 MHz on up to 7,500 Gen2 satellites; that is not the 2 GHz MSS application.) https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

Cited: 1. docs.fcc.gov · 2. docs.fcc.gov

G Grok native ◐ Partly correct Incomplete list 1.0m · $0.181 · 2 searches · 2 fetches

> **Judge:** Fact 4 is missing: the answer never says DA-26-398 dismisses the Big LEO portion of the D2C application outside the US, and it gives no D2C file numbers or GN Docket 25-340. It names call sign S00735 but calls the D2C application pending. Fact 3 is counted correct, though SAT-LOA-20200526-00055 is not named.

I'll look up both FCC orders and read them together so I can state the post-April status of SpaceX Gen2 in the Big LEO and L bands, and of 2 GHz MSS, with call signs.The April order is the MSS exclusivity decision. I'll read both full texts for the Big LEO, L-band, and 2 GHz dispositions and any call signs.After DA-26-398, SpaceX has no authority for Gen2 operations in the Big LEO or L bands, inside or outside the United States. Those requests are dismissed with prejudice. The January outside-U.S. 2 GHz MSS grant remains; the separate application for 2 GHz MSS inside the United States is still pending and was not decided.

Big LEO (1610–1626.5 MHz and 2483.5–2500 MHz). DA-26-36 did not authorize these bands. It deferred most pending MSS requests in 1429–2690 MHz, including Big LEO, on Gen2 call sign S2992/3069. DA-26-398 then dismissed with prejudice SpaceX's Gen2 requests to operate in the Big LEO bands both inside and outside the United States. That covers the Gen2 Upgrade Applications, the Gen2 D2C modification, and the Gen2 1.5 GHz and 1.6/2.4 GHz modification (SAT-MOD-20250611-00144), which was dismissed in its entirety. The Bureau also dismissed SpaceX's Big LEO sharing-plan petition (RM-11975).

L band (1525–1559 MHz and 1626.5–1660.5 MHz). Same sequence. DA-26-36 deferred these frequencies. DA-26-398 dismissed with prejudice the portions of the Gen2 applications seeking to add L-band operations both inside and outside the United States, again under call sign S2992/3069, and dismissed SAT-MOD-20250611-00144 in full.

2 GHz MSS outside the United States. Still authorized for Gen2, and not undone by the April order. DA-26-36 authorized up to 7,500 Gen2 satellites, call sign S2992/3069, to use 1980–2000 MHz and 2000–2020 MHz (Earth-to-space) and 2180–2200 MHz (space-to-Earth) outside the United States. The frequency list also includes 1980–2010 MHz (Earth-to-space), 2010–2025 MHz (Earth-to-space, Region 2 only), 2160–2170 MHz (space-to-Earth, Region 2 only), and 2170–2200 MHz (space-to-Earth). DA-26-398 cites that grant (describing it as 1980–2010 MHz and 2010–2025 MHz outside the United States) and does not dismiss it. The April order instead refuses additional U.S. commercial systems for international 2 GHz MSS and dismisses other operators' requests.

2 GHz MSS inside the United States. Not authorized, and not decided. DA-26-398 states that SpaceX's request to modify Gen2 to add 2 GHz operations inside the United States, ICFS File No. SAT-MOD-20250514-00119, remains pending and is not addressed. The orders do not assign that file a separate call sign. The related EchoStar-to-SpaceX 2 GHz assignment and SpaceX's separate D2C application (call sign S00735) are also described as pending; the April order does not grant U.S. 2 GHz MSS on either.

K Keenable router → SELECT Correct ✓ ✓ ✓ ✓ 4.3m · ~$0.159 · 9 searches · 0 fetches

> **Judge:** All nine facts are stated correctly and none of the traps is asserted. The answer says the Big LEO deferral was converted into a dismissal, keeps the January 2 GHz outside-US grant in place, and says SAT-MOD-20250514-00119 remains pending.

After DA-26-398 (23 April 2026), read with DA-26-36 (9 January 2026):

Big LEO (1610–1626.5 MHz Earth-to-space and 2483.5–2500 MHz space-to-Earth), Gen2 call signs S2992 and S3069. Dismissed with prejudice, both inside and outside the United States. The same dismissal covers the Big LEO portion of SpaceX's separate D2C application (call sign S00735; ICFS File Nos. SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339). SpaceX's petition to revise the Big LEO NGSO MSS sharing plan, RM-11975, is also dismissed. DA-26-36 had not granted these bands; it deferred the broader 1429–2690 MHz MSS request except for the 2 GHz grant below. DA-26-398 says that deferral included the 1.6/2.4 GHz bands, and then dismisses the requests rather than leaving them deferred. https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

L band (1525–1559 MHz space-to-Earth and 1626.5–1660.5 MHz Earth-to-space), same Gen2 call signs S2992/S3069. Dismissed with prejudice, both inside and outside the United States, including the L-band portion of the D2C application. The SpaceX Gen2 1.5 GHz and 1.6/2.4 GHz Modification application is dismissed in its entirety. Ordering clause file numbers: SAT-LOA-20200526-00055, SAT-AMD-20210818-00105, SAT-AMD-20221215-00175, SAT-AMD-20241017-00228, SAT-MOD-20230207-00021, SAT-AMD-20240322-00061, SAT-MOD-20240111-00224, and SAT-MOD-20250611-00144. https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

2 GHz MSS outside the United States. Still authorized. DA-26-36 granted SpaceX authority to communicate outside the United States in the 2 GHz band on up to 7,500 Gen2 satellites (call signs S2992/S3069). DA-26-398 leaves that grant in place and describes it as authority to provide MSS outside the United States in the 1980–2010 MHz and 2010–2025 MHz bands. The January grant text itself lists MSS outside the U.S. as 1980–2010 MHz (Earth-to-space), 2010–2025 MHz (Earth-to-space, Region 2 only), 2160–2170 MHz (space-to-Earth, Region 2 only), and 2170–2200 MHz (space-to-Earth); the narrative authorization line is written as 1980–2000, 2000–2020, and 2180–2200 MHz. The PDF text is OCR-broken, so those two formulations should be checked against the original PDF rather than treated as a clean single list. https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

2 GHz MSS inside the United States. Not authorized. SpaceX's application to modify the Gen2 constellation to add 2 GHz operations inside the United States, ICFS File No. SAT-MOD-20250514-00119, remains pending; DA-26-398 expressly does not address it. (Separately, DA-26-36 did authorize SCS inside the United States at 1910–1915 MHz and 1990–1995 MHz on up to 7,500 Gen2 satellites; that is not the 2 GHz MSS application.) https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

PROMPT 11 · LIST-BUILDING · FACTS AS OF 2026-10-08

Starlink asked Ofcom for UK gateway authority in Ka band at two urban sites, and earlier for E-band at three existing sites. For each, state the sites, the frequencies and direction if the decision gives them, whether the authority is a decision to grant, a licence already issued, or a temporary licence, and the end date if there is one. Note anything that still has to happen before a Ka licence is in force, and whether the E-band decision promises access after it expires.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Two Ofcom decisions. They are not one permanent nationwide gateway licence.

Ka band. Statement on application STRLNK-GAT-3. Ofcom decided to grant two NGSO gateway licences, Mulberry Wharf (London) and Harlow (Essex), for 27.5-28.0525 GHz, 28.4445-29.0605 GHz, and 29.5-30 GHz. That is not a continuous 27.5-30 GHz block. The gaps are not granted. The statement says Ofcom will issue the licences subject to payment of the licence fee. A decision to grant is not the same as a licence already in force. These would be the first NGSO gateways in an urban area of the UK. The only consultation response was from Amazon Leo, and it did not object. The gateways connect to the USASAT NGSO-3X filing. Starlink's UK NGSO network licence, which authorises user terminals, was issued on 16 November 2020 and is a different licence. Consultation opened 13 March 2026 and closed 17 April 2026. The statement PDF is dated 20 July 2026.

E band. Statement of 28 October 2025. Temporary fixed-term licences at Morn Hill (Hampshire), Wherstead (Suffolk), and Woodwalton (Cambridgeshire), 71-76 GHz space-to-Earth and 81-86 GHz Earth-to-space. Licences first issued 29 October 2025, numbers 1398959 (Morn Hill), 1398998 (Wherstead), and 1399007 (Woodwalton), tied to network licence 1239247. They expire 31 December 2028. E band is not available in the UK for long-term gateway use. The decision does not promise that Starlink can keep these sites, or these terms, after that date. Ofcom will consult on a long-term framework after WRC-27. Conditions protect the fixed service and EESS (passive) in the adjacent 86-92 GHz band. Ofcom agreed the three grants with the Ministry of Defence because parts of 71-74 GHz and 81-84 GHz are defence allocations.

Wrong: E-band was granted with no end date. Wrong: the Ka licences were already issued with no fee left to pay. Wrong: both decisions cover the same three sites.

Exa · Partly correct · Incomplete list · 1.4m · $0.262 · 8 searches · 4 fetches

Judge: The core and required facts are covered except fact 5: the answer lists the three Ka ranges but never says they are not one continuous 27.5-30 GHz block or that the gaps are not granted. Context facts 8-12, 19, 22 and 23 are also missing.

Ofcom has decided to grant the Ka-band gateways, but those licences were not yet in force on the published record. The E-band authorisations are temporary licences that have been issued, and they do not promise access after they expire.

Ka band — decision to grant, not yet shown as issued

Ofcom's statement of 20 July 2026 is a **decision to grant** two NGSO gateway licences to Starlink Internet Services Limited, not a record that the licences have already been issued. The sites are **Mulberry Wharf, London** and **Harlow, Essex** (application STRLNK-GAT-3). The frequencies in the decision are **27.5–28.0525 GHz, 28.4445–29.0605 GHz and 29.5–30 GHz**. The decision does not state direction or an end date. (statement; page)

Before a licence is in force, Ofcom says it will issue the licences **subject to payment of the licence fee**, and then publish copies under "Existing licences". Ofcom's NGSO licensing page, last updated 31 July 2026, still does not list Mulberry Wharf or Harlow among existing gateway licences, so issue cannot be confirmed from that page. (NGSO licensing page)

Those ranges match Ofcom's UK-wide **uplink** Ka-band ranges for NGSO gateways in its applicant guidance. That direction is in the guidance, not in this decision. (NGSO guidance)

E band — temporary licences, issued, ending 31 December 2028

Ofcom decided on 28 October 2025 to grant **temporary fixed-term** licences for E-band NGSO gateways at three existing sites: **Morn Hill, Hampshire; Wherstead, Suffolk; and Woodwalton, Cambridgeshire**. The decision frequencies are **71–76 GHz and 81–86 GHz**. The licences **expire on 31 December 2028**. (statement; decision page)

The licences have since been issued, on **29 October 2025**, to Starlink Internet Services Limited: Morn Hill 1398959, Wherstead 1398998, Woodwalton 1399007. The decision named the applicant as Starlink Services, LLC. (licence list)

The issued Wherstead schedule (the decision's technical conditions use the same split) sets direction as **receive 71–76 GHz** (centres 71.625, 72.875, 74.125 and 75.375 GHz, each 1,250 MHz) and **transmit/uplink 81–86 GHz** (centres 81.625, 82.875, 84.125 and 85.375 GHz, each 1,250 MHz). (Wherstead licence)

The decision does **not** promise access after expiry. It says the grant does not prejudge the later long-term framework (to be consulted on after WRC-27) and "does not provide any assurance" that Starlink will be able to use this spectrum at these sites, or on these terms, after the temporary licences end. (statement, paras 1.8 and 6.14)

Judge: The answer lists the three Ka ranges but never says they are not a continuous 27.5-30 GHz block (fact 5). It also omits several context facts: the first urban NGSO gateways, Amazon Leo as sole respondent, the USASAT NGSO-3X filing, the 2020 network licence, the consultation dates, E band not available long-term, the adjacent-band protections, and the

> MoD agreement.

Ka band (two new urban sites). Ofcom's 20 July 2026 statement is a **decision to grant** two ordinary NGSO gateway licences, not a record that the licences have already been issued, and not a temporary licence. The sites are **Mulberry Wharf, London** and **Harlow, Essex** (application STRLNK-GAT-3; applicant Starlink Internet Services Limited). The frequencies in the decision are **27.5–28.0525 GHz, 28.4445–29.0605 GHz and 29.5–30 GHz.** The decision does **not** state direction. It gives **no end date.**

Before a Ka licence is in force, Ofcom says it will issue the licences **only after the licence fee is paid**, and will then publish them under "Existing licences" on its NGSO licensing page. That page, last updated 31 July 2026, still does not list Harlow or Mulberry Wharf among existing gateway licences.

Sources: decision page; statement PDF (overview and §§2.5–2.6, 6.3–6.4); NGSO licensing page.

E band (three existing sites). Ofcom's 28 October 2025 statement is a **decision to grant temporary fixed-term licences.** The licences were then **issued on 29 October 2025.** Sites: **Morn Hill, Hampshire** (licence 1398959), **Wherstead, Suffolk** (1398998) and **Woodwalton, Cambridgeshire** (1399007). Frequencies and direction in the statement: **71–76 GHz (space-to-Earth)** and **81–86 GHz (Earth-to-space).** End date: **31 December 2028.**

The decision does **not** promise access after expiry. It says the grant does not prejudge a later long-term framework (to be consulted on after WRC-27) and "does not provide any assurance" that Starlink can use this spectrum at these sites, or on these terms, after the temporary licences end.

Sources: decision page; statement PDF (overview, §§1.7–1.8, 2.3, 6.1–6.3, 6.13–6.14); temporary E-band licensing page (issued-licence table).

Keenable search — Partly correct — Incomplete list — 1.3m · ~$0.234 · 18 searches · 5 fetches

> **Judge:** All core and required facts are correct. Context facts 8-12, 19 and 21-23 are missing, and the Ka statement date is given as 16 July 2026 rather than 20 July 2026, which contradicts fact 13.

The Ka-band request is a decision to grant, not yet a licence in force. The E-band request ended in temporary licences that have already been issued and that expressly do not promise access after they expire.

Ka band — decision to grant (licences not yet issued)
Sites: Mulberry Wharf, London, and Harlow, Essex.
Frequencies in the decision: 27.5–28.0525 GHz, 28.4445–29.0605 GHz and 29.5–30 GHz. The statement does not state direction for those ranges.
Status: Ofcom has decided to grant two NGSO gateway licences. It will issue them only after Starlink pays the licence fee; copies will then appear under "Existing licences" on Ofcom's NGSO licensing page. No end date is given.
Source: Ofcom statement PDF (page dated 16 July 2026 in search metadata; the consultation page is here).

The consultation had described slightly different ranges (27.5–27.9405, 28.4545–28.9485 and 29.5–30 GHz). The statement figures above are the ones in the grant decision.

E band — temporary licences already issued
Sites (existing gateways): Morn Hill, Hampshire; Wherstead, Suffolk; Woodwalton, Cambridgeshire.
Frequencies: 71–76 GHz and 81–86 GHz. Ofcom's consultation specified 71–76 GHz space-to-Earth and 81–86 GHz Earth-to-space; the grant decision summaries repeat the bands but not always the direction.
Status: temporary fixed-term licences, first issued 29 October 2025 (licence numbers 1398959, 1398998 and 1399007), following the 28 October 2025 decision. End date: 31 December 2028.
The decision does not promise later access. Ofcom states that granting the temporary authorisations "does not prejudge" a future consultation on longer-term E-band gateway access and "does not provide any assurance that Starlink will be able to access this spectrum at these sites, or on these terms, beyond the end date of the temporary licences."
Sources: Ofcom temporary E-band licensing page; consultation page; ISPreview quoting the statement. The statement PDF is linked from the licensing page.

Keenable SELECT — Wrong — Outdated information — 5.6m · ~$0.421 · 16 searches · 11 fetches

> **Judge:** The answer treated the Ka application as still at consultation stage, citing only the March 2026 consultation, and missed the July 2026 statement deciding to grant two licences subject to the fee. It gave the consultation-stage Ka frequencies rather than the granted 27.5-28.0525, 28.4445-29.0605 and 29.5-30 GHz ranges. It never says the fee must be paid before the licences take effect. It also gave no E-band direction, missing space-to-Earth 71-76 GHz and Earth-to-space 81-86 GHz.

The Ka-band request is still only a consultation, not a grant. The E-band request ended in licences that have already been issued.

Ka band — consultation, not yet a licence. Ofcom opened a consultation on Starlink Internet Services Limited's application for two new NGSO gateway earth station licences. The sites are Mulberry Wharf, Fisher's Way, Lower Belvedere, London Borough of Bexley (Thamesmead), and the former Harlow Car Boot Sale site, Horsecroft Road, Harlow, Essex (The Pinnacles). Ofcom describes these as the first NGSO gateways proposed in an urban area. The frequencies applied for are Ka band 27.5–27.9405 GHz, 28.4545–28.9485 GHz and 29.5–30 GHz. Neither the consultation summary quoted by ISPreview nor the news reports state uplink or downlink. Ofcom's preliminary view is that it will grant the licences, but it says it will consider responses before a final decision. Comments were due by 17 April 2026. No licence has been issued, and there is no end date because there is no authorisation yet. Before a Ka licence is in force, Ofcom still has to reach and publish that final decision and then issue the licences. Reporting of the filing also says a granted NGSO gateway licence would require the station to become operational within 12 months. Sources: ISPreview, 13 March 2026, quoting the Ofcom consultation at ofcom.org.uk; Data Center Dynamics; Your Harlow.

E band — temporary licences already issued. On 28 October 2025 Ofcom decided to grant temporary fixed-term licences, and the licences were first issued on 29 October 2025 to Starlink Internet Services Limited: 1398959 (Morn Hill, Hampshire), 1398998 (Wherstead, Suffolk) and 1399007 (Woodwalton, Cambridgeshire). The frequencies are 71–76 GHz and 81–86 GHz. The decision and the licence-list page do not state direction. All three end on 31 December 2028. The decision does not promise access after expiry. Ofcom says granting the temporary authorisations "does not prejudge" the later consultation on longer-term E-band gateway access and "does not provide any assurance that Starlink will be able to access this spectrum at these sites, or on these terms, beyond the end date of the temporary licences." Ofcom's own page says the fixed end date is so it can consult on long-term authorisation after WRC-27. Sources: Ofcom, Apply for a Temporary E Band Gateway Licence; SatNews, quoting the 28 October 2025 statement; ISPreview, quoting the statement PDF.

I could not open the Ofcom consultation PDF or the E-band statement PDF directly, so the "no direction stated" finding is from the pages and quotations above, not

a line-by-line read of those PDFs. One secondary report puts the end of existing E-band fixed-service licences at 31 December 2029; Ofcom's licence page and the other reports put Starlink's temporary licences at 31 December 2028.

Cited: 1. ispreview.co.uk · 2. ofcom.org.uk · 3. datacenterdynamics.com · 4. yourharlow.com · 5. ofcom.org.uk · 6. satnews.com · 7. ispreview.co.uk

Grok native · Partly correct · Incomplete list · 1.0m · $0.440 · 8 searches · 4 fetches

> **Judge:** The answer lists the three Ka ranges but never says the gaps between them are not granted (fact 5). Several context facts are also absent: first urban NGSO gateways, Amazon Leo as the sole respondent, the USASAT filing, the separate 2020 network licence, the consultation dates, E band being unavailable for long-term use, the adjacent-band protections, and the MoD agreement.

Ka band — decision to grant, not yet a licence in force. Ofcom's 20 July 2026 statement decides to grant two NGSO gateway licences to Starlink Internet Services Limited at **Mulberry Wharf (London)** and **Harlow (Essex)**, in **27.5–28.0525 GHz, 28.4445–29.0605 GHz and 29.5–30 GHz**. The decision does not label direction. No end date is set; these are not temporary licences. Before a licence is in force, Ofcom must still **issue the licences, subject to payment of the licence fee**, and then publish copies on its NGSO licensing page. The existing-licences list, last updated 31 July 2026, does not yet include these two sites, so issuance after that date is not verified here.
https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-3-4-weeks/consultation-starlink-application-for-two-non-geostationary-gateway-earth-station-licences/statement-starlink-application-for-two-non-geostationary-gateway-earth-station-licences.pdf?v=422694
https://www.ofcom.org.uk/spectrum/space-and-satellites/non-geo-fss

E band — temporary licences, already issued. Ofcom's 28 October 2025 statement grants temporary fixed-term licences at three existing sites: **Morn Hill (Hampshire), Wherstead (Suffolk) and Woodwalton (Cambridgeshire)**. The statement records the request as **71–76 GHz (space to Earth)** and **81–86 GHz (Earth to space)**. The licences expire on **31 December 2028**. They were issued on **29 October 2025** (numbers 1398959, 1398998 and 1399007) to Starlink Internet Services Limited. The decision does **not** promise access after expiry: it does not prejudge a later long-term framework (to be consulted on after WRC-27) and gives **no assurance** of access at these sites, or on these terms, beyond that date.
https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-3-4-weeks/consultation-temporary-ngso-gateway-access-to-e-band/statement-temporary-ngso-gateway-access-to-e-band.pdf?v=406905

E band — temporary licences already issued
Sites (existing gateways): Morn Hill, Hampshire; Wherstead, Suffolk; Woodwalton, Cambridgeshire.
Frequencies: 71–76 GHz and 81–86 GHz. Ofcom's consultation specified 71–76 GHz space-to-Earth and 81–86 GHz Earth-to-space; the grant decision summaries repeat the bands but not always the direction.
Status: temporary fixed-term licences, first issued 29 October 2025 (licence numbers 1398959, 1398998 and 1399007), following the 28 October 2025 decision. End date: 31 December 2028.
The decision does not promise later access. Ofcom states that granting the temporary authorisations "does not prejudge" a future consultation on longer-term E-band gateway access and "does not provide any assurance that Starlink will be able to access this spectrum at these sites, or on these terms, beyond the end date of the temporary licences."
Sources: Ofcom temporary E-band licensing page; consultation page; ISPreview quoting the statement. The statement PDF is linked from the licensing page.

PROMPT 12 · REGULATION · FACTS AS OF 2026-10-08

SpaceX Services received a special temporary authority for a quad-band gateway in Eloy, Arizona, file SES-STA-20260511-01297. As of 8 October 2026, is that STA still in force? What did it authorize (antennas, call sign, term), on what interference basis, and what happened to Iridium's objection?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grant of SES-STA-20260511-01297. Licensee SpaceX Services, Inc. Call sign E260362. A 60-day STA, not a license. Forty technically identical 1.99 m antennas. Location 32° 52' 23.8" N, 111° 30' 54.0" W, Eloy, Arizona. Communicates with Starlink Gen1 (S2983/3018) and Gen2 (S2992/3069).

Action date 9 July 2026. Term 10 July 2026 through 7 September 2026. On 8 October 2026 that term is over. This grant is not authority after 7 September 2026. Do not invent a renewal; this reference does not establish one.

Operations are unprotected and non-interference basis. Iridium's petition is denied only as to these STA operations. The grant says no determination is made on any associated license application. An answer that says Iridium's objection to a full license was denied is wrong.

The grant also waives the U.S. Table, for this STA, for FSS in 29.1-29.5 GHz that is not limited to MSS feeder links; for NGSO FSS uplink in 51.4-52.4 GHz; and for NGSO uplinks in 92.0-94.0, 94.1-95.0, 95.0-100.0, 102.0-109.5, and 111.8-114.25 GHz. Those waivers end with the STA.

Exa ✓ Correct ✓ ✓ ✓ ✓ — 37.1s · $0.158 · 8 searches · 2 fetches

Judge: Only fact 18 (the waivers end with the STA) is not stated explicitly. The answer is otherwise accurate and does not assert either trap.

No. As of 8 October 2026, SES-STA-20260511-01297 is not in force. It was granted 9 July 2026 for a fixed term of **10 July 2026 through 7 September 2026** and is recorded as closed, with expiration **7 September 2026**. No granted extension of this file or of call sign E260362 at Eloy turned up in available records.

What it authorized. SpaceX Services, Inc. received a **60-day STA**, call sign **E260362**, to operate a quad-band gateway at **32° 52' 23.8" N, 111° 30' 54.0" W, Eloy, Arizona**, with **40 technically identical 1.99 m antennas**, communicating with Starlink NGSO Gen1 (S2983/3018) and Gen2 (S2992/3069). It was tied to pending license application **SES-LIC-20260429-01219**. Authorized bands were:

- Earth-to-space: 27.5–30.0, 47.2–50.2, 50.4–52.4, 81.0–86.0, 92.0–94.0, 94.1–100.0, 102.0–109.5, and 111.8–114.25 GHz
- Space-to-Earth: 17.3–20.2, 37.5–42.0, and 71.0–76.0 GHz

51.4–52.4 GHz uplink was not allowed until NASA and NOAA coordination was finished. The grant also waived U.S. Table § 2.106(a) for specified uses of 29.1–29.5 GHz, 51.4–52.4 GHz, and several W-band uplink segments, and imposed EESS unwanted-emission limits and logging conditions.

Interference basis. All operations were **unprotected and non-interference basis (NIB)**: SpaceX Services must not cause harmful interference and must not claim protection from any other lawfully operating station; it must use the minimum power needed; and it must stop immediately and notify the Commission in writing if harmful or unacceptable interference is reported.

Iridium. As to **these STA operations only**, the Space Bureau **denied Iridium's petition.** The stated reason was that NIB STA operations cannot rise to unacceptable interference (any such interference would violate the NIB condition) and are temporary by design, citing a SpaceX ex parte of 11 June 2026. **No determination was made on the petition as it relates to the associated license application.**

Judge: The answer asserts a later renewal (SES-STA-20260815-02301) that is not in the cited sources or the DATA window, which contradicts the fact that no renewal is established and triggers the renewal trap. It also does not state the 51.4-52.4 GHz and 92-114.25 GHz NGSO waivers or that the waivers end with the STA.

No. File SES-STA-20260511-01297 is not still in force as of 8 October 2026. Its term ended 7 September 2026. The same Eloy gateway remains authorized under a later 60-day renewal, SES-STA-20260815-02301, from 23 September 2026 through 21 November 2026.

What SES-STA-20260511-01297 authorized. On 9 July 2026 the Space Bureau granted SpaceX Services, Inc. a 60-day STA, call sign E260362, from 10 July 2026 through 7 September 2026 (grant attachment updated 14 July 2026; actions-taken notice SES-02880, 15 July 2026). It covered a quad-band gateway at 32° 52' 23.8" N, 111° 30' 54.0" W in Eloy, Arizona, with 40 technically identical 1.99 m antennas, communicating with Starlink NGSO Gen1 (S2983/3018) and Gen2 (S2992/3069).

Earth-to-space: 27.5–30.0, 47.2–50.2, 50.4–52.4, 81.0–86.0, 92.0–94.0, 94.1–100.0, 102.0–109.5, and 111.8–114.25 GHz. Space-to-Earth: 17.3–20.2, 37.5–42.0, and 71.0–76.0 GHz. The underlying license, SES-LIC-20260429-01219, was still pending review on the ICFS record.

Sources: ICFS summary, grant attachment, SES-02880, license status.

Interference basis. Operations had to stay within requested and coordinated power and use the minimum power needed. All operations were on an unprotected, non-interference basis: SpaceX must not cause harmful interference and may not claim protection from any other lawfully operating station. If harmful or unacceptable interference occurred, it had to stop immediately and notify the Commission in writing. The Bureau also imposed EESS (passive) unwanted-emission limits, barred 51.4–52.4 GHz uplinks until NASA/NOAA coordination, and required data logs for certain V- and W-band transmissions. It granted U.S. Table waivers, including for FSS use of 29.1–29.5 GHz not limited to MSS feeder links.

Iridium. On 5 June 2026 Iridium Constellation LLC petitioned to dismiss, deny, or defer the parts of both the STA and the license seeking 29.1–29.3 GHz and 19.4–19.6 GHz, arguing SpaceX had neither coordinated nor demonstrated no unacceptable interference under 47 C.F.R. § 25.203(k). It also asked that any non-conforming FSS waiver be conditioned on Iridium's petition for reconsideration of the Gen2 space-station waiver. Condition 4 of the STA grant denied that petition only as to the STA operations, on the ground that non-interference-basis, temporary operations cannot rise to unacceptable interference. The Bureau made no

determination on the associated license application. Iridium and SpaceX continued exchanging letters on the docket through at least 28 September 2026.

Source: Iridium petition.

Successor authority. SES-STA-20260815-02301, filed 21 August 2026 and granted 22 September 2026, extends the same Eloy operations through 21 November 2026 on the same non-interference basis and again denies Iridium's petition only as to the STA. Condition 17 states that operations between expiry of the prior STA and the start of this one were authorized as continuing operations under 47 C.F.R. § 1.62. Sources: renewal ICFS page, renewal grant.

Keenable search — Wrong — Incomplete list — 3.7m · ~$0.730 · 46 searches · 7 fetches

> **Judge:** The answer says Iridium's petition was not found denied, so the partial denial limited to STA operations (13) and the no-determination on the license application (14) are missing. The U.S. Table waivers (15-18) are not stated. It also claims a renewal/extension (SES-STA-20260815-02301) in force on 8 Oct, which conflicts with the no-renewal fact (3) and trips trap 2; the extension's grant details are not shown in the DATA.

No. SES-STA-20260511-01297 itself is not still in force as of 8 October 2026. It expired 7 September 2026. The same operations continue under a later 60-day extension, SES-STA-20260815-02301, through 21 November 2026.

What the original STA authorized. The Space Bureau granted it on 9 July 2026, effective 10 July through 7 September 2026, under call sign E260362. It covered a quad-band gateway in Eloy, Arizona (32°52′23.8″ N, 111°30′54.0″ W), with 40 technically identical 1.99 m antennas, communicating with Starlink Gen1 (S2983/3018) and Gen2 (S2992/3069).

Frequencies:
- Earth-to-space: 27.5–30.0, 47.2–50.2, 50.4–52.4, 81.0–86.0, 92.0–94.0, 94.1–100.0, 102.0–109.5, and 111.8–114.25 GHz
- Space-to-Earth: 17.3–20.2, 37.5–42.0, and 71.0–76.0 GHz

Sources: FCC Report No. SES-02880 (DOC-423076A1); ICFS filing summary.

Interference basis. SpaceX requested, and the grant was for, operations on a non-harmful interference basis, with protection of terrestrial and space systems in shared bands as described in the underlying license application SES-LIC-20260429-01219. The original STA request did not itself seek rule waivers. The extension request sought, to the extent necessary, waivers of 47 C.F.R. §§ 2.106, 25.115(f)(1), and 25.146(a)(2).

Iridium. Iridium petitioned to dismiss, deny, or defer the portions of this STA and the underlying license that would use its 19.4–19.6 GHz and 29.1–29.3 GHz feeder-link bands, arguing that SpaceX had neither completed prior coordination nor made an adequate interference showing under 47 C.F.R. § 25.203(k). The Bureau nonetheless granted the STA. I have not found a public order that expressly dismisses or denies that petition; SpaceX's later filings cite grant Condition 4 on this and related 9 July 2026 STAs, reissued 14–15 July 2026. The underlying license remained pending, and Iridium was still pressing the same objection on later gateway applications as of August 2026.

Current authority. On 22 September 2026 the Bureau granted SES-STA-20260815-02301, an additional 60-day STA for the same Eloy station, call sign, antennas, and bands, from 23 September through 21 November 2026. So the original file is expired, but equivalent temporary authority is in force on 8 October 2026. Source: FCC Report No. SES-02899 (DOC-425290A1).

Keenable SELECT — Partly correct — Incomplete list — 15.8m · ~$0.429 · 27 searches · 3 fetches

> **Judge:** The answer correctly says 01297 expired on 7 September 2026 and gives the call sign, antennas and term. It misses the unprotected non-interference basis (it hedges), Iridium's petition being denied as to the STA only, the no-determination-on-license point, the coordinates, and all the U.S. Table waivers. It also asserts a separate extension STA (02301), which conflicts with the reference not establishing any renewal.

No. SES-STA-20260511-01297 itself was not still in force on 8 October 2026. It expired 7 September 2026. The same station was then covered by a separate 60-day extension, SES-STA-20260815-02301, through 21 November 2026.

What 01297 authorized. Space Bureau granted it on 9 July 2026 under delegated authority, effective 10 July through 7 September 2026 (60 days), call sign E260362, for SpaceX Services' quad-band gateway in Eloy, Arizona. The grant covered 40 technically identical 1.99 m antennas communicating with Starlink Gen1 (S2983/3018) and Gen2 (S2992/3069) in:

- Earth-to-space: 27.5–30.0, 47.2–50.2, 50.4–52.4, 81.0–86.0, 92.0–94.0, 94.1–100.0, 102.0–109.5, and 111.8–114.25 GHz
- Space-to-Earth: 17.3–20.2, 37.5–42.0, and 71.0–76.0 GHz

Source: Report No. SES-02880, DOC-423076A1 (15 July 2026). The IBFS record shows status Closed, last action Grant of Authority, expiration 7 September 2026: fcc.report filing page. An updated grant stamp was posted 14 July 2026; I could not retrieve that PDF.

Interference basis. SpaceX requested operations "on a non-harmful interference basis," with protection of terrestrial and space systems "as set forth in the underlying earth station application" (SES-LIC-20260429-01219). That is the applicant's representation on the STA form, not a quoted grant-stamp condition. The grant PDF itself was not retrievable. A SpaceX letter says these July grants, including 01297, carried a Condition 4 tied to coordination of non-feeder-link FSS operations with Iridium, but that letter does not quote the condition. Scribd copy of the 27 July 2026 letter.

Iridium. Iridium filed serial petitions to dismiss, deny, or defer against these gateway applications and STAs, including the Eloy pair. I did not find an FCC order that dismisses or denies Iridium's objection specifically on 01297. SpaceX's 27 July 2026 letter says the Commission had by then rejected Iridium petitions 18 times and that remaining petitions were still pending; that is SpaceX's characterization, not a Commission disposition. The STA was granted anyway on 9 July 2026.

What was in force on 8 October. On 22 September 2026 the Bureau granted SES-STA-20260815-02301, an additional 60-day STA for the same call sign, site, antennas, and bands, from 23 September through 21 November 2026. DOC-425290A1. That extension, not 01297, was the live authority on 8 October 2026.

Cited: 1. docs.fcc.gov · 2. fcc.report · 3. scribd.com · 4. docs.fcc.gov

Grok native ✗ Wrong × × ✓ ✓ Claim not in sources 54.8s · $0.241 · 12 searches · 2 fetches

> **Judge:** The answer says the grant ran through 9 September 2026 and expired then, which contradicts the 7 September end of authority (fact 2), although it later gives the correct 7 September term end. It does not specifically state the 51.4-52.4 GHz and 92-114.25 GHz waivers, or that the waivers end with the STA (facts 16-18).

No. As of 8 October 2026, SES-STA-20260511-01297 is not in force. The Space Bureau grant ran from 10 July 2026 through 9 September 2026 and expired on that end date. The filing is closed; last action was a grant of authority on 9 July 2026. I did not find a later extension of this file that would still be running on 8 October 2026. The related license application, SES-LIC-20260429-01219, is not archived on the same source, so this does not address whether a regular license was later granted.

What it authorized. SpaceX Services, Inc. received a 60-day STA, call sign E260362, for a quad-band gateway at 32° 52' 23.8" N, 111° 30' 54.0" W, Eloy, Arizona, using **40 technically identical 1.99 m antennas** to communicate with Starlink NGSO Gen1 (S2983/3018) and Gen2 (S2992/3069). It was filed 11 May 2026 as an initial 60-day STA tied to SES-LIC-20260429-01219. Action date 9 July 2026; term **10 July 2026–7 September 2026.**

Uplink bands: 27.5–30.0, 47.2–50.2, 50.4–52.4, 81.0–86.0, 92.0–94.0, 94.1–100.0, 102.0–109.5, and 111.8–114.25 GHz. Downlink: 17.3–20.2, 37.5–42.0, and 71.0–76.0 GHz. Operations in 51.4–52.4 GHz (Earth-to-space) were not allowed until NASA and NOAA coordination was finished. The grant also waived U.S. Table § 2.106(a) for certain FSS/NGSO uplinks, including 29.1–29.5 GHz not limited to MSS feeder links.

Interference basis. The grant required operations on an **unprotected, non-interference basis (NIB)**: SpaceX must not cause harmful interference to, and must not claim protection from, any other lawfully operating station; must use minimum power; and must stop immediately if notified of harmful or unacceptable interference. The application itself had asked for a "non-harmful interference basis."

Iridium. As to these STA operations only, **Iridium's petition was denied.** The Bureau's reason was that NIB STA operations cannot rise to unacceptable interference (citing a SpaceX ex parte of 11 June 2026) and are temporary, so SpaceX had shown the STA would not cause unacceptable interference. **No determination was made on the petition as it relates to the associated license application.**

Sources: FCC.report filing record; grant attachment. The filing-page snapshot is dated 31 July 2026; the term dates above are from the grant text itself.

PROMPT 14 · REGULATION · FACTS AS OF 2026-10-08

For a licensed orbital launch, what does 14 CFR Part 440 actually require on insurance amounts, how long the cover has to last, and whether the licensee can cut the limits by giving the FAA 30 days' notice? Separate the statutory ceilings from the amount the FAA sets for a given launch.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

14 CFR 440.9 and 440.11, and the FAA financial-responsibility page. The ceilings are not minimums, and notice is not approval.

Third-party liability insurance is the amount the FAA sets from maximum probable loss for that launch, and it will not exceed the lesser of $500 million or the maximum liability insurance available on the world market at a reasonable cost. Government-property insurance at a Federal range is likewise the MPL amount, and it will not exceed the lesser of $100 million or the maximum available at a reasonable cost. An answer that says every launch must carry $500 million and $100 million is wrong. MPL is not the maximum possible loss. The FAA page says permits do not get the same government coverage above MPL that licenses do.

For an orbital launch, cover under 440.11 attaches at the start and lasts until the later of 30 days after payload separation (or attempted separation, if separation fails) or 30 days from ignition. It does not run until disposal or until the mission ends.

440.11: the licensee cannot replace, cancel, or reduce the limits, and the cover cannot expire early, before the time in the license order, unless the FAA is notified at least 30 days ahead and expressly approves the change. Notice without approval is not enough.

440.9(b)(4) names space flight participants as additional insureds and says that paragraph ceases to be effective on 30 September 2025 unless public law modifies the limitation in 51 USC 50914. This reference does not establish a later statute. An answer that says participants must still be named, and never mentions that sunset, is wrong.

Sources: https://www.law.cornell.edu/cfr/text/14/440.9 and https://www.govinfo.gov/content/pkg/CFR-2025-title14-vol4/pdf/CFR-2025-title14-vol4-part440.pdf and https://www.faa.gov/space/licenses/financial_responsibility

Exa · Correct · 43.5s · $0.091 · 4 searches · 3 fetches

Judge: All core and required facts are correct. Four context facts are missing: the permit versus license coverage difference above MPL (7), space flight participants as additional insureds under 440.9(b)(4) (13), the 30 September 2025 sunset on that paragraph (14), and the absence of a later extending statute (15).

No. A 30-day notice does not let the licensee cut the limits. Under 14 CFR 440.11(b), required financial responsibility may not be replaced, canceled, changed, withdrawn, or otherwise modified to reduce the limits or the extent of coverage, and it may not expire by its own terms before the time in the license or permit order, unless the FAA is notified at least 30 days in advance **and expressly approves** the change. Notice alone is not enough.

The separate 30-day rule in 14 CFR 440.15 is only about **submitting evidence** of insurance (generally at least 30 days before the licensed launch). It is not a right to reduce coverage.

What the FAA sets for a given launch
Part 440 does not impose one fixed premium or one fixed dollar amount on every orbital launch. The amount is launch-specific:

- Under 14 CFR 440.7, the FAA determines **maximum probable loss (MPL)** for third-party bodily injury and property damage, and separately for covered U.S. Government property damage. That MPL is the basis for the financial-responsibility figures in the license or permit order. The FAA must issue the determination no later than 90 days after a complete request, and it may amend it before the licensed activity is complete.
- Under 14 CFR 440.9(a), (c), and (e), the licensee must carry insurance (or another form of financial responsibility that meets the same terms, 440.9(f)) **in the amount the FAA prescribes** for that launch. There are two amounts:
  1. **Third-party liability** for covered bodily injury or property damage (440.9(b)–(c)).
  2. **U.S. Government property** owned, leased, occupied, or in the care, custody, or control of the United States, its agencies, and involved contractors and subcontractors **at a Federal range facility** (440.9(d)–(e)).

Those prescribed amounts can be, and often are, below the statutory ceilings.

Statutory ceilings (caps, not the required amount)
51 U.S.C. 50914(a) is the source of the caps. The Secretary of Transportation sets the MPL-based amounts after consulting NASA, the Air Force, and other agencies, but for the total claims from one launch or reentry the licensee is **not required** to insure or otherwise demonstrate financial responsibility of more than:

- **$500 million** for third-party death, bodily injury, or property damage, or
- **$100 million** for damage or loss to Government property,

or, if less, the maximum liability insurance available on the world market at reasonable cost.

14 CFR 440.9(c) and (e) repeat those caps: the FAA-prescribed amount is the MPL, but it will not exceed the **lesser of** $500 million (third party) or $100 million (Government range property), and the maximum available on the world market at a reasonable cost as determined by the FAA. Current Part 440 and 51 U.S.C. 50914 still state those dollar ceilings. The statute also requires an annual review and a report to Congress with proposed adjustments; a proposed adjustment takes effect 30 days after that report is submitted. I did not find a later enacted increase that has replaced the $500 million / $100 million figures in Part 440.

Do not confuse those licensee caps with the separate government-payment tier. Above the required financial responsibility, 51 U.S.C. 50915 and 14 CFR 440.19 address federal payment of successful covered third-party claims, subject to appropriation, up to $1.5 billion adjusted for inflation. That is not an insurance amount the licensee must buy.

How long orbital-launch cover must last
Under 14 CFR 440.11(a), insurance or other required financial responsibility **attaches when the licensed launch starts** and stays in full force:

1. until completion of licensed launch activities at the launch or reentry site, **and**

2. for an orbital launch, until the later of
- 30 days after payload separation (or attempted separation, if separation is anomalous), or
- 30 days after ignition of the launch vehicle.

P Parallel Correct 50.8s · $0.066 · 4 searches · 3 fetches

> **Judge:** All core and required facts are correct. The context facts are missing: the permit-versus-license government coverage difference (7), the 440.9(b)(4) space flight participant additional-insured provision (13), its 30 September 2025 sunset (14), and the absence of a later extending statute (15).

For a licensed orbital launch, 14 CFR Part 440 does not set one fixed premium or limit. The FAA sets a launch-specific amount up to statutory ceilings, coverage must run through a defined post-ignition window, and a 30-day notice alone does not let the licensee cut the limits.

What the FAA sets for a given launch. Under 14 CFR § 440.9(c) and (e), the FAA prescribes, for each licensee and each particular launch, the insurance (or other financial responsibility) needed to cover maximum probable loss (MPL). That is a launch-specific figure, not the statutory cap. It is a license condition. In lieu of a policy, the licensee may demonstrate financial responsibility another way that meets Part 440. See https://www.ecfr.gov/current/title-14/section-440.9.

Two separate MPL amounts apply:

- Third-party bodily injury and property damage, including U.S. claims for property other than the Government property covered below (§ 440.9(b)–(c)).
- Damage or loss to U.S. Government property at a Federal range facility (§ 440.9(d)–(e)).

Statutory ceilings (caps, not the required amount). The required amount may not exceed the lesser of those ceilings or the maximum liability insurance available on the world market at a reasonable cost, as determined by the FAA (§ 440.9(c), (e)). The same ceilings are in 51 U.S.C. § 50914(a)(3): for total claims related to one launch, not more than $500,000,000 for third-party claims, or $100,000,000 for Government-property claims, or the lesser world-market amount. See https://www.law.cornell.edu/uscode/text/51/50914 and https://www.ecfr.gov/current/title-14/section-440.9.

Those $500 million and $100 million figures are ceilings on what the licensee can be required to obtain. They are not inflation-adjusted in § 50914 or § 440.9, and they are not the amount the FAA will set unless MPL (and market availability) reaches them. Do not confuse them with the separate Government payment ceiling in 51 U.S.C. § 50915 — $1,500,000,000 above the required insurance, adjusted for inflation after January 1, 1989. That is not an insurance limit the licensee must buy under § 440.9.

How long orbital-launch cover must last. Under 14 CFR § 440.11(a), coverage required by § 440.9 attaches when the licensed launch starts and must stay in full force until both of the following:

- completion of licensed launch activities at the launch site; and
- for an orbital launch, the later of (i) 30 days after payload separation, or attempted payload separation if separation is anomalous, or (ii) 30 days from ignition of the launch vehicle.

See https://www.ecfr.gov/current/title-14/section-440.11.

30 days' notice does not by itself cut the limits. Section 440.11(b) says financial responsibility may not be replaced, canceled, changed, withdrawn, or otherwise modified to reduce the limits or the extent of coverage, and may not expire by its own terms before the time specified in the license order, unless the FAA is notified at least 30 days in advance and expressly approves the modification. Notice is necessary but not sufficient; FAA approval is also required. See https://www.ecfr.gov/current/title-14/section-440.11.

K Keenable search Partly correct Incomplete list 21.2s · ~$0.054 · 3 searches · 2 fetches

> **Judge:** The answer covers the core and required facts accurately. It omits the context facts on permits (7), space flight participants and the 30 September 2025 sunset (13-15), and does not explicitly say that cover does not run until disposal or mission end (10), though its stated duration implies it.

No. Part 440 does not set one insurance number for every orbital launch, and a licensee cannot cut the required limits by notice alone.

What the FAA sets for a given launch
Under 14 CFR § 440.9, the licensee must carry liability insurance (or show equivalent financial responsibility) in an amount the FAA prescribes for that license and that launch. That amount is the FAA's **maximum probable loss (MPL)** for the activity, not a flat statutory figure. The same section splits the requirement into two policies:

- **Third-party** bodily injury and property damage (including certain U.S. Government property claims that are not Federal-range property covered by the second policy).
- **U.S. Government property** at a Federal range facility (property owned, leased, occupied, or in the care, custody, or control of the United States, its agencies, and involved contractors and subcontractors).

MPL is defined in 14 CFR Part 440 as the greatest dollar loss reasonably expected to result from the licensed activity. The regulatory thresholds are losses with a probability of at least **1 in 10 million** for third parties, and at least **1 in 100,000** for Government property and Government personnel. Under § 440.7, the FAA issues the MPL determination within 90 days after a complete request; that determination is what goes into the license order.

Statutory ceilings (caps, not the required amount)
The ceilings come from 51 U.S.C. § 50914(a)(3) and are repeated in § 440.9(c) and (e). For all claims from one launch, the licensee is **not required** to insure or otherwise demonstrate more than the **lesser of**:

Exposure	Ceiling
Third-party claims	**$500 million**, or the maximum liability insurance available on the world market at reasonable cost, as determined by the FAA
Government property	**$100 million**, or the maximum available on the world market at reasonable cost, as determined by the FAA

So the required amount is MPL, capped by those ceilings. $500 million and $100 million are maximums, not the amount every licensee must buy. If world-market capacity at reasonable cost is lower, that lower figure is the cap.

How long orbital-launch cover must last
Under 14 CFR § 440.11(a), required insurance attaches when the licensed launch starts and must stay in force:

1. until licensed launch activities at the launch site are complete, and
2. for an orbital launch, until the later of (i) 30 days after payload separation (or attempted separation, if separation fails) or (ii) 30 days after ignition of the launch vehicle.

Can the licensee cut the limits on 30 days' notice?
No. Section 440.11(b) says the financial responsibility may not be replaced, canceled, changed, withdrawn, or otherwise modified to reduce the limits or the extent of coverage, and may not expire by its own terms, before the time in the license order, unless the FAA is notified at least 30 days in advance and expressly approves the modification. Notice is required; it is not enough by itself.

> **Judge:** All core and required facts are correct, and no trap is asserted. Four context facts are missing: the permit versus license coverage above MPL (7), space flight participants as additional insureds (13), the 30 September 2025 sunset of 440.9(b)(4) (14), and the absence of a later extending statute (15).

No. Notice alone does not let the licensee cut the limits. 14 CFR § 440.11(b) says required financial responsibility may not be replaced, canceled, changed, withdrawn, or otherwise modified to reduce the limits or the extent of coverage, and may not expire by its own terms before the time in the license or permit order, unless the FAA is notified at least 30 days in advance and expressly approves the modification. Source: https://www.ecfr.gov/current/title-14/section-440.11

What the FAA actually sets (per launch)
Part 440 does not impose a flat premium or a flat required limit. Under § 440.9(c) and (e), the FAA prescribes, for each licensee and each launch or reentry, two amounts based on its maximum probable loss (MPL) determination (§ 440.7):

1. Third-party liability insurance (death, bodily injury, property damage), covering the people listed in § 440.9(b) as additional insureds.
2. U.S. Government property insurance for damage or loss to property of the United States, its agencies, and its contractors and subcontractors at a Federal range facility (§ 440.9(d)).

The licensee may demonstrate financial responsibility another way instead of buying a policy, if it meets the same terms (§ 440.9(f)). Source: https://www.ecfr.gov/current/title-14/section-440.9

Statutory / regulatory ceilings (not the amount you must buy)
Those ceilings are caps on what can be required, not the required amount. The required amount is the MPL, but it will not exceed the lesser of the dollar cap or what is available on the world market at a reasonable cost, as the FAA determines:

Layer	Ceiling on what FAA may require	Source
Third-party claims, one launch or reentry	**$500 million**, or less if that is all that is available at reasonable cost	51 U.S.C. § 50914(a)(3); 14 CFR § 440.9(c)
Government property	**$100 million**, or less if that is all that is available at reasonable cost	51 U.S.C. § 50914(a)(3); 14 CFR § 440.9(e)

Statute: the licensee must obtain insurance or demonstrate financial responsibility for the MPL from third-party claims and from Government property claims; the Secretary sets those amounts. A licensee is not required to obtain more than $500,000,000 (third party) or $100,000,000 (Government property), or the maximum liability insurance available on the world market at reasonable cost if that is less. https://uscode.house.gov/view.xhtml?edition=prelim&num=0&req=granuleid:USC-prelim-title51-section50914

A separate figure, $1.5 billion (as adjusted for inflation after January 1, 1989), is not insurance the licensee must buy. It is the cap on what the United States may pay for successful covered third-party claims above the required insurance (14 CFR § 440.19, implementing 51 U.S.C. § 50915). https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-440

How long cover has to last (orbital)
§ 440.11(a): coverage attaches when the licensed launch starts and stays in force:

- until completion of licensed launch activities at the launch or reentry site, and
- for an orbital launch, until the later of (i) 30 days after payload separation, or attempted separation if there is a separation anomaly, or (ii) 30 days from ignition of the launch vehicle.

(Suborbital is different: later of motor impact and payload recovery, or an FAA determination that third-party and Government-property risk is small enough that financial responsibility is no longer necessary.) https://www.ecfr.gov/current/title-14/section-440.11

The 30-day orbital tail is a regulatory duration in § 440.11. It is not one of the dollar ceilings in § 50914(a)(3).

> **Judge:** All core and required facts are correct. Only the context facts are missing: the permit versus license government coverage point (7), and the 440.9(b)(4) space flight participant additional-insured paragraph with its 30 September 2025 sunset (13-15).

No. A 30-day notice does not let the licensee cut the limits. Under 14 CFR § 440.11(b), coverage may not be replaced, canceled, changed, withdrawn, reduced, or allowed to expire before the time in the license or permit order unless the FAA is notified at least 30 days in advance **and expressly approves** the change. 14 CFR § 440.11

What must be bought: FAA-set amount, not the ceiling

Part 440 does not set one fixed premium or limit for every orbital launch. As a license condition, the licensee must carry insurance (or another form of financial responsibility that meets the same terms) in the amount the FAA prescribes for that launch. 14 CFR § 440.9(a), (f)

There are two separate requirements:

1. **Third-party liability** (bodily injury and property damage, including U.S. claims for property that is not the Federal-range property covered below). The FAA sets the amount from its maximum probable loss (MPL) determination for that launch. It will not exceed the lesser of **$500 million** or the maximum liability insurance available on the world market at a reasonable cost, as the FAA determines. 14 CFR § 440.9(b)–(c)

2. **U.S. Government property at a Federal range facility** (property owned, leased, occupied, or in the care, custody, or control of the United States, its agencies, and involved contractors and subcontractors). Again, the FAA sets the amount from MPL, and it will not exceed the lesser of **$100 million** or the maximum available on the world market at a reasonable cost, as the FAA determines. 14 CFR § 440.9(d)–(e)

MPL is the greatest dollar loss reasonably expected from the licensed activity: third-party losses at a probability of no less than 1 in 10 million, and Government property and Government personnel losses at no less than 1 in 100,000. 14 CFR § 440.3 The FAA can amend the MPL, and any resulting change in financial responsibility is put in a license or permit order. 14 CFR § 440.7

So the **required amount is the FAA's MPL for that launch** (often well below the cap). The $500 million and $100 million figures are caps, not the default purchase.

Statutory ceilings vs. the FAA's number

Those caps come from statute, not from a per-launch FAA judgment. 51 U.S.C. § 50914(a) requires insurance or other financial responsibility for MPL from (A) third-party death, bodily injury, or property damage and (B) damage to Government property. The Secretary of Transportation (through the FAA) determines those MPL amounts after consulting NASA, the Air Force, and other agencies, and must do so within 90 days after a complete request. 51 U.S.C. § 50914(a)(2), (c)

For total claims from one launch or reentry, the licensee is **not required** to obtain more than:

- **$500 million** for third-party claims, or
- **$100 million** for Government-property claims, or
- if less, the maximum liability insurance available on the world market at reasonable cost.

51 U.S.C. § 50914(a)(3); same ceilings in 14 CFR § 440.9(c) and (e).

The statute also says the Secretary must review those dollar amounts by May 15 each year and report proposed adjustments to Congress; a proposed adjustment takes effect 30 days after the report is submitted. 51 U.S.C. § 50914(d)(2). The U.S. Code text in effect as of July 22, 2026, the current Part 440 text, and a June 23, 2025 CRS report still state the ceilings as $500 million and $100 million. I did not find a later adjustment that changed them. 51 U.S.C. § 50914 (House, laws in effect July 22, 2026); CRS R48582.

Those insurance ceilings are not the separate Government payment ceiling in 51 U.S.C. § 50915 (up to $1.5 billion above the required insurance, plus inflation after January 1, 1989, subject to appropriation). That is indemnification above the insured amount, not an insurance-purchase requirement in Part 440.

How long orbital-launch cover must last

Under 14 CFR § 440.11(a), required insurance or other financial responsibility attaches when the licensed launch starts and must stay in full force:

- until licensed launch activities at the launch or reentry site are complete, **and**
- for an orbital launch, until the **later** of (i) 30 days after payload separation, or attempted separation if there is a separation anomaly, or (ii) 30 days from ignition of the launch vehicle.

It cannot expire by its own terms before the time specified in the license or permit order without the 30-day notice **and** express FAA approval described above.

> **Judge:** The answer covers the core and required facts accurately. It omits the context facts on permits (7), space flight participants and the 30 September 2025 sunset (13-15), and does not explicitly say that cover does not run until disposal or mission end (10), though its stated duration implies it.

No. Part 440 does not set one insurance number for every orbital launch, and a licensee cannot cut the required limits by notice alone.

What the FAA sets for a given launch
Under 14 CFR § 440.9, the licensee must carry liability insurance (or show equivalent financial responsibility) in an amount the FAA prescribes for that license and that launch. That amount is the FAA's **maximum probable loss (MPL)** for the activity, not a flat statutory figure. The same section splits the requirement into two policies:

- **Third-party** bodily injury and property damage (including certain U.S. Government property claims that are not Federal-range property covered by the second policy).

- **U.S. Government property** at a Federal range facility (property owned, leased, occupied, or in the care, custody, or control of the United States, its agencies, and involved contractors and subcontractors).

MPL is defined in 14 CFR Part 440 as the greatest dollar loss reasonably expected to result from the licensed activity. The regulatory thresholds are losses with a probability of at least **1 in 10 million** for third parties, and at least **1 in 100,000** for Government property and Government personnel. Under § 440.7, the FAA issues the MPL determination within 90 days after a complete request; that determination is what goes into the license order.

Statutory ceilings (caps, not the required amount)
The ceilings come from 51 U.S.C. § 50914(a)(3) and are repeated in § 440.9(c) and (e). For all claims from one launch, the licensee is **not required** to insure or otherwise demonstrate more than the **lesser** of:

Exposure	Ceiling
Third-party claims	**$500 million**, or the maximum liability insurance available on the world market at reasonable cost, as determined by the FAA
Government property	**$100 million**, or the maximum available on the world market at reasonable cost, as determined by the FAA

So the required amount is **MPL, capped by those ceilings**. $500 million and $100 million are maximums, not the amount every licensee must buy. If world-market capacity at reasonable cost is lower, that lower figure is the cap.

How long orbital-launch cover must last
Under 14 CFR § 440.11(a), required insurance attaches when the licensed launch starts and must stay in force:

1. until licensed launch activities at the launch site are complete, **and**
2. for an **orbital** launch, until the **later** of (i) **30 days after payload separation** (or attempted separation, if separation fails) or (ii) **30 days after ignition** of the launch vehicle.

Can the licensee cut the limits on 30 days' notice?
No. Section 440.11(b) says the financial responsibility may not be replaced, canceled, changed, withdrawn, or otherwise modified to reduce the limits or the extent of coverage, and may not expire by its own terms, before the time in the license order, **unless the FAA is notified at least 30 days in advance and expressly approves the modification**. Notice is required; it is not enough by itself.

PROMPT 15 · REGULATION · FACTS AS OF 2026-10-08

FCC-26-47, adopted 22 July 2026, replaces Part 25 with Part 100. The day after the vote, does a license that cites a Part 25 section have to be rewritten, and after Part 25 sunsets what does that citation mean?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FCC-26-47, Space Modernization for the 21st Century, adopted 22 July 2026, released 23 July 2026. This is the rewrite question, not the effective-date question.

Part 25 sunsets when Part 100 becomes effective. The vote is not that date, so the day after the vote the license is not rewritten and Part 25 still applies.

After the sunset, a Part 25 citation in an existing authorization continues to mean the corresponding Part 100 rule unless the order addresses that citation otherwise. The order says the operational and technical requirements largely stay the same. Part 100 separates application rules (subpart B), operations (subpart C), and compliance (subpart D).

Wrong: existing licenses must be rewritten before the effective date. Wrong: a Part 25 citation becomes meaningless on 22 July 2026. Do not invent a Federal Register effective date.

Source: https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf

Exa Correct — 3.4m · $1.036 · 14 searches · 29 fetches

Judge: Facts 7 (operational and technical requirements largely stay the same) and 8 (Part 100 subpart structure) are not stated in the answer; both are context-level. The core and required facts are correct and no traps are asserted.

No. The day after the July 22, 2026 vote, a license that cites a Part 25 section does not have to be rewritten.

FCC-26-47 was adopted July 22 and released July 23, but Part 25 does not disappear on adoption or release. The Commission sunsets Part 25 only once Part 100 becomes effective, and the Space Bureau is to announce that later effective date. Until then, the Part 25 citation still means the Part 25 rule. (FCC-26-47, paras. 26, 28; Holland & Knight summary of the transition)

After the sunset, that citation is not obsolete and does not by itself require a rewrite. The order says a Part 25 rule cited in a current authorization remains subject to the corresponding Part 100 rule, unless the order addresses that requirement otherwise. The Bureau is to keep those licenses intelligible and enforceable, including by posting Part 25 as it stood on the effective date and a Part 25-to-Part 100 crosswalk. The Commission generally will not convert Part 25 licenses into Part 100 licenses; conversion is a limited Bureau option where it would produce efficiency gains or fix a significant transition problem. (FCC-26-47, paras. 26, 28; Greenberg Traurig, quoting the order)

On the effective date, existing space and earth station licensees and market access grantees must comply with Part 100, subject to the terms of their existing authorizations. A conflict that makes compliance impossible is handled through the Bureau's waiver process, not by an automatic rewrite of the citation. (Holland & Knight)

Parallel Wrong — Claim not in sources — 1.3m · $1.311 · 12 searches · 3 fetches

Judge: Fact 6 is contradicted: the answer says a post-sunset Part 25 citation means the archived Part 25 text and not the corresponding Part 100 rule. It mentions the ¶28 Part 100 mapping only to dismiss it. Facts 7 and 8 are not stated. The DATA window does not show the ¶322 claim the answer relies on.

No. The day after the July 22, 2026 vote, a license that cites a Part 25 section does not have to be rewritten, and Part 25 is still the operative rule.

FCC-26-47 was adopted July 22 and released July 23, 2026. It does not take effect on adoption. The Order is effective 60 days after Federal Register publication, except sections that contain new or modified information collections, which wait on Office of Management and Budget review. The Space Bureau must announce the Part 100 Effective Date by public notice. Until that date, existing authorizations stay under Part 25. FCC-26-47 (ordering clause ¶ 420; transition ¶¶ 319–321).

After Part 25 sunsets, that citation still means the archived Part 25 text, not a void reference and not an automatic rewrite to a Part 100 section.

On the Part 100 Effective Date, Part 25 is removed from Title 47 of the Code of Federal Regulations. The Space Bureau must post, on an FCC transition webpage, the full text of Part 25 as it stood on that date. References in authorization documents issued before the Part 100 Effective Date are taken to refer to that posted Part 25 text, unless the Order says otherwise. The Bureau will not reissue all authorizations under Part 100. FCC-26-47 ¶¶ 322, 325, 337.

Two related limits, from the same Order:

- On the effective date, existing space and earth station licensees and market access recipients must comply with Part 100, but only subject to the terms and conditions already on their authorizations. The Order does not void those terms except where it expressly says so. ¶ 321.
- If a Part 25 condition cannot be followed while also complying with Part 100, the Bureau will set a limited process for licensees to identify that conflict and a grace period to come into compliance. ¶ 323.

An earlier passage (¶ 28) also says Part 25 rules cited in current authorizations remain subject to the corresponding Part 100 rules unless the Order addresses them otherwise. The operative sunset rule for what the citation itself means is ¶ 322: the posted Part 25 text as of the effective date.

Keenable search Correct — 1.1m · ~$0.220 · 17 searches · 2 fetches

Judge: Fact 8 (Part 100 subparts B, C, D separating applications, operations, compliance) is not stated in the answer. All other facts are correct and no traps were asserted.

No. The day after the July 22, 2026 vote, a license that cites a Part 25 section does not have to be rewritten, and that citation does not become meaningless when Part 25 later sunsets.

The day after the vote. FCC 26-47 was adopted July 22, 2026 and released July 23, 2026. Part 25 does not end on either date. The order says the Commission will sunset Part 25 only once Part 100 becomes effective, and the Space Bureau is to announce that effective date after Federal Register publication. Until then, Part 25 remains the governing rule set, so an existing Part 25 citation is still a citation to rules in force. Nothing in the order requires licenses to be rewritten on July 23.

After the sunset. The Commission expressly rejected the idea that moving to Part 100 would make Part 25 citations in existing authorizations obsolete. It said that most operational and technical requirements stay the same, and that "any part 25 rules cited in current authorizations will still be subject to those corresponding rules in part 100, unless addressed otherwise." It also directed a transition process so licenses issued under or referencing Part 25 "remain intelligible and enforceable."

Law-firm summaries of the transition section add the mechanics: on the effective date, existing space and earth station licensees and market-access recipients must comply with Part 100, subject to the terms of their existing authorizations; the Space Bureau will post the full text of Part 25 as it existed on the effective date and issue a chart mapping each Part 25 rule to its Part 100 counterpart. Those details are from secondary summaries of the order, not from text I could extract verbatim from the PDF.

So after sunset, a Part 25 citation in a license is not a dead reference and does not, by itself, force a rewrite. It continues to identify the obligation, read through the preserved Part 25 text and the mapped Part 100 counterpart, unless the order treats that requirement differently.

Keenable SELECT ✗ Wrong — Claim not in sources — 3.1m · ~$0.225 · 11 searches · 1 fetches

> **Judge:** The answer says the post-sunset citation means the archived Part 25 text on an FCC transition page. Fact 6 says it continues to mean the corresponding Part 100 rule, and the answer relegates that to an 'overlay', so it is contradicted. Facts 7 (requirements largely unchanged) and 8 (Part 100 subparts B/C/D) are not stated.

No. The day after the July 22, 2026 vote, a license that cites a Part 25 section does not have to be rewritten. Adoption does not itself replace Part 25. FCC-26-47, adopted July 22 and released July 23, sunsets Part 25 only once Part 100 becomes effective, and it tells the Space Bureau to announce that date by public notice. Until that "Part 100 Effective Date," Part 25 remains the rule text those citations point to. https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf

After the sunset, the citation still means the Part 25 rule as it stood on the Part 100 Effective Date, not a dead or automatically renumbered cite. Paragraph 322 says Part 25 will be removed from Title 47 of the Code of Federal Regulations, and directs the Space Bureau to post the entirety of Part 25 as of that date on an FCC transition webpage. References in authorization documents issued before that date "will be taken to refer to the part 25 rules posted on the FCC website by the Space Bureau, unless otherwise specified herein." The point is to avoid an immediate enforcement gap. https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf

That is not a wholesale rewrite, and it is not a free pass from Part 100. On the effective date, space and earth station licensees and market-access recipients must fully comply with Part 100, subject to the terms and conditions already on active licenses, unless the order says otherwise (para. 321). Nothing in the order voids those existing terms except where it expressly says so. If a Part 25 license condition cannot be met at the same time as a Part 100 requirement, the licensee identifies that conflict in a limited window the Space Bureau must set up; the Bureau handles it case by case and sets a grace period (paras. 323–324). A licensee that can comply but wants a change must seek a modification. The Bureau will convert authorizations to Part 100 when it next handles them individually, such as on a modification or renewal, rather than reissuing every authorization at once (para. 325). https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf

Paragraph 28's broader statement—that a Part 25 rule cited in a current authorization remains subject to the corresponding Part 100 rule "unless addressed otherwise"—is the substantive overlay. The operative meaning of the citation itself, after removal from the CFR, is the archived Part 25 text on the FCC transition page. https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf

Grok native ✓ Correct — 1.0m · $0.414 · 15 searches · 3 fetches

> **Judge:** Facts 7 (operational and technical requirements largely stay the same) and 8 (Part 100 subpart structure) are not stated, but both are context-only. All core and required facts are correct and no traps were asserted.

No. The day after the July 22, 2026 vote, a license that cites a Part 25 section does not have to be rewritten. After Part 25 sunsets, that citation is not obsolete: it is read as the corresponding Part 100 rule, unless the Order says otherwise.

FCC-26-47 was adopted July 22, 2026 and released July 23, 2026. It replaces Part 25 with Part 100, but Part 100 is not effective on adoption or release. The Space Bureau must announce the effective date in the Federal Register (Order ¶ 420). Until that date, Part 25 remains in force, so an existing Part 25 citation still points to a live rule. See the Order and a later Commission authorization restating that timing: https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf and https://fcc.report/IBFS/SES-MOD-20260625-01921/a9438732cf474f10cd52f1642f851cea.pdf?raw=1.

Part 25 sunsets only when Part 100 becomes effective, not the day after the vote. The Commission rejected the idea that Part 25 citations in current authorizations would then become obsolete. Those citations remain enforceable and are subject to the corresponding Part 100 rules, unless the Order addresses that requirement otherwise. The Order also directs a process so licenses issued under or referencing Part 25 stay intelligible and enforceable. https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf (¶¶ 26, 28).

On the effective date, existing space and earth station licensees and market-access grantees must comply with Part 100, subject to the terms of their existing authorizations. They do not have to amend the license just to update the citation. The Space Bureau is to post the text of Part 25 as it stood on the effective date and publish a chart mapping each Part 25 rule to its Part 100 counterpart. https://www.hklaw.com/en/insights/publications/2026/07/ground-control-to-major-reform-fcc-adopts-landmark-overhaul-of-space.

PROMPT 18 · LIST-BUILDING · FACTS AS OF 2026-10-08

On the ACMA register, Starlink Australia holds area-wide FSS licences 11240792 (Bulla Bulling, Western Australia) and 11240791 (Calrossie, New South Wales). For each, give the date of effect, the date of expiry, and the geographic band limits shown. As of 8 October 2026, which term has already ended?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

ACMA Register of Radiocommunications Licences. Both are Starlink Australia Pty Ltd, service Spectrum, sub-service AWL - FSS Only. Assignments shown are transmit at 28.75 GHz. The geographic area band on each is 27.5-30 GHz.

11240792, Bulla Bulling WA, Great Eastern Highway: date of effect 26 March 2026, date of expiry 1 March 2027. On 8 October 2026 that term is still open.

11240791, Calrossie NSW, Newell Highway: date of effect 4 May 2023, date of expiry 2 May 2026. On 8 October 2026 that expiry date has passed.

The register pages label status as Granted. Grade the dates. Do not treat the word Granted as proof that the New South Wales term still runs. Do not invent a renewal of 11240791; this reference does not establish one.

Sources: https://web.acma.gov.au/rrl/licence_search.licence_lookup?pLICENCE_NO=11240792 and https://web.acma.gov.au/rrl/licence_search.licence_lookup?pLICENCE_NO=11240791

Exa — Correct

17.2s · $0.052 · 2 searches · 2 fetches

Judge: Only fact 2 (transmit at 28.75 GHz) is missing from the answer; everything else matches, and neither trap is asserted.

Licence 11240792 (Bulla Bulling, WA) — Starlink Australia Pty Ltd, AWL – FSS Only, status Granted.

- Date of effect: 26 March 2026
- Date of expiry: 1 March 2027
- Geographic band limits (Area 1): lower band 27.5 GHz to 30 GHz; upper-band lower and upper limits are blank on the register.

Source: https://web.acma.gov.au/rrl/licence_search.licence_lookup?pLICENCE_NO=11240792

Licence 11240791 (Calrossie, NSW) — Starlink Australia Pty Ltd, AWL – FSS Only, status still shown as Granted.

- Date of effect: 4 May 2023
- Date of expiry: 2 May 2026
- Geographic band limits (Area 1): lower band 27.5 GHz to 30 GHz; upper-band lower and upper limits are blank on the register.

Source: https://web.acma.gov.au/rrl/licence_search.licence_lookup?pLICENCE_NO=11240791

As of 8 October 2026, the term that has already ended is 11240791 (Calrossie). Its expiry date is 2 May 2026. Licence 11240792 does not expire until 1 March 2027. The register still lists 11240791 as Granted despite that expiry date.

Parallel — Wrong

Incomplete list

8.1m · $0.916 · 14 searches · 33 fetches

Judge: The answer declined to give any details and did not retrieve the licence pages, so all facts are missing, including the band (27.5-30 GHz), the dates of effect and expiry, and the conclusion that 11240791 has already ended. No traps were asserted.

I could not verify the date of effect, expiry, or geographic band limits for either licence. Those fields are not in any public page I could retrieve, and the live ACMA Register of Radiocommunications Licences is a search application I could not query for licence numbers 11240792 and 11240791.

The register itself was current when checked on 8 October 2026 (data timestamp shown as 10/8/2026, 9:52:19 PM): https://www.acma.gov.au/register-radiocommunication-licences-rrl

Because those dates are unverified, I also cannot say which term had already ended as of 8 October 2026. Look up each licence number directly on that register (or the daily RRL extract linked from https://www.acma.gov.au/radiocomms-licence-data).

Cited: 1. tesmanian.com · 2. facebook.com · 3. reddit.com · 4. cnbc.com · 5. web.acma.gov.au · 6. acma.gov.au · 7. apis.io · 8. web.acma.gov.au · 9. acma.gov.au · 10. reddit.com · 11. facebook.com · 12. acma.gov.au · 13. acma.gov.au · 14. acma.gov.au · 15. facebook.com · 16. commsroom.co · 17. acma.gov.au · 18. acma.gov.au · 19. acma.gov.au · 20. compasse.aas.org · 21. docs.fcc.gov · 22. docs.fcc.gov · 23. apps.fcc.gov · 24. pa.gov · 25. mass.gov · 26. professions.dol.wa.gov · 27. acma.gov.au · 28. apis.io · 29. apis.apievangelist.com · 30. backend.acma.gov.au · 31. web.acma.gov.au · 32. acma.gov.au · 33. lightreading.com · 34. acma.gov.au · 35. calrossie.com · 36. acma.gov.au · 37. acma.gov.au · 38. calrossie.com · 39. calrossie.com

Keenable search — Wrong

Tool error / timeout

7.6m · ~$1.302 · 68 searches · 19 fetches

Judge: The answer declined to provide any of the requested data, so all facts are missing: the 27.5-30 GHz band, both licences' effect and expiry dates, and the conclusion that 11240791 has ended. It did not assert either trap, and its statements about what it could not retrieve are consistent with the sources.

I could not verify the date of effect, date of expiry, or geographic band limits for either licence. The live ACMA Register of Radiocommunications Licences lookup, the Spectrum Licensing API, and the daily RRL extract were not retrievable from here, and no secondary source publishes those fields for 11240792 or 11240791. I therefore cannot say which term, if either, had ended by 8 October 2026.

What is checkable elsewhere does not fill that gap:

- Starlink Australia Pty Ltd holds carrier licence 542, current from 7 August 2020. That is a carrier licence, not these FSS apparatus licences. https://www.acma.gov.au/register-licensed-carriers
- An official RRL extract dated 29 August 2026 shows STARLINK AUSTRALIA PTY LTD (client 20044061, ABN 68 636 841 533) holding spectrum licence 11190450, category “AWL - FSS Only”, status Granted. That row is not 11240792 or 11240791 and does not include effect, expiry, or geographic limits. https://gist.github.com/connectors-testing-pplx/94eac84dc773fa339d1074efa58a6065

- A 2025 EMI assessment lists Starlink earth-receive licences 11240789/1 and 11240790/1 at Cataby, not these two numbers, and gives no effect, expiry, or band limits. https://www.epa.wa.gov.au/sites/default/files/Referral_Documentation/MarriWF%20-%20ERD%20-%20Appendix%20A%20Electromagnetic%20Interference%20Assessment.pdf
- Bulla Bulling and Calrossie are publicly described as Starlink gateway sites, but those lists do not carry ACMA licence terms or band limits. https://wp.me/P6PCqG-WV

The authoritative records are the licence lookups on the RRL: https://web.acma.gov.au/rrl/licence_search.licence_lookup?pLICENCE_NO=11240792 and https://web.acma.gov.au/rrl/licence_search.licence_lookup?pLICENCE_NO=11240791.

---

Keenable SELECT — Wrong — Claim not in sources — 12.7m · ~$1.152 · 26 searches · 38 fetches

> **Judge:** The answer could not retrieve the register pages and committed to none of the checklist facts. The band limits (27.5-30 GHz), both effect and expiry dates, and which term has ended (11240791) are all missing.

I have not been able to verify the register fields for either licence, so I will not invent dates or band limits.

What I could confirm:

- The authoritative record is the ACMA Register of Radiocommunications Licences. Licence pages are at `https://web.acma.gov.au/rrl/licence_search.licence_lookup?pLICENCE_NO=11240792/1` and `...pLICENCE_NO=11240791/1`. Those pages are JavaScript-rendered; every fetch returned only "Loading...", and the daily extract (`https://cdn.acma.gov.au/rrl/spectra_rrl.zip`, last modified 9 October 2026 per `https://backend.acma.gov.au/rrl/v1/Extracts`) is a 68 MB zip this tool cannot open. The Spectrum Licensing API also rejected the lookup calls.
- Starlink Australia Pty Ltd is ACMA radiocommunications client 20044061. A third-party extract of the 29 August 2026 RRL download names that client and an area-wide "AWL - FSS Only" spectrum licence, but for licence 11190450, not 11240792 or 11240791: https://gist.github.com/connectors-testing-pplx/94eac84dc773fa339d1074efa58a6065
- Neighbouring earth-receive licences 11240789/1 and 11240790/1 are held by STARLINK AUSTRALIA PTY LTD at the Cataby earth station (site ID 10025044). Those rows give no date of effect, expiry, or band limits, and they are not the two licences asked about: https://www.epa.wa.gov.au/sites/default/files/Referral_Documentation/MarriWF%20-%20ERD%20-%20Appendix%20A%20Electromagnetic%20Interference%20Assessment.pdf
- Bulla Bulling (WA) and Calrossie (NSW) are documented as Starlink gateway sites, but those pages do not quote licence terms or geographic band limits: https://birrraus.com/starlink-in-australia

Because no source I could read states the date of effect, date of expiry, or geographic band limits for 11240792 or 11240791, I cannot say which term had already ended as of 8 October 2026. The register lookup URLs above are the place those three fields are shown.

Cited: 1. web.acma.gov.au · 2. cdn.acma.gov.au · 3. backend.acma.gov.au · 4. gist.github.com · 5. epa.wa.gov.au · 6. birrraus.com

> **Judge:** The answer declined to provide any of the requested data, so all facts are missing: the 27.5-30 GHz band, both licences' effect and expiry dates, and the conclusion that 11240791 has ended. It did not assert either trap, and its statements about what it could not retrieve are consistent with the sources.

I could not verify the date of effect, date of expiry, or geographic band limits for either licence. The live ACMA Register of Radiocommunications Licences lookup, the Spectrum Licensing API, and the daily RRL extract were not retrievable from here, and no secondary source publishes those fields for 11240792 or 11240791. I therefore cannot say which term, if either, had ended by 8 October 2026.

What is checkable elsewhere does not fill that gap:

- Starlink Australia Pty Ltd holds carrier licence 542, current from 7 August 2020. That is a carrier licence, not these FSS apparatus licences. https://www.acma.gov.au/register-licensed-carriers
- An official RRL extract dated 29 August 2026 shows STARLINK AUSTRALIA PTY LTD (client 20044061, ABN 68 636 841 533) holding spectrum licence 11190450, category "AWL - FSS Only", status Granted. That row is not 11240792 or 11240791 and does not include effect, expiry, or geographic limits. https://gist.github.com/connectors-testing-pplx/94eac84dc773fa339d1074efa58a6065

- A 2025 EMI assessment lists Starlink earth-receive licences 11240789/1 and 11240790/1 at Cataby, not these two numbers, and gives no effect, expiry, or band limits. https://www.epa.wa.gov.au/sites/default/files/Referral_Documentation/MarriWF%20-%20ERD%20-%20Appendix%20A%20Electromagnetic%20Interference%20Assessment.pdf
- Bulla Bulling and Calrossie are publicly described as Starlink gateway sites, but those lists do not carry ACMA licence terms or band limits. https://wp.me/P6PCqG-WV

The authoritative records are the licence lookups on the RRL: https://web.acma.gov.au/rrl/licence_search.licence_lookup?pLICENCE_NO=11240792 and https://web.acma.gov.au/rrl/licence_search.licence_lookup?pLICENCE_NO=11240791.

PROMPT 19 · REGULATION · FACTS AS OF 2026-10-08

ACMA considered interim W-band earth-station transmitters for Starlink at Melbourne, Perth, and Sydney. What happened to each city, on what interference basis, for how long, and does the Australian Radiofrequency Spectrum Plan allocate W band to the fixed-satellite service?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

ACMA, interim arrangements for W-band fixed-satellite service earth station transmitters. Consultation closed 3 December 2025. Outcome updated 15 January 2026.

The proponent withdrew the Melbourne site and will deal directly with the radar operator. Melbourne is no longer under consideration. ACMA made subsection 10(10) decisions for Perth and Sydney. It has issued the first W-band earth station licences.

Conditions: no interference to any licensed station or service, and no protection from interference. Licences are a non-renewable term of one year. They are interim. Approval is not a precedent, and access is conditional on a future review of the band.

The Australian Radiofrequency Spectrum Plan 2021 does not allocate W band to the fixed-satellite service. ACMA used subsection 10(10) (unspecified service) because of that. The ranges in the proposal are 92-94, 94.1-95, 95-100, 102-109.5, and 111.8-114.25 GHz.

Wrong: Melbourne was licensed. Wrong: these are renewable, protected FSS licences. Wrong: the spectrum plan already allocates W band to FSS.

E Exa ✓ Correct ✓ ✓ ✓ ✓ 51.0s · $0.228 · 10 searches · 4 fetches

Judge: Only fact 13 (consultation closed 3 December 2025) is missing. Fact 8 is covered by the one-year non-renewable term and the answer's reference to interim arrangements and a short term, so it is marked correct.

Melbourne was withdrawn; Perth and Sydney were approved for one-year, non-renewable licences on a no-interference, no-protection basis. The Australian Radiofrequency Spectrum Plan does not allocate W band to the fixed-satellite service (FSS).

ACMA's published outcome refers to "the proponent" of non-geostationary FSS earth-station transmitters at those three cities. It does not name Starlink on the outcome page or in the subsection 10(10) decision reviewed here.

What happened to each city
- **Melbourne:** After consultation, the proponent **withdrew** the site. It is **no longer under consideration**. The stated reason was potential interference to a **cloud and fog radar** near Melbourne Airport, licensed Australia-wide (location not visible in the ACMA database). The proponent said it would deal directly with the radar operator on compatibility. Melbourne is not in the 15 December 2025 subsection 10(10) decision.
- **Perth and Sydney:** On **15 December 2025**, ACMA made subsection **10(10)** decisions for earth stations within a **2 km** radius of the proposed centres (GDA94): Sydney −33.785073°, 151.131214°; Perth −31.864147°, 115.895866°. ACMA was satisfied that W-band transmitters talking to non-geostationary FSS space stations are **unlikely to cause harmful interference** to other services. The outcome (published **15 January 2026**) says the first W-band earth-station licences have been issued.

Bands covered: 92–94, 94.1–95, 95–100, 102–109.5 and 111.8–114.25 GHz.

Interference basis and term
Approval is under **subsection 10(10)** of the Spectrum Plan (an unspecified service), only if ACMA is satisfied harmful interference is unlikely. Licences are also conditioned so that **no interference is caused** to any licensed station or service and **no protection** is given from interference by those stations or services.

Other objections (adjacent-band Earth exploration-satellite passive sensors, reflected signals into radio astronomy, unlicensed receivers under test at CSIRO Marsfield, and future space-based radio astronomy) were not treated as a reason to refuse Perth and Sydney. ACMA cited the small number of sites versus a draft ECC study of many more gateways, plus the short licence term.

Duration: licences are for a **non-renewable term of one year**, so international W-band work can inform later decisions. Future requests are case by case. Approval is not a precedent.

Spectrum Plan allocation
No. ACMA states that the **Australian Radiofrequency Spectrum Plan 2021 does not allocate W band to FSS.** The 15 December 2025 decision under the **Australian Radiofrequency Spectrum Plan (2025 Update) 2021** still treats this FSS use as an **unspecified service**, not as an allocation. In the Australian table, those ranges are allocated to services such as fixed, mobile, radio astronomy and radiolocation (and, in 95–100 GHz, radionavigation / radionavigation-satellite), not to FSS.

P Parallel ✓ Correct ✓ ✓ ✓ ✓ 1.4m · $0.185 · 13 searches · 3 fetches

Judge: All the core and required facts are covered. Only the consultation closing date of 3 December 2025 (context) is missing. The answer's headline phrase 'unlikely to cause harmful interference' is accurate, and it also states the no-interference and no-protection licence conditions.

Melbourne was withdrawn; Perth and Sydney were approved for one-year, non-renewable licences on a "unlikely to cause harmful interference" basis under subsection 10(10). The Australian Radiofrequency Spectrum Plan does not allocate W-band to the fixed-satellite service.

ACMA's outcome (published 15 January 2026) covers interim W-band earth-station transmitters talking to non-geostationary fixed-satellite space stations in parts of those cities (92–94, 94.1–95, 95–100, 102–109.5 and 111.8–114.25 GHz). The published text refers to "the proponent" and consumer LEOSat offerings; it does not name Starlink. Source: ACMA consultation and outcome.

What happened to each city

- **Melbourne:** After objections about interference to a cloud and fog radar near Melbourne Airport (Australia-wide licence; location not shown in the ACMA database), the proponent withdrew the site and said it would deal directly with the radar operator on compatibility. ACMA is no longer considering that site.
- **Perth and Sydney:** ACMA made subsection 10(10) decisions for the proposed sites. It is satisfied those transmitters are unlikely to cause harmful interference to other services. It has issued the first W-band earth-station licences. Stations were to be within a 2 km radius of Perth −31.864147°, 115.895866° and Sydney −33.785073°, 151.131214° (GDA94).

Interference basis

There is no FSS allocation, so use is as an unspecified service under **subsection 10(10)** of the Australian Radiofrequency Spectrum Plan: ACMA must first be satisfied the service is unlikely to cause harmful interference, and the approval must be in writing and published. Licences are also conditioned so that **no interference may be caused to any licensed station or service, and no protection is given from interference by those stations or services.** Objections on adjacent-band Earth exploration-satellite (passive) sensors, radio astronomy, and use of subsection 10(10) were addressed; ACMA treated harmful interference to passive sensors as highly unlikely given only two sites versus much larger European study scenarios.

How long

Licences are for a **non-renewable term of one year**, so international W-band work can inform later decisions. These are interim arrangements, conditional on a future band review, not a precedent. Further requests are case by case.

Spectrum Plan allocation

No. ACMA states that the Australian Radiofrequency Spectrum Plan 2021 **does not currently allocate W-band to the fixed-satellite service**, which is why subsection 10(10) was used. That statement remained on the outcome page updated 15 January 2026.

Keenable search ✕ Wrong ✕ ✓ ✓ ✓ Incomplete list 4.9m · ~$0.816 · 59 searches · 6 fetches

> **Judge:** The answer does not say Melbourne's proponent will deal directly with the radar operator. It only says ACMA proposed using subsection 10(10), not that it made 10(10) decisions for Perth and Sydney. It also hedges on the final non-renewable one-year term and does not state that first W-band licences were issued.

Perth and Sydney were approved on an interim, non-interference basis; Melbourne was withdrawn. The Australian Radiofrequency Spectrum Plan does not allocate these W-band segments to the fixed-satellite service (FSS).

In November 2025, ACMA consulted on interim W-band earth-station transmitters communicating with non-geostationary FSS space stations in parts of Melbourne, Perth and Sydney, in 92–94, 94.1–95, 95–100, 102–109.5 and 111.8–114.25 GHz. The consultation closed on 3 December 2025. CommsDay reported that SpaceX was the first operator to use the resulting arrangements, for Starlink V3 gateways. (ACMA consultation; Content+Technology; TelSoc/CommsDay, 16 January 2026)

What happened
- **Perth and Sydney:** ACMA approved interim operation under temporary licensing conditions after consultation. (TelecomPaper, 15 January 2026)
- **Melbourne:** The proposed site was withdrawn after concerns about potential interference. The publicly indexed report cuts off before naming the affected service, so that detail is not verified here. (TelecomPaper)

Interference basis. These bands are not allocated to FSS, so ACMA proposed to rely on subsection 10(10) of the Spectrum Plan: an unspecified service may be used only if ACMA is first satisfied it is unlikely to cause harmful interference, and the written approval is published. Its preliminary view was that this was unlikely if stations stayed within 2 km of stated coordinates in each city. Licences were also to be non-interference and unprotected: no interference to any radiocommunications station or service, and no protection from them. (Content+Technology; ACMA on subsection 10(10))

Duration. The consultation proposed a **non-renewable one-year** term, so international W-band work could inform a later review, and said approval would not be a precedent. I could not retrieve ACMA's final decision text, so I cannot confirm that the issued Perth and Sydney licences kept that exact term rather than some other temporary period. (Content+Technology; ATA submission, 3 December 2025)

Spectrum Plan. No. ACMA stated that the Australian Radiofrequency Spectrum Plan 2021 does not allocate W-band to FSS. The Australian table reproduced in the December 2025 ATA submission allocates 92–94, 94.1–95, 95–100, 102–109.5 and 111.8–114.25 GHz to services such as fixed, mobile, radio astronomy and radiolocation—not FSS. The 2 October 2025 Spectrum Plan variation does not change that conclusion in the sources checked. (Content+Technology; ATA annex; Spectrum Plan)

> **Judge:** The answer gives the one-year non-renewable term and the no-interference/no-protection conditions only as proposals, and explicitly says the final licences are unconfirmed, so facts 5-7 are missing. It also omits the radar operator and proponent detail for Melbourne (fact 1), the issuing of the first licences (4), and the no-precedent/future-review condition (9).

Hit its tool-call or time budget and was forced to answer.

Perth and Sydney were approved on an interim basis; the Melbourne site was withdrawn. The Australian Radiofrequency Spectrum Plan does not allocate W band to the fixed-satellite service (FSS). The public ACMA text does not name Starlink or SpaceX.

ACMA consulted from 5 November to 3 December 2025 on interim W-band earth-station transmitters talking to non-geostationary FSS space stations in parts of Melbourne, Perth and Sydney, in 92–94, 94.1–95, 95–100, 102–109.5 and 111.8–114.25 GHz. Its preliminary view was that harmful interference was unlikely if stations stayed within 2 km of stated GDA94 points (Sydney −33.785073°, 151.131214°; Melbourne −37.823009°, 144.915390°; Perth −31.864147°, 115.895866°). Because there is no FSS allocation, any use had to be approved in writing under subsection 10(10) of the Spectrum Plan, which allows an unspecified service only if ACMA is satisfied it is unlikely to cause harmful interference to another service. ACMA also proposed that each station cause no interference and receive no protection, and that licences be non-renewable for one year. https://web.archive.org/web/20251107231916/https://www.acma.gov.au/consultations/2025-10/interim-arrangements-w-band-fixed-satellite-service-earth-station-transmitters

After consultation, TelecomPaper reported on 15 January 2026 that ACMA approved interim arrangements for Perth and Sydney under temporary licensing conditions. It said the originally proposed Melbourne site was withdrawn after concerns about “potential…” interference; the accessible text cuts off there, so the service or mechanism behind that concern is not verified. The same report does not confirm that the granted Perth and Sydney licences kept the proposed one-year non-renewable term or the exact “no interference / no protection” condition. https://www.telecompaper.com/news/acma-approves-w-band-earth-stations-in-perth-and-sydney--1559237

No. The Spectrum Plan does not allocate these W-band segments to FSS. ACMA said so in the consultation, and the Australian Telecommunications Alliance’s 3 December 2025 submission reproduces the Australian table: those segments are allocated to services such as fixed, mobile, radio astronomy and radiolocation, not FSS. The 2025 update of the Plan, compiled on 9 October 2025, still contains subsection 10(10) in the same terms, and ACMA’s November 2025 consultation still said there was no FSS allocation. https://www.austelco.org.au/wp-content/uploads/2025/12/ATA-submission---ACMAs-Interim-arrangements-for-W-band-FSS-ES-transmitters.pdf

Cited: 1. web.archive.org · 2. telecompaper.com · 3. austelco.org.au

G Grok native ✓ Correct ✓ ✓ ✓ ✓ 1.9m · $0.353 · 11 searches · 4 fetches

> **Judge:** Fact 8 (licences are interim) is not stated explicitly, although the answer says 'interim' for the arrangements. Fact 13 (consultation closed 3 December 2025) is not stated; only the opening in October 2025 is given. The core facts are all correct.

Melbourne was withdrawn; Perth and Sydney were approved for one year on a non-interference, non-protection basis under ARSP subsection 10(10). The Australian Radiofrequency Spectrum Plan does not allocate W band to the fixed-satellite service.

ACMA’s published outcome (consultation opened October 2025; outcome dated 15 January 2026) covers interim NGSO fixed-satellite earth-station transmitters at those three cities in 92–94, 94.1–95, 95–100, 102–109.5 and 111.8–114.25 GHz. The outcome text refers to a “proponent,” not Starlink by name. The bands match SpaceX’s W-band uplink request, but that naming is not confirmed in the ACMA text retrieved here.

Melbourne. After objections, the proponent withdrew the site. It is no longer under consideration. The specific concern was interference to a cloud and fog radar near Melbourne Airport, licensed Australia-wide and not visible in the ACMA licensing database. The proponent said it would deal with the radar operator directly on compatibility. Other objections (adjacent-band Earth exploration-satellite passive sensors, radio astronomy, and use of subsection 10(10)) were not the reason the site was dropped.

Perth and Sydney. On 15 December 2025 ACMA made subsection 10(10) decisions for both sites. It found transmitters talking to non-geostationary fixed-satellite space stations unlikely to cause harmful interference. It has issued the first W-band earth-station licences. Conditions:

- No interference may be caused to any licensed radiocommunications station or service, and no protection is given from interference by those stations or services.
- Licences are for a **non-renewable term of one year**, so later international W-band work can be taken into account.
- Future requests are case by case. This approval is not a precedent.

Spectrum Plan. No. ACMA states that the Australian Radiofrequency Spectrum Plan 2021 does not allocate W band to the fixed-satellite service. That is why access is only as an unspecified service under subsection 10(10), which requires a written finding that harmful interference is unlikely, published on the ACMA website. The Australian table for these ranges lists fixed, mobile, radio astronomy, radiolocation and related services, not FSS.

Sources: ACMA consultation and outcome; subsection 10(10) decisions (15 December 2025 W-band decision); ATA submission quoting the ARSP table.

PROMPT 21 · LIST-BUILDING · FACTS AS OF 2026-10-08

These four SpaceX file numbers are easy to conflate: the Gen2 call sign, the direct-to-cell constellation application, the orbital data-center application, and the Eloy earth-station STA. For each, give the call sign or file number, what was requested, and whether the Bureau granted it, deferred it, dismissed it, or only accepted it for filing.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Four different files.

Gen2: call sign S2992/3069. DA-26-36 (9 January 2026) granted in part and deferred in part: 15,000 satellites, not the 29,988 requested. DA-26-398 (23 April 2026) later dismissed with prejudice the Big LEO and L-band pieces of the Gen2 requests, inside and outside the United States. The 2 GHz outside-US grant from January was not undone by that dismissal.

Direct-to-cell constellation: call sign S00735, SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339, GN Docket 25-340. A separate application for 15,000 NGSO satellites for D2C, not the Gen2 authorization. DA-26-398 dismisses with prejudice the portion seeking Big LEO operations outside the United States.

Orbital data center: call sign S00798, SAT-LOA-20260108-00016. DA-26-113 (4 February 2026) accepted it for filing. It did not grant a license and did not waive milestones or the surety bond.

Eloy: SES-STA-20260511-01297, call sign E260362. A 60-day STA granted to SpaceX Services, term 10 July 2026 through 7 September 2026. Not a license, and the term is over as of 8 October 2026.

Wrong: one call sign covers all four. Wrong: the data-center notice is a grant. Wrong: S00735 is the Gen2 license.

Sources: DA-26-36, DA-26-398, DA-26-113, and the Eloy STA grant.

Exa · Wrong · Incomplete list · 1.1m · $0.319 · 12 searches · 4 fetches

Judge: The answer never says the Gen2 grant in DA-26-36 was 15,000 satellites, and it does not tie DA-26-398 to the Gen2 Big LEO/L-band dismissal or the unaffected 2 GHz grant. It mentions only that 'some L-band requests' were dismissed, without 'with prejudice' or the Big LEO outside-US scope. It also omits that the data-center acceptance waived no milestones or surety bond, and that the Eloy STA is not a license and has expired.

These are four different Commission records. None of the first three is the Eloy STA, and the direct-to-cell constellation is not the Gen2 license.

1. Gen2 call sign — S3069 (later also written S2992/3069)
File numbers: SAT-LOA-20200526-00055 and SAT-AMD-20210818-00105.
SpaceX asked to deploy and operate up to 29,988 second-generation Starlink NGSO satellites for fixed-satellite service in Ku-, Ka-, and E-band.
Granted in part and deferred in part. In FCC 22-91 (released Dec. 1, 2022), the Commission authorized 7,500 satellites in specified Ku/Ka shells and deferred the rest, including E-band and tracking beacons. Later orders, including DA 26-36 (Jan. 9, 2026), expanded that partial grant; the application was still granted in part and deferred in part, not fully granted.
https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf
https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

2. Direct-to-cell constellation — call sign S00735
File numbers: SAT-LOA-20250916-00282 and amendment SAT-AMD-20251125-00339 (GN Docket No. 25-340).
SpaceX asked for a new system of up to 15,000 very-low-Earth-orbit satellites for supplemental coverage from space and mobile-satellite service in the United States, direct-to-cell/MSS outside the United States, and related FSS backhaul and TT&C.
Granted in part and deferred in part (DA 26-1078, Oct. 6, 2026). The Bureaus authorized the 15,000-satellite D2D constellation in specified bands and shells, and deferred other requests, including U.S. MSS in 2020–2025 MHz and use of 20.2–21.2 GHz and 30.0–31.0 GHz. Some L-band requests had already been dismissed in DA 26-398. This is not the earlier Gen2 direct-to-cell modification, SAT-MOD-20230207-00021.
https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf
https://docs.fcc.gov/public/attachments/DA-25-1018A1.pdf

3. Orbital data-center application — call sign S00798
File number: SAT-LOA-20260108-00016.
SpaceX asked to launch and operate up to one million NGSO satellites as an orbital data-center system, mainly using optical links, plus 18.3–19.3 GHz (space-to-Earth) and 28.6–29.1 GHz (Earth-to-space) on a non-interference, unprotected basis, with several waivers.
Only accepted for filing. DA 26-113 (Feb. 4, 2026) accepted the application and set a comment cycle. I did not find a later grant, deferral, or dismissal.
https://docs.fcc.gov/public/attachments/DA-26-113A1.txt
https://www.fcc.gov/document/sb-accepts-filing-spacexs-application-orbital-data-centers

4. Eloy earth-station STA — call sign E260362
File number: SES-STA-20260511-01297 (SpaceX Services, Inc.; related license application SES-LIC-20260429-01219).
SpaceX requested a 60-day special temporary authorization to operate a quad-band gateway with 40 identical 1.99 m antennas in Eloy, Arizona, communicating with Starlink Gen1 (S2983/3018) and Gen2 (S2992/3069), on a non-interference basis.
Granted, with conditions, on July 9, 2026, for July 10 through Sept. 7, 2026. Iridium's petition was denied as to this STA only; no decision was made on the underlying license application.
https://fcc.report/IBFS/SES-STA-20260511-01297
https://fcc.report/IBFS/SES-STA-20260511-01297/e7205f462f820b10c7a543ca6fa4e359.pdf?raw=1

> **Judge:** The answer never says DA-26-398 dismissed the Gen2 Big LEO/L-band requests, and its only DA-26-398 mention is a vague line under the direct-to-cell application that does not name the Big LEO outside-US portion. It also omits that acceptance for filing granted nothing and waived no milestones or surety bond, and that the Eloy STA term has expired as of 8 October 2026.

These are four different SpaceX matters. The Bureau did not treat them the same way.

1. Gen2 call sign — S2992 and S3069 (lead file SAT-LOA-20200526-00055)
SpaceX sought operating authority for a second-generation NGSO fixed-satellite system (Starlink Gen2). The Space Bureau **granted it in part and deferred it in part.** ICFS records the latest action on that lead file as granted-in-part/deferred-in-part on January 9, 2026 (DA 26-36). That order authorized additional Gen2 satellites up to a total of 15,000 and deferred satellites beyond that total, plus some frequency requests. Do not mix these call signs with Gen1 (S2983/S3018).
https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf
https://fcc.report/IBFS/SAT-LOA-20200526-00055

2. Direct-to-cell constellation — call sign S00735; SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339
SpaceX asked to launch and operate a separate 15,000-satellite NGSO system (the "SpaceX D2D Constellation") for SCS and MSS in the United States, MSS and direct-to-cell outside the United States, and FSS backhaul and TT&C. On October 6, 2026, the Space Bureau and Wireless Telecommunications Bureau **granted it in part and deferred it in part** (DA 26-1078). Deferred items include 2020–2025 MHz MSS in the United States, 20.2–21.2/30.0–31.0 GHz outside the United States, and the broader 1429–2690 MHz direct-to-cell request outside the United States. Some other band requests had already been dismissed in DA 26-398.
https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

3. Orbital data-center application — call sign S00798; SAT-LOA-20260108-00016
SpaceX asked to launch and operate up to one million NGSO satellites as an orbital data-center system, at 500–2,000 km, using optical inter-satellite links and TT&C in 18.3–19.3 GHz (space-to-Earth) and 28.6–29.1 GHz (Earth-to-space), plus several rule waivers. The Space Bureau **only accepted it for filing** and sought comment (DA 26-113, released February 4, 2026). I did not find a later grant, deferral, or dismissal.
https://docs.fcc.gov/public/attachments/DA-26-113A1.pdf

4. Eloy earth-station STA — call sign E260362; SES-STA-20260511-01297
SpaceX Services asked for a 60-day special temporary authority to operate a quad-band gateway in Eloy, Arizona (40 identical 1.99 m antennas) with Starlink Gen1 (S2983/S3018) and Gen2 (S2992/S3069). The Space Bureau **granted it with conditions** on July 9, 2026, for July 10 through September 7, 2026. That grant denied Iridium's petition only as to the STA and made no decision on the underlying license application, SES-LIC-20260429-01219.

> **Judge:** The answer relied on the 2022 and 2024 Gen2 orders, so it missed DA-26-36 and its 15,000-satellite grant (it said 7,500). It also missed the DA-26-398 dismissals and asserted that none of the four was dismissed. It also omitted that the data-center acceptance did not waive milestones or the surety bond, and that the Eloy STA is not a license and has expired. The D2C disposition of DA 26-1078 is supported by the data but is not on the checklist.

These four SpaceX matters use different identifiers and had different Bureau outcomes. None was dismissed.

1. Gen2 Starlink call sign and application
- **Call sign / file number:** Call sign S3069 (later orders also use S2992/S3069). Lead file SAT-LOA-20200526-00055, with amendment SAT-AMD-20210818-00105.
- **Request:** Authority to deploy and operate a second-generation NGSO Starlink system of up to 29,988 satellites using Ku-, Ka-, and E-band.
- **Disposition: Granted in part and deferred in part**, with conditions (FCC 22-91, Dec. 1, 2022). The partial grant authorized 7,500 satellites; the rest of the request was deferred, not dismissed. Later Gen2 orders (including DA 24-1193) continued that grant-in-part / defer-in-part pattern.
- Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf ; later caption: https://docs.fcc.gov/public/attachments/DA-24-1193A1.pdf

2. Direct-to-cell constellation application
This is easy to mix up with the Gen2 SCS modification. The standalone D2D constellation is a different file and call sign.
- **Call sign / file number:** Call sign S00735. SAT-LOA-20250916-00282, amended by SAT-AMD-20251125-00339.
- **Request:** A new constellation of 15,000 very-low-Earth-orbit NGSO satellites for direct-to-device service: SCS and MSS in the United States, MSS and direct-to-cell outside the United States, plus FSS backhaul and TT&C.
- **Disposition: Granted in part and deferred in part**, with conditions (DA 26-1078).
- The older Gen2 direct-to-cell request is separate: SAT-MOD-20230207-00021 / SAT-AMD-20240322-00061, call sign S3069, also **granted in part and deferred in part** (DA 24-1193, Nov. 26, 2024) for SCS in the U.S. and direct-to-cell outside the U.S. on the already authorized 7,500 Gen2 satellites.
- Sources: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf ; https://docs.fcc.gov/public/attachments/DA-24-1193A1.pdf

3. Orbital data-center application
- **Call sign / file number:** Call sign S00798. SAT-LOA-20260108-00016.
- **Request:** Authority to launch and operate the "SpaceX Orbital Data Center system," an NGSO system of up to one million satellites at 500–2,000 km, using optical inter-satellite links and Ka-band TT&C (18.3–19.3 GHz space-to-Earth and 28.6–29.1 GHz Earth-to-space), plus waivers of NGSO processing-round, milestone, and surety-bond rules.
- **Disposition: Accepted for filing only** (Space Bureau public notice DA 26-113, Feb. 4, 2026). Comment deadlines were set; that notice did not grant, defer, or dismiss the application.
- Source: https://docs.fcc.gov/public/attachments/DA-26-113A1.pdf

4. Eloy earth-station STA
- **Call sign / file number:** Call sign E260362. STA file SES-STA-20260511-01297, tied to underlying license application SES-LIC-20260429-01219.
- **Request:** A 60-day special temporary authority for SpaceX Services to operate the proposed quad-band gateway earth station in Eloy, Arizona, before grant of the underlying license, on a non-harmful-interference basis. The grant covers 40 identical 1.99 m antennas communicating with Starlink Gen1 (S2983/3018) and Gen2 (S2992/3069).

- **Disposition: Granted** (Grant of Authority, July 9, 2026), for operations from July 10, 2026 through September 7, 2026. A later renewal STA, **SES-STA-20260815-02301**, was filed and was still pending review in the record checked.
- Sources: https://fcc.report/IBFS/SES-STA-20260511-01297 ; FCC public notice: https://docs.fcc.gov/public/attachments/DOC-423076A1.pdf

K Keenable SELECT ⊗ Wrong Incomplete list 6.9m · ~$0.169 · 7 searches · 5 fetches

> **Judge:** The answer never says the Gen2 grant was 15,000 satellites against 29,988 requested, and never says DA-26-398 dismissed the Big LEO and L-band parts of the Gen2 requests or left the January 2 GHz grant intact. It also omits that acceptance of the data-center application waived neither milestones nor the surety bond.

The four identifiers that get mixed up are S2992/S3069, SAT-LOA-20250916-00282 (S00735), SAT-LOA-20260108-00016 (S00798), and SES-STA-20260511-01297 (E260362).

1. Gen2 call sign — S2992/3069, not a separate application.
The Gen2 deployment application is **SAT-LOA-20200526-00055** (with later amendments). The Bureau's own captions list the call sign as **S2992/3069**. That slash is the source of the confusion: some modification captions use only S3069, and the January 9, 2026 upgrade order still uses S2992/3069. The original request was authority to construct, deploy, and operate the second-generation Starlink NGSO system. The Commission partially granted it in 2022 (7,500 satellites). The Space Bureau's January 9, 2026 order (**DA 26-36**) **granted in part and deferred in part** a further upgrade and a second tranche of 7,500 satellites.
https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf
https://docs.fcc.gov/public/attachments/DA-24-1193A1.pdf

2. Direct-to-cell constellation — SAT-LOA-20250916-00282, call sign S00735 (amended by SAT-AMD-20251125-00339).
SpaceX asked to launch and operate a new 15,000-satellite NGSO system for MSS and supplemental coverage from space in the United States, MSS and direct-to-cell outside the United States, and FSS backhaul and TT&C. On October 6, 2026, the Space Bureau and Wireless Telecommunications Bureau **granted it in part and deferred it in part**, with conditions (**DA 26-1078**). Use of 2020–2025 MHz in the United States was deferred. An earlier April 23, 2026 order (**DA 26-398**) **dismissed with prejudice** only the requests to use certain already-licensed MSS bands (including 1610–1626.5, 2483.5–2500, 1525–1559, and 1626.5–1660.5 MHz outside the United States). It did not dismiss the constellation application as a whole.
https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf
https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

3. Orbital data-center application — SAT-LOA-20260108-00016, call sign S00798.
Filed January 30, 2026, for authority to launch and operate up to one million NGSO satellites as the "SpaceX Orbital Data Center system," plus several rule waivers. The Space Bureau **accepted it for filing** on February 4, 2026 (**DA 26-113**) and sought comment. I did not find a later grant, deferral, or dismissal.
https://regmedia.co.uk/2026/02/05/public-notice-spacex-ai-sats.pdf

4. Eloy earth-station STA — SES-STA-20260511-01297, call sign E260362.
SpaceX Services requested a 60-day special temporary authority, beginning May 25, 2026, for the gateway operations proposed in underlying license application SES-LIC-20260429-01219 at Eloy, Arizona, on a non-harmful-interference basis. The Bureau **granted** it on July 9, 2026; the STA expired September 7, 2026.
https://fcc.report/IBFS/SES-STA-20260511-01297

G Grok native ⊗ Wrong Incomplete list 1.1m · $0.534 · 12 searches · 6 fetches

> **Judge:** The answer applies the DA-26-398 dismissal only to the direct-to-cell application, so it misses the dismissal of the Gen2 Big LEO and L-band pieces (fact 5) and that the January 2 GHz grant stands (fact 6). It also does not say the data-center acceptance left milestones and the surety bond unwaived (fact 12), or that the Eloy STA is not a license and has expired (fact 15).

These are four different SpaceX matters. Two were granted only in part and deferred in part; one was only accepted for filing; one STA was granted.

Gen2 call sign — S2992/S3069 (lead file SAT-LOA-20200526-00055, with later amendments). SpaceX asked to deploy and operate its second-generation NGSO Starlink system. The Space Bureau has **granted in part and deferred in part**. The latest partial grant, DA 26-36 (Jan. 9, 2026), authorizes 15,000 Gen2 satellites with upgraded frequencies and form factors and leaves the rest of the original request deferred. https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

Direct-to-cell constellation — call sign S00735, files SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339 (GN Docket No. 25-340). This is a **new** system, not a Gen2 modification: up to 15,000 very-low-Earth-orbit satellites for U.S. SCS/MSS, direct-to-cell/MSS outside the United States, and FSS backhaul and TT&C. In DA 26-1078 (Oct. 6, 2026), the Space Bureau and Wireless Telecommunications Bureau **granted it in part and deferred it in part**, including deferral of U.S. MSS in 2020–2025 MHz and of 20.2–21.2 / 30.0–31.0 GHz. Separately, DA 26-398 **dismissed with prejudice** the Big LEO (1.6/2.4 GHz) and L-band (1.5 GHz) pieces of this application.
https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

Orbital data-center application — call sign S00798, file SAT-LOA-20260108-00016. SpaceX asked to launch and operate up to one million NGSO satellites (500–2,000 km) as an orbital data-center system, using optical inter-satellite links and limited Ka-band feeder spectrum, plus several waivers. The Bureau has **only accepted it for filing** and sought comment (DA 26-113, Feb. 4, 2026). It has not granted, deferred, or dismissed it. https://docs.fcc.gov/public/attachments/DA-26-113A1.txt

Eloy earth-station STA — call sign E260362, file SES-STA-20260511-01297 (related license application SES-LIC-20260429-01219). SpaceX Services asked for a 60-day STA to operate a quad-band gateway in Eloy, Arizona—up to 40 identical 1.99 m antennas—with the already authorized Gen1 (S2983/S3018) and Gen2 (S2992/S3069) systems. The Bureau **granted** it on July 9, 2026, for July 10 through September 7, 2026, on a non-interference basis. https://fcc.report/IBFS/SES-STA-20260511-01297

https://docs.fcc.gov/public/attachments/DA-24-1193A1.pdf

2. Direct-to-cell constellation — SAT-LOA-20250916-00282, call sign S00735 (amended by SAT-AMD-20251125-00339).
SpaceX asked to launch and operate a new 15,000-satellite NGSO system for MSS and supplemental coverage from space in the United States, MSS and direct-to-cell outside the United States, and FSS backhaul and TT&C. On October 6, 2026, the Space Bureau and Wireless Telecommunications Bureau **granted it in part and deferred it in part**, with conditions (**DA 26-1078**). Use of 2020–2025 MHz in the United States was deferred. An earlier April 23, 2026 order (**DA 26-398**) **dismissed with prejudice** only the requests to use certain already-licensed MSS bands (including 1610–1626.5, 2483.5–2500, 1525–1559, and 1626.5–1660.5 MHz outside the United States). It did not dismiss the constellation application as a whole.
https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf
https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

3. Orbital data-center application — SAT-LOA-20260108-00016, call sign S00798.
Filed January 30, 2026, for authority to launch and operate up to one million NGSO satellites as the "SpaceX Orbital Data Center system," plus several rule waivers. The Space Bureau **accepted it for filing** on February 4, 2026 (**DA 26-113**) and sought comment. I did not find a later grant, deferral, or dismissal.
https://regmedia.co.uk/2026/02/05/public-notice-spacex-ai-sats.pdf

4. Eloy earth-station STA — SES-STA-20260511-01297, call sign E260362.
SpaceX Services requested a 60-day special temporary authority, beginning May 25, 2026, for the gateway operations proposed in underlying license application SES-LIC-20260429-01219 at Eloy, Arizona, on a non-harmful-interference basis. The Bureau **granted** it on July 9, 2026; the STA expired September 7, 2026.

PROMPT 23 · REGULATION · FACTS AS OF 2026-10-08

The FAA said legacy launch licenses had to move to Part 450. What was the deadline, did Falcon 9, Falcon Heavy, and Dragon make it, and what does one Part 450 license cover that the old rules split up?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FAA newsroom, 17 March 2026, "FAA Streamlines Commercial Space License Approvals."

The transition deadline was 9 March 2026. Operators that transitioned legacy licenses by that date include SpaceX Falcon 9 / Falcon Heavy and Dragon, and also Blue Origin New Shepard, Firefly Alpha, Rocket Lab Electron, and ULA Atlas and Vulcan. An answer that says Falcon 9 missed the deadline is wrong.

Part 450 lets one license cover a portfolio of operations, different vehicle configurations and mission profiles, and more than one launch and reentry site. The FAA says it has issued 14 Part 450 licenses since the rule took effect in March 2021. Do not invent a Falcon license number; the page does not give one.

Exa — Correct

39.9s · $0.044 · 2 searches · 2 fetches

Judge: Facts 1-6 are correct. Facts 7 (14 Part 450 licenses issued) and 8 (no Falcon license number on the FAA page) are not stated, but both are context-only.

Deadline: March 9, 2026. Legacy licenses under Parts 415/417, 431, and 435 expired no later than that date. Operators had to be under Part 450 to keep flying after March 9, 2026. Those legacy parts were removed from the CFR on March 10, 2026, ending a five-year overlap that began when Part 450 took effect on March 10, 2021. (FAA legacy regulations; Federal Register final rule)

Falcon 9, Falcon Heavy, and Dragon made it. The FAA lists SpaceX Falcon 9 / Falcon Heavy and Dragon among operators that transitioned legacy licenses by the March 9, 2026 deadline (along with Blue Origin New Shepard, Firefly Alpha, Rocket Lab Electron, and ULA Atlas and Vulcan). (FAA newsroom, March 17, 2026)

What one Part 450 license covers that the old rules split up: Part 450 folds four old rules (Parts 415, 417, 431, and 435—expendable launch, reusable launch, and reentry) into a single vehicle-operator license. One license can authorize launch, reentry, or both, and a portfolio of operations: different vehicle configurations, mission profiles, and multiple launch and reentry sites. Under the old parts, those were licensed separately. (FAA newsroom; 14 CFR § 450.3)

33.6s · $0.054 · 3 searches · 2 fetches

Judge: Facts 7 (14 licenses issued) and 8 (no Falcon license number on the FAA page) are not stated in the answer; both are context-level. The core and required facts are all correct and no traps were asserted.

Deadline: March 9, 2026. The FAA says legacy licenses expired no later than that date, and operators had to be under Part 450 to keep flying after March 9. The old rules (Parts 415/417, 431, and 435) were removed from the CFR on March 10, 2026. Some summaries say “by March 10”; the FAA’s own pages use March 9 as the expiration deadline.

Yes — Falcon 9, Falcon Heavy, and Dragon made it. The FAA’s March 17, 2026 announcement lists SpaceX Falcon 9 / Falcon Heavy and Dragon among operators that transitioned legacy licenses by the March 9 deadline (along with New Shepard, Alpha, Electron, and Atlas/Vulcan).

One Part 450 license covers what the old rules split up. Part 450 folds those four legacy rules into a single vehicle-operator license. Instead of separate launch vs. reentry and expendable vs. reusable licensing tracks, one license can authorize a portfolio of operations: different vehicle configurations and mission profiles, and multiple launch and reentry sites.

Sources: FAA newsroom, March 17, 2026; FAA legacy regulations page.

Keenable search — Correct

9.2s · ~$0.033 · 2 searches · 1 fetches

Judge: All core and required facts are correct, and the answer lists the other operators. It omits the 14-license count and the point that the FAA page gives no Falcon license number. It also claims Falcon 9 needed separate Florida and California licenses under the old rules, which the cited sources do not say.

Deadline: March 9, 2026. Legacy licenses under the old rules had a five-year transition after Part 450 took effect in March 2021. The FAA says those legacy licenses had to be moved by March 9, 2026; after that, all licensing is under Part 450. (FAA)

Falcon 9, Falcon Heavy, and Dragon made it. The FAA lists SpaceX’s Falcon 9, Falcon Heavy, and Dragon among operators that transitioned legacy licenses by that deadline, along with Blue Origin New Shepard, Firefly Alpha, Rocket Lab Electron, and ULA Atlas and Vulcan. (FAA)

What one Part 450 license covers: It consolidates four old rules (Parts 415, 417, 431, and 435) into one performance-based vehicle-operator license. One license can cover a portfolio of operations—different vehicle configurations, mission profiles, and multiple launch and reentry sites—instead of separate approvals for expendable launch, reusable launch/reentry, reentry, and often each site. Under the old rules, Falcon 9 needed separate licenses for its Florida and California sites; Part 450 allows those sites under one authorization. (FAA)

Judge: Facts 7 (14 Part 450 licenses issued) and 8 (no Falcon license number on FAA page) are not stated in the answer; both are context-only. The core and required facts are all correct and no traps were asserted.

Deadline: March 9, 2026. Legacy launch and reentry licenses expired no later than that date. Operators had to be under Part 450 to keep flying after March 9. The old rules (Parts 415/417, 431, and 435) came out of the CFR on March 10, 2026. The Part 450 rule took effect March 10, 2021, and the FAA ran a five-year overlap so operators could switch.

Falcon 9, Falcon Heavy, and Dragon made it. The FAA’s March 17, 2026 notice lists “SpaceX Falcon 9 / Falcon Heavy and Dragon” among operators that transitioned legacy licenses by the March 9 deadline, along with Blue Origin New Shepard, Firefly Alpha, Rocket Lab Electron, and ULA Atlas and Vulcan.

One Part 450 vehicle operator license covers launch, reentry, or both, for one or more flights of the same vehicle or family of vehicles (14 CFR 450.1 and 450.3). The FAA also says one license can cover a portfolio of operations, different configurations and mission profiles, and multiple launch and reentry sites.

The old rules split that work up. Parts 415 and 417 covered expendable launch vehicles (license vs. launch safety). Part 431 covered reusable launch vehicle missions. Part 435 covered reentry of a reentry vehicle that was not an RLV. A capsule such as Dragon needed its own reentry license, separate from the Falcon launch licenses. Part 450 folded those four rules into one.

Sources: FAA, March 17, 2026; FAA legacy regulations page; 14 CFR Part 450; 2020 final rule, 85 FR 79566.

Grok native · Partly correct · Incomplete list · 27.1s · $0.048 · 2 searches · 2 fetches

> **Judge:** The answer never says one license covers a 'portfolio of operations' (it says one or more flights of the same vehicle family, which is close but not the same). It omits the 14 Part 450 licenses figure and does not note that the FAA page gives no Falcon license number.

Deadline: March 9, 2026. Legacy licenses expired no later than that date; operators had to be under Part 450 to keep flying after March 9, 2026. The underlying rule took effect March 10, 2021, with a five-year transition; Parts 415, 417, 431, and 435 were removed from the CFR effective March 10, 2026. Some summaries say “by March 10, 2026.” The FAA’s own pages use March 9 as the last day of legacy licenses.

Falcon 9, Falcon Heavy, and Dragon made it. The FAA lists SpaceX Falcon 9 / Falcon Heavy and Dragon among operators that transitioned by the March 9, 2026 deadline, along with Blue Origin New Shepard, Firefly Alpha, Rocket Lab Electron, and ULA Atlas and Vulcan.

What one Part 450 license covers that the old rules split up: Part 450 replaces four separate regimes—Parts 415 and 417 (expendable launch), Part 431 (reusable launch and reentry), and Part 435 (other reentry vehicles)—with a single vehicle-operator license. One license can authorize launch, reentry, or both, for one or more flights of the same vehicle or family of vehicles, including different configurations and mission profiles and operations at multiple launch and reentry sites. Under the old rules, those activities and sites generally needed separate licenses.

PROMPT 26 · REGULATION · FACTS AS OF 2026-10-08

L'Arcep a-t-elle autorisé Starlink à utiliser en France le réseau UIT USASAT-NGSO-3X? Quelle décision, quels réseaux sont réellement autorisés, dans quelles bandes et quel sens, et le terminal est-il protégé contre le brouillage?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Décision n° 2024-2687, délibérée le 19 décembre 2024. Elle modifie la décision n° 2022-1102 du 25 mai 2022. Le communiqué de presse de l'Arcep est du 19 décembre 2024. Ne pas grader une date de 2023 qui apparaîtrait dans un intitulé de fichier.

La décision de 2022 autorisait seulement le système UIT « STEAM-1 », dans les bandes 10,70-12,75 GHz (espace vers Terre) et 14,00-14,50 GHz (Terre vers espace).

Le 21 mars 2024, Starlink a demandé d'ajouter « STEAM-1B » et « USASAT-NGSO-3X ». Consultation publique du 19 juin au 19 juillet 2024. Le 6 décembre 2024, Starlink a retiré USASAT-NGSO-3X et n'a maintenu que STEAM-1B.

La décision autorise les liaisons avec « STEAM-1 » et « STEAM-1B » seulement, vers des stations terriennes fixes et des stations en mouvement, sur le territoire dont l'Arcep est affectataire. USASAT-NGSO-3X n'est pas autorisé. L'autorisation est sans garantie de non-brouillage, avec une obligation de non-interférence. Les ESIM doivent respecter la décision ECC/DEC/(18)05, notamment une PIRE maximale de 54,5 dBW.

Faux: la France a autorisé USASAT-NGSO-3X. Faux: les terminaux sont protégés contre le brouillage.

Exa — Correct

16.3s · $0.063 · 2 searches · 2 fetches

Judge: Only fact 5 (the 2022 decision authorising only STEAM-1) is not explicitly stated; the answer only says STEAM-1B was added to the system already authorised. Everything else matches the checklist and no trap is asserted.

Non. L'Arcep n'a pas autorisé Starlink à utiliser en France le réseau UIT USASAT-NGSO-3X.

Décision. La décision n° 2024-2687 du 19 décembre 2024 modifie la décision n° 2022-1102 du 25 mai 2022 (déjà modifiée). Starlink avait demandé, le 21 mars 2024, d'ajouter STEAM-1B et USASAT-NGSO-3X. Après la consultation publique (19 juin–19 juillet 2024), Starlink a limité sa demande au seul STEAM-1B par courriel du 6 décembre 2024. La décision n'autorise donc que ce réseau en plus de celui déjà autorisé.
Sources : décision n° 2024-2687 (PDF), communiqué Arcep du 19 décembre 2024.

Réseaux réellement autorisés. L'annexe de la décision n° 2024-2687 n'autorise des liaisons qu'avec les systèmes non géostationnaires enregistrés à l'UIT sous les noms « STEAM-1 » et « STEAM-1B », vers des stations terriennes fixes et des stations terriennes en mouvement (ESIM), sur le territoire dont l'Arcep est affectataire. USASAT-NGSO-3X n'y figure pas.

Bandes et sens.
- 10,70–12,75 GHz, sens espace vers Terre
- 14,00–14,50 GHz, sens Terre vers espace

Protection contre le brouillage. Non. L'autorisation est délivrée sans garantie de non-brouillage. Les conditions techniques des décisions CEPT ECC/DEC/(17)04 (stations fixes, PIRE max. 60 dBW) et ECC/DEC/(18)05 (ESIM, PIRE max. 54,5 dBW) visent à éviter que les terminaux causent des brouillages, mais ne garantissent pas que ces stations soient elles-mêmes protégées. Starlink a en outre une obligation de non-interférence vis-à-vis des autres systèmes et services de ces bandes ou des bandes adjacentes.

Cited: 1. arcep.fr · 2. arcep.fr · 3. arcep.fr · 4. arcep.fr · 5. arcep.fr · 6. arcep.fr · 7. arcep.fr

Parallel — Correct

39.7s · $0.136 · 8 searches · 2 fetches

Judge: Fact 5 is only partly covered: the answer says STEAM-1 was already authorised by the 2022 decision, but never states it was the only system. Fact 13 is missing: the 54.5 dBW EIRP limit is not given. The answer cites ECC/DEC/(18)05 but only in the interference context.

Non. L'Arcep n'a pas autorisé Starlink à utiliser en France le réseau UIT USASAT-NGSO-3X.

Décision
La demande du 21 mars 2024 visait STEAM-1B et USASAT-NGSO-3X. Après la consultation publique (19 juin–19 juillet 2024), Starlink a restreint sa demande, le 6 décembre 2024, au seul STEAM-1B.

La décision n° 2024-2687 du 19 décembre 2024 modifie la décision n° 2022-1102 et n'ajoute que STEAM-1B. L'en-tête du PDF indique par erreur « 19 décembre 2023 » ; le dispositif et le communiqué datent bien du 19 décembre 2024.

Sources : décision n° 2024-2687 (PDF), communiqué Arcep du 19 décembre 2024.

Réseaux réellement autorisés (terminaux utilisateurs)
Sur le territoire dont l'Arcep est affectataire, Starlink Internet Services Limited peut relier des stations terriennes fixes et des ESIM aux systèmes UIT :

- STEAM-1 (déjà autorisé par la décision n° 2022-1102) ;
- STEAM-1B (ajouté par la décision n° 2024-2687).

USASAT-NGSO-3X n'y figure pas. Aucune décision ultérieure trouvée ne l'ajoute à cette autorisation.

Bandes et sens

Sens	Bandes
Espace vers Terre	**10,70–12,75 GHz**

Sens	Bandes
Terre vers espace	**14,00–14,50 GHz**

Protection contre le brouillage
Non. L'autorisation est accordée sans garantie de non-brouillage, avec une obligation de non-interférence envers les autres systèmes et services de ces bandes ou des bandes adjacentes. Les décisions CEPT ECC/DEC/(17)04 et ECC/DEC/(18)05 limitent les brouillages *causés par* les terminaux ; elles ne garantissent pas leur protection.

> **Judge:** Only fact 13 is missing: the answer cites ECC/DEC/(18)05 but never gives the 54.5 dBW maximum PIRE. The answer says the 2022 decision's bands were narrower (10.95-12.70 GHz), which differs from fact 6's wording, but it gives the correct bands and directions for the authorization.

Non. L'Arcep n'a pas autorisé Starlink à utiliser en France le réseau UIT USASAT-NGSO-3X.

Starlink l'avait demandé le 21 mars 2024, avec **STEAM-1B**, pour des liaisons avec des stations terriennes fixes et des ESIM. Après la consultation du 19 juin au 19 juillet 2024, Starlink a limité sa demande, par courriel du 6 décembre 2024, au seul **STEAM-1B**. La **décision n° 2024-2687** n'autorise donc que STEAM-1B, en plus du réseau déjà autorisé.
Sources : communiqué Arcep du 19 décembre 2024, décision n° 2024-2687.

Décision et réseaux réellement autorisés

La décision de référence est la **n° 2022-1102 du 25 mai 2022**, modifiée par la **n° 2023-0680 du 28 mars 2023** puis par la **n° 2024-2687**. Elle a remplacé l'autorisation **n° 2021-0116 du 9 février 2021**, annulée par le Conseil d'État le 5 avril 2022.

L'annexe substituée par la décision 2024-2687 autorise des liaisons uniquement avec les systèmes non géostationnaires enregistrés à l'UIT sous les noms :

- **STEAM-1**
- **STEAM-1B**

USASAT-NGSO-3X n'y figure pas.

Bandes et sens

Sur le territoire dont l'Arcep est affectataire, pour les terminaux utilisateurs (stations fixes et ESIM) :

Sens	Bande
espace vers Terre	**10,70 – 12,75 GHz**
Terre vers espace	**14,00 – 14,50 GHz**

La décision de 2022 était plus étroite (10,95–12,70 GHz et 14–14,5 GHz, stations fixes seulement). La décision 2023-0680 a élargi les bandes et ajouté les ESIM ; la décision 2024-2687 a ajouté STEAM-1B sans changer ces bandes.

Les passerelles (*gateways*) relèvent d'autorisations distinctes. L'Arcep indique, pour ce type de stations, **17,8–19,3 GHz** (espace vers Terre) et **27,5–30,0 GHz** (Terre vers espace). Ce ne sont pas les bandes de la décision 2024-2687.
Source : page Arcep mise à jour.

Protection contre le brouillage

Non, le terminal n'est pas protégé. L'autorisation est délivrée **sans garantie de non-brouillage**. Starlink a une obligation de non-interférence envers les autres utilisateurs de ces bandes et des bandes adjacentes, et doit cesser immédiatement l'usage si un brouillage est constaté (article 4 de la décision 2022-1102, complété en 2023).

Les décisions CEPT ECC/DEC/(17)04 et ECC/DEC/(18)05 visent à empêcher les terminaux de brouiller d'autres services. L'Arcep écrit expressément qu'elles **ne garantissent pas que les stations terriennes fixes ou en mouvement puissent être protégées.**

Cited: 1. arcep.fr · 2. arcep.fr · 3. arcep.fr

Grok native Correct

`24.8s · $0.150 · 4 searches · 2 fetches`

> **Judge:** Only fact 5 is missing: the answer never says that the 2022 decision authorised only STEAM-1. The 2022 bands are given, but they are framed as the bands in the annex to decision 2024-2687.

Non. L'Arcep n'a pas autorisé Starlink à utiliser en France le réseau UIT USASAT-NGSO-3X.

Décision. La décision n° 2024-2687 du 19 décembre 2024 modifie la décision n° 2022-1102 du 25 mai 2022 (déjà modifiée, notamment par la n° 2023-0680). Starlink avait demandé, le 21 mars 2024, d'ajouter STEAM-1B et USASAT-NGSO-3X. Après la consultation publique du 19 juin au 19 juillet 2024, Starlink a limité sa demande à STEAM-1B (courriel du 6 décembre 2024). La décision adoptée n'autorise donc que STEAM-1 et STEAM-1B. Le projet de consultation qui citait USASAT-NGSO-3X n'a pas été retenu. Aucune décision ultérieure publiée par l'Arcep n'a été trouvée qui autoriserait ce réseau.

Réseaux, bandes, sens (annexe de la décision n° 2024-2687), sur le territoire dont l'Arcep est affectataire, pour des stations terriennes fixes et des ESIM :
- **espace vers Terre :** 10,70–12,75 GHz ;
- **Terre vers espace :** 14,00–14,50 GHz.

Protection contre le brouillage. Non. L'autorisation est accordée **sans garantie de non-brouillage**, avec une **obligation de non-interférence** vis-à-vis des autres systèmes et services de ces bandes ou des bandes adjacentes. Les conditions ECC/DEC/(17)04 (stations fixes, PIRE max. 60 dBW) et ECC/DEC/(18)05 (ESIM, PIRE max. 54,5 dBW) visent à **éviter que les terminaux brouillent autrui** ; l'Arcep indique expressément qu'elles **ne garantissent pas la protection** de ces stations. Les terminaux doivent aussi respecter ETSI EN 303 980 ou EN 303 981 (ou norme équivalente ultérieure) et rester sous contrôle d'un centre d'exploitation.

Sources : décision n° 2024-2687 (PDF) ; communiqué Arcep du 19 décembre 2024 ; décision n° 2022-1102 (art. 4 : sans garantie de non-brouillage, obligation de cesser en cas de brouillage).

> **Judge:** Only fact 13 is missing: the answer cites ECC/DEC/(18)05 but never gives the 54.5 dBW maximum PIRE. The answer says the 2022 decision's bands were narrower (10.95-12.70 GHz), which differs from fact 6's wording, but it gives the correct bands and directions for the authorization.

Non. L'Arcep n'a pas autorisé Starlink à utiliser en France le réseau UIT USASAT-NGSO-3X.

Starlink l'avait demandé le 21 mars 2024, avec **STEAM-1B**, pour des liaisons avec des stations terriennes fixes et des ESIM. Après la consultation du 19 juin au 19 juillet 2024, Starlink a limité sa demande, par courriel du 6 décembre 2024, au seul **STEAM-1B**. La décision n° 2024-2687 n'autorise donc que STEAM-1B, en plus du réseau déjà autorisé.
Sources : communiqué Arcep du 19 décembre 2024, décision n° 2024-2687.

Décision et réseaux réellement autorisés

La décision de référence est la **n° 2022-1102 du 25 mai 2022**, modifiée par la **n° 2023-0680 du 28 mars 2023** puis par la **n° 2024-2687**. Elle a remplacé l'autorisation **n° 2021-0116 du 9 février 2021**, annulée par le Conseil d'État le 5 avril 2022.

L'annexe substituée par la décision 2024-2687 autorise des liaisons uniquement avec les systèmes non géostationnaires enregistrés à l'UIT sous les noms :

- **STEAM-1**
- **STEAM-1B**

USASAT-NGSO-3X n'y figure pas.

Bandes et sens

Sur le territoire dont l'Arcep est affectataire, pour les terminaux utilisateurs (stations fixes et ESIM) :

Sens	Bande
espace vers Terre	**10,70 – 12,75 GHz**
Terre vers espace	**14,00 – 14,50 GHz**

La décision de 2022 était plus étroite (10,95–12,70 GHz et 14–14,5 GHz, stations fixes seulement). La décision 2023-0680 a élargi les bandes et ajouté les ESIM ; la décision 2024-2687 a ajouté STEAM-1B sans changer ces bandes.

Les passerelles (*gateways*) relèvent d'autorisations distinctes. L'Arcep indique, pour ce type de stations, **17,8–19,3 GHz** (espace vers Terre) et **27,5–30,0 GHz** (Terre vers espace). Ce ne sont pas les bandes de la décision 2024-2687.
Source : page Arcep mise à jour.

Protection contre le brouillage

Non, le terminal n'est pas protégé. L'autorisation est délivrée **sans garantie de non-brouillage**. Starlink a une obligation de non-interférence envers les autres utilisateurs de ces bandes et des bandes adjacentes, et doit cesser immédiatement l'usage si un brouillage est constaté (article 4 de la décision 2022-1102, complété en 2023).

Les décisions CEPT ECC/DEC/(17)04 et ECC/DEC/(18)05 visent à empêcher les terminaux de brouiller d'autres services. L'Arcep écrit expressément qu'elles **ne garantissent pas que les stations terriennes fixes ou en mouvement puissent être protégées**.

PROMPT 28 · REGULATION · FACTS AS OF 2026-10-08

A petitioner asked the FCC to hold a hearing on whether SpaceX could be an EchoStar-spectrum licensee, on the theory that Elon Musk is controlled by the Chinese Communist Party. Did DA-26-471 refuse the assignment on that ground?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

DA-26-471, paragraph 27. Frequency Forward's petition to deny sought an evidentiary hearing on the applications and on SpaceX's qualifications to remain an FCC licensee, arguing that Elon Musk, as majority shareholder, is controlled by or subject to the direction of the Chinese Communist Party.

The Bureaus find that SpaceX is qualified to be a licensee. The order does not refuse the assignment on that theory. Paragraph 26 also finds the Trust qualified to hold the licenses during the interim, and says the Trust holds them for up to two years for the benefit of SpaceX. The applicants expect step two to close on or about 30 November 2027.

Wrong: the assignment was denied because of the control allegation. Wrong: the order skipped the qualifications finding.

Source: https://docs.fcc.gov/public/attachments/DA-26-471A1.pdf

Exa Correct

15.6s · $0.099 · 4 searches · 1 fetches

> **Judge:** The answer covers facts 1-4, saying the order did not refuse the assignment and found SpaceX qualified. It omits the Trust qualification finding in paragraph 26, the two-year trust holding period, and the expected November 2027 step-two closing, but these are context-only.

No. DA-26-471 granted the assignment; it did not refuse it on that ground.

In the May 12, 2026 Memorandum Opinion and Order (GN Docket No. 25-302), the Wireless Telecommunications Bureau and Space Bureau approved assignment of about 65 MHz of EchoStar AWS-4, AWS-H Block, and unpaired AWS-3 spectrum, plus earth-station licenses, to SpaceX via Spectrum Business Trust 2025-1. Frequency Forward had petitioned to deny and sought a section 309(e) hearing, arguing that Elon Musk, as SpaceX's majority shareholder, is "controlled by, or subject to the direction of" the Chinese Communist Party.

Paragraph 27 finds SpaceX qualified to be a licensee. The Bureaus said the cited articles did not show disclosable investors from the People's Republic of China, that claims of CCP influence via loans or Tesla were unsupported, and that there was "no evidence that would warrant an evidentiary hearing" on SpaceX's qualifications. They therefore found SpaceX qualified to hold the licenses and granted the applications (with waivers and buildout conditions).

13.8s · $0.113 · 2 searches · 1 fetches

> **Judge:** Facts 5, 6 and 7 (Trust qualified in paragraph 26, two-year trust period, expected closing around 30 November 2027) are not stated in the answer, but they are context-only. The core answer is correct and supported: the assignment was granted and SpaceX was found qualified.

No. DA-26-471 granted the assignment; it did not refuse it on that ground.

In the May 12, 2026 Memorandum Opinion and Order (GN Docket No. 25-302), the Wireless Telecommunications Bureau and Space Bureau approved the two-step assignment of EchoStar's AWS-4, AWS-H Block, and unpaired AWS-3 spectrum licenses and certain earth station licenses to SpaceX. Frequency Forward had petitioned to deny and asked for an evidentiary hearing, arguing that Elon Musk, as SpaceX's majority shareholder, is "controlled by, or subject to the direction of" the Chinese Communist Party, citing Tesla's China business arrangements and Delaware court testimony about possible Chinese investors.

The Bureaus rejected that theory. They found the cited materials did not show disclosable investors from the People's Republic of China, and that the claim that loans to Musk-controlled companies would control SpaceX was unsupported. They found no evidence warranting a section 309(e) hearing, held SpaceX qualified, and denied Frequency Forward's petition. See paragraphs 27 and 81.

> **Judge:** Facts 5, 6 and 7 (Trust qualified in paragraph 26, Trust holding licenses up to two years, step two closing around 30 November 2027) are not stated in the answer. These are context-only details, and the core and required facts are correct.

No. DA-26-471 did the opposite: it granted the assignment and declined to designate a hearing on that theory.

On May 12, 2026, the Wireless Telecommunications Bureau and Space Bureau released DA-26-471, a Memorandum Opinion and Order in GN Docket No. 25-302. It approved assignment of EchoStar's AWS-4, AWS-H Block, and unpaired AWS-3 licenses (about 65 MHz) and several earth station licenses to SpaceX through a two-step transaction. The FCC's document page describes the order as granting those applications. https://docs.fcc.gov/public/attachments/DA-26-471A1.pdf https://www.fcc.gov/document/order-granting-spacex-echostar-applications

Frequency Forward's October 30, 2025 petition to deny asked for an evidentiary hearing on SpaceX's qualifications, arguing that Elon Musk, as majority shareholder, is "controlled by, or subject to the direction of" the Chinese Communist Party. The order quotes that request, notes SpaceX's response that it disclosed all 10%-or-greater interest holders and that none are PRC citizens, and finds that the articles Frequency Forward cited "fail to sufficiently support its contention that SpaceX has disclosable investors from the People's Republic of China." It also finds "no evidence that would warrant an evidentiary hearing under section 309(e)" on SpaceX's qualifications, and finds SpaceX qualified to be a licensee. https://docs.fcc.gov/public/attachments/DA-26-471A1.pdf https://frequencyfwd.com/files/frequency-forward-petition-to-deny.pdf

PROMPT 29 · REGULATION · FACTS AS OF 2026-10-08

The 8 March 2024 E-band order, DA-24-222, is often described as giving Starlink E-band. How many satellites does it actually cover, does it add any satellites, what did it do about a processing round, and were the tracking beacons granted that day?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

DA-24-222, adopted and released 8 March 2024.

The grant is limited to communications in 71.0-76.0 GHz (space-to-Earth) and 81.0-86.0 GHz (Earth-to-space) on the 7,500 Gen2 satellites the Commission had already authorized. The order says it does not authorize SpaceX to construct, deploy, or operate any additional satellites beyond those authorized to date.

The Bureau declines to open an E-band processing round and waives 47 CFR 25.156 and 25.157 for this E-band request on its own motion.

E-band during launch, early orbit, payload testing, and deorbit must be on a non-harmful-interference basis: do not cause harmful interference, and accept any interference received. If notified of harmful interference, stop immediately and tell the Commission in writing.

The order continues to defer SpaceX's use of tracking beacons. The beacon grant is a later order, 20 November 2024, and is not this one. As of 8 March 2024 the beacons were not granted.

The first partial grant of 29 November 2022 had deferred E-band and the beacons, and had deferred the remaining 22,488 satellites in the request. Two court appeals and two petitions for reconsideration of that 2022 grant were still pending on 8 March 2024.

Wrong: DA-24-222 authorized E-band on a new tranche. Wrong: the beacons were granted on 8 March 2024.

Exa — Partly correct — Incomplete list

14.9s · $0.064 · 2 searches · 1 fetches

> **Judge:** Missing the launch/early-orbit non-harmful-interference condition (6), the stop-on-notification duty (7), the 20 November 2024 beacon grant date (9), and the pending appeals/reconsideration petitions (12). Core facts are correct and no traps are asserted.

DA-24-222 (adopted and released 8 March 2024) did not expand the Gen2 constellation. It only added E-band on satellites already licensed, waived an E-band processing round, and left the beacon request deferred.

Satellites covered. The grant is limited to E-band communications—71.0–76.0 GHz space-to-Earth and 81.0–86.0 GHz Earth-to-space—with the 7,500 Gen2 Starlink satellites the Commission had already authorized in the 29 November 2022 first partial grant. Source: DA-24-222A1.pdf, ¶1.

No added satellites. The order states it "does not authorize SpaceX to construct, deploy, or operate any additional satellites beyond those authorized to date." It continues to defer the remaining 22,488 satellites in the amended application (29,988 proposed in total). Source: same PDF, ¶¶1–2.

Processing round. E-band was not part of the 2020 Ku/Ka-band processing round, so the request would normally have started a new round under 47 CFR §§ 25.156 and 25.157. The Bureau **declined to open an E-band processing round** and **waived those processing-round procedures on its own motion**, citing limited gateway use and no new satellite frequency conflicts. The grant is conditioned on coordination with existing and future FSS operators and on compliance with any sharing rules from a **future** E-band processing round that would include SpaceX. It does not give SpaceX first-come, first-served priority. Source: same PDF, ¶¶10–13.

Tracking beacons. Not granted that day. The order continues to defer the rest of the request, including SpaceX's use of emergency/tracking beacons in the 16 December 2022 second amendment (137.00–138.00 MHz and 148.00–150.05 MHz). Those beacons had already been deferred in the 2022 partial grant. Source: same PDF, ¶¶1–3.

> **Judge:** Missing: the non-harmful-interference condition (6), the stop-on-notice requirement (7), the 20 November 2024 beacon grant (9), and the pending appeals and reconsideration petitions (12). The core and required facts on satellite count, no additions, no processing round, the waiver, and deferral of the beacons are all correct.

It covers the already-authorized 7,500 Gen2 satellites only. It adds none, declines to open an E-band processing round, and does not grant the beacons.

DA-24-222 (adopted and released 8 March 2024) grants, in part and with conditions, E-band use only: 71.0–76.0 GHz space-to-Earth and 81.0–86.0 GHz Earth-to-space, and only with the 7,500 Gen2 Starlink satellites already authorized in the December 2022 partial grant. The order states it "does not authorize SpaceX to construct, deploy, or operate any additional satellites beyond those authorized to date," and it continues to defer the remaining 22,488 satellites in the amended application. https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf

On the processing round, the E-band frequencies were not part of the 2020 Ku/Ka-band round, so that portion of the application would normally have started a new round. The Bureau "decline[d] to open an E-band processing round at this time" and waived the processing-round procedures in 47 C.F.R. §§ 25.156 and 25.157 on its own motion. The grant is conditioned on SpaceX complying with any sharing rules from a future E-band processing round, which would include SpaceX. https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf

The tracking/emergency beacons were not granted that day. The 16 December 2022 second amendment sought tracking beacons in 137.00–138.00 MHz and 148.00–150.05 MHz; the order continues to defer "SpaceX's ongoing use of emergency beacons" under that amendment, along with the rest of the pending request. https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf

Cited: 1. docs.fcc.gov

> **Judge:** Fact 9 is missing: the answer says beacon authority came later but cites DA-24-1160 and gives no 20 November 2024 date. Facts 6, 7 and 12 (the interference conditions and the pending appeals and petitions) are not stated.

DA-24-222 (adopted and released March 8, 2024) did not newly authorize a larger Starlink fleet. It only added E-band use on satellites the FCC had already licensed.

Satellites covered. The grant is limited to E-band communications—71.0–76.0 GHz (space-to-Earth) and 81.0–86.0 GHz (Earth-to-space)—with the 7,500 Gen2 Starlink satellites already authorized in the first partial grant of the Gen2 application. Source: DA-24-222A1; FCC summary: Partial Grant of SpaceX Gen2 Application to Allow E-Band Operations.

No added satellites. The order states it "does not authorize SpaceX to construct, deploy, or operate any additional satellites beyond those authorized to date." It continues to defer the rest of the request, including the remaining 22,488 satellites in the amended application (29,988 proposed in total). Source: DA-24-222A1.

Processing round. E-band was not part of the 2020 Ku/Ka-band processing round, so this request would normally have started a new round under 47 C.F.R. §§ 25.156 and 25.157. The Commission declined to open an E-band processing round and waived those processing-round procedures on its own motion, treating the request as limited, non-preclusive gateway use. The grant is conditioned on coordination with existing and future FSS operators (including OneWeb if authorized) and on compliance with any sharing rules from a possible future E-band round. It does not give SpaceX higher status than later systems. Source: DA-24-222A1, paras. 10–13.

Tracking beacons. No. The same order defers SpaceX's second-amendment request for tracking/emergency beacons (137.00–138.00 MHz and 148.00–150.05 MHz). The first partial grant had already deferred both E-band and tracking beacons; only E-band was decided on March 8, 2024. Source: DA-24-222A1. Beacon authority came later, not in this order (DA-24-1160).

> **Judge:** Missing context facts 6, 7 and 12 (non-harmful-interference conditions, stop-on-notice duty, pending appeals) and required fact 9 (the beacon grant came in a later 20 November 2024 order). All core and other required facts are correct and no trap was asserted.

DA-24-222 (8 March 2024) does not give Starlink new satellites. It is a further partial grant of the Gen2 application (call sign S3069; ICFS File Nos. SAT-LOA-20200526-00055, SAT-AMD-20210818-00105, SAT-AMD-20221216-00175). Source: DA-24-222A1.pdf.

- **Satellites covered:** E-band use only on the 7,500 Gen2 Starlink satellites already authorized in the first partial grant. Bands: 71.0–76.0 GHz (space-to-Earth) and 81.0–86.0 GHz (Earth-to-space).
- **No added satellites:** The order says it "does not authorize SpaceX to construct, deploy, or operate any additional satellites beyond those authorized to date." The other 22,488 of the proposed 29,988 remain deferred.
- **Processing round:** The Commission declined to open an E-band processing round and, on its own motion, waived 47 CFR §§ 25.156 and 25.157, so E-band operations are authorized outside a processing round. The grant is conditioned on later sharing rules from any future E-band round, plus coordination (including with existing and future FSS operators such as OneWeb, if authorized).
- **Tracking beacons: Not granted that day.** Consideration of the rest of the request is deferred, including ongoing use of emergency/tracking beacons in the second amendment (137.00–138.00 MHz Earth-to-space and 148.00–150.05 MHz space-to-Earth). The first partial grant had also deferred tracking beacons.

PROMPT 30 · MULTI-HOP · FACTS AS OF 2026-10-08

What did the D.C. Circuit do with the 29 November 2022 Gen2 grant, what was still pending at the Commission after that, and did the 26 November 2024 order let SpaceX put all 29,988 requested satellites into the 340 to 360 km shells?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

DA-24-1193, adopted and released 26 November 2024, paragraphs 6 and 18, read with the 9 January 2026 stamp.

The 29 November 2022 grant authorized up to 7,500 Gen2 satellites in Ku and Ka band and deferred the rest, including the 340, 345, 350, and 360 km shells. Two parties appealed to the D.C. Circuit. In July 2024 the D.C. Circuit upheld that grant. Two petitions for reconsideration at the Commission were still pending when DA-24-1193 was adopted. The 9 January 2026 grant stamp still lists petitions for reconsideration of the 2022 grant as pending. The court affirmance did not end those petitions.

DA-24-1193 grants the 340, 345, 350, and 360 km shells as an option for the previously authorized 7,500 satellites, conditioned on limited deployment consistent with SpaceX's coordination with NASA under the Space Act Agreement. It does not authorize the full requested constellation of nearly 30,000 satellites at those altitudes. The order says the Commission will keep watching interference, debris, and optical astronomy for that larger proposal.

Wrong: the court struck down the 2022 grant. Wrong: the November 2024 order filled the 340-360 km shells with the whole 29,988-satellite request.

Judge: Missing: the 9 January 2026 grant stamp still listing petitions for reconsideration as pending (fact 3), the explicit point that the affirmance did not end the petitions (fact 4, only implied), and the Commission's continued monitoring of interference, debris and astronomy (fact 10). The core facts are correct and no trap is asserted.

The D.C. Circuit affirmed the FCC's 29 November 2022 partial Gen2 grant. It did not expand that grant. After the appeal, two Commission reconsideration filings were still pending. The 26 November 2024 order did not authorize all 29,988 requested satellites in the 340–360 km shells.

D.C. Circuit. DISH Network and the International Dark-Sky Association appealed the 29 November 2022 *SpaceX Gen2 First Partial Grant* (interference and NEPA/environmental review). On 12 July 2024, in *International Dark-Sky Association, Inc. v. FCC*, 106 F.4th 1206 (D.C. Cir. 2024) (Nos. 22-1337 and 23-1001), the court held the order lawful and reasonably explained and affirmed it. Sources: FCC DA 24-1193 ¶ 6; D.C. Circuit opinion.

Still pending at the Commission. The FCC's November 2024 order states that two other parties' filings on that same partial grant remained pending: LeoLabs, Inc.'s petition for reconsideration (filed 30 December 2022) and Viasat, Inc.'s petition for clarification (filed 3 January 2023). Source: DA 24-1193 ¶ 6 & n.33.

26 November 2024 order and the 340–360 km shells. No. DA 24-1193 authorized only the already-authorized 7,500 Gen2 satellites to operate at 340, 345, 350, and 360 km (Ku-, Ka-, E-, and V-band, plus limited SCS/direct-to-cell authority), subject to conditions including NASA coordination below 400 km. It expressly continued to defer the other 22,488 satellites, "including all satellites proposed to operate in the 340 km, 345 km, 350 km, and 360 km orbital shells beyond the 7,500 satellites authorized today." The underlying request was for up to 29,988 satellites between 340 km and 614 km, not all of them in the 340–360 km shells (about 19,440 were proposed there). Source: DA 24-1193 ¶¶ 1–2, 5–6.

Judge: Fact 3 (the 9 January 2026 grant stamp still listing the petitions as pending) and fact 10 (continued Commission monitoring of interference, debris and optical astronomy) are not stated. The other facts match, including the 7,500-satellite option at 340, 345, 350 and 360 km conditioned on NASA coordination.

The D.C. Circuit affirmed the FCC's 29 November 2022 Gen2 partial grant. After that, LeoLabs's petition for reconsideration and Viasat's petition for clarification were still pending at the Commission. The 26 November 2024 order did not authorize all 29,988 requested satellites in the 340–360 km shells.

On 29 November 2022 the Commission granted in part and deferred in part SpaceX's Gen2 application, authorizing up to 7,500 Gen2 Starlink satellites in the Ku- and Ka-bands and deferring the rest of the request, including operations at 340, 345, 350, and 360 km. DISH and the International Dark-Sky Association appealed. On 12 July 2024 the D.C. Circuit held that the order was lawful and reasonably explained and affirmed it. *International Dark-Sky Ass'n, Inc. v. FCC*, 106 F.4th 1206 (D.C. Cir. 2024); https://docs.fcc.gov/public/attachments/DOC-403925A1.txt

The Space Bureau's 26 November 2024 order states that, after that affirmance, two Commission filings on the 2022 grant remained pending: LeoLabs's petition for reconsideration (filed 30 December 2022) and Viasat's petition for clarification (filed 3 January 2023). https://docs.fcc.gov/public/attachments/DA-24-1193A1.txt (¶ 6)

That same 26 November 2024 order (DA 24-1193) did not let SpaceX place all 29,988 requested satellites in the 340–360 km shells. It authorized only the already-authorized 7,500 Gen2 satellites to operate at 340, 345, 350, and 360 km, and it expressly continued to defer the remaining 22,488 satellites, "including all satellites proposed to operate in the 340 km, 345 km, 350 km, and 360 km orbital shells beyond the 7,500 satellites authorized today." Operations below 400 km were further limited to the number of satellites for which SpaceX had completed physical coordination with NASA. https://docs.fcc.gov/public/attachments/DA-24-1193A1.txt (¶¶ 1–2, 19, 50, 89a)

Judge: The answer never says that petitions for reconsideration of the 2022 grant were still pending at the Commission (facts 2, 3, 4), which was the second part of the question. It also omits the Commission's continued monitoring of interference, debris and astronomy (fact 10).

The D.C. Circuit did not act on the 29 November 2022 Gen2 grant itself. That grant is FCC Order FCC 22-91 (adopted 29 November 2022, released 1 December 2022). On 12 July 2024, in *International Dark-Sky Association, Inc. v. FCC*, No. 22-1337 (consolidated with DISH's No. 23-1001), the D.C. Circuit affirmed that partial grant. It rejected DISH's interference and unlawful-delegation challenges and International Dark-Sky's NEPA challenge, holding the order was lawful and reasonably explained. https://docs.fcc.gov/public/attachments/DOC-403925A1.pdf

The 2022 order authorized only up to 7,500 Gen2 satellites at 525, 530, and 535 km (inclinations 53°, 43°, and 33°) in the Ku- and Ka-bands. It deferred the rest of the application for 29,988 satellites, including E-band and tracking beacons, and the lower shells (about 19,440 satellites centered at 340–360 km) and the higher retrograde shells (468 satellites at 604 and 614 km). https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

The 26 November 2024 Space Bureau order (DA 24-1193) did not authorize all 29,988 satellites in the 340–360 km shells. It let SpaceX operate the already authorized 7,500 Gen2 satellites at 340, 345, 350, and 360 km (Ku-, Ka-, E-, and V-band, plus VHF beacons, with conditions), and it continued to defer the remaining 22,488 satellites, including any satellites in those lower shells beyond the 7,500. https://docs.fcc.gov/public/attachments/DA-24-1193A1.pdf https://docs.fcc.gov/public/attachments/DA-24-1193A1_Rcd.pdf

> **Judge:** The answer does not mention that the 9 January 2026 grant stamp still lists petitions for reconsideration as pending (fact 3). It also omits that the Commission will keep watching interference, debris and astronomy for the larger proposal (fact 10).

The D.C. Circuit upheld the 29 November 2022 partial grant; it did not vacate or remand it. In July 2024, in *International Dark-Sky Association, Inc. v. FCC*, 106 F.4th 1206 (D.C. Cir. 2024) (Nos. 22-1337 and 23-1001, the latter brought by Dish), the court affirmed the FCC's *SpaceX Gen2 First Partial Grant*. That grant, adopted 29 November 2022 (FCC 22-91), authorized only up to 7,500 Gen2 Starlink satellites in the Ku- and Ka-bands and deferred the rest, including operations in the 340, 345, 350, and 360 km shells. The appeals raised interference and environmental-review issues; the court rejected them. (DA-24-1193A1; Justia)

Still pending at the Commission after that decision were the two petitions that had not gone to the D.C. Circuit: LeoLabs's petition for reconsideration (filed 30 December 2022) and Viasat's petition for clarification (filed 3 January 2023). The deferred remainder of the Gen2 application also stayed open. By the time of the later order, SpaceX had also filed still-pending modifications and amendments (SAT-MOD-20241011-00224, SAT-AMD-20241017-00228, and the V-band bond/milestone request SAT-MOD-20240813-00183). (DA-24-1193A1)

No. The 26 November 2024 order did not put all 29,988 requested satellites into the 340–360 km shells. SpaceX had asked for up to 29,988 Gen2 satellites between 340 and 614 km. DA-24-1193 (adopted and released 26 November 2024) only let SpaceX operate the already authorized 7,500 Gen2 satellites at 340, 345, 350, and 360 km (Ku-, Ka-, E-, and V-band, plus VHF beacons), with operations below 400 km capped by completed NASA physical coordination. It expressly continued to defer the other 22,488 satellites, "including all satellites proposed to operate in the 340 km, 345 km, 350 km, and 360 km orbital shells beyond the 7,500 satellites authorized today," and said it was "not authorizing any additional satellites beyond the 7,500." (DA-24-1193A1)

> **Judge:** Fact 3 (the 9 January 2026 grant stamp still listing the petitions as pending) and fact 10 (continued Commission monitoring of interference, debris and astronomy) are not stated. The answer omits the Space Act Agreement/NASA coordination condition in fact 6 but does state the 7,500 satellites at 340/345/350/360 km, which is judged substantively correct.

The D.C. Circuit upheld the November 29, 2022 partial grant. It did not vacate or remand it. After that, LeoLabs' and Viasat's reconsideration/clarification petitions were still pending at the Commission. The November 26, 2024 order did not authorize all 29,988 requested satellites in the 340–360 km shells.

On July 12, 2024, in *International Dark-Sky Association v. FCC*, No. 22-1337 (consolidated with *DISH Network Corp. v. FCC*, No. 23-1001), the court affirmed the FCC's November 29, 2022 Gen2 partial grant (FCC 22-91). DISH's interference challenge and the International Dark-Sky Association's NEPA challenge were rejected. The court held that the order was lawful and reasonably explained. Sources: D.C. Circuit opinion (July 12, 2024); FCC DA 24-1193 ¶ 6.

The November 29, 2022 order itself had granted only up to 7,500 Gen2 satellites in the Ku- and Ka-bands at 525, 530, and 535 km, and deferred the rest of the 29,988-satellite request, including the 340–360 km shells, E-band, and tracking beacons. Source: FCC 22-91.

After the D.C. Circuit decision, two Commission filings on that partial grant were still pending: LeoLabs' petition for reconsideration (filed December 30, 2022) and Viasat's petition for clarification (filed January 3, 2023). Source: DA 24-1193 ¶ 6 & n.33.

The November 26, 2024 Space Bureau order (DA 24-1193) did not put all 29,988 satellites into the 340–360 km shells. It let the already authorized 7,500 Gen2 satellites operate at 340, 345, 350, and 360 km, and it continued to defer the other 22,488 satellites, including any additional satellites proposed for those lower shells. Source: DA 24-1193 ¶¶ 1–2.

For each of these Starlink authorizations, say whether the operator may claim protection from interference, and the date or event that ends the authority if the document gives one: the Canadian E-band decision, the UK E-band gateway licences, the French user-terminal decision of December 2024, the Australian W-band earth stations at Perth and Sydney, the Brazilian alteration in Acórdão 91, and the Eloy STA.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Six authorities. None of them is a permanent protected primary grant.

Canada, ISED, April 2026. Temporary. No-interference, no-protection. Only Janet, Alberta, and Saint-Laurent, Quebec. 71-76 GHz downlink and 81-86 GHz uplink, ITU filing USASAT-NGSO-3X. Subject to any later Canadian decision, including measures from WRC-27. No fixed end date is stated beyond that reservation.

United Kingdom E-band. Temporary licences at Morn Hill, Wherstead, and Woodwalton, first issued 29 October 2025, expire 31 December 2028. They must not cause harmful interference to fixed links in 71-76 GHz or to EESS (passive) in 86-92 GHz. The decision does not promise access after 31 December 2028.

France, Arcep decision 2024-2687, 19 December 2024. STEAM-1 and STEAM-1B only, not USASAT-NGSO-3X. 10.70-12.75 GHz space-to-Earth and 14.00-14.50 GHz Earth-to-space. Sans garantie de non-brouillage, with an obligation of non-interference. No expiry date is stated in the decision.

Australia W-band, ACMA outcome 15 January 2026. Perth and Sydney only. Melbourne was withdrawn. No interference to licensed stations, and no protection from them. Non-renewable term of one year. Not an FSS allocation in the Australian Radiofrequency Spectrum Plan.

Brazil, Anatel Acórdão 91, 8 April 2025. Alteration runs until 28 March 2027, and only if the public price of R$ 102,677 is paid. No right to protection against harmful interference, and the operation must not cause it.

Eloy, SES-STA-20260511-01297. Unprotected, non-interference basis. Term ended 7 September 2026.

Wrong: any of these is a permanent right to protection. Wrong: France covers USASAT-NGSO-3X. Wrong: Melbourne was included in the Australian W-band decision.

Sources: the ISED decision, the Ofcom E-band statement, Arcep decision 2024-2687, the ACMA W-band outcome, Anatel Acórdão 91, and the Eloy STA grant.

Exa Correct ✓ ✓ ✓ ✓ 55.6s · $0.275 · 12 searches · 3 fetches

Judge: All core and required facts are correct. Only context facts are missing: the Canadian ITU filing USASAT-NGSO-3X, the UK site names and issue date, the UK no-promise-after-2028 point, the France scope limited to STEAM-1/1B and its frequency bands, Australia's Melbourne withdrawal, and the ARSP non-FSS allocation.

I'll look up each Starlink authorization and extract the interference-protection status and any stated end date or terminating event.The first pass identifies the main conditions. I'm checking the licence texts for the exact protection wording and any end date.UK and Brazil are clear on the end date. I'm checking whether the UK licences confer any protection, and whether Australia or France states a calendar end date.None of these authorizations lets the operator claim protection from interference in general. Where a document sets an end point, it is noted below.

Canadian E-band decision. No. Innovation, Science and Economic Development Canada (ISED) authorizes the 71–76 GHz and 81–86 GHz links to the Janet, Alberta and Saint-Laurent, Quebec gateways only on a no-interference, no-protection basis, and only after coordination with fixed-service licensees. There is no calendar end date. The authority is temporary and is subject to any later Canadian decision after public consultation, including implementation of World Radiocommunication Conference 2027 (WRC-27) outcomes. https://ised-isde.canada.ca/site/spectrum-management-telecommunications/en/learn-more/key-documents/consultations/decision-request-received-spacex-canada-corp-use-e-band-frequencies-canada

UK E-band gateway licences. No general right to claim protection. The licensee must not cause harmful interference to fixed links in 71–76 GHz or to the Earth exploration-satellite service (passive) in 86–92 GHz, and must comply with ITU Radio Regulation No. 22.2, so it may not claim protection from geostationary fixed-satellite and broadcasting-satellite networks. It must protect E-band fixed links licensed or registered before 27 May 2025. Ofcom will coordinate certain later fixed-link applications with the three gateways for the licence term; that is a coordination process, not a general protection right. The licences continue until 31 December 2028 unless earlier revoked or surrendered. The Wherstead licence cover sheet also shows a "Licence end date" of 31 December 2025, which conflicts with Schedule 1 and Ofcom's statement; the operative term in those sources is 31 December 2028.
https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-3-4-weeks/consultation-temporary-ngso-gateway-access-to-e-band/statement-temporary-ngso-gateway-access-to-e-band.pdf?v=406905

French user-terminal decision of 19 December 2024 (Décision n° 2024-2687). No. Fixed and in-motion user terminals using STEAM-1B are authorized without a guarantee against interference and with an obligation not to interfere with other systems and services in those or adjacent bands. That decision does not set its own end date. It amends Décision n° 2022-1102, whose Article 3 grants the frequency authorization for 10 years from 25 May 2022, so until 25 May 2032 unless renewed. https://www.arcep.fr/uploads/tx_gsavis/24-2687.pdf https://www.arcep.fr/uploads/tx_gsavis/22-1102.pdf

Australian W-band earth stations at Perth and Sydney. No. The Australian Communications and Media Authority (ACMA) says the stations are authorized on condition that they cause no interference to any licensed station or service and are afforded no protection from interference by such stations or services. The decision does not give a calendar expiry. It says the licences are for a non-renewable term of one year, and that access is interim and conditional on a future review of the band. https://www.acma.gov.au/consultations/2025-10/interim-arrangements-w-band-fixed-satellite-service-earth-station-transmitters

Brazilian alteration in Acórdão 91 of 8 April 2025. No. The system may operate only without a right to protection against harmful interference, and without causing such interference to the previously identified systems for which coordination is incomplete. It also may not claim protection from regularly operating geostationary fixed-satellite and broadcasting-satellite networks under Radio Regulation No. 22.2. The altered right runs until 28 March 2027, subject to payment of the public price. Anatel may also modify the authorizing act at any time, on a reasoned basis, to add coexistence conditions.
https://static.poder360.com.br/2025/04/autorizacao-anatel-starlink.pdf

Eloy special temporary authority (STA) (IBFS file SES-STA-20260511-01297, call sign E260362). No. Operations must be on an unprotected and non-interference

basis: SpaceX Services must not cause harmful interference to, and must not claim protection from, any other lawfully operating station. The grant runs from 10 July 2026 to 7 September 2026. https://fcc.report/IBFS/SES-STA-20260511-01297/e7205f462f820b10c7a543ca6fa4e359.pdf?raw=1

> **Judge:** The answer says "No for five of six" and presents the UK licences as the exception, a "not a general no-protection grant", which conflicts with fact 1 (no protected primary status) and is not supported by the Ofcom text shown. Context facts were also missing: Canada's temporary nature and the ITU filing, the UK site names and 29 October date, no promise after 2028, France's STEAM-1/USASAT scope, Australia's ARSP point, and Brazil's R$ 102,677 fee.

I'll look up each Starlink authorization and extract whether interference protection is allowed and any stated end date or terminating event.The Canadian, UK, and Australian decisions are clear. I still need the French, Brazilian, and Eloy documents.No for five of the six. The UK licences are the exception: they are not a blanket no-protection grant, and they end on a fixed date.

Canada — E-band (ISED, April 2026). No. Use of 71–76 GHz and 81–86 GHz at Janet, Alberta and Saint-Laurent, Quebec is authorized only on a no-interference, no-protection basis. There is no calendar end date. The authority is subject to any later Canadian decision after public consultation, including implementation of WRC-27 outcomes. https://ised-isde.canada.ca/site/spectrum-management-telecommunications/en/learn-more/key-documents/consultations/decision-request-received-spacex-canada-corp-use-e-band-frequencies-canada

UK — temporary E-band gateway licences (Ofcom statement, 28 October 2025). Not a general no-protection grant. Starlink must not cause harmful interference to fixed links in 71–76 GHz or to EESS (passive) in 86–92 GHz, and ITU Radio Regulations No. 22.2 means it may not claim protection from GSO FSS/BSS networks. It must protect fixed links licensed or registered before 27 May 2025. New fixed links after that date are coordinated with the three gateways, so those later links are coordinated against Starlink. The licences continue until **31 December 2028** unless revoked earlier or surrendered. Ofcom may also revoke on one month's written notice for spectrum-management reasons. https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-3-4-weeks/consultation-temporary-ngso-gateway-access-to-e-band/statement-temporary-ngso-gateway-access-to-e-band.pdf?v=406905

France — user-terminal decision (Arcep Decision No. 2024-2687, signed 19 December 2024). No. The amendment authorizing STEAM-1B user terminals (fixed and ESIM) in 10.70–12.75 GHz and 14.0–14.50 GHz is "sans garantie de non brouillage" and with a non-interference obligation toward other systems and services in those or adjacent bands. The decision itself does not state an end date. (The heading date "19 décembre 2023" conflicts with the deliberation and signature date of 19 December 2024.) https://www.arcep.fr/uploads/tx_gsavis/24-2687.pdf

Australia — W-band earth stations, Perth and Sydney (ACMA outcome, 15 January 2026). No. Stations are authorized on condition that they cause no interference to any licensed station or service and that no protection from interference by such stations or services is afforded. Melbourne was withdrawn. The decision does not give one calendar end date; each licence is a **non-renewable one-year term**. https://www.acma.gov.au/consultations/2025-10/interim-arrangements-w-band-fixed-satellite-service-earth-station-transmitters

Brazil — Acórdão nº 91, 8 April 2025. No. The altered right of exploitation may be operated only without a right to protection against harmful interference, and without causing such interference to the previously indicated systems. It also may not claim protection from operating GSO FSS/BSS networks under ITU Radio Regulations No. 22.2. The altered right runs until **28 March 2027**. https://sei.anatel.gov.br/sei/modulos/pesquisa/md_pesq_documento_consulta_externa.php?8-74Kn1tDR89f1Q7RjX8EYU46IzCFD26Q9Xx5QNDbqaVGFge29ZX4GY9JuggGc6R9TgdKbjDQsCcXRc8PvFVlhh2-DT1Rgzb5lsmMrNjS-4w1no1ZQpHYvZ12qy_OciN

Eloy STA (FCC, SES-STA-20260511-01297, call sign E260362). No. The 60-day STA for the quad-band gateway at Eloy, Arizona is unprotected and non-interference basis: SpaceX Services must not cause harmful interference and must not claim protection from any other lawfully operating station. Term is **10 July 2026 to 7 September 2026**. https://api-prod.fcc.gov/icfs-attachment/exp/api/v1/3b205f462f820b10c7a543ca6fa4e35b

> **Judge:** Missing: the UK non-interference duty toward fixed links and EESS (the answer only describes protecting existing links), and the Australian final no-protection and one-year term (the answer only cites the proposal and says it could not verify). Also missing are context details: the Canada ITU filing, UK sites and issue date, France's STEAM-1/1B-only scope, and Brazil's R$ 102,677 price.

Canada (ISED E-band decision, April 2026). No. Use of 71–76 GHz and 81–86 GHz at the Janet, Alberta and Saint-Laurent, Quebec gateways is authorized only on a no-interference, no-protection basis. The decision sets no calendar end date. The authority is temporary and remains subject to any later Canadian decision after public consultation, including implementation of any WRC-27 outcomes. https://ised-isde.canada.ca/site/spectrum-management-telecommunications/en/learn-more/key-documents/consultations/decision-request-received-spacex-canada-corp-use-e-band-frequencies-canada

UK (Ofcom temporary E-band gateway licences). Not as a general right. Starlink must protect E-band fixed links that were Ofcom-licensed or registered as self-coordinated before 27 May 2025, so it cannot claim protection from those links. New self-coordinated links within 25 km of the three sites, and new Ofcom-coordinated links in the relevant sub-bands, are coordinated taking the gateways into account. The licences end on **31 December 2028**. https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-3-4-weeks/consultation-temporary-ngso-gateway-access-to-e-band/statement-temporary-ngso-gateway-access-to-e-band.pdf ; https://www.ofcom.org.uk/spectrum/space-and-satellites/apply-for-a-temporary-E-Band-Gateway-Licence

France (Arcep Decision No. 2024-2687, deliberated 19 December 2024). No. The decision adds the STEAM-1B system for fixed user terminals and ESIMs in 10.70–12.75 GHz and 14.0–14.50 GHz, but states that the applicable CEPT conditions do not guarantee that those earth stations can themselves be protected. The text that could be read states no end date or terminating event for this amendment. https://www.arcep.fr/uploads/tx_gsavis/24-2687.pdf

Australia (ACMA W-band earth stations, Perth and Sydney). The consultation that preceded the approval proposed that these stations cause no interference and receive no protection, with non-renewable one-year licences. Secondary reporting says ACMA then approved interim arrangements for Perth and Sydney only, under temporary licensing conditions, and that the Melbourne site was withdrawn. The ACMA outcomes page did not return the operative decision, so the final protection clause and the exact expiry date could not be verified from an ACMA instrument. https://www.acma.gov.au/consultations/2025-10/interim-arrangements-w-band-fixed-satellite-service-earth-station-transmitters ; https://content-technology.com/asia-pacific-news/acma-consults-on-w-band-earth-

station-transmitters/ ; https://telecompaper.com/news/acma-approves-w-band-earth-stations-in-perth-and-sydney--1559237

Brazil (Anatel Acórdão No. 91 of 8 April 2025). No. Despite unfinished coordination, the system may operate only without a right to protection from harmful interference, and only if it does not cause such interference to the systems already identified. It also may not claim protection from operating geostationary FSS and BSS networks under ITU Radio Regulation 22.2. The alteration does not extend the underlying right, which remains valid until 28 March 2027. Anatel may also modify the right at any time, on stated grounds, to add coexistence conditions.
https://sei.anatel.gov.br/sei/modulos/pesquisa/md_pesq_documento_consulta_externa.php?8-74Kn1tDR89f1Q7RjX8EYU46IzCFD26Q9Xx5QNDbqaVGFge29ZX4GY9JuggGc6R9TgdKbjDQsCcXRc8PvFVlhh2-DT1Rgzb5lsmMrNjS-4w1no1ZQpHYvZ12qy_OciN ; https://telesintese.com.br/anatel-autoriza-ampliacao-da-constelacao-starlink-mas-emite-alerta-regulatorio/

Eloy STA (FCC SES-STA-20260511-01297). No. The grant is on an unprotected, non-interference basis. It runs for 60 days, from 10 July 2026 through 7 September 2026. https://docs.fcc.gov/public/attachments/DOC-423076A1.pdf

Cited: 1. ised-isde.canada.ca · 2. ofcom.org.uk · 3. ofcom.org.uk · 4. arcep.fr · 5. acma.gov.au · 6. content-technology.com · 7. telecompaper.com · 8. sei.anatel.gov.br · 9. telesintese.com.br · 10. docs.fcc.gov

K Keenable SELECT ✗ Wrong — Incomplete list — 9.6m · ~$1.197 · 56 searches · 8 fetches

> **Judge:** The answer hedged on the UK no-harmful-interference clause (fact 10) and on whether the Australian grant adopted the no-protection term and one-year non-renewable term (17, 18). It also omitted the Canadian ITU filing (5), the French frequency bands (13), the UK no-access-promise point (11), the Australian ARSP point (19) and the Brazilian R$ 102,677 payment condition (21).

No for every authorization I could verify: the operator may not claim protection from interference. End dates differ, and two documents do not state a calendar end date.

Canadian E-band decision. No. ISED's decision temporarily authorizes SpaceX Canada to use 71–76 GHz and 81–86 GHz with the Starlink constellation at Janet, Alberta, and Saint-Laurent, Quebec, on a no-interference, no-protection (NINP) basis, subject to coordination with fixed-service licensees. It does not set a calendar expiry. It ends when Canada adopts a later decision after public consultation, including implementation of any WRC-27 outcomes. https://ised-isde.canada.ca/site/spectrum-management-telecommunications/en/node/2491

UK E-band gateway licences. The licences for Morn Hill, Wherstead, and Woodwalton, first issued 29 October 2025, end on 31 December 2028. Ofcom says that fixed end date allows a post-WRC-27 review and a consultation on long-term authorisation. I could not retrieve the licence PDFs or the 28 October 2025 statement, so I cannot verify a clause that expressly says the licensee may not claim protection. The published conditions do require coexistence with, and technical protection of, existing fixed and passive EESS services. https://www.ofcom.org.uk/spectrum/space-and-satellites/apply-for-a-temporary-E-Band-Gateway-Licence

French user-terminal decision of December 2024. No. Decision No. 2024-2687 amends Decision No. 2022-1102 and authorizes user terminals, fixed and in motion, for STEAM-1 and STEAM-1B "sans garantie de non brouillage" and with an obligation not to interfere with other systems and services. Arcep states that the technical conditions do not guarantee that those earth stations can be protected. The decision text does not state an end date or terminating event. The PDF header reads "19 décembre 2023," which conflicts with Arcep's 19 December 2024 press release announcing the same decision number; I could not resolve that discrepancy from the text. https://www.arcep.fr/uploads/tx_gsavis/24-2687.pdf ; https://en.arcep.fr/news/press-releases/view/n/frequencies-191224.html

Australian W-band earth stations at Perth and Sydney. The consultation proposed that earth stations cause no interference and that "no protection from interference by such stations or services will be afforded," with a non-renewable one-year term. Telecompaper reports that ACMA later approved interim arrangements for Perth and Sydney only, under temporary licensing conditions, and that the proposed Melbourne site was withdrawn. The approval article is paywalled and truncated, and the ACMA outcome page did not return the decision text, so I cannot verify that the grant adopted the no-protection clause or the one-year term, or name the licensee. https://content-technology.com/asia-pacific-news/acma-consults-on-w-band-earth-station-transmitters/ ; https://www.telecompaper.com/news/acma-approves-w-band-earth-stations-in-perth-and-sydney--1559237

Brazilian alteration in Acórdão 91. No. Acórdão 91/2025 allows operation only "sem direito à proteção contra interferências prejudiciais," and only if it does not cause such interference to the previously identified systems. It also maintains the condition that the NGSO system must not cause unacceptable interference to operating GSO FSS and BSS networks and may not request protection from those networks under ITU Radio Regulations Article 22.2. The alteration did not change the term: the right of exploitation remains valid until 28 March 2027. https://www.jusbrasil.com.br/jurisprudencia/anatel-fonte/4185631618 ; https://tecnoblog.net/noticias/anatel-autoriza-starlink-a-operar-com-mais-7-500-satelites-no-brasil/

Eloy STA. No. SpaceX Services' granted STA, SES-STA-20260511-01297, call sign E260362, for the Eloy, Arizona gateway, states that operations "will be on a non-harmful interference basis." The FCC record shows it was granted on 9 July 2026 and expires on 7 September 2026. A later extension request, SES-STA-20260815-02301, was still only a request for another 60 days from 7 September 2026, also on a non-harmful-interference basis; I did not find a grant of that extension. https://fcc.report/IBFS/SES-STA-20260511-01297 ; https://fcc.report/IBFS/SES-STA-20260815-02301

G Grok native ✓ Correct — 1.4m · $0.219 · 11 searches · 4 fetches

> **Judge:** All core and required facts are correct and no trap is asserted. Several context facts are missing: the Canada ITU filing and downlink/uplink split, the UK site names and 29 October 2025 issue date, the UK no-access-after-2028 point, France's STEAM-1/1B scope and frequency bands, Australia's Melbourne withdrawal and the ACMA outcome date, Australia's non-FSS allocation, and Brazil's R$ 102,677 price condition.

I'll look up each Starlink authorization and extract whether interference protection is allowed and any stated end date or terminating event.The first four authorizations are documented; next I'll confirm the Brazilian Acórdão 91 terms and the Eloy STA.I have the core findings; I'll open the source documents to confirm protection language and any end dates.The operator may not claim protection under any of these authorizations, except that the UK licences do not use a blanket no-protection clause. End dates differ.

Canada (ISED E-band decision, April 2026). No. Use of 71–76 GHz and 81–86 GHz at Janet, Alberta, and Saint-Laurent, Quebec, is authorized only on a no-interference, no-protection basis, and only after coordination with fixed-service licensees. The decision gives no calendar end date. The authority is temporary and is subject to any later Canadian decision after public consultation, including implementation of WRC-27 outcomes. https://ised-isde.canada.ca/site/spectrum-management-telecommunications/en/learn-more/key-documents/consultations/decision-request-received-spacex-canada-corp-use-e-band-frequencies-canada

UK (Ofcom temporary E-band gateway licences). Not a general right to claim protection. The licences require the licensee not to cause harmful interference to fixed links in 71–76 GHz and to EESS (passive) in 86–92 GHz, and to stop if such interference is reported. They also require compliance with ITU Radio Regulations Article 22, including No. 22.2, under which an NGSO system shall not claim protection from GSO fixed-satellite and broadcasting-satellite networks. They do not contain a blanket "no protection from any other station" clause. Authority ends on 31 December 2028 unless revoked or surrendered earlier.

https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-3-4-weeks/consultation-temporary-ngso-gateway-access-to-e-band/statement-temporary-ngso-gateway-access-to-e-band.pdf?v=406905

France (Arcep Decision No. 2024-2687, 19 December 2024). No. The amended user-terminal authorization is without a guarantee of non-interference and carries an obligation not to interfere with other systems and services in the bands or in adjacent bands. Decision 2024-2687 itself does not set an end date. It amends Decision No. 2022-1102, which runs for 10 years from 25 May 2022 and therefore expires on 25 May 2032 unless renewed. https://www.arcep.fr/uploads/tx_gsavis/24-2687.pdf https://www.arcep.fr/uploads/tx_gsavis/22-1102.pdf

Australia (ACMA W-band earth stations, Perth and Sydney). No. Stations are authorized on condition that they cause no interference to any licensed station or service and are afforded no protection from interference by those stations or services. The decision sets a non-renewable term of one year. It does not state a calendar expiry date for the Perth or Sydney licences. Access is interim and conditional on a future review of the band. https://www.acma.gov.au/consultations/2025-10/interim-arrangements-w-band-fixed-satellite-service-earth-station-transmitters

Brazil (Anatel Acórdão No. 91, 8 April 2025). No. The altered right of exploitation may be exercised without a right to protection against harmful interference, and the system must not cause such interference to systems for which coordination has not been completed. Under RR Article 22.2 it also may not claim protection from operating GSO fixed-satellite and broadcasting-satellite networks. The altered right runs until 28 March 2027. https://static.poder360.com.br/2025/04/autorizacao-anatel-starlink.pdf

Eloy STA (FCC SES-STA-20260511-01297, call sign E260362). No. Operations are unprotected and non-interference: SpaceX Services must not cause harmful interference and must not claim protection from any other lawfully operating station, and must cease immediately if notified of harmful interference. The grant runs from 10 July 2026 to 7 September 2026. https://fcc.report/IBFS/SES-STA-20260511-01297

PROMPT 37 · REGULATION · FACTS AS OF 2026-10-08

In March 2024 the Space Bureau acted on SpaceX's application to add mobile-satellite service to Gen2 in the Big LEO bands, the 2 GHz bands, and 2020-2025 MHz uplink. Was that application accepted for filing, was it held in abeyance while SpaceX's rulemaking petitions were pending, and what file number was dismissed?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

DA-24-300. The application is ICFS File No. SAT-MOD-20230207-00022, filed 7 February 2023. It is not SAT-MOD-20230207-00021. That other file is the separate SCS modification.

The Bureau dismissed 00022 on its own motion as unacceptable for filing. It had not been accepted for filing and had not been placed on public notice. The 1.6/2.4 GHz and 2 GHz bands were not available for an additional MSS applicant. The leftover request, MSS uplink only in 2020-2025 MHz, is not a comprehensive proposal under section 25.114. In the United States that band is allocated to fixed and mobile, with no MSS allocation.

On 5 February 2024 SpaceX asked that the application be held in abeyance while it sought a rulemaking, and also asked for a freeze on other MSS applications, including Globalstar and Gamma. The Bureau denied the abeyance. SpaceX gained no rights by filing an application that was unacceptable when filed. The freeze request, as made in this application proceeding, is dismissed as beyond its scope. If the Commission later opens the bands, SpaceX may reapply. Until then this application cannot be processed.

The DISH petition to dismiss or deny, and SpaceX's motion to strike, are dismissed as moot because the application itself is dismissed.

Wrong: the Bureau parked 00022 until the rulemaking. Wrong: this is the same file as the T-Mobile SCS modification. A later dismissal with prejudice, in DA-26-398, is a different order and a different list of files.

E Exa ✓ Correct — 21.6s · $0.038 · 2 searches · 0 fetches

Judge: All core and required facts are correct. Missing only context facts: the distinction from 00021, no MSS allocation in 2020-2025 MHz, no rights gained, reapply option, and DA-26-398 being a separate order.

No. On March 26, 2024, the FCC Space Bureau dismissed SpaceX's Gen2 modification as unacceptable for filing; it was never accepted for filing and was not placed on public notice. The Bureau also refused to hold it in abeyance pending SpaceX's rulemaking petitions.

The order is DA-24-300 (adopted and released March 26, 2024). It covers Space Exploration Holdings' February 7, 2023 request to add MSS on Gen2 (call sign S3069) in the 1.6/2.4 GHz bands (1610–1617.775 MHz Earth-to-space and 2483.5–2500 MHz space-to-Earth—the Big LEO MSS bands), the 2 GHz bands (2000–2020 MHz Earth-to-space and 2180–2200 MHz space-to-Earth), and 2020–2025 MHz Earth-to-space only. The Bureau found the 1.6/2.4 GHz and 2 GHz requests did not substantially comply with rules that those bands are not open to additional MSS applicants, and that an uplink-only 2020–2025 MHz request was not a "comprehensive proposal."

SpaceX's February 5, 2024 letter asked that this application (and other pending MSS applications) be held in abeyance while its February 21–22, 2024 petitions to reopen the 1.6/2.4 GHz and 2 GHz MSS frameworks were pending. The Bureau denied that request as to SpaceX's own application and dismissed, as beyond the scope of this proceeding, the request to freeze or hold other applications.

The dismissed file number is ICFS File No. SAT-MOD-20230207-00022. Related DISH/EchoStar pleadings were dismissed as moot.

P Parallel ✓ Correct — 17.2s · $0.048 · 2 searches · 1 fetches

Judge: All core and required facts are correct. Only context facts are missing: the contrast with the separate SCS file 00021, the US allocation of 2020-2025 MHz, the option to reapply, and the later DA-26-398 order.

No. The Space Bureau did not accept the application for filing, did not hold it in abeyance, and dismissed ICFS File No. SAT-MOD-20230207-00022.

On March 26, 2024, the Space Bureau (DA 24-300) dismissed as unacceptable for filing SpaceX's February 7, 2023 modification application to add MSS to Gen2 Starlink in the 1.6/2.4 GHz (Big LEO) bands, the 2 GHz bands (2000–2020 MHz Earth-to-space and 2180–2200 MHz space-to-Earth), and 2020–2025 MHz (Earth-to-space). The Bureau stated it had never accepted the application for filing and had not placed it on public notice. It found the 1.6/2.4 GHz and 2 GHz requests did not substantially comply with existing rules that those bands are not available for additional MSS applicants, and that uplink-only use of 2020–2025 MHz was not a "comprehensive proposal" under 47 CFR § 25.114(a)(1).

SpaceX had asked on February 5, 2024, that the application be held in abeyance while its petitions to reopen the 1.6/2.4 GHz and 2 GHz sharing frameworks (filed February 21 and 22, 2024) were pending. The Bureau denied that request: the application was unacceptable when filed, so holding it would not preserve any rights. Related requests to freeze or hold other parties' applications were dismissed as outside the scope of this proceeding. DISH/EchoStar's petition to dismiss or deny was dismissed as moot.

K Keenable search Partly correct — Incomplete list — 1.1m · ~$0.265 · 19 searches · 2 fetches

Judge: Core facts are all correct. Missing context facts: the 7 Feb 2023 filing date, the distinction from -00021, the 2020-2025 MHz US allocation, no rights gained, reapplication option, and the later DA-26-398 order.

No. The Space Bureau did not accept the application for filing. On March 26, 2024, in DA 24-300, it dismissed ICFS File No. SAT-MOD-20230207-00022 on its own motion as unacceptable for filing. The application sought to add MSS to up to 7,500 Gen2 Starlink satellites in the 1.6/2.4 GHz "Big LEO" bands, the 2 GHz bands, and 2020-2025 MHz uplink. The Bureau said the first two bands are not available for additional MSS systems under existing rulemakings, and that an uplink-only

request in 2020-2025 MHz was not a complete satellite proposal under 47 C.F.R. §§ 25.112 and 25.114. Because it was never accepted, it was not placed on public notice. https://docs.fcc.gov/public/attachments/DA-24-300A1.pdf

It was not held in abeyance pending SpaceX's rulemaking petitions. SpaceX asked on February 5, 2024, to hold this application—and other pending 1.6/2.4 GHz and 2 GHz applications—in abeyance while it sought a reassessment of the MSS sharing frameworks. The Bureau denied that request as to the modification application and dismissed, as beyond the scope of this proceeding, the request to freeze or hold other applications in abeyance. https://docs.fcc.gov/public/attachments/DA-24-300A1.pdf

The file number dismissed was SAT-MOD-20230207-00022 (call sign S3069). The DISH/EchoStar petition to dismiss or deny, and related pleadings, were dismissed as moot. https://www.fcc.gov/document/spacex-gen2-mss-application-dismissed-unacceptable-filing

Cited: 1. docs.fcc.gov · 2. fcc.gov

K Keenable SELECT ✓ Correct ✓ ✓ ✓ ✓ 2.8m · ~$0.088 · 3 searches · 1 fetches

> **Judge:** All core and required facts are correct. Only context facts 3, 8, 11, 13 and 15 are missing: the 00021 distinction, the 2020-2025 MHz allocation, no rights gained, the reapply option, and the later DA-26-398 order.

No. The Space Bureau did not accept the application for filing, and it did not hold it in abeyance. The file number dismissed was SAT-MOD-20230207-00022 (call sign S3069).

On March 26, 2024, the Satellite Programs and Policy Division of the Space Bureau released DA 24-300. That order dismissed, on the Bureau's own motion and as unacceptable for filing, SpaceX's February 7, 2023 application to modify its Gen2 Starlink authorization (up to 7,500 satellites) to add mobile-satellite service in the 1.6/2.4 GHz (Big LEO) bands, the 2 GHz bands, and 2020–2025 MHz (Earth-to-space). The order states that the Bureau had not accepted the application for filing and therefore did not place it on public notice. The stated reasons were that the 1.6/2.4 GHz and 2 GHz bands are not available for additional MSS applications, and that an uplink-only request in 2020–2025 MHz is not a complete satellite proposal under the Commission's rules.

SpaceX had asked on February 5, 2024, that the application be held in abeyance while it sought changes to the MSS sharing rules. The Bureau denied that request. A related request to hold other applications in abeyance or freeze applications was dismissed as outside the scope of this proceeding. DISH's petition to dismiss or deny was dismissed as moot.

> **Judge:** Core facts are all correct. Missing only context facts: the distinction from 00021 (SCS), the 2020-2025 MHz allocation, the freeze request naming Globalstar and Gamma, the DISH petition mooted, and the later DA-26-398 order. The answer says the abeyance request was 'denied in part', which is consistent with the denial.

No. The Space Bureau did not accept the application for filing, did not hold it in abeyance, and dismissed ICFS File No. SAT-MOD-20230207-00022.

On March 26, 2024, the Space Bureau (Satellite Programs and Policy Division) released DA 24-300, dismissing on its own motion Space Exploration Holdings, LLC's February 7, 2023 application to modify its Gen2 Starlink authorization (call sign S3069) to add MSS in the 1.6/2.4 GHz bands (1610–1617.775 MHz Earth-to-space and 2483.5–2500 MHz space-to-Earth), the 2 GHz bands (2000–2020 MHz Earth-to-space and 2180–2200 MHz space-to-Earth), and 2020–2025 MHz (Earth-to-space). The Bureau found the 1.6/2.4 GHz and 2 GHz requests did not substantially comply with rules that those bands are not available for additional MSS applicants, and that uplink-only use of 2020–2025 MHz was not a "comprehensive proposal" under the satellite rules. Because the application was never accepted for filing, it was not placed on public notice. Source: https://docs.fcc.gov/public/attachments/DA-24-300A1.pdf; https://www.fcc.gov/document/spacex-gen2-mss-application-dismissed-unacceptable-filing

SpaceX's February 5, 2024 request to hold the application in abeyance while its February 21–22, 2024 MSS rulemaking petitions were pending was denied in part. The Bureau said the application was unacceptable when filed, so holding it would not preserve any rights, and SpaceX could reapply if the rules later changed. Requests in that letter to freeze or hold other parties' MSS applications were dismissed as outside the scope of this proceeding. The ordering clause dismisses SAT-MOD-20230207-00022 and states that the abeyance request "IS DENIED in part and DISMISSED in part." Source: https://docs.fcc.gov/public/attachments/DA-24-300A1.pdf

PROMPT 42 · REGULATION · FACTS AS OF 2026-10-08

On 29 June 2026 SpaceX filed written representations with ICASA on the draft amendment of the Radio Frequency Spectrum Fees Regulations. Did that filing grant Starlink a South African spectrum licence, and for what term? What equity rule does SpaceX say the draft leaves unresolved?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

SpaceX written representations to ICASA, 29 June 2026, on Notice 3926 of 2026, Government Gazette No. 54677, 15 May 2026. This document is a comment on a draft. It is not a spectrum licence and it does not grant one.

SpaceX says it intends to provide Starlink to South African consumers and businesses in future through its South African subsidiary. The draft, if final, would govern fees for gateway earth stations and user-terminal networks. That sentence is SpaceX's statement of intent. It is not an ICASA grant, and it is not a finding that every other authorisation is absent.

The draft does not set the duration of gateway or user-terminal network licences. SpaceX asks for a minimum term of 10 years, with renewal criteria and a timeline. Ten years is SpaceX's request, not a term ICASA granted on 29 June 2026.

SpaceX says the existing Radio Frequency Spectrum Regulations impose a minimum 30 percent Historically Disadvantaged Group equity requirement on applicants for and holders of radio frequency spectrum licences, and that the draft does not say how that requirement applies to the new gateway and user-terminal network categories. SpaceX asks the Authority to confirm it. The 12 December 2025 ministerial policy direction on aligning spectrum licensing with the ICT Sector Code is noted by SpaceX as a separate process the draft does not complete.

The satellite-licensing inquiry findings in Government Gazette 52530, General Notice 3144 of 2025, are findings on a framework. They are not this fee filing, and they are not a Starlink licence.

Wrong: ICASA licensed Starlink for 10 years on 29 June 2026. Wrong: the comment letter abolished the 30 percent equity rule.

Source: https://www.icasa.org.za/uploads/files/Space-X_Redacted.pdf

E Exa ✓ Correct ✓ ✓ ✓ ✓ — 10.1s · $0.046 · 2 searches · 1 fetches

Judge: Facts 11 (12 December 2025 ministerial policy direction) and 12 (satellite-licensing inquiry findings in GG 52530) are not mentioned; both are context-only, and the core and required facts are all correct. The answer does not state the 'asks the Authority to confirm' point verbatim but conveys the unresolved application.

No. The 29 June 2026 filing did not grant Starlink a South African spectrum licence, and it set no licence term.

It is SpaceX's written representations on ICASA's draft amendment of the Radio Frequency Spectrum Fees Regulations, 2010 (Notice 3926 of 2026, Government Gazette No. 54677, 15 May 2026). SpaceX says it intends to offer Starlink later through a South African subsidiary; the draft only concerns fees, not a grant of spectrum. The draft also does not set the duration of Gateway Earth Station or User-Terminal Network licences. SpaceX asks that the final rules provide a minimum term of 10 years for those licences, with clear renewal provisions. That is a request, not a licence or a fixed term.

The equity rule SpaceX says the draft leaves unresolved is the minimum 30% Historically Disadvantaged Group (HDG) equity requirement in the Radio Frequency Spectrum Regulations. SpaceX says the draft does not say how that rule applies to the new Gateway Earth Station and User-Terminal Network licence categories, or how it interacts with space-segment registration for a foreign satellite operator.

Judge: Core and required facts are covered, except fact 6, the draft not setting licence duration, which the answer does not state. Context facts 4, 11 and 12 are also missing.

No. The 29 June 2026 filing did not grant Starlink a South African spectrum licence, and it set no licence term.

It was SpaceX's written representations on ICASA's draft amendment of the Radio Frequency Spectrum Fees Regulations, 2010 (Notice 3926 of 2026, Government Gazette No. 54677, 15 May 2026). SpaceX said it intends to offer Starlink in South Africa later through a local subsidiary, and asked ICASA to adopt a **minimum 10-year term** for Gateway Earth Station and User-Terminal Network licences, with renewal. That was a request, not a grant. TechCentral later reported that SpaceX had still not lodged a formal licence application.

On equity, SpaceX says the draft leaves unresolved the **minimum 30% Historically Disadvantaged Group (HDG) equity requirement** in the Radio Frequency Spectrum Regulations: the draft does not say how that rule applies to the new Gateway Earth Station and User-Terminal Network licence categories, or how it interacts with space-segment registration for a foreign satellite operator.

Source: SpaceX written representations (ICASA PDF); TechCentral, 20 August 2026.

K Keenable search ◐ Partly correct ✓ ✓ ✓ ✓ Incomplete list — 14.3s · ~$0.041 · 2 searches · 2 fetches

Judge: Missing or only partially covered: the Notice 3926/Gazette 54677 details, SpaceX's stated intent via a South African subsidiary, the draft not setting licence duration, the existing 30% regulation basis, the 12 December 2025 ministerial direction, and the Gazette 52530 inquiry findings. The core answers (no licence granted, 10 years is a request, 30% HDG equity application unresolved) are correct.

No. The 29 June 2026 filing did not grant Starlink a South African spectrum licence, for any term.

It was written representations on ICASA's May 2026 draft amendment of the Radio Frequency Spectrum Fees Regulations (linked to the Radio Frequency Spectrum Regulations, 2015), not a licence application or a grant. The later August 2026 hearings on those drafts were also not a licensing decision. Reporting states SpaceX still had not lodged a formal Starlink licence application; a parliamentary reply of 11 June 2026 said ICASA had received none. To serve South African customers directly, an operator would still need an individual electronic communications service (I-ECS) licence, an individual electronic communications network service

(I-ECNS) licence, and radio frequency spectrum licences. https://techafricanews.com/2026/08/20/spacex-urges-south-africas-icasa-to-rethink-proposed-satellite-spectrum-fees/ https://techcentral.co.za/spacex-breaks-cover-at-icasa-satellite-spectrum-hearings/285094/ https://southafriworld.co.za/starlink-south-africa

In that same submission, SpaceX asked ICASA to set a **minimum licence duration of 10 years** (with clear renewal rules), for investment certainty. That was a request, not a term that was granted. https://techafricanews.com/2026/08/20/spacex-urges-south-africas-icasa-to-rethink-proposed-satellite-spectrum-fees/ https://techcentral.co.za/spacex-breaks-cover-at-icasa-satellite-spectrum-hearings/285094/

Equity rule left unresolved: SpaceX said the draft does not explain how the **minimum 30% equity stake for historically disadvantaged groups (HDGs)** applies to the new gateway and user-terminal licence categories. It asked for clear, consolidated guidance on local-entity requirements, that 30% HDG equity rule, and alignment with the ICT Sector Code under B-BBEE. https://techcentral.co.za/spacex-breaks-cover-at-icasa-satellite-spectrum-hearings/285094/ https://techafricanews.com/2026/08/20/spacex-urges-south-africas-icasa-to-rethink-proposed-satellite-spectrum-fees/

---

K Keenable SELECT · Partly correct · Incomplete list · 4.8m · ~$0.183 · 9 searches · 5 fetches

> **Judge:** Core and required facts are covered except fact 6, the draft not setting licence duration, which the answer never states. Context facts 1, 3, 4, 5, 11 and 12 are not stated, and no traps were asserted.

No. The 29 June 2026 filing did not grant Starlink a South African spectrum licence, and it set no licence term.

It was SpaceX's written representations on ICASA's draft amendment of the Radio Frequency Spectrum Fees Regulations, signed by Ryan Goodnight. A submission in a fee consultation is not a licensing decision. SpaceX had still not lodged a formal licence application; a parliamentary reply of 11 June 2026 said ICASA had received none, and later reporting said that remained the case. The August 2026 hearings on those drafts were also not a licence grant. https://techafricanews.com/2026/08/20/spacex-urges-south-africas-icasa-to-rethink-proposed-satellite-spectrum-fees https://southafriworld.co.za/starlink-south-africa https://techcentral.co.za/spacex-breaks-cover-at-icasa-satellite-spectrum-hearings/285094

What SpaceX did ask for, separately, was a minimum licence duration of 10 years (with clear renewal rules), as a recommendation for the fee regime, not a term that was granted. https://techafricanews.com/2026/08/20/spacex-urges-south-africas-icasa-to-rethink-proposed-satellite-spectrum-fees https://techcentral.co.za/spacex-breaks-cover-at-icasa-satellite-spectrum-hearings/285094

On equity, SpaceX said the draft leaves unresolved how the spectrum regulations' minimum 30% equity stake for historically disadvantaged groups applies to the new gateway and user-terminal licence categories. It asked ICASA for clear guidance on that HDG rule, local-entity requirements, and alignment with the ICT Sector Code under B-BBEE. https://techcentral.co.za/spacex-breaks-cover-at-icasa-satellite-spectrum-hearings/285094 https://news.broadcastmediaafrica.com/2026/08/21/spacex-urges-south-africas-icasa-to-reconsider-proposed-satellite-spectrum-fees

G Grok native · Correct · 34.0s · $0.198 · 2 searches · 3 fetches

> **Judge:** Facts 5, 11 and 12 are not stated: the answer never says that SpaceX's statement of intent is not an ICASA grant, never mentions the 12 December 2025 ministerial direction as a separate process, and never mentions the Gazette 52530 inquiry findings. The core and required facts are all correct and no trap is asserted.

No. The 29 June 2026 filing did not grant Starlink a South African spectrum licence, and it set no licence term.

It is SpaceX's written comment on ICASA's draft amendment of the Radio Frequency Spectrum Fees Regulations, 2010 (Notice 3926 of 2026, Government Gazette No. 54677, 15 May 2026). SpaceX says it intends to offer Starlink later through a South African subsidiary; the draft would only set fees for gateway earth stations and user-terminal networks. ICASA listed it as one of the public submissions received by the 29 June deadline. As of 11 June 2026, the Minister of Communications and Digital Technologies told Parliament that ICASA had received no Starlink application for spectrum, I-ECNS, or I-ECS licences.

On duration, SpaceX says the draft does not set a term for Gateway Earth Station or User-Terminal Network licences. It asks ICASA to adopt a **minimum term of 10 years**, with clear renewal rules, and not to tie gateway licence length automatically to a local service licence. That is a request, not a granted term.

Equity rule left unresolved: SpaceX says the draft does not say how the existing **minimum 30% Historically Disadvantaged Group (HDG) equity** rule in the Radio Frequency Spectrum Regulations applies to the new Gateway Earth Station and User-Terminal Network licence categories, or how that rule interacts with space-segment registration for a foreign satellite operator. It also flags local-entity rules under section 5(8)(b) of the ECA and alignment with the ICT Sector Code / B-BBEE, but the equity point it names as unresolved is the 30% HDG requirement.

> **Judge:** Missing or only partially covered: the Notice 3926/Gazette 54677 details, SpaceX's stated intent via a South African subsidiary, the draft not setting licence duration, the existing 30% regulation basis, the 12 December 2025 ministerial direction, and the Gazette 52530 inquiry findings. The core answers (no licence granted, 10 years is a request, 30% HDG equity application unresolved) are correct.

No. The 29 June 2026 filing did not grant Starlink a South African spectrum licence, for any term.

It was written representations on ICASA's May 2026 draft amendment of the Radio Frequency Spectrum Fees Regulations (linked to the Radio Frequency Spectrum Regulations, 2015), not a licence application or a grant. The later August 2026 hearings on those drafts were also not a licensing decision. Reporting states SpaceX still had not lodged a formal Starlink licence application; a parliamentary reply of 11 June 2026 said ICASA had received none. To serve South African customers directly, an operator would still need an individual electronic communications service (I-ECS) licence, an individual electronic communications network service (I-ECNS) licence, and radio frequency spectrum licences. https://techafricanews.com/2026/08/20/spacex-urges-south-africas-icasa-to-rethink-proposed-satellite-spectrum-fees/ https://techcentral.co.za/spacex-breaks-cover-at-icasa-satellite-spectrum-hearings/285094/ https://southafriworld.co.za/starlink-south-africa

In that same submission, SpaceX asked ICASA to set a **minimum licence duration of 10 years** (with clear renewal rules), for investment certainty. That was a request, not a term that was granted. https://techafricanews.com/2026/08/20/spacex-urges-south-africas-icasa-to-rethink-proposed-satellite-spectrum-fees/ https://techcentral.co.za/spacex-breaks-cover-at-icasa-satellite-spectrum-hearings/285094/

Equity rule left unresolved: SpaceX said the draft does not explain how the **minimum 30% equity stake for historically disadvantaged groups (HDGs)** applies to the

new gateway and user-terminal licence categories. It asked for clear, consolidated guidance on local-entity requirements, that 30% HDG equity rule, and alignment with the ICT Sector Code under B-BBEE. https://techcentral.co.za/spacex-breaks-cover-at-icasa-satellite-spectrum-hearings/285094/ https://techafricanews.com/2026/08/20/spacex-urges-south-africas-icasa-to-rethink-proposed-satellite-spectrum-fees/

PROMPT 43 · MULTI-HOP · FACTS AS OF 2026-10-08

SpaceX was first authorized for a separate V-band constellation of up to 7,500 satellites. Did that separate constellation survive, and what did the 26 November 2024 order actually allow at 340 to 360 km? Was the later request to change the V-band bond and milestones already granted on that date?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

SpaceX was originally authorized to operate up to 7,500 satellites as a separate V-band constellation. It later committed to put V-band on the Gen2 satellites instead. On 13 October 2023 the Space Bureau granted in part and dismissed in part SAT-MOD-20230322-00062, adding V-band to Gen2 rather than keeping the separate constellation. DA-24-222 paragraph 4 and DA-24-1193 footnote 34 state that.

DA-24-1193, 26 November 2024, grants the V-band modification so those previously authorized Gen2 satellites may use V-band at 340 km to 360 km. The frequencies recited for that earlier V-band grant are 37.5-40.0 GHz and 40.0-42.0 GHz space-to-Earth, and 47.2-50.2 GHz and 50.4-51.4 GHz Earth-to-space. This is not a new 7,500-satellite constellation on top of Gen2.

As of that 26 November 2024 order, SAT-MOD-20240813-00183, the request to modify the V-band bond and milestone conditions, remained pending. Do not treat it as granted on that date, and do not invent a later disposition.

Wrong: the separate V-band constellation is still authorized alongside Gen2. Wrong: the November 2024 order granted the bond and milestone change.

Sources: https://docs.fcc.gov/public/attachments/DA-24-1193A1.pdf and https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf

Exa Correct

18.7s · $0.085 · 3 searches · 1 fetches

Judge: All checklist facts are stated correctly, and neither trap is asserted. The answer says the separate V-band constellation was replaced by V-band on Gen2, the order allowed 7,500 Gen2 satellites at 340-360 km, and SAT-MOD-20240813-00183 was still pending.

No. The separate V-band constellation did not survive as a standalone system, and the 26 November 2024 order did not grant the later bond-and-milestone change.

Separate constellation. SpaceX was originally authorized for up to 7,500 satellites as a separate V-band constellation. It later committed to putting V-band capability on Gen2 Starlink satellites instead. The Space Bureau granted that change, with conditions, on 13 October 2023 (ICFS File No. SAT-MOD-20230322-00062), authorizing V-band on the Gen2 satellites in 37.5–40.0 GHz and 40.0–42.0 GHz (space-to-Earth) and 47.2–50.2 GHz and 50.4–51.4 GHz (Earth-to-space). The 26 November 2024 order restates that history. Source: DA-24-1193, ¶7 and n.34; see also the Gen2 first partial grant, FCC 22-91.

What 26 November 2024 allowed at 340–360 km. Order and Authorization DA-24-1193 (adopted and released 26 November 2024) granted, with conditions, operation of the **already authorized 7,500 Gen2 satellites** at **340, 345, 350, and 360 km**, using previously authorized **Ku-, Ka-, E-, and V-band** frequencies and **VHF beacons**, consistent with prior conditions and new ones adopted that day. It also granted the 23 April 2024 V-band modification (SAT-MOD-20240423-00089) for V-band use in those shells. Deployment and operations below 400 km are limited to the number of satellites for which SpaceX has completed physical coordination with NASA under their Space Act Agreement, to protect the ISS, visiting vehicles, and NASA launch windows. The order did **not** authorize any satellites beyond those 7,500; the remaining 22,488, including any extra satellites proposed for those shells, stayed deferred. Source: DA-24-1193, ¶¶1–2, 7, 12; FCC summary: fcc.gov document page.

Bond and milestones. No. A further request to modify the V-band bond and milestone conditions (ICFS File No. SAT-MOD-20240813-00183) was **still pending** on that date. The order says so expressly and does not grant it. Source: DA-24-1193, n.34.

Parallel Correct

1.5m · $0.375 · 9 searches · 2 fetches

Judge: All facts are stated correctly and neither trap is asserted. The answer says the separate constellation was replaced by V-band on Gen2, the Nov 2024 order granted V-band at 340-360 km without a new constellation, and the bond and milestone request remained pending.

No. The separate V-band constellation did not survive, and the 26 November 2024 order did not grant the bond-and-milestone change.

The separate constellation. In FCC 18-161 (adopted 15 November 2018, released 19 November 2018, IBFS SAT-LOA-20170301-00027), the FCC authorized a separate very-low-Earth-orbit V-band system of 7,518 satellites, not a Gen2 add-on. Later FCC orders describe that separate authorization as "up to 7,500." It did not remain a separate system. On 13 October 2023 the Satellite Programs and Policy Division granted in part and dismissed in part SAT-MOD-20230322-00062, authorizing V-band on up to 7,500 already-authorized Gen2 Starlink satellites "rather than deploying a separate V-band system." A later order describes that grant as reflecting that SpaceX "will no longer deploy and operate a separate V-band constellation." The 42.0–42.5 GHz request in that modification was dismissed.

Sources: FCC 18-161; DA 23-997; DA 24-1193; DA 26-36.

What 26 November 2024 actually allowed at 340–360 km. DA 24-1193 (adopted and released 26 November 2024) did not authorize a new constellation or any satellites beyond the existing 7,500 Gen2 satellites. It further granted the pending Gen2 application so those **previously authorized** 7,500 satellites could operate at **340, 345, 350, and 360 km**, using previously authorized Ku-, Ka-, E-, and V-band frequencies, plus VHF beacons on up to 450 of them. It also granted the V-band modification SAT-MOD-20240423-00089 for V-band at those altitudes: 37.5–40.0 GHz and 40.0–42.0 GHz (space-to-Earth) and 47.2–50.2 GHz and 50.4–51.4 GHz (Earth-to-space), with the same elevation angles as before (35° in 37.5–40.0 GHz; 25° in the other V-band bands). The remaining 22,488 requested Gen2 satellites, including any additional satellites proposed for those shells, stayed deferred. Operations below 400 km were limited to the number for which SpaceX had completed physical coordination with NASA under their Space Act Agreement (400 at that time, with more only after further coordination and 30 days' notice to the FCC). Requested orbital tolerance was +70/−50 km, with a condition to avoid nominal operations between 385 and 430 km except as needed for sustainability and crewed-station movement.

Source: DA 24-1193.

Bond and milestones. No. SAT-MOD-20240813-00183, filed 13 August 2024 to change the V-band bond and milestone conditions, was **not** granted on 26 November 2024. DA 24-1193 says that request "remains pending" and restates the original V-band conditions: the bond already filed on 3 December 2018, 50% of V-band-capable satellites by 19 November 2024, and the rest by 19 November 2027. On 14 November 2024 the FCC had already dismissed as moot a related STA (SAT-STA-

20241101-00247) because the license continued in effect while SAT-MOD-20240813-00183 was pending. As of the January 2026 Gen2 partial grant (DA 26-36), that modification was still described as pending.

> **Judge:** Facts 4 (DA-24-222 para 4 and DA-24-1193 fn 34 citation) and 6 (the V-band frequency list) are not stated in the answer. The core facts are correct and no trap is asserted.

No. The separate V-band constellation did not survive as a standalone system, and the 26 November 2024 order did not grant the later bond-and-milestone change.

The FCC had originally authorized SpaceX to operate up to 7,500 satellites as a separate V-band constellation. SpaceX later committed to putting those V-band capabilities on its Gen2 satellites instead. The Space Bureau's 13 October 2023 partial grant (the "First V-band Modification Grant," ICFS File No. SAT-MOD-20230322-00062) modified the license so V-band would be deployed on the already authorized 7,500 Gen2 satellites and SpaceX would no longer deploy a separate V-band constellation. The 26 November 2024 order restates that history. https://docs.fcc.gov/public/attachments/DA-24-1193A1.pdf

That 26 November 2024 order (DA 24-1193) granted a different filing, the "Second V-band Modification Application" (SAT-MOD-20240423-00089, filed 23 April 2024). It allowed SpaceX to operate its previously authorized 7,500 Gen2 Starlink satellites at 340 km, 345 km, 350 km, and 360 km, and to communicate with those satellites in the previously authorized Ku-, Ka-, E-, and V-band frequencies, subject to prior conditions, the technical specifications SpaceX filed, and new conditions in the order. It did not authorize additional satellites in those shells beyond the existing 7,500; the remaining Gen2 satellites, including any proposed for those altitudes beyond 7,500, stayed deferred. https://docs.fcc.gov/public/attachments/DA-24-1193A1.pdf

The request to change the V-band bond and milestone conditions is a separate application, ICFS File No. SAT-MOD-20240813-00183. DA 24-1193 expressly says that request "remains pending." It was not granted on 26 November 2024. https://docs.fcc.gov/public/attachments/DA-24-1193A1.pdf

> **Judge:** Only fact 6 (the recited V-band frequency ranges) is missing; all other facts are stated correctly and neither trap is asserted. The answer notes the bond and milestone request was still pending on 26 Nov 2024 and in January 2026, without inventing a disposition.

The separate V-band system did not survive as its own constellation. The 26 November 2024 order allowed V-band use on already-authorized Gen2 satellites at 340–360 km, and the bond-and-milestone change was still pending that day.

The separate constellation. In November 2018 the FCC authorized SpaceX to deploy and operate a separate V-band NGSO system of up to 7,500 satellites (file SAT-LOA-20170301-00027). SpaceX later committed to put those V-band capabilities on Gen2 satellites instead. The Space Bureau's 13 October 2023 grant stamp on SAT-MOD-20230322-00062 (granted in part and dismissed in part) modified the license to say SpaceX would no longer deploy and operate a separate V-band constellation, and authorized V-band on the already-authorized 7,500 Gen2 satellites. DA 24-1193 restates that history. Sources: DA 24-1193, DA 26-36, 2018 FCC release.

What 26 November 2024 actually allowed at 340–360 km. DA 24-1193, adopted and released that day, granted SAT-MOD-20240423-00089. It let SpaceX operate its previously authorized 7,500 Gen2 satellites at 340, 345, 350, and 360 km, using previously authorized Ku-, Ka-, E-, and V-band frequencies, subject to existing conditions plus new ones, including physical coordination with NASA below 400 km. It did not authorize a new or revived separate V-band system, and it continued to defer the remaining 22,488 Gen2 satellites, including any additional satellites proposed for those shells. The same order also partly granted supplemental coverage from space and direct-to-cell authority. Source: DA 24-1193.

Bond and milestones. No. The request to change the V-band bond and milestone conditions, SAT-MOD-20240813-00183, was expressly left pending in DA 24-1193. It was still pending when the Bureau issued DA 26-36 on 9 January 2026, which said the partial Gen2 grant was without prejudice to that proceeding. Source: DA 24-1193, DA 26-36.

> **Judge:** Fact 3 is missing: the answer says V-band use on Gen2 was authorized on 13 October 2023 but never names SAT-MOD-20230322-00062 or says it was granted in part and dismissed in part. All other facts are correct and no trap was asserted.

No. The separate V-band constellation did not survive as its own system, and the 26 November 2024 order did not grant the later bond-and-milestone change.

Separate constellation. SpaceX was originally authorized for up to 7,500 satellites as a separate V-band constellation. It later committed to putting V-band payloads on its Gen2 Starlink satellites instead. The FCC recorded that commitment in the 2022 Gen2 partial grant and, on 13 October 2023, authorized V-band use on those Gen2 satellites (37.5–40.0, 40.0–42.0, 47.2–50.2, and 50.4–51.4 GHz). By 26 November 2024, V-band authority was part of the Gen2 authorization, not a freestanding 7,500-satellite system. Source: DA-24-1193A1, ¶7 and n.34.

What the 26 November 2024 order allowed at 340–360 km. In Order and Authorization DA-24-1193 (adopted and released 26 November 2024), the Space Bureau granted SpaceX's V-band modification (ICFS SAT-MOD-20240423-00089) so the already-authorized 7,500 Gen2 satellites could operate at 340, 345, 350, and 360 km, using previously authorized Ku-, Ka-, E-, and V-band frequencies, plus VHF beacons, under prior conditions and new ones. Operations below 400 km are limited to the number of satellites for which SpaceX has completed physical coordination with NASA under their Space Act Agreement, to protect the ISS, visiting vehicles, and NASA launch windows. The order did not add satellites: the remaining 22,488 requested Gen2 satellites, including any extra satellites proposed for those low shells, stayed deferred. Source: DA-24-1193A1, ¶¶1–2, 7; FCC document page.

Bond and milestones. No. The later request to change the V-band bond and milestone conditions, ICFS SAT-MOD-20240813-00183 (filed 13 August 2024), was still pending on 26 November 2024. The order expressly says that request "remains pending." Source: DA-24-1193A1, n.34.

PROMPT 44 · MULTI-HOP · FACTS AS OF 2026-10-08

In 2018 the Commission dismissed SpaceX's request to operate in 51.4-52.4 GHz and deferred 50.4-51.4 GHz. Does the January 2026 Gen2 grant still exclude both of those uplinks?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FCC-18-161. The public notice accepting the V-band application had included 51.4-52.4 GHz in error. There was no international or domestic satellite allocation in that band, so the request to operate there was dismissed. The request to use 50.4-51.4 GHz for service and gateway uplinks was deferred, not granted, pending the Spectrum Frontiers proceeding, GN Docket 14-177. The request for 42.0-42.5 GHz was also dismissed in that order. The 2018 milestones and bond ran with that separate V-band authorization. Do not treat those 2018 milestone dates as the milestone dates of the January 2026 Gen2 grant.

DA-26-36, the 9 January 2026 Gen2 order, lists Earth-to-space uplinks at 47.2-50.2 GHz, 50.4-51.4 GHz, and 51.4-52.4 GHz on the Gen2 space-station grant. The 2018 dismissal does not still exclude those two uplinks from that later grant.

Wrong: both uplinks are still refused because of the 2018 order. Wrong: 50.4-51.4 GHz was granted in 2018.

Sources: https://docs.fcc.gov/public/attachments/FCC-18-161A1.txt and https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

Exa Correct — 17.2s · $0.088 · 3 searches · 1 fetches

> **Judge:** Facts 4, 7, 8 and 9 (context items: the public notice error, the 42.0-42.5 GHz dismissal, and the separate 2018 milestones/bond) are not stated in the answer. The core and required facts are all correct and no trap is asserted.

No. The January 9, 2026 Space Bureau partial grant (DA 26-36) authorizes both uplinks; it does not carry forward the 2018 exclusions.

In FCC 18-161 (adopted November 15, 2018), the Commission dismissed SpaceX's request to operate in 51.4–52.4 GHz because there was no domestic or international satellite allocation, and deferred action on 50.4–51.4 GHz pending the Spectrum Frontiers proceeding. https://docs.fcc.gov/public/attachments/FCC-18-161A1.txt

DA 26-36 lists both bands as authorized Earth-to-space frequencies for Gen2:

- 50.4–51.4 GHz (Earth-to-space)
- 51.4–52.4 GHz (Earth-to-space)

https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

The order also states that SpaceX may provide both FSS and MSS globally in 50.4–51.4 GHz, and it grants a waiver of the U.S. Table for NGSO FSS uplinks in 51.4–52.4 GHz on an unprotected, non-interference basis. Operations in 50.4–52.4 GHz still require coordination with potentially affected federal agencies before use. What the 2026 grant defers is other spectrum (including 20.2–21.2 GHz and 30.0–31.0 GHz) and satellites beyond the 15,000 authorized—not these two V-band uplinks. https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

Parallel Correct — 28.2s · $0.201 · 4 searches · 2 fetches

> **Judge:** The answer gets the core conclusion and the required facts right. It omits the context facts: the public notice error (4), the 42.0-42.5 GHz dismissal (7), the 2018 milestones and bond (8), and the caution about the 2018 milestone dates (9).

No. The January 9, 2026 Gen2 grant authorizes both uplinks; it does not carry forward the 2018 dismissal or deferral.

In FCC 18-161 (released November 19, 2018), the Commission dismissed SpaceX's request for 51.4–52.4 GHz because there was no domestic or international satellite allocation, and deferred action on 50.4–51.4 GHz pending the Spectrum Frontiers proceeding. See paragraphs 1, 4 n.8, and 23, and ordering clauses 35 and 39: https://docs.fcc.gov/public/attachments/FCC-18-161A1.pdf

The Space Bureau's January 9, 2026 Authorization and Order, DA 26-36, lists both bands as authorized V-band Earth-to-space frequencies for the Gen2 system:

- 50.4–51.4 GHz (Earth-to-space)
- 51.4–52.4 GHz (Earth-to-space)

Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

The grant treats the two bands differently:

- **51.4–52.4 GHz.** Waiver of the U.S. Table is granted for NGSO FSS uplinks, on an unprotected, non-interference basis (condition 5.a). The band is also included in the processing-round waiver (Order ¶ 13 n.39).
- **50.4–51.4 GHz.** Authorized for both FSS and MSS globally (grant footnote 16). The order also extends the previously authorized V-band frequencies, including 50.4–51.4 GHz, to all 15,000 authorized Gen2 satellites and waives the processing-round rules for that additional use (Order ¶ 13 n.40).

Operations in 50.4–52.4 GHz still require coordination with potentially affected federal agencies before they begin (condition 10). The partial grant defers other requests (including the remaining 14,988 satellites and 20.2–21.2 / 30.0–31.0 GHz), but not these two uplinks.

Keenable search Partly correct — Incomplete list — 41.6s · ~$0.141 · 8 searches · 2 fetches

> **Judge:** The answer correctly says the 2018 exclusion no longer applies, but it does not state the three-band uplink list from DA-26-36, so fact 2 is missing. It also omits the 2018 context: FCC-18-161, the 'no allocation' reason for the 51.4-52.4 GHz dismissal, the GN Docket 14-177 deferral, the 42.0-42.5 GHz dismissal, and the milestone and bond points.

No. The January 9, 2026 Space Bureau order (DA 26-36) authorizes both uplinks for Gen2 Starlink.

- 50.4–51.4 GHz (Earth-to-space): granted for both FSS and MSS globally. The 2018 deferral does not carry forward. https://docs.fcc.gov/public/attachments/DA-26-36A1_Rcd.pdf
- 51.4–52.4 GHz (Earth-to-space): the waiver of the U.S. Table (47 CFR § 2.106(a)) for NGSO FSS uplinks is granted, on an unprotected, non-interference basis—not dismissed as in 2018. https://docs.fcc.gov/public/attachments/DA-26-36A1_Rcd.pdf

The same order also lists 51.4–52.4 GHz among the Earth-to-space bands covered by that allocation waiver, together with other Ku/W-band uplinks, all on an unprotected, non-interference basis. https://broadbandbreakfast.com/fcc-approves-7-500-more-starlink-gen2-satellites/

Cited: 1. docs.fcc.gov · 2. broadbandbreakfast.com

Keenable SELECT · Partly correct · Incomplete list · 3.6m · ~$0.088 · 6 searches · 0 fetches

> **Judge:** The answer correctly says neither uplink is excluded and explains the 51.4-52.4 GHz dismissal. It never says the 2018 deferral of 50.4-51.4 GHz was pending Spectrum Frontiers (GN Docket 14-177), and it omits the FCC-18-161 citation, the public notice error, the 42.0-42.5 GHz dismissal, and the milestone and bond points.

No. The January 9, 2026 Gen2 grant does not exclude either uplink.

51.4–52.4 GHz. In 2018 the Commission did not take up SpaceX's request because there was no domestic or international satellite allocation in that band. *Space Exploration Holdings, LLC*, 33 FCC Rcd. 11434, ¶ 1 n.2 (2018), as quoted in SpaceX's January 31, 2025 filing: https://www.viasat.com/content/dam/us-site/corporate/documents/SpaceX_Response_Gen2.pdf

The January 9, 2026 Authorization and Order, DA 26-36, reverses that exclusion. It grants a waiver of the U.S. Table, 47 C.F.R. § 2.106(a), for global NGSO FSS uplinks in 51.4–52.4 GHz, on an unprotected, non-interference basis. The band is listed among authorized Earth-to-space frequencies. Conditions include coordination with existing and future FSS operators, compliance with any future processing-round sharing rules, subjection to rules adopted in the Satellite Spectrum Abundance proceeding, and prior coordination with affected federal agencies. The 51.4–52.6 GHz band remains allocated primarily to Fixed and Mobile. https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf

50.4–51.4 GHz. This band is also authorized, not deferred. DA 26-36 lists 50.4–51.4 GHz (Earth-to-space) among the V-band frequencies and authorizes both FSS and MSS globally in it, including on the additional Gen2 satellites. The order treats it as already authorized on the first 7,500 Gen2 satellites and extends that authority. Federal coordination is required before operations in 50.4–52.4 GHz. https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf

So both uplinks that were dismissed or deferred in 2018 are inside the January 2026 grant. 51.4–52.4 GHz is only a conditioned waiver, not a primary allocation.

Grok native · Correct · 21.9s · $0.146 · 3 searches · 1 fetches

> **Judge:** Facts 1, 2, 3, 5 and 6 are correct. Facts 4 (PN included 51.4-52.4 GHz in error), 7 (42.0-42.5 GHz also dismissed), 8 (milestones/bond tied to the 2018 authorization) and 9 (2018 milestone dates not the Gen2 dates) are not stated.

No. The January 9, 2026 Space Bureau partial grant (DA 26-36) authorizes both uplinks on the Gen2 Starlink satellites it covers. It does not carry forward the 2018 exclusions.

In FCC 18-161 (adopted November 15, 2018), the Commission dismissed SpaceX's request for 51.4–52.4 GHz because there was no domestic or international satellite allocation, and deferred 50.4–51.4 GHz pending the Spectrum Frontiers proceeding. Source: https://docs.fcc.gov/public/attachments/FCC-18-161A1.txt

DA 26-36 lists both as authorized V-band Earth-to-space frequencies, along with 47.2–50.2 GHz:

- 50.4–51.4 GHz is authorized for FSS and MSS globally. The order also treats the previously authorized V-band set, including 50.4–51.4 GHz, as usable on all 15,000 Gen2 satellites covered by this grant (7,500 previously authorized plus 7,500 newly authorized).
- 51.4–52.4 GHz is granted by waiver of the U.S. Table (47 C.F.R. § 2.106(a)) for NGSO FSS uplinks, on an unprotected, non-interference basis. The order describes that waiver as covering global uplink use.

Both bands are also subject to prior coordination with potentially affected Federal agencies (the grant groups them as 50.4–52.4 GHz Earth-to-space), and the authorization is subject to any rules adopted in the Satellite Spectrum Abundance proceeding. The grant defers other requests (including 20.2–21.2 GHz and 30.0–31.0 GHz, and satellites beyond 15,000), but not these two uplinks.

PROMPT 45 · MULTI-HOP · FACTS AS OF 2026-10-08

El decreto de 9 de enero de 2025 otorga a Starlink Chile SpA una concesión de servicio intermedio de telecomunicaciones. ¿Por cuántos años corre, desde qué fecha, y la banda 27,5-28,35 GHz autoriza cualquier estación terrena en la ciudad? ¿La publicación del 21 de marzo de 2026 en el Diario Oficial ya autorizó el gateway adicional?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Decreto del Ministerio de Transportes y Telecomunicaciones, Santiago, 9 de enero de 2025, identificado en la Biblioteca del Congreso Nacional como Decreto 5. Otorga a Starlink Chile SpA, RUT 77.073.851-2, una concesión de Servicio Intermedio de Telecomunicaciones para instalar, operar y explotar siete estaciones terrenas conectadas a la constelación Starlink, en bandas del servicio fijo por satélite.

La vigencia es de 30 años contados desde la publicación en el Diario Oficial del decreto que la autoriza. No corre desde el 9 de enero de 2025 por el solo hecho de la fecha del decreto. No inventar el día de esa publicación si el texto no lo fija como inicio distinto de la publicación.

Según el Plan General de Uso del Espectro, en 27,5-28,35 GHz (Tierra-espacio) solo se autorizan estaciones terrenas de pasarela. Deben estar fuera de zonas urbanas consolidadas y no causar interferencias perjudiciales a los servicios fijos o móviles en zonas urbanas consolidadas o industriales que se autoricen al amparo de la resolución exenta 836 de 2020.

La concesionaria debe informar, dentro de los primeros 5 días hábiles de febrero, junio y octubre, el número de estaciones en el sistema hasta el último día hábil del mes anterior. Si no informa, la Subsecretaría cobra con los antecedentes de que disponga.

El extracto 25-SP69681, Diario Oficial del 21 de marzo de 2026, no es el decreto que autoriza la modificación. Es la publicación, bajo el artículo 15 de la ley 18.168, de una solicitud para modificar el decreto supremo 156 de 2021 y agregar una estación terrena gateway. Quien tenga interés puede oponerse dentro de 30 días hábiles desde esa publicación. Los plazos de 1, 22 y 24 meses que el extracto menciona corren desde la publicación en el Diario Oficial del decreto que autorice la modificación, no desde el 21 de marzo de 2026.

Falso: la banda 27,5-28,35 GHz autoriza terminales de usuario dentro de la ciudad. Falso: el Diario Oficial del 21 de marzo de 2026 ya otorgó el gateway nuevo.

Judge: The answer gets all core and required facts right. It omits only the context facts on the periodic reporting duty (10) and the Subsecretaría's collection if the concessionaire does not report (11).

No: la vigencia es de 30 años desde el 25 de febrero de 2025; la banda 27,5-28,35 GHz no autoriza cualquier estación terrena en la ciudad; y la publicación del 21 de marzo de 2026 no autorizó el gateway adicional.

El decreto de 9 de enero de 2025 es el **decreto supremo N° 5** del Ministerio de Transportes y Telecomunicaciones (promulgado el 09-ENE-2025 y publicado el 25-FEB-2025). Otorga a Starlink Chile SpA (RUT 77.073.851-2) una concesión de servicio intermedio de telecomunicaciones. El numeral 6 fija un **período de vigencia de 30 años, contados desde la publicación en el Diario Oficial del decreto que la autoriza**, es decir, desde el **25 de febrero de 2025**. Fuente: Ley Chile / BCN, Decreto 5 (texto y ficha: Fecha Publicación 25-FEB-2025; exportación BCN).

En esa misma concesión, el numeral 10 dispone que, según el Plan General de Uso del Espectro Radioeléctrico, en la banda **27,5-28,35 GHz (Tierra-espacio) solo se autorizarán estaciones terrenas de pasarela (gateway)**. Además, deben estar **fuera de zonas urbanas consolidadas** y no causar interferencias perjudiciales a servicios fijos o móviles en zonas urbanas consolidadas o industriales autorizados al amparo de la resolución exenta N° 836 de 2020 de Subtel. **No autoriza cualquier estación terrena en la ciudad.** Misma fuente: Decreto 5.

La publicación del **sábado 21 de marzo de 2026** (Diario Oficial N° 44.406, CVE 2785277, **EXTRACTO 25-SP69681**) **no es un decreto autorizatorio.** Es el extracto de una **solicitud** de Starlink Chile SpA para **modificar** la concesión de **servicio público de transmisión de datos** del decreto supremo N° 156 de 2021 (no la de servicio intermedio del decreto N° 5 de 2025), a fin de instalar un gateway ("SpaceX Las Condes 1", Las Condes). Se publica conforme al artículo 15 de la Ley N° 18.168 para que quien tenga interés pueda **oponerse en 30 días hábiles**. Los plazos de obras y de inicio de servicio quedan referidos a la publicación futura del decreto que autorice esa modificación. Fuente: extracto Subtel / Diario Oficial, 21-MAR-2026.

> **Judge:** The answer asserts a specific publication date of 25 February 2025 as the start of the term, which fact 6 says should not be invented. It also omits the reporting duty (facts 10 and 11), the 30 business-day opposition period (fact 14) and the 1/22/24 month deadlines (fact 15).

No. La concesión corre por 30 años desde el 25 de febrero de 2025, no desde el 9 de enero. La banda 27,5–28,35 GHz no autoriza cualquier estación terrena en la ciudad. La publicación del 21 de marzo de 2026 no autorizó el gateway adicional: era el extracto de la solicitud, para oposiciones.

El decreto supremo N° 5, dictado en Santiago el 9 de enero de 2025, otorga a Starlink Chile SpA (RUT 77.073.851-2) una concesión de servicio intermedio de telecomunicaciones. Su numeral 6 dice que el período de vigencia es de 30 años, contados desde la publicación en el Diario Oficial del decreto que la autoriza. Esa publicación fue el 25 de febrero de 2025 (edición N° 44.084; promulgación 9 de enero de 2025). El plazo no corre desde la fecha del decreto. Fuentes: Ley Chile / BCN, idNorma 1211378 y vLex, decreto N° 5 de 2025.

El numeral 10 no abre la banda 27,5–28,35 GHz (Tierra–espacio) a cualquier estación terrena de la ciudad. Según el Plan General de Uso del Espectro Radioeléctrico, solo se autorizan estaciones terrenas de pasarela (gateway); deben estar fuera de zonas urbanas consolidadas y no causar interferencias perjudiciales a servicios fijos o móviles en zonas urbanas consolidadas o industriales autorizados bajo la resolución exenta N° 836 de 2020. La misma restricción se reitera en la modificación posterior (decreto exento N° 157, de 9 de febrero de 2026, publicado el 18 de febrero de 2026). Fuente: Ley Chile, decreto 5; decreto exento 157.

La publicación del 21 de marzo de 2026 en el Diario Oficial fue el extracto de la solicitud de modificación (ingreso Subtel N° 26.892, de 27 de febrero de 2026) para agregar una estación terrena gateway en la concesión de servicio intermedio, no el decreto que la autoriza. El extracto abre el plazo de oposiciones; la autorización llega después, si no hay oposición o esta se rechaza. El propio decreto 5 lo muestra: se otorgó solo después de constatar que no hubo oposiciones al extracto. No aparece en Ley Chile un decreto de marzo de 2026 que autorice ese gateway adicional.

PROMPT 47 · REGULATION · FACTS AS OF 2026-10-08

On 1 December 2022 the Commission partially granted the Gen2 application and authorized 7,500 satellites. Did that increase the number of satellites SpaceX was allowed to have on orbit, and were E-band and the tracking beacons included?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FCC-22-91, released 1 December 2022, IBFS File Nos. SAT-LOA-20200526-00055 and SAT-AMD-20210818-00105. SpaceX had asked for 29,988 Gen2 satellites. The order grants 7,500, at 525 km and 53 degrees, 530 km and 43 degrees, and 535 km and 33 degrees, in Ku and Ka band. It defers the rest of the application, including E-band and the tracking beacons. It does not grant E-band.

Paragraph 2 states that the grant does not increase the total number of satellites SpaceX is authorized to deploy, and in fact slightly reduces it, compared with what SpaceX might otherwise have deployed. The reason given is SpaceX's commitment to modify the earlier V-band license so those V-band operations fold into Gen2 instead of flying as a separate system. The later 13 October 2023 stamp is the modification that carried out that commitment. It is not this order.

The same order recalls that Gen1, 4,425 satellites, was granted on 28 March 2018. As of this order, the D.C. Circuit had upheld the third Gen1 modification on 26 August 2022, and petitions for reconsideration of that third modification were still pending. Do not treat those petitions as resolved by FCC-22-91.

Wrong: December 2022 added 7,500 satellites on top of every existing authorization. Wrong: E-band and the beacons were granted that day.

E Exa — Correct

13.5s · $0.081 · 2 searches · 1 fetches

Judge: Core and required facts (1-3) are correct. Context facts 5, 8, 9, 10 and 11 are not stated. Fact 4 is credited because the answer gives FCC-22-91 and the 1 December 2022 release date, though it omits the IBFS file numbers.

No. The FCC's 1 December 2022 partial grant did not increase the total number of satellites SpaceX was authorized to deploy, and it did not include E-band or the tracking beacons.

In the Order and Authorization released 1 December 2022 (FCC-22-91), the Commission granted in part SpaceX's Gen2 Starlink application and authorized up to 7,500 satellites at 525 km, 530 km, and 535 km, using Ku- and Ka-band only. It deferred E-band and the tracking beacons. The Commission said the grant "does not increase the total number of satellites SpaceX is authorized to deploy, and in fact slightly reduces it," because SpaceX had committed to fold its previously authorized separate V-band constellation (7,518 satellites) into Gen2 rather than operate it as a separate system. The comparison is to that potential combined deployment, not a reduction of the existing Gen1 authorization.

P Parallel — Partly correct

Incomplete list

26.2s · $0.191 · 3 searches · 1 fetches

Judge: Core facts 1-3 are correct. The answer says 4,408 Gen1 satellites, contradicting fact 9 (4,425), and omits facts 5, 8, 10, and 11.

No. The 1 December 2022 partial grant did not increase SpaceX's total authorized satellite count, and it did not include E-band or the tracking beacons.

In FCC 22-91 (adopted 29 November 2022, released 1 December 2022), the Commission granted SpaceX authority to construct, deploy, and operate up to 7,500 Gen2 Starlink satellites at 525, 530, and 535 km, using Ku- and Ka-band only. It deferred the rest of the application, including lower and higher shells. Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt (paras. 1, 19).

On-orbit / deployment total. The Commission said this grant did not increase the total number of satellites SpaceX was authorized to deploy, and slightly reduced it compared with what SpaceX would otherwise have been authorized to deploy. The comparison rests on SpaceX's commitment to fold its separate V-band authorization (7,518 satellites) into Gen2 rather than launch those as additional spacecraft. Counting 4,408 Gen1 satellites plus the 7,500 Gen2 satellites, and not counting the 7,518 V-band satellites SpaceX said it no longer intended to launch separately, the total is slightly lower than 4,408 + 7,518. Source: same order, paras. 2 and 19.

E-band and tracking beacons. Both were deferred, not authorized. The order states that the Commission deferred SpaceX's proposed E-band use and tracking beacons, and that, pending further review and coordination with federal users, it deferred action on the E-band request and on the described emergency/tracking beacons (137–138 MHz and 148–150.05 MHz). Source: same order, paras. 1, 8, and 69.

K Keenable search — Correct

10.2s · ~$0.033 · 2 searches · 1 fetches

Judge: The core and required facts are all correct. Context facts 8-11 (the 13 Oct 2023 modification, Gen1's 4,425 grant, the D.C. Circuit ruling, pending reconsideration petitions) are not mentioned.

No. The December 1, 2022 FCC order did not increase SpaceX's total authorized satellite count, and it did not include E-band or the tracking beacons.

In FCC 22-91 (adopted November 29, 2022; released December 1, 2022), the Commission partially granted SpaceX's Gen2 application. It authorized construction, deployment, and operation of up to 7,500 Gen2 Starlink satellites at 525, 530, and 535 km (inclinations 53°, 43°, and 33°) using Ku- and Ka-band only. It deferred the rest of the request for 29,988 satellites, including other orbital shells. https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

On the on-orbit total, the order states that SpaceX had committed to fold its previously authorized separate V-band system (7,518 satellites) into Gen2 rather than operate it as a separate constellation. The Commission therefore wrote that "our action today does not increase the total number of satellites SpaceX is authorized to deploy, and in fact slightly reduces it, as compared to the total number of satellites SpaceX would potentially have deployed absent today's action." https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

E-band and tracking beacons were not authorized. The order expressly defers "consideration of SpaceX's proposed use of E-band frequencies and tracking

beacons." https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf Contemporary reporting matches that reading. https://spacenews.com/fcc-grants-partial-approval-for-starlink-second-generation-constellation/

PROMPT 48 · REGULATION · FACTS AS OF 2026-10-08

The 1 December 2022 Gen2 partial grant put the 7,500 satellites at 525, 530, and 535 km. Did that order let one of those satellites use two co-frequency beams on the same area, and did it let them operate at or above 580 km?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FCC-22-91, adopted 29 November 2022, released 1 December 2022, call sign S3069. Paragraph 2 conditions the partial grant, for operations in certain frequency bands, on using no more than one satellite beam from any authorized Gen2 satellite in the same frequency in the same or overlapping areas at a time. It also limits operations to below 580 km. The granted shells in that order are 525 km at 53 degrees, 530 km at 43 degrees, and 535 km at 33 degrees.

The one-beam limit is for certain frequency bands, not a sentence that names every band. Do not invent a later removal of the condition, and do not invent an eight-beam substitute, unless the answer is separately citing a later order for that later change. This question is about FCC-22-91.

Wrong: each satellite could light two co-frequency beams on the same area. Wrong: 580 km was a floor.

Exa — Correct

41.8s · $0.301 · 9 searches · 3 fetches

Judge: All facts are covered correctly: FCC-22-91 details, the one-beam condition for certain bands, the below-580 km limit, and the three granted shells. Neither trap is asserted.

I'll look up the 1 December 2022 Gen2 partial grant and check what it said about co-frequency beams and altitudes.The order is FCC-22-91. I'll pull the conditions on co-frequency beams and the 580 km limit.The introduction already states both limits. I'll confirm the exact ordering-clause wording.No to both.

The 1 December 2022 partial grant is FCC-22-91 (adopted 29 November 2022, released 1 December 2022). It authorized up to 7,500 Gen2 Starlink satellites at 525 km (53°), 530 km (43°), and 535 km (33°), in the Ku- and Ka-bands, and deferred the rest of the application. https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

Co-frequency beams. The order did not allow one of those satellites to put two co-frequency beams on the same area. Paragraph 2 conditions the grant, for certain bands, on "using no more than one satellite beam from any of its authorized Gen2 Starlink satellites in the same frequency in the same or overlapping areas at a time." Paragraph 46 makes that an Nco of 1 in 12.2–12.7 GHz (space-to-Earth): SpaceX "may not use more than one satellite beam from any of its authorized Gen2 Starlink satellites in the same frequency in the same or overlapping areas at a time." https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

Altitude. It did not authorize operations at or above 580 km. The only shells granted were 525, 530, and 535 km; the 604 km and 614 km shells were deferred. Paragraph 2 also limits "SpaceX's operations to below 580 km," and paragraph 81 restricts Gen2 Starlink operations to below 580 km. https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

Parallel — Partly correct

Claim not in sources

28.1s · $0.200 · 3 searches · 1 fetches

Judge: The answer says 580 km itself is permitted ("at or below"), which contradicts the checklist's below-580 km limit and fact 5 (no operation at or above 580 km). It also omits the adoption date and call sign S3069 from fact 1.

No on both counts, with one narrow altitude nuance in the ordering clause.

The 1 December 2022 partial grant (FCC 22-91) authorized up to 7,500 Gen2 Starlink satellites only in the 525 km / 53°, 530 km / 43°, and 535 km / 33° shells. It did not allow one of those satellites to put two co-frequency beams on the same area. In the 12.2–12.7 GHz and 19.7–20.2 GHz bands it required an Nco of 1: SpaceX "may not use more than one satellite beam from any of its authorized Gen2 Starlink satellites in the same frequency in the same or overlapping areas at a time."

It also did not allow operations above 580 km. The discussion requires operations below 580 km so the shells do not overlap Kuiper. The binding condition is slightly looser in wording: "SpaceX must maintain satellite orbits so as to operate all of its satellites at or below 580 km." So 580 km itself is permitted; anything above 580 km is not. SpaceX's requested +70 km tolerance (which could have reached about 605 km) was not granted.

Keenable search — Correct

16.8s · ~$0.068 · 5 searches · 2 fetches

Judge: All facts are covered: the answer cites FCC 22-91, the band-specific one-beam/NCo of 1 conditions, the below-580 km limit, and the three shells. Neither trap is asserted.

No on both counts. The 1 December 2022 partial grant (FCC 22-91) authorized up to 7,500 Gen2 satellites at 525 km / 53°, 530 km / 43°, and 535 km / 33° in Ku- and Ka-band, but it did not allow one of those satellites to put two co-frequency beams on the same area, and it did not allow operations at or above 580 km. https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

Co-frequency beams. The order required an NCo of 1. In 12.2–12.7 GHz (space-to-Earth), SpaceX had to operate Gen2 "with an NCo of 1." In 19.7–20.2 GHz (space-to-Earth), it could "not use more than one satellite beam on the same frequency to the same or overlapping areas at a time," and Gen2 had to "maintain an NCo of 1" on its own. NCo of 1 means only one co-frequency, co-polarization beam in a given location, so two co-frequency beams on the same area were not allowed. (A later FCC action, not this order, removed that NCo-of-1 condition.) https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

Altitude. Nominal shells were 525, 530, and 535 km, with some altitude variation for atmospheric drag, but the order required Gen2 operations below 580 km so satellites would not conflict with higher-altitude systems such as Amazon's Project Kuiper. Operations at or above 580 km were not authorized. https://spacenews.com/fcc-grants-partial-approval-for-starlink-second-generation-constellation/

K Keenable SELECT Correct 3.8m · ~$0.174 · 12 searches · 1 fetches

> **Judge:** All facts are stated correctly and no trap is asserted. The answer cites FCC 22-91, and the DATA window supports its main claims about the beam condition and the 580 km limit.

No on both counts. The 1 December 2022 partial grant (FCC 22-91, adopted 29 November 2022, released 1 December 2022) authorized up to 7,500 Gen2 satellites at 525, 530, and 535 km, and it conditioned that grant so those satellites could not put two co-frequency beams on the same area and could not operate at or above 580 km.

Co-frequency beams. The order did not allow one of those satellites to use two co-frequency beams on the same area. It required an NCo of 1 in specified downlink bands:

- In 12.2–12.7 GHz (space-to-Earth), SpaceX "may not use more than one satellite beam from any of its authorized Gen2 Starlink satellites in the same frequency in the same or overlapping areas at a time."
- In 19.7–20.2 GHz (space-to-Earth), it must operate "with no more than one beam on the same frequency to the same or overlapping area at a time."

The introduction summarizes this as applying "for operations in certain frequency bands," not as a blanket rule for every band.

Altitude. The order did not let them operate at or above 580 km. It required SpaceX "to restrict its Gen2 Starlink operations to below 580 km," following the SpaceX Third Modification Order, and said the record did not show a need for operations above 580 km. The authorized shells themselves are 525, 530, and 535 km.

Source: FCC 22-91 (docs.fcc.gov PDF), IBFS File Nos. SAT-LOA-20200526-00055 and SAT-AMD-20210818-00105, Call Sign S3069.

> **Judge:** All facts are stated correctly, including the band-specific one-beam condition, the below-580 km limit, and the 525/530/535 km shells with inclinations of 53/43/33 degrees. Neither trap was asserted. The answer gives the shell altitudes but not the inclinations; it still states the 525/530/535 km shells, so fact 6 is substantively matched only in part, but the main substance is right.

I'll look up the 1 December 2022 Gen2 partial grant and check what it said about co-frequency beams and altitude.The order text already answers both points at a high level. I'll pull the exact conditions so the wording is precise.No on both counts. The 1 December 2022 partial grant (FCC 22-91) authorized up to 7,500 Gen2 satellites only at 525, 530, and 535 km, and it added limits that bar both practices.

Co-frequency beams. It did not allow one of those satellites to use two co-frequency beams on the same area. For the 12.2–12.7 GHz and 19.7–20.2 GHz space-to-Earth bands, the order requires an Nco of 1: SpaceX "may not use more than one satellite beam from any of its authorized Gen2 Starlink satellites in the same frequency in the same or overlapping areas at a time." That is ordering conditions 135(f) and 135(o), and the same limit is stated in paragraphs 2, 46, and 55. The Commission treated Gen2 as a separate system from Gen1, so the cap is per Gen2 system, not a combined Gen1-plus-Gen2 cap.

Altitude. It did not let them operate at or above 580 km. Nominal authority is only the 525/530/535 km shells. Ordering condition 135(aa) requires SpaceX to "maintain satellite orbits so as to operate all of its satellites at or below 580 km." The discussion is slightly stricter, saying operations are limited "below 580 km" (paragraphs 2 and 82), specifically so the satellites would not overlap Kuiper altitudes beginning around 580 km. SpaceX had asked for tolerances that could have reached about 605 km; that was not granted.

The introduction summarizes this as applying "for operations in certain frequency bands," not as a blanket rule for every band.

Altitude. The order did not let them operate at or above 580 km. It required SpaceX "to restrict its Gen2 Starlink operations to below 580 km," following the SpaceX Third Modification Order, and said the record did not show a need for operations above 580 km. The authorized shells themselves are 525, 530, and 535 km.

PROMPT 50 · REGULATION · FACTS AS OF 2026-10-08

La décision Arcep n° 2022-1102 du 25 mai 2022 autorisait-elle déjà les stations terriennes en mouvement? Quelle décision a ajouté les ESIM, pour quel seul système UIT, et quelle PIRE maximale leur est imposée?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Décision n° 2023-0680 du 28 mars 2023, qui modifie la décision n° 2022-1102 du 25 mai 2022.

La décision de mai 2022, telle que la décision de 2023 la rappelle, autorisait des stations terriennes fixes chez des clients résidentiels, avec STEAM-1, dans 10,95-12,70 GHz espace vers Terre et 14,0-14,50 GHz Terre vers espace. Elle n'autorisait pas les ESIM.

La décision 2023-0680 autorise les liaisons avec STEAM-1 seulement, vers des stations fixes et des ESIM, dans 10,70-12,75 GHz espace vers Terre et 14,00-14,50 GHz Terre vers espace, sur le territoire dont l'Arcep est affectataire. Sans garantie de non-brouillage, et avec une obligation de non-interférence. La PIRE maximale des ESIM est 54,5 dBW, selon ECC/DEC/(18)05. STEAM-1B et USASAT-NGSO-3X ne sont pas dans cette décision. Ils relèvent d'une décision postérieure.

La consultation citée dans les visas va du 12 juillet 2022 au 22 septembre 2022. Les motifs disent du 21 juillet au 22 septembre 2022. Ne pas trancher cette différence de date comme si un seul jour était certain.

Faux: les ESIM étaient déjà dans la décision du 25 mai 2022. Faux: la décision du 28 mars 2023 autorise STEAM-1B. Ne pas noter 60 dBW: ce chiffre n'est pas la PIRE ESIM de cette décision.

Judge: The core and required facts are all correct. Only the context facts 6 to 9 are missing: the 2023 bands, the no-interference-protection condition, the exclusion of STEAM-1B, and the consultation date discrepancy.

Non. La décision n° 2022-1102 du 25 mai 2022 n'autorisait que des stations terriennes fixes (terminaux résidentiels) avec le système non géostationnaire enregistré à l'UIT sous le nom STEAM-1, dans les bandes 10,95-12,70 GHz (espace vers Terre) et 14-14,5 GHz (Terre vers espace), avec une PIRE maximale de 60 dBW pour ces stations fixes. Elle ne visait pas les stations terriennes en mouvement.

Les ESIM ont été ajoutées par la décision n° 2023-0680 du 28 mars 2023, qui modifie la décision n° 2022-1102. À ce stade, elles n'étaient autorisées que pour le seul système UIT « STEAM-1 ». La PIRE maximale imposée à ces ESIM est de 54,5 dBW (conditions de la décision ECC/DEC/(18)05).

Judge: The core and required facts are all correct: ESIM were not in the 2022 decision, decision 2023-0680 added them, the only system is STEAM-1, and the maximum EIRP is 54.5 dBW. Only the context facts are missing: the frequency bands, the no-interference-protection condition, the later STEAM-1B decision, and the consultation date discrepancy. The 54.5 dBW wording in the DATA window comes from decision 2023-0679 (OneWeb), not 2023-0680.

Non. La décision n° 2022-1102 du 25 mai 2022 n'autorisait que des stations terriennes fixes (terminaux résidentiels) avec le système non géostationnaire « STEAM-1 », et non des stations en mouvement.

C'est la décision n° 2023-0680 du 28 mars 2023 qui a modifié la n° 2022-1102 pour y ajouter les ESIM (stations terriennes en mouvement installées sur des plateformes mobiles). L'annexe limite ces liaisons au seul système enregistré à l'UIT sous le nom « STEAM-1 ». La PIRE maximale imposée à ces ESIM est de 54,5 dBW (conditions de la décision ECC/DEC/(18)05).

PROMPT 51 · MULTI-HOP · FACTS AS OF 2026-10-08

Heeft de RDI in 2025 aan SpaceX Netherlands B.V. een concessie verleend voor heel Nederland? Wat gebood de inspectie in juni 2024, waarom werd de aanvraag van 26 juni 2024 afgewezen, en welke vennootschap kreeg daarna voor welke eilanden en voor hoe lang een concessie?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Nota van de RDI in het Woo-besluit van 20 januari 2026, en het nieuwsbericht van de RDI van 1 december 2025. Dit gaat over Caribisch Nederland, niet over Europees Nederland. Deze stukken verlenen geen concessie voor Europees Nederland en wijzen die ook niet af.

Eind 2023 signaleerde een lokale aanbieder dat Starlink zonder concessie internetdiensten aanbood in Caribisch Nederland. De RDI stelde vast dat dat ongeoorloofd was. Op 14 juni 2024 sommeerde de RDI SpaceX de diensten uiterlijk 21 juni 2024 te staken. SpaceX gaf daaraan geen gehoor. Op 5 augustus 2024 volgde een tweede sommatie om per 7 augustus te staken. Daaraan gaf SpaceX wel gehoor. Het toezichtstraject is daarmee afgesloten.

Op 26 juni 2024 diende SpaceX Netherlands B.V. een concessieaanvraag in. Het Besluit radio-elektrische inrichtingen BES eist een inschrijving in het handelsregister van de Kamer van Koophandel en Fabrieken BES, dus een lokale entiteit. Op 11 juli 2024 is SpaceX daarop gewezen. Op 7 februari 2025 is die aanvraag afgewezen omdat de inschrijving ontbrak. Die afwijzing is geen verlening.

Op 23 juli 2025 vroeg Starlink Caribbean LLC, handelsnaam Starlink Bonaire, handelsregisternummer 15854, een concessie voor Bonaire, Saba en Sint Eustatius. Die aanvraag voldeed aan de inschrijving. Het nieuwsbericht van de RDI van 1 december 2025 zegt dat de concessie is verleend voor satellietcommunicatiediensten op Bonaire, Sint Eustatius en Saba, voor vijftien jaar. De concessie is voor openbare telecommunicatie-infrastructuur. Artikel 43 van de Wet telecommunicatievoorzieningen BES verplicht de concessiehouder mee te werken aan een last tot aftappen of opnemen.

Fout: SpaceX Netherlands B.V. kreeg in februari 2025 een concessie voor heel Nederland. Fout: de concessie van december 2025 is verleend aan dezelfde vennootschap als de afgewezen aanvraag. Fout: de eerste sommatie van 14 juni 2024 werd meteen nageleefd.

Bronnen: https://www.rdi.nl/actueel/nieuws/2025/12/01/rdi-grants-concession-contract-to-starlink-for-satellite-services-on-bonaire-sint-eustatius-and-saba en https://open.overheid.nl/documenten/65ac8267-005d-4692-bedf-f5cbc5f108d6/file

Exa — Correct

16.7s · $0.090 · 4 searches · 1 fetches

Judge: All core and required facts are correct and no trap is asserted. Four context facts are missing: the late-2023 report by a local provider (3), the supervision track being closed (8), the concession covering public telecom infrastructure (16) and the Article 43 interception duty (17).

Nee. De RDI heeft in 2025 geen concessie aan SpaceX Netherlands B.V. verleend voor heel Nederland. De enige concessie in dit dossier geldt voor Caribisch Nederland en is aan een andere vennootschap verleend.

Juni 2024. Na inspecties sommeerde de RDI SpaceX, als moederbedrijf van Starlink, op 14 juni 2024 om het ongeoorloofde aanbieden van internetdiensten in Caribisch Nederland uiterlijk 21 juni 2024 te staken. SpaceX voldeed daar niet aan; een tweede sommatie van 5 augustus (staken per 7 augustus) wel. De sommatie gold niet voor buitenlandse (cruise)schepen en luchtvaartuigen die tijdelijk in Caribisch Nederland waren, en niet voor door de overheid aangewezen rampenteams.

Aanvraag 26 juni 2024. SpaceX Netherlands B.V. diende die dag een concessieaanvraag in. Die is op 7 februari 2025 afgewezen omdat niet was voldaan aan de eis uit het Besluit radio-elektrische inrichtingen BES: inschrijving in het handelsregister van de Kamer van Koophandel en Fabrieken BES (een lokale entiteit op een van de eilanden). De RDI had dat op 11 juli 2024 gemeld en ruimte gegeven om alsnog in te schrijven.

Latere concessie. Op 27 november 2025 kreeg Starlink Caribbean LLC (handelsnaam Starlink Bonaire), gevestigd op Bonaire en ingeschreven onder nummer 15854, een concessie voor satellietcommunicatiediensten op Bonaire, Sint Eustatius en Saba. De concessie geldt tot 27 november 2040 (vijftien jaar), tenzij zij eerder wordt ingetrokken. De aanvraag dateert van 23 juli 2025.

Parallel — Partly correct

Incomplete list

1.2m · $0.494 · 14 searches · 7 fetches

Judge: The answer gets the 'no' verdict, the registration requirement, and the Starlink Caribbean LLC concession for Bonaire, Saba and Sint Eustatius for fifteen years. It misses the 14 June 2024 order to stop by 21 June 2024 (it says July 2024 instead), the 7 February 2025 rejection date, and the 26 June 2024 application, which it says it could not verify.

Nee. In 2025 heeft de RDI geen concessie aan SpaceX Netherlands B.V. voor heel Nederland verleend. De verleende concessie geldt alleen voor de BES-eilanden.

Wat de inspectie gebood. Volgens de RDI heeft zij Starlink in juli 2024 (niet juni) verzocht te stoppen met satellietdiensten in Caribisch Nederland, omdat er geen geldige concessie was. Uitzonderingen golden voor buitenlandse schepen en vliegtuigen en voor door de overheid aangewezen rampenteams. Bron: RDI, 11 februari 2025 en RDI, 1 december 2025.

Waarom de aanvraag werd afgewezen. Kort daarna diende Starlink een concessieaanvraag in. Die is afgewezen omdat het bedrijf niet voldeed aan de voorwaarde van lokale inschrijving in het handelsregister van de Kamer van Koophandel BES. Een datum 26 juni 2024 heb ik in de officiële berichten niet kunnen verifiëren; die spreken van een verzoek in juli 2024 en een aanvraag “kort daarna”. Bron: RDI, 11 februari 2025.

Welke vennootschap daarna, voor welke eilanden en hoe lang. In juli 2025 diende Starlink opnieuw een aanvraag in. Die voldeed wel, waarna de RDI een concessie verleende voor **Bonaire, Sint Eustatius en Saba**, voor **vijftien jaar**, om internet te leveren aan particulieren en bedrijven. Bron: RDI, 1 december 2025.

De RDI noemt de houder “Starlink”, niet SpaceX Netherlands B.V. Volgens berichtgeving over een Woo-besluit is de concessie op 27 november 2025 verleend aan **Starlink Caribbean LLC** (handelsnaam Starlink Bonaire), na inschrijving in Bonaire. Dat is een secundaire bron, geen RDI-besluittekst: BES Reporter, 24 januari 2026.

K Keenable search — Partly correct — Incomplete list — 3.8m · ~$0.718 · 50 searches · 6 fetches

> **Judge:** The answer correctly says no nationwide concession was granted, and gives the BES registration reason, Starlink Caribbean LLC, the three islands and 15 years. It missed the 14 June 2024 order to stop by 21 June (it only says it couldn't verify a June order), the 7 February 2025 rejection date, and the 26 June 2024 application date; it also omitted the second order and the other context facts.

Nee. Uit de openbare bronnen blijkt niet dat de RDI in 2025 aan SpaceX Netherlands B.V. een concessie voor heel Nederland heeft verleend. De concessie van 2025 geldt alleen voor Caribisch Nederland en is verleend aan Starlink Caribbean LLC, niet aan SpaceX Netherlands B.V.

Wat de inspectie gebood. De RDI heeft Starlink in juli 2024 — het persbericht is van 1 juli 2024 — gelast te stoppen met satellietinternet voor particulieren en bedrijven op Bonaire, Sint Eustatius en Saba, omdat er geen concessie op grond van de Wet telecommunicatievoorzieningen BES was. Het bezit van een schotel was niet verboden; het afnemen van de dienst wel. Uitzonderingen golden voor buitenlandse schepen en vliegtuigen en voor door de overheid aangewezen rampenteams. Een bevel specifiek in juni 2024 heb ik niet kunnen verifiëren.

Afwijzing. De datum 26 juni 2024 staat niet in de officiële berichten. Die zeggen dat Starlink kort na het stopverzoek van juli 2024 een aanvraag indiende en dat de RDI die heeft afgewezen — bekendgemaakt op 11 februari 2025 — omdat het bedrijf niet lokaal stond ingeschreven in het handelsregister van de Kamer van Koophandel BES. De reden is dus de ontbrekende BES-inschrijving; de exacte aanvraagdatum niet.

Latere concessie. Na een nieuwe aanvraag in juli 2025 heeft de RDI aan Starlink Caribbean LLC (handelend als Starlink Bonaire) een concessie verleend voor satellietcommunicatie op Bonaire, Sint Eustatius en Saba, voor vijftien jaar. Volgens berichtgeving op basis van het Woo-dossier is die concessie op 27 november 2025 verleend; de RDI maakte dit op 28 november en 1 december 2025 bekend. Niet voor Europees Nederland, en niet aan SpaceX Netherlands B.V.

Bronnen: RDI, 1 december 2025; RDI, 11 februari 2025; Rijksdienst CN, 1 juli 2024; Woo-besluit RDI, 20 januari 2026; BES Reporter, 24 januari 2026.

K Keenable SELECT — Partly correct — Incomplete list — 4.6m · ~$0.186 · 11 searches · 0 fetches

> **Judge:** The answer says no concession for all of the Netherlands and gives the registration requirement and the 15-year BES concession to Starlink Caribbean LLC. It misses the 14 June 2024 order to stop by 21 June, the 26 June 2024 application, the 7 February 2025 rejection date (it gives 11 February), and the 2024 sommation chronology. It even denies the June 2024 order, which is a missing fact rather than an affirmative contradiction.

Nee. De RDI heeft in 2025 geen concessie aan SpaceX Netherlands B.V. voor heel Nederland verleend. Wat wel is verleend, is een concessie voor satellietdiensten op de BES-eilanden, op naam van Starlink, niet voor Europees Nederland.

Wat de inspectie in 2024 gebood. De RDI zelf dateert het optreden in juli 2024, niet in juni. Zij verzocht Starlink te stoppen met het aanbieden van satellietdiensten op Bonaire, Sint Eustatius en Saba, omdat het bedrijf geen geldige concessie had. Een apart bevel van juni 2024 heb ik in de RDI- en RCN-berichten niet gevonden.

Afwijzing. Kort daarna vroeg Starlink een concessie aan. De RDI wees die aanvraag af (bericht van 11 februari 2025). Reden: niet voldaan aan de voorwaarde dat de aanbieder lokaal staat ingeschreven in het handelsregister van de Kamer van Koophandel BES. De datum 26 juni 2024 staat niet in die berichten; de RDI zegt alleen “kort daarna” na het verzoek van juli 2024.

Latere concessie. Na een nieuwe aanvraag in juli 2025, toen wel aan de eisen was voldaan, verleende de RDI een concessie voor vijftien jaar voor Bonaire, Sint Eustatius en Saba. De officiële RDI-tekst noemt de houder “Starlink”, niet SpaceX Netherlands B.V. Volgens BES-Reporter en Saba News is de lokale vennootschap Starlink Caribbean LLC (handelend als Starlink Bonaire); die bronnen noemen 27 november 2025 als verleningsdatum. Dat is geen RDI-citaat.

Bronnen: RDI, 11 februari 2025, RDI, 1 december 2025, RCN, 11 februari 2025, BES-Reporter.

> **Judge:** All core and required facts are correct and no trap is asserted. Only context facts are missing: the end-2023 local provider report (3), the closed supervision track (8), the public telecom infrastructure nature of the concession (16), and Article 43 on interception (17). Fact 2, about the source documents not granting or rejecting a concession for European Netherlands, is also not stated.

Nee. De RDI heeft in 2025 geen concessie aan SpaceX Netherlands B.V. verleend voor heel Nederland. De concessie ging naar een andere vennootschap en alleen voor de BES-eilanden.

Juni 2024. Na inspecties sommeerde de RDI op 14 juni 2024 SpaceX, als moederbedrijf van Starlink, om het ongeoorloofd aanbieden van internetdiensten in Caribisch Nederland uiterlijk 21 juni 2024 te staken. SpaceX voldeed daar niet aan; een tweede sommatie volgde op 5 augustus 2024 (staken per 7 augustus). Uitzonderingen golden voor buitenlandse (cruise)schepen en luchtvaartuigen die zich tijdelijk in Caribisch Nederland bevonden, en voor door de overheid aangewezen rampenteams.

Aanvraag 26 juni 2024. SpaceX Netherlands B.V. diende die dag een concessieaanvraag in. Die is op 7 februari 2025 afgewezen omdat niet was voldaan aan de eis van inschrijving in het handelsregister van de Kamer van Koophandel en Fabrieken BES (een lokale entiteit op een van de eilanden), een voorwaarde op grond van het Besluit radio-elektrische inrichtingen BES. Op 11 juli 2024 was SpaceX daarop gewezen en in de gelegenheid gesteld de inschrijving alsnog te regelen.

Latere concessie. Op 27 november 2025 kreeg Starlink Caribbean LLC (handelsnaam Starlink Bonaire), gevestigd op Bonaire en ingeschreven onder nummer 15854, een concessie voor satellietcommunicatiediensten op Bonaire, Sint Eustatius en Saba. De concessie geldt vijftien jaar, tot 27 november 2040, tenzij zij eerder wordt ingetrokken. De aanvraag van 23 juli 2025 voldeed wel aan de lokale inschrijvingseis.

Bronnen: RDI, 1 december 2025, RDI, 11 februari 2025, Woo-besluit concessieverlening Starlink.

K Keenable router → Search — Partly correct — Incomplete list — 3.8m · ~$0.718 · 50 searches · 6 fetches

> **Judge:** The answer correctly says no nationwide concession was granted, and gives the BES registration reason, Starlink Caribbean LLC, the three islands and 15 years. It missed the 14 June 2024 order to stop by 21 June (it only says it couldn't verify a June order), the 7 February 2025 rejection date, and the 26 June 2024 application date; it also omitted the second

> order and the other context facts.

Nee. Uit de openbare bronnen blijkt niet dat de RDI in 2025 aan SpaceX Netherlands B.V. een concessie voor heel Nederland heeft verleend. De concessie van 2025 geldt alleen voor Caribisch Nederland en is verleend aan Starlink Caribbean LLC, niet aan SpaceX Netherlands B.V.

Wat de inspectie gebood. De RDI heeft Starlink in juli 2024 — het persbericht is van 1 juli 2024 — gelast te stoppen met satellietinternet voor particulieren en bedrijven op Bonaire, Sint Eustatius en Saba, omdat er geen concessie op grond van de Wet telecommunicatievoorzieningen BES was. Het bezit van een schotel was niet verboden; het afnemen van de dienst wel. Uitzonderingen golden voor buitenlandse schepen en vliegtuigen en voor door de overheid aangewezen rampenteams. Een bevel specifiek in juni 2024 heb ik niet kunnen verifiëren.

Afwijzing. De datum 26 juni 2024 staat niet in de officiële berichten. Die zeggen dat Starlink kort na het stopverzoek van juli 2024 een aanvraag indiende en dat de RDI die heeft afgewezen — bekendgemaakt op 11 februari 2025 — omdat het bedrijf niet lokaal stond ingeschreven in het handelsregister van de Kamer van Koophandel BES. De reden is dus de ontbrekende BES-inschrijving; de exacte aanvraagdatum niet.

Latere concessie. Na een nieuwe aanvraag in juli 2025 heeft de RDI aan Starlink Caribbean LLC (handelend als Starlink Bonaire) een concessie verleend voor satellietcommunicatie op Bonaire, Sint Eustatius en Saba, voor vijftien jaar. Volgens berichtgeving op basis van het Woo-dossier is die concessie op 27 november 2025 verleend; de RDI maakte dit op 28 november en 1 december 2025 bekend. Niet voor Europees Nederland, en niet aan SpaceX Netherlands B.V.

Bronnen: RDI, 1 december 2025; RDI, 11 februari 2025; Rijksdienst CN, 1 juli 2024; Woo-besluit RDI, 20 januari 2026; BES Reporter, 24 januari 2026.

PROMPT 52 · REGULATION · FACTS AS OF 2026-10-08

The December 2022 Gen2 grant required SpaceX to coordinate with earlier NGSO systems and to make a specific report about the ITU's EPFD finding. Does a favorable finding on one Gen2 ITU filing satisfy that report, and may SpaceX keep deploying if satellite failures exceed the threshold in the order?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FCC-22-91, released 1 December 2022, paragraph 2.

SpaceX must report whether the ITU finding on compliance with EPFD limits takes into account all of the relevant ITU filings for the Gen2 system combined. A favorable or qualified-favorable finding on a single filing is not, by itself, that report. The order also conditions the grant on coordination with NGSO FSS systems licensed in certain prior processing rounds. It does not name those systems in the introductory paragraph. Do not invent the list.

The same paragraph requires SpaceX to pause deployment of new satellites if satellite failures exceed the threshold set in the order. It does not allow deployment to continue through that threshold. This introductory paragraph does not state the numeric threshold. Do not invent the percentage or the count. The obligation to pause is the graded holding.

The same paragraph requires SpaceX to report mitigation actions taken to avoid collisions, and to coordinate with NASA on launch windows. It requires coordination with the National Science Foundation and with specific observatories for radio astronomy. Do not invent which observatories if the answer is relying only on this paragraph.

Wrong: any one favorable ITU finding closes the reporting condition. Wrong: SpaceX may keep launching new Gen2 satellites after the failure threshold is crossed.

Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt

E Exa · Partly correct · Incomplete list · 1.5m · $0.617 · 13 searches · 7 fetches

Judge: Fact 8 is contradicted only in the sense that the answer states a numeric threshold (100 object years), which is actually supported by sources, not the intro paragraph. Facts 10-12 (collision mitigation reporting, NASA launch windows, NSF/observatory coordination) were not stated in the answer. Core facts are all correct and no trap was asserted.

No. A favorable ITU finding on a single Gen2 filing does not satisfy the December 2022 report condition, and SpaceX may not keep deploying once failed-satellite "object years" exceed 100.

The Commission's December 1, 2022 partial grant (FCC 22-91, adopted November 29, 2022) authorizes up to 7,500 Gen2 Starlink satellites and conditions that grant on coordination with NGSO FSS systems licensed in earlier processing rounds, and on a report of whether the ITU's EPFD finding accounts for all relevant Gen2 ITU filings together. https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

EPFD report. The order requires SpaceX to report whether the ITU's finding on EPFD compliance "takes into account all of the relevant ITU filings for its Gen2 Starlink system combined." https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf Paragraph 31 also requires the ITU finding itself to "explicitly indicate" that the ITU considered the joint effect of SpaceX's multiple Gen2 ITU filings. https://storage.courtlistener.com/recap/gov.uscourts.cadc.39348/gov.uscourts.cadc.39348.1208544049.0.pdf A favorable or qualified-favorable finding on only one Gen2 ITU filing does not satisfy that reporting condition.

Failure threshold. The same order adopts a 100 "object year" cap: the sum, across failed Gen2 satellites, of the years each failed satellite remains in orbit. If that total is exceeded, SpaceX must pause further deployment "while the sources of satellite failure are reviewed to determine whether there are any adequate and reliable mitigation measures going forward." https://spacenews.com/fcc-grants-partial-approval-for-starlink-second-generation-constellation/ The operative condition, restated from the 2022 grant, is that if failures produce more than 100 post-failure object years, SpaceX may not deploy any additional satellites until the Commission approves a license modification with an updated orbital debris mitigation plan that addresses a lower failure rate or mitigation of failure risk. https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf SpaceX may not continue deployment on its own once that threshold is crossed.

P Parallel · Partly correct · Incomplete list · 59.0s · $0.458 · 11 searches · 1 fetches

Judge: Fact 8 is contradicted: the answer states a numeric threshold of 100 post-failure object years, but the checklist says the introductory paragraph does not state one. Facts 5, 10, 11 and 12 are not stated; the answer does name the prior rounds via public notices, but not the systems. The core facts are all correct and neither trap is asserted.

No. A favorable ITU finding on a single Gen2 filing does not satisfy the December 2022 report condition, and SpaceX may not keep deploying once failures exceed the order's threshold until the FCC approves a license modification.

The grant is the FCC's Order and Authorization, FCC 22-91, adopted November 29, 2022 and released December 1, 2022 (IBFS File Nos. SAT-LOA-20200526-00055 and SAT-AMD-20210818-00105). It authorized up to 7,500 Gen2 Starlink satellites at 525, 530, and 535 km. Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt

Coordination. Before Ku- and Ka-band operations, SpaceX must certify a coordination agreement with, or a Commission showing that it will not cause harmful interference to, operational NGSO FSS systems licensed or granted U.S. market access in the rounds in Public Notices DA 16-804 and DA 17-524. It may start at its own risk, on a non-interference, unprotected basis, before the Commission approves that showing. Condition 135v. Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt

EPFD report. The order conditions the grant on SpaceX reporting whether the ITU's EPFD finding "takes into account all of the relevant ITU filings for its Gen2 Starlink system combined," and requires a favorable or qualified-favorable finding that "explicitly indicate[s] the ITU has considered the joint effect of SpaceX's multiple ITU filings." Paras. 2, 32, and 34; condition 135s. A favorable finding on one filing does not do that. The Commission later described the Gen2 order the same way: the finding must explicitly show that the ITU considered the joint effect of the multiple filings. Source: https://docs.fcc.gov/public/attachments/DA-23-362A1_Rcd.pdf (para. 19). A partial waiver lets SpaceX start the 7,500 satellites before the finding, at its own risk, and it must adjust operations if the finding is unfavorable. Para. 40. Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt

Failure threshold. If satellite failures produce more than 100 post-failure object years, SpaceX "may not deploy any additional satellites until the Commission has approved a license modification that includes an updated orbital debris mitigation plan addressing reduction in the failure rate or mitigation of the risk of satellite failures." Condition 135z; para. 85. It may not keep deploying past that threshold. Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt

K Keenable search ✓ Correct ✓ ✓ ✓ ✓ 5.0m · ~$1.290 · 65 searches · 9 fetches

> **Judge:** All core and required facts are correct and neither trap is asserted. Only the context facts 10-12 (collision mitigation reporting, NASA coordination, NSF and observatory coordination) are missing, and the question did not ask about them.

No. A favorable finding on one Gen2 ITU filing does not satisfy the December 2022 report, and SpaceX may not keep deploying additional satellites once failures exceed the order's threshold.

The FCC's December 1, 2022 partial grant (FCC 22-91, adopted November 29, 2022) authorized up to 7,500 Gen2 Starlink satellites and conditioned that grant on coordination with earlier NGSO systems and on a specific ITU EPFD report. The order requires SpaceX to coordinate with NGSO fixed-satellite systems licensed in certain prior processing rounds, and to report whether the ITU's EPFD-compliance finding "takes into account all of the relevant ITU filings for its Gen2 Starlink system combined." https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf; https://arstechnica.com/tech-policy/2022/12/starlink-speeds-in-us-dropped-from-105mbps-to-53mbps-in-the-past-year/

That report is about the joint effect of the Gen2 filings, not a favorable result on one of them. The Commission required SpaceX to obtain an ITU finding that "explicitly indicates the ITU has considered the joint effect of SpaceX's multiple ITU filings." A favorable or qualified-favorable finding on a single Gen2 filing does not meet that condition. https://storage.courtlistener.com/recap/gov.uscourts.cadc.39353/gov.uscourts.cadc.39353.1218527562.0.pdf; https://docs.fcc.gov/public/attachments/DA-24-376A1_Rcd.pdf

The same order also bars further deployment above the failure threshold. If satellite failures produce more than 100 post-failure object-years, SpaceX may not deploy any additional satellites until the Commission approves a license modification with an updated orbital-debris mitigation plan that reduces the failure rate or mitigates the failure risk. https://forum.nasaspaceflight.com/?topic=46726.500; https://spacenews.com/fcc-grants-partial-approval-for-starlink-second-generation-constellation/

The later E-band grant restates the earlier-round coordination condition: before Ku- and Ka-band operations, SpaceX must certify a coordination agreement with, or a no-harmful-interference showing for, operational systems licensed or granted U.S. market access in the processing rounds in Public Notices DA 16-804 and DA 17-524. Operations before that showing is approved are at SpaceX's own risk and on a non-interference, unprotected basis. https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf

Cited: 1. docs.fcc.gov · 2. arstechnica.com · 3. storage.courtlistener.com · 4. docs.fcc.gov · 5. forum.nasaspaceflight.com · 6. spacenews.com · 7. docs.fcc.gov

K Keenable SELECT ◐ Partly correct ✓ × × ✓ Claim not in sources 6.8m · ~$0.130 · 8 searches · 0 fetches

> **Judge:** Fact 8 is contradicted: the answer gives a numeric threshold (100 post-failure object years) from later DA orders, although the introductory paragraph does not state one. Facts 10-12 (collision mitigation reporting, NASA coordination, NSF/observatory coordination) are not mentioned. Fact 1 is only partly stated (the answer gives release date and file numbers but not the paragraph) and was graded correct. Fact 5 is correct only loosely, since the answer says 'including operators licensed in earlier Ku- and Ka-band rounds', which goes beyond the paragraph.

The December 2022 grant does require both things. A favorable EPFD finding on one Gen2 ITU filing does not satisfy the report. If failures exceed the threshold, SpaceX may not keep deploying.

Coordination. FCC 22-91 (adopted November 29, 2022; released December 1, 2022; IBFS File Nos. SAT-LOA-20200526-00055 and SAT-AMD-20210818-00105) conditions the partial grant of up to 7,500 Gen2 satellites on SpaceX coordinating with NGSO FSS systems licensed in certain earlier processing rounds, including operators licensed in earlier Ku- and Ka-band rounds. https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

EPFD report. The same order requires SpaceX to report whether the ITU's finding on EPFD compliance "takes into account all of the relevant ITU filings for its Gen2 Starlink system combined," and to obtain a finding that "explicitly indicate[s] the ITU has considered the joint effect of SpaceX's multiple ITU filings." A favorable or qualified-favorable finding on a single Gen2 filing does not meet that condition. Later grants restate the same rule: until there is a finding for the authorized Gen2 satellites that evaluates the joint effect of the multiple ITU filings, SpaceX must make the validation-software input data available, including the data that combine the Gen2 satellites into one consolidated file. https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf ; https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf

Failure threshold. The December 2022 order also requires SpaceX to pause deployment if satellite failures exceed a threshold. As carried into the operative conditions (DA 24-222, March 8, 2024, condition 22ccc, and restated in DA 26-36), that threshold is more than 100 post-failure object years. A disposal failure is a satellite that loses the ability to maneuver effectively after being raised from injection; object years are the estimated remaining orbital lifetime of each failed satellite, summed and reported semi-annually. Once that total is exceeded, SpaceX may not deploy any additional satellites until the Commission approves a license modification with an updated orbital debris mitigation plan that addresses reducing the failure rate or mitigating the risk of failures. https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf ; https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf

Cited: 1. docs.fcc.gov · 2. docs.fcc.gov · 3. docs.fcc.gov

G Grok native ◐ Partly correct ✓ × ✓ ✓ Incomplete list 42.8s · $0.358 · 7 searches · 1 fetches

> **Judge:** Core facts are all correct. The answer names DA 16-804 and DA 17-524 and states a numeric threshold of 100 object years, which conflicts with the checklist claims that the intro paragraph names neither prior-round systems nor a threshold. It also omits the mitigation-reporting, NASA and NSF/observatory items. Those are context-tagged and do not affect the core answer, and the cited sources support the 100 object-year threshold.

No. A favorable ITU finding on a single Gen2 filing does not satisfy the December 2022 condition, and SpaceX may not keep deploying once failures exceed the order's threshold.

The grant is FCC 22-91 (adopted November 29, 2022; released December 1, 2022). It authorizes up to 7,500 Gen2 Starlink satellites and conditions that grant on coordination with earlier NGSO FSS systems and on an EPFD report that covers the Gen2 filings together, not one filing alone. Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt

Earlier NGSO systems. Before Ku- and Ka-band operations, SpaceX must certify a coordination agreement with, or a Commission-approved showing that it will not cause harmful interference to, operational systems licensed or granted U.S. market access in the processing rounds in DA 16-804 and DA 17-524. If coordination is unfinished, it may start only at its own risk, on a non-interference, unprotected basis, until the Commission approves that showing. Condition v; paras. 60–63.

EPFD report. The order requires SpaceX to report whether the ITU's EPFD finding "takes into account all of the relevant ITU filings for its Gen2 Starlink system combined," and to obtain a finding that "explicitly indicates the ITU has considered the joint effect of SpaceX's multiple ITU filings." Para. 2; paras. 31–32; condition s. A favorable or qualified-favorable finding on one Gen2 filing does not meet that requirement. SpaceX must communicate the finding to the Commission and, if it is unfavorable, adjust operations to meet the ITU limits. It may start service before the finding only under a partial waiver, at its own risk. Paras. 37, 40; condition s.

Failure threshold. The threshold is more than 100 post-failure object years (the sum of remaining orbital lifetimes of satellites that lose effective maneuverability after being raised from injection). If that total is exceeded, SpaceX may not deploy any additional satellites until the Commission approves a license modification with an updated orbital debris mitigation plan that reduces the failure rate or mitigates the risk. Para. 85; condition z. Semi-annual reports must include the cumulative failed-satellite object years. Condition y.

PROMPT 53 · LIST-BUILDING · FACTS AS OF 2026-10-08

In early March 2026 the FCC acted on several SpaceX Services earth-station files. Were those actions ordinary licenses still in force on 8 October 2026? For the special temporary authorities with an end date, what basis were they granted on, when did the term end, and which two actions that same week were instead continuing-operations grants under section 1.62?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Public notice text in DOC-419216A1. These are not new full-term earth-station licenses. Do not invent a renewal after the printed end date.

Granted on an unprotected and non-interference basis, and only within the parameters requested, with the licensee still bound by the space-station grant for the associated points of communication:

SES-STA-20260109-00645, call sign E230070, filed 9 January 2026, term 3 March 2026 through 1 May 2026, action 3 March 2026.
SES-STA-20260109-00642, E230106, filed 12 January 2026, term 3 March 2026 through 1 May 2026, action 3 March 2026.
SES-STA-20260109-00640, E220075, filed 12 January 2026, term 3 March 2026 through 1 May 2026, action 3 March 2026.
SES-STA-20260109-00625, E230147, filed 12 January 2026, term 27 February 2026 through 27 April 2026, action 26 February 2026.
SES-STA-20260211-00685, E210127, filed 12 February 2026, term 3 March 2026 through 1 April 2026, action 3 March 2026.
SES-STA-20260211-00687, E210309, filed 12 February 2026, term 3 March 2026 through 1 April 2026, action 3 March 2026.

On 8 October 2026 every one of those printed terms is over.

Two different actions the same week are not those dated STAs. SES-STA-20260117-00812, E220009, action 2 March 2026, and SES-STA-20260117-00918, E210309, action 2 March 2026, were granted pursuant to section 1.62 to reflect continuing operations. The public notice does not put an end date on those two. E210309 therefore has both a 1.62 continuing-operations action and a separate STA, file 00687, that ended 1 April 2026. Do not treat those as the same grant.

Wrong: the March 2026 actions were ordinary licenses still running in October. Wrong: the two section 1.62 actions expired on 1 May 2026.

Source: https://docs.fcc.gov/public/attachments/DOC-419216A1.txt

Exa — Correct

1.0m · $0.343 · 12 searches · 1 fetches

Judge: All checklist facts are stated correctly and neither trap is asserted. The answer lists five section 1.62 actions rather than two, but it includes the two required ones (00812 and 00918) and says no end date is stated for them.

No. Those early-March 2026 SpaceX Services earth-station actions were not ordinary licenses, and the ones with a stated end date were not still in force on 8 October 2026.

They appear in FCC Space Bureau Public Notice, Report No. SES-02841 (released 4 March 2026): https://docs.fcc.gov/public/attachments/DOC-419216A1.txt. Every SpaceX Services item in that notice is a special temporary authority (STA), not a license grant.

The STAs that carry an end date were granted on an unprotected and non-interference basis, to operate within the parameters of the referenced file and subject to Commission rules and any associated space-station grant. Their terms all ended well before 8 October 2026:

- 1 April 2026: SES-STA-20260211-00685 (E210127), SES-STA-20260211-00688 (E220009), SES-STA-20260211-00687 (E210309), SES-STA-20260211-00684 (E210310), and SES-STA-20260211-00686 (E190066). Action date 3 March 2026; term 3 March–1 April 2026.
- 27 April 2026: SES-STA-20260109-00625 (E230147), -00614 (E230126), -00619 (E230073), -00634 (E240086), -00630 (E230130), -00627 (E230129), -00618 (E230072), -00632 (E230120), and -00621 (E230119). Action date 26 February 2026; term 27 February–27 April 2026.
- 1 May 2026: SES-STA-20260109-00645 (E230070), -00642 (E230106), -00640 (E220075), -00646 (E230125), -00641 (E230113), -00636 (E230107), and -00635 (E230110). Action date 3 March 2026; term 3 March–1 May 2026.
- 2 May 2026: SES-STA-20251119-00802 (E190676). Action date 3 March 2026; term 4 March–2 May 2026.

That same notice does not show only two continuing-operations grants. It shows five SpaceX Services actions, all dated 2 March 2026, granted under section 1.62 "to reflect continuing operations," with no end date stated: SES-STA-20260117-00922 (E210127), SES-STA-20260117-00812 (E220009), SES-STA-20260117-00918 (E210309), SES-STA-20260117-00931 (E210310), and SES-STA-20260117-00919 (E190066). This notice alone does not say whether those section 1.62 operations were later superseded or were still authorized on 8 October 2026.

Parallel — Partly correct

Used the wrong source

2.7m · $0.554 · 15 searches · 15 fetches

Judge: The answer picked a different batch (SES-02843, 10 March) as the main set and named the wrong STAs and 1.62 actions as its headline answer. Only a secondary paragraph mentions DOC-419216A1, and it lists no individual STA file numbers, call signs or terms (facts 6-11 missing), and it lists five 1.62 grants rather than the two (00812 and 00918), so the two required are only listed among five. It gives no space-station-grant condition (fact 5) and does not note that E210309 has both a 1.62 action and a separate STA (fact 16).

No. Those early-March 2026 SpaceX Services earth-station actions were not ordinary licenses, and they were not still in force on 8 October 2026.

The set that matches the rest of the question is the Space Bureau actions of 10 March 2026, reported in Actions Taken public notice SES-02843 (released 11 March 2026). The two special temporary authorities with an end date were granted under 47 CFR § 25.120 (delegated authority, 47 CFR § 0.261), on an unprotected and non-interference basis. Both ran from 11 March 2026 through 9 May 2026:

- SES-STA-20260306-00718 (E250202), Hillsboro, Oregon gateway.
- SES-STA-20260306-00754 (E240163), Redmond, Washington gateway.

ICFS lists both as closed grants with a term end date of 9 May 2026, so they had expired well before 8 October 2026.

The two actions that same week that were instead continuing-operations grants under section 1.62, both for E240163 and with no term end date, were SES-STA-

20251118-00806 and SES-STA-20260112-00798. The public notice states each was “granted pursuant to section 1.62 of the Commission’s rules to reflect continuing operations.”

Sources: SES-02843 (DOC-419434A1); grant, SES-STA-20260306-00718; grant, SES-STA-20260306-00754; ICFS, SES-STA-20260306-00718; ICFS, SES-STA-20260306-00754; ICFS, SES-STA-20251118-00806; ICFS, SES-STA-20260112-00798.

A separate, larger batch on 2–3 March 2026 (SES-02841, released 4 March 2026) was also STAs, not ordinary licenses. Those dated grants were likewise on an unprotected and non-interference basis and ended on 1 April, 27 April, 1 May, or 2 May 2026. That week had five SpaceX section 1.62 grants, not two: SES-STA-20260117-00922 (E210127), SES-STA-20260117-00812 (E220009), SES-STA-20260117-00918 (E210309), SES-STA-20260117-00931 (E210310), and SES-STA-20260117-00919 (E190066). SES-02841 (DOC-419216A1).

Keenable search — Partly correct — Incomplete list — `10.4m · ~$2.004 · 92 searches · 8 fetches`

> **Judge:** The answer gets the main conclusion right (STAs, not licenses; terms over by October; unprotected/non-interference basis). It misses the six specified STA file numbers and terms, and fails to identify the two section 1.62 actions (E220009 file 00812 and E210309 file 00918), instead saying they could not be verified.

Hit its tool-call or time budget and was forced to answer.

No. The early-March 2026 SpaceX Services earth-station actions were special temporary authorities, not ordinary licenses, and the dated terms ended in April or May 2026—well before 8 October 2026.

The Space Bureau’s actions notice, Report No. SES-02841, released 4 March 2026, lists SpaceX Services STA grants, not licenses. The entries that could be read in full are:

- SES-STA-20260109-00614 (E230126), action date 26 February 2026, term 27 February–27 April 2026, granted on an unprotected and non-interference basis.
- SES-STA-20260109-00618 (E230072) and SES-STA-20260109-00621 (E230119), same action date and the same 27 February–27 April 2026 term.
- At least one other SpaceX Services STA in that notice ran 3 March–1 May 2026 (action date 3 March 2026). The notice’s standard condition for these grants is an unprotected, non-interference basis.

Sources: DOC-419216A1 and the 4 March 2026 Daily Digest.

I could not verify the two section 1.62 continuing-operations file numbers in that same week’s notice. The only section 1.62 grant I could confirm in SES-02841 was Intelsat’s SES-STA-20260114-00991 (E040125), not a SpaceX Services file. Later section 1.62 grants for SpaceX Services files filed in early March—SES-STA-20260306-00705 (E250153) and SES-STA-20260306-00725 (E250155)—were acted on 26 May 2026, not that week (DOC-422011A1).

Keenable SELECT — Partly correct — Incomplete list — `6.6m · ~$0.624 · 22 searches · 0 fetches`

> **Judge:** Fact 5 is missing: the answer never says the licensee stays bound by the space-station grant for the associated points of communication. The answer lists five section 1.62 grants rather than two, but this includes the two required ones (00812 and 00918) with no end date, so it is not contradicted.

No. Those early-March actions were not ordinary licenses still in force on 8 October 2026.

The relevant notice is the FCC Space Bureau’s Satellite Communications Services Information public notice, Report No. SES-02841, released 4 March 2026. Every SpaceX Services, Inc. action on it is a special temporary authority, not a regular earth-station license. The latest stated end date is 2 May 2026, so none of those terms was still running on 8 October 2026. The next week’s notice, Report No. SES-02842 (11 March 2026), only accepted SpaceX modification applications for filing; it did not grant licenses.

On SES-02841, the STAs that carry an end date were granted on an unprotected, non-interference basis, to operate within the parameters of the referenced file. Dates of action were 26 February and 3 March 2026. Terms:

- 27 February–27 April 2026: SES-STA-20260109-00614 (E230126), -00618 (E230072), -00619 (E230073), -00621 (E230119), -00625 (E230147), -00627 (E230129), -00630 (E230130), -00632 (E230120), and -00634 (E240086).
- 3 March–1 April 2026: SES-STA-20260211-00684 (E210310), -00685 (E210127), -00686 (E190066), -00687 (E210309), and -00688 (E220009).
- 3 March–1 May 2026: SES-STA-20260109-00635 (E230110), -00636 (E230107), -00640 (E220075), -00641 (E230113), -00642 (E230106), -00645 (E230070), and -00646 (E230125).
- 4 March–2 May 2026: SES-STA-20251119-00802 (E190676).

The same notice also granted five SpaceX Services applications on 2 March 2026 “pursuant to section 1.62 of the Commission’s rules to reflect continuing operations,” with no from/to dates printed: SES-STA-20260117-00812 (E220009), -00918 (E210309), -00919 (E190066), -00922 (E210127), and -00931 (E210310). The notice does not identify only two such SpaceX actions. Intelsat and AT&T also received section 1.62 grants on that notice, but those are not SpaceX Services files.

Grok native — Correct — `2.5m · $0.647 · 13 searches · 10 fetches`

> **Judge:** All checklist facts are stated correctly and neither trap is asserted. The answer lists five section 1.62 actions rather than two, but that includes the two required ones and the DATA window shows a third (00922), so it is not graded as a contradiction.

No. The early-March 2026 SpaceX Services earth-station actions were not ordinary licenses, and the dated grants were not still in force on 8 October 2026.

They appear on the Space Bureau actions-taken notice, Report No. SES-02841, released 4 March 2026. Every SpaceX Services entry there is a special temporary authority, not a regular earth-station license. Source: https://docs.fcc.gov/public/attachments/DOC-419216A1.txt

Dated STAs. Those with an end date were granted on an unprotected and non-interference basis, limited to the parameters in the file and to any limits in the associated space-station grant. Terms ended well before 8 October 2026:

- 1 April 2026: SES-STA-20260211-00685 (E210127), -00688 (E220009), -00687 (E210309), -00684 (E210310), and -00686 (E190066), each 3 March–1 April 2026 (action 3 March 2026).
- 27 April 2026: the 27 February–27 April 2026 grants, including E230147, E230126, E230073, E240086, E230130, E230129, E230072, E230120, and E230119 (action date 26 February 2026, reported on the 4 March notice).
- 1 May 2026: the 3 March–1 May 2026 grants, including E230070, E230106, E220075, E230125, E230113, E230107, and E230110 (action 3 March 2026).
- 2 May 2026: SES-STA-20251119-00802 (E190676), 4 March–2 May 2026 (action 3 March 2026).

Section 1.62. The same notice does not show only two continuing-operations grants. Five SpaceX Services actions that week, all dated 2 March 2026, were instead granted under section 1.62 “to reflect continuing operations,” with no end date stated: SES-STA-20260117-00922 (E210127), SES-STA-20260117-00812 (E220009), SES-STA-20260117-00918 (E210309), SES-STA-20260117-00931 (E210310), and SES-STA-20260117-00919 (E190066). The same notice also has a non-SpaceX section 1.62 grant that day, SES-STA-20251124-01045 (AT&T, E240182).

Those section 1.62 entries are not ordinary licenses. Whether any of them was still in effect on 8 October 2026 depends on later action on the underlying application, which this notice does not show.

Keenable router → SELECT Partly correct Incomplete list 6.6m · ~$0.624 · 22 searches · 0 fetches

> **Judge:** Fact 5 is missing: the answer never says the licensee stays bound by the space-station grant for the associated points of communication. The answer lists five section 1.62 grants rather than two, but this includes the two required ones (00812 and 00918) with no end date, so it is not contradicted.

No. Those early-March actions were not ordinary licenses still in force on 8 October 2026.

The relevant notice is the FCC Space Bureau’s Satellite Communications Services Information public notice, Report No. SES-02841, released 4 March 2026. Every SpaceX Services, Inc. action on it is a special temporary authority, not a regular earth-station license. The latest stated end date is 2 May 2026, so none of those terms was still running on 8 October 2026. The next week’s notice, Report No. SES-02842 (11 March 2026), only accepted SpaceX modification applications for filing; it did not grant licenses.

On SES-02841, the STAs that carry an end date were granted on an unprotected, non-interference basis, to operate within the parameters of the referenced file. Dates of action were 26 February and 3 March 2026. Terms:

- 27 February–27 April 2026: SES-STA-20260109-00614 (E230126), -00618 (E230072), -00619 (E230073), -00621 (E230119), -00625 (E230147), -00627 (E230129), -00630 (E230130), -00632 (E230120), and -00634 (E240086).
- 3 March–1 April 2026: SES-STA-20260211-00684 (E210310), -00685 (E210127), -00686 (E190066), -00687 (E210309), and -00688 (E220009).
- 3 March–1 May 2026: SES-STA-20260109-00635 (E230110), -00636 (E230107), -00640 (E220075), -00641 (E230113), -00642 (E230106), -00645 (E230070), and -00646 (E230125).
- 4 March–2 May 2026: SES-STA-20251119-00802 (E190676).

The same notice also granted five SpaceX Services applications on 2 March 2026 “pursuant to section 1.62 of the Commission’s rules to reflect continuing operations,” with no from/to dates printed: SES-STA-20260117-00812 (E220009), -00918 (E210309), -00919 (E190066), -00922 (E210127), and -00931 (E210310). The notice does not identify only two such SpaceX actions. Intelsat and AT&T also received section 1.62 grants on that notice, but those are not SpaceX Services files.

PROMPT 55 · REGULATION · FACTS AS OF 2026-10-08

New Zealand decided in 2026 how 27.5-28.35 GHz would be shared between mobile and fixed-satellite gateways. Do satellite gateways get that band inside cities on the same footing as mobile? When could an existing interim gateway apply for a long-term licence, and when did applications for a new gateway open?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Radio Spectrum Management, Future use of the 24-30 GHz spectrum, and the RSM news item of 7 April 2026. This is the allocation and licensing rule. It is not a grant of a Starlink licence, and it does not name Starlink. Do not invent a Starlink call sign or a New Zealand expiry for a Starlink station.

In 27.5-28.35 GHz the Government adopted geographic sharing: mobile inside urban areas, fixed-satellite service outside urban areas. There is a limited, time-bound application window for new satellite gateways that already had plans in urban areas. After that period, MBIE accepts satellite licence requests only outside urban areas. A gateway does not get the urban band on the same footing as mobile.

Long-term applications for existing earth stations in 27.5-30 GHz, as defined in the licensing rules, were accepted until 22 May 2026. During that period other licensing in the band was paused so existing licences could be processed ahead of expiry. The 7 April 2026 news says applications for fixed-satellite gateways already operating under interim licences opened on 2 April 2026.

Applications for new gateways, feeder links, and user terminals or VSAT earth stations could be submitted from 09:00 on 8 June 2026. The news says licensing for new fixed-satellite gateways was expected to open on 8 June 2026. 2 April 2026 is not the opening date for a new gateway.

Wrong: satellite gateways and mobile share 27.5-28.35 GHz inside cities without a geographic split. Wrong: a new gateway application could be filed on 2 April 2026.

Sources: https://www.rsm.govt.nz/projects-and-auctions/current-projects/future-use-of-the-24-30-ghz-spectrum and https://www.rsm.govt.nz/about/news-and-updates/24-30-ghz-public-consultation-outcomes-and-radio-licensing-open-for-some-services

Exa — Correct

20.2s · $0.052 · 2 searches · 2 fetches

Judge: All core and required facts are correct. The answer omits that other licensing in the band was paused while existing licences were processed (fact 6). It also never says this is a rule, not a Starlink licence grant (fact 11).

No. In lower 28 GHz (27.5–28.35 GHz), New Zealand chose geographic sharing, not equal access inside cities: mobile and fixed wireless access are for urban areas; fixed-satellite service (FSS) gateways are generally licensed only outside those urban areas.

That follows “option 1” from the 2025 consultation (mobile inside urban areas, FSS outside), with a narrow hybrid exception. After a one-off window, MBIE accepts new gateway licence requests only outside urban areas. Mobile assignment in this band is delayed until about 2028–2030 and will not be national management rights. Urban areas are defined from Statistics NZ categories (major, large, medium and small urban areas, plus high urban accessibility).

Existing interim gateways. Long-term licence applications for FSS gateways already on interim licences opened on **2 April 2026**. RSM then accepted applications for existing Earth stations in 27.5–30 GHz until **17:00 on 22 May 2026**, so those could be processed before expiry. Stations licensed before 2026 can continue, including extra licences at the same site.

New gateways. Applications for new gateway/feeder-link (and VSAT) Earth stations opened at **09:00 on 8 June 2026**. Those new lower-28 GHz gateways are for locations outside the defined urban areas.

A separate, limited window for a small number of **new urban** gateways with advanced plans already in place before 7 April 2026 ran from **10:00 on 1 July 2026 to 17:00 on 31 August 2026**. That is an exception, not the same footing as mobile.

Parallel — Partly correct

Incomplete list

32.9s · $0.120 · 2 searches · 4 fetches

Judge: Fact 9 is missing: the answer gives 8 June 2026 as the application date but does not say the news only expected that opening. Fact 10 (2 April is not the new-gateway date) is not stated explicitly, and fact 11 (no Starlink licence) is not mentioned.

No. In lower 28 GHz (27.5–28.35 GHz), New Zealand chose geographic sharing: mobile and fixed wireless access inside urban areas, fixed-satellite service (FSS) gateways outside them. Gateways do not get that band in cities on the same footing as mobile.

Radio Spectrum Management’s April 2026 decision follows “option 1”: mobile inside urban areas, FSS outside urban areas. Mobile and fixed wireless access may be licensed only in urban areas (assignment expected in 2028–2030) and not outside them. New FSS gateways are licensed outside those urban areas. Existing urban gateways may continue and expand. New urban gateways are not generally allowed; there is only a limited, one-off window for sites with advanced or pre-existing plans. After that window, MBIE accepts satellite licence requests only outside urban areas. Sources: RSM 24–30 GHz project page and summary of decisions (PDF).

Existing interim gateways. Long-term licence applications for FSS gateways already operating under interim licences opened on **2 April 2026**. RSM accepted applications for those existing Earth stations in 27.5–30 GHz **until 22 May 2026**, ahead of interim expiry, and paused other licensing in the band during that period. Sources: 7 April 2026 RSM notice and the project page.

New gateways. Applications for new gateways and feeder-link Earth stations (and user terminals/VSATs) could be submitted from **09:00 on 8 June 2026**. The separate urban exception window ran from 10:00 on 1 July 2026 to 17:00 on 31 August 2026 (NZT), only where a credible urban plan existed before 7 April 2026. Sources: project page and 1 July 2026 urban-window notice.

> **Judge:** Fact 9 (news said new gateway licensing was 'expected' to open 8 June) is not stated as such; the answer gives the 8 June opening as fact. Fact 11 (not a Starlink licence) is not mentioned. Both are minor, and the core and required facts are correct.

No. In lower 28 GHz (27.5–28.35 GHz), New Zealand chose geographic sharing: mobile and fixed wireless access inside urban areas, fixed-satellite service (FSS) gateways and feeder links outside urban areas. Gateways are not licensed in cities on the same footing as mobile.

Sharing rule. After the late-2025 consultation, the Government adopted "option 1": mobile inside urban areas, FSS outside urban areas. Mobile/FWA in this range will be licensed only in urban areas (assignment expected 2028–2030). FSS gateway/feeder-link earth stations are for specific sites outside urban areas. After a one-off urban exception, MBIE will accept satellite licence requests only outside urban areas. Upper 28 GHz (28.35–29.5 GHz) is different: primarily satellite, including gateways anywhere in New Zealand.

Existing interim gateways. Long-term applications for FSS gateways already on interim licences opened on **2 April 2026**. RSM accepted those existing earth-station applications in 27.5–30 GHz until **17:00 on 22 May 2026**, and paused other licensing in the band so those could be processed before expiry.

New gateways. Applications for new gateway/feeder-link (and VSAT) stations opened at **09:00 on 8 June 2026** (NZT), generally outside urban areas. A separate, limited urban window—for sites with a credible plan before 7 April 2026—ran from **10:00 on 1 July 2026 to 17:00 on 31 August 2026**. That is an exception, not equal access with mobile.

Sources: RSM 24–30 GHz project page, 2 April 2026 licensing notice, urban window notice, PIB 38 supplementary rules (PDF).

Cited: 1. rsm.govt.nz · 2. rsm.govt.nz · 3. rsm.govt.nz · 4. rsm.govt.nz

> **Judge:** The answer says existing-gateway applications opened on 7 April 2026, but the checklist says 2 April 2026 (fact 7), and the DATA states no open date. It also omits the pause on other licensing during the window (fact 6) and never says this is not a Starlink licence (fact 11).

No. Satellite gateways do not get 27.5–28.35 GHz inside cities on the same footing as mobile.

In April 2026 the Government chose geographic sharing: mobile and fixed wireless access inside urban areas, fixed-satellite service (FSS) gateways and feeder-link Earth stations outside urban areas. After a one-off urban window, MBIE will only accept satellite licence requests outside urban areas. Existing urban gateways may continue and expand on site. New urban gateways are not generally allowed; only a limited, one-off window was opened for applicants who already had a credible plan before 7 April 2026. Mobile assignment in this band is delayed until about 2028–2030 and is urban-only. Sources: RSM 24–30 GHz page, summary of decisions (PDF).

Existing interim gateways. Long-term licence applications for existing Earth stations in 27.5–30 GHz could be lodged from publication of the licensing rules (7 April 2026) until **17:00 NZT on 22 May 2026**. After that they were no longer treated as "existing Earth stations." The project page says "until 22 May 2026"; the time is in the PIB 38 supplementary rules. Sources: RSM page, PIB 38 supplementary document (PDF).

New gateways. Applications for new gateways, feeder links, and user terminals/VSATs opened at **09:00 NZT on 8 June 2026**, and only outside urban areas under the general rule. The separate urban exception window opened at **10:00 am NZT on 1 July 2026** and closed at **5:00 pm NZT on 31 August 2026** on the RSM project page. The PIB 38 PDF says the urban window closed at **17:00 on 31 August 2026**, so the close time is not identical across the two official documents; the project page is the later public notice of the open window. Sources: RSM page, PIB 38 supplementary document (PDF).

Cited: 1. rsm.govt.nz · 2. rsm.govt.nz · 3. rsm.govt.nz

Grok native · Partly correct · Incomplete list · 32.7s · $0.274 · 2 searches · 2 fetches

> **Judge:** Fact 9 is missing: the answer never says the 7 April news only expected new-gateway licensing to open on 8 June, though it gives the 8 June opening itself. Fact 11 is also missing, since the answer does not say this is a rule and not a Starlink licence grant.

No. In the lower 28 GHz band (27.5–28.35 GHz), New Zealand adopted a geographic split, not equal urban access: mobile and fixed wireless access inside urban areas, and fixed-satellite service (FSS) gateways outside them. Urban gateways are only a narrow, one-off exception, not the same footing as mobile.

Radio Spectrum Management (RSM) confirmed that sharing follows "option 1 – Geography based by area type: Mobile inside urban areas, FSS outside urban areas." After a limited urban window, MBIE accepts satellite licence requests only outside urban areas. Mobile assignment in this band is delayed until use cases mature, expected in 2028–2030, and will be non-national (radio or spectrum licensing, not management rights).

The exception is a time-limited window for a very limited number of new gateway or feeder-link earth stations in urban areas that already had advanced plans. It ran from 10:00 am on 1 July 2026 to 5:00 pm on 31 August 2026 (NZT). Applicants had to show a credible urban plan before 7 April 2026, a calculated coordination zone, and mitigations for future mobile and fixed wireless access. It does not cover user terminals, VSATs, or ESIMs.

Existing interim gateways could apply for long-term licences from 2 April 2026. RSM's project page says applications for existing earth stations in 27.5–30 GHz were accepted until 22 May 2026, with other licensing in the band paused so those could be processed before expiry.

Applications for new gateways and feeder links (and user terminals/VSATs) opened at 09:00 on 8 June 2026. That is the ordinary new-gateway opening, outside urban areas. The separate urban exception window opened later, on 1 July 2026.

PROMPT 56 · REGULATION · FACTS AS OF 2026-10-08

Section 25.146 required a favorable or qualified-favorable ITU finding on EPFD limits before an NGSO system could start operating. Did the 1 December 2022 Gen2 partial grant make SpaceX wait for that finding, and did the waiver erase the conditions in the same order?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FCC-22-91, ordering clause 141, as printed in the FCC Record. The request for a waiver of the requirement to receive a favorable or qualified-favorable finding, in accordance with Resolution 85 (WRC-03), on compliance with the equivalent power-flux-density limits in Article 22 of the ITU Radio Regulations, before commencing operations, is GRANTED, subject to the conditions set forth above.

The ordering clause as reprinted cites that requirement under 47 CFR 25.146(a). Footnote 48 of the discussion identifies the rule SpaceX asked to waive as 47 CFR 25.146(c). That citation difference is not a second waiver. Do not grade ordering clause 140. The extract of that clause, on the Ka-band PFD waiver of section 25.146(a)(1), is incomplete.

The waiver does not delete Article 22, and it does not erase the conditions earlier in the order. Those conditions include the requirement to report whether the ITU EPFD finding takes into account all relevant Gen2 ITU filings combined. A waiver of the prior-finding gate is not a finding that the limits were met.

Wrong: SpaceX had to wait for the ITU finding before it could commence the operations authorized on 1 December 2022. Wrong: the waiver removed the combined-filings report.

Sources: https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf and the FCC Record reprint at https://digital.library.unt.edu/ark:/67531/metadc2303643/m1/1030/

E Exa · Partly correct · Incomplete list · 1.5m · $0.458 · 12 searches · 8 fetches

Judge: The answer never says the waiver leaves Article 22 intact, and never states that waiving the prior-finding gate is not a finding that the limits were met. Ordering clause 140 is not graded, and the answer's treatment of the cited-rule discrepancy as a citation detail rather than a second waiver is acceptable.

No. The 1 December 2022 Gen2 partial grant did not make SpaceX wait for the ITU finding, and the waiver did not erase the related conditions in that same order.

Section 25.146(c) requires an NGSO FSS operator in the 10.7–30 GHz range to obtain a favorable or "qualified favorable" ITU finding on compliance with Article 22 EPFD limits, under Resolution 85, before beginning service, and then to give that finding to the Commission. FCC 22-91, ¶ 26; 47 C.F.R. § 25.146(c).

In *Space Exploration Holdings, LLC*, Order and Authorization, FCC 22-91 (adopted 29 November 2022, released 1 December 2022), 37 FCC Rcd 14882, the Commission granted only a partial waiver of that timing rule. Paragraph 40 says SpaceX must still obtain a favorable or qualified-favorable ITU finding and communicate it to the Commission, but may start operations with the 7,500 satellites authorized in that order before the finding. Operations before the finding are at SpaceX's own risk. If the finding is unfavorable, SpaceX must adjust operations to meet the EPFD limits. FCC Record, 37 FCC Rcd at 14909–10, ¶ 40; ordering clause 141. A later Space Bureau order describes the same grant the same way. DA 24-376, ¶¶ 4, 13.

The waiver was expressly "subject to the conditions set forth above." Those conditions were not removed. The same order still required SpaceX to:

- receive a favorable or qualified-favorable finding and, if the finding is unfavorable, adjust operations (condition 135s);
- obtain a finding that explicitly shows the ITU considered the joint effect of SpaceX's multiple ITU filings (¶¶ 31–32);
- give requesting parties the combined EPFD input and output files used for that analysis (¶ 32; condition 135t).

One citation detail: the narrative correctly identifies the prior-to-service rule as § 25.146(c), while the FCC Record text of condition 135s and ordering clause 141 cites § 25.146(a). The operative holding in paragraph 40 is still a partial waiver of § 25.146(c)'s pre-operation timing requirement, not a deletion of the finding obligation.

Cited: 1. fcc.gov · 2. digital.library.unt.edu · 3. docs.fcc.gov · 4. fcc.gov · 5. spacenews.com · 6. docs.fcc.gov · 7. storage.courtlistener.com · 8. storage.courtlistener.com · 9. andyxlastro.me · 10. fccid.io · 11. fcc.report · 12. docs.fcc.gov · 13. docs.fcc.gov · 14. docs.fcc.gov · 15. docs.fcc.gov · 16. docs.fcc.gov · 17. docs.fcc.gov · 18. docs.fcc.gov · 19. docs.fcc.gov · 20. cdn.arstechnica.net · 21. fcc.report · 22. darksky.org · 23. fcc.report

P Parallel · Partly correct · Incomplete list · 29.5s · $0.192 · 3 searches · 1 fetches

Judge: The answer correctly says the waiver applied and the conditions stayed, including the combined-filings requirement. It never says the waiver is granted subject to the order's conditions, that Article 22 is not deleted, or that the 25.146(a) vs (c) citation difference is not a second waiver.

No. The 1 December 2022 Gen2 partial grant did not make SpaceX wait for the ITU finding, and the waiver did not erase the related conditions in that same order.

The timing rule is 47 C.F.R. § 25.146(c): an NGSO FSS operator in the 10.7–30 GHz range must obtain a favorable or qualified-favorable ITU finding on applicable EPFD limits before initiating service, then communicate that finding to the Commission. In *Space Exploration Holdings, LLC*, Order and Authorization, FCC 22-91 (adopted 29 November 2022, released 1 December 2022), the Commission granted a partial waiver of that pre-service requirement so SpaceX could start operations of the 7,500 satellites authorized that day before the finding arrived. Deployment under the waiver was at SpaceX's own risk. See paras. 26, 37, 40, and ordering clause 141: https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

The same order kept the substance of the obligation. Condition 135.s still requires SpaceX to receive a favorable or "qualified favorable" finding under Resolution 85 (WRC-03), communicate it to the Commission, and adjust operations if the finding is unfavorable. The order also requires that the finding explicitly reflect the joint effect of SpaceX's multiple ITU filings, and condition 135.t requires SpaceX to give any requesting party the ITU validation-software input data, including the consolidated Gen2 file. Those conditions were imposed in part because of the waiver, not removed by it.

K Keenable search · Correct · 1.4m · ~$0.248 · 18 searches · 4 fetches

Judge: Answer correctly says no wait was required, conditions survived, and the combined-filings requirement remained. It does not mention the 25.146(a) vs (c) citation difference in

> the ordering clause, so facts 7 and 8 are missing; fact 9 is not graded and is marked missing.

No. The 1 December 2022 Gen2 partial grant did not make SpaceX wait for the ITU finding, and the waiver did not erase the related conditions.

Section 25.146(c) requires an NGSO operator in the 10.7–30 GHz range to obtain a favorable or "qualified favorable" ITU finding on applicable EPFD limits before starting service. In *Space Exploration Holdings, LLC*, Order and Authorization, FCC 22-91 (adopted 29 Nov. 2022, released 1 Dec. 2022), 37 FCC Rcd 14882 (*SpaceX Gen2 First Partial Grant*), the Commission granted only a **partial waiver** of that timing rule so SpaceX could begin operations before the finding. https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

The same order kept the substance of the obligation and added conditions. As the FCC later described that grant:

- SpaceX still had to obtain an ITU finding that accounted for the joint effect of its multiple ITU filings (para. 31).
- The waiver only let it start before that finding (paras. 40, 135s, 141).
- Operations before the finding were at SpaceX's own risk; if the finding was unfavorable, SpaceX had to adjust operations to meet the EPFD limits; and operations were on a non-interference basis until the Commission was notified of the joint-effect finding (paras. 32, 135s).

https://docs.fcc.gov/public/attachments/DA-24-376A1_Rcd.pdf

SpaceX's D.C. Circuit brief quotes paragraph 40 of the same order: the Commission called it "only a partial waiver," said SpaceX "must still obtain a favorable or qualified-favorable ITU finding," and said that an unfavorable finding would require SpaceX to adjust operations to comply with applicable EPFD limits, with deployment "at SpaceX's own risk." https://storage.courtlistener.com/recap/gov.uscourts.cadc.39353/gov.uscourts.cadc.39353.1218527562.0.pdf

So the waiver removed only the "before service begins" bar. It did not delete the ITU-finding requirement or the conditions imposed in that order. This was not a waiver of the EPFD limits themselves.

Keenable SELECT — Correct — 3.7m · ~$0.060 · 3 searches · 0 fetches

> **Judge:** The answer reaches the right conclusion. It does not mention the 25.146(a) vs 25.146(c) citation difference or that it is not a second waiver (facts 7-8), and fact 9 is not addressed. It never mentions Article 22 or ordering clause 141 by name, and it describes the combined-filings condition without framing it as a report; the judge graded those facts correct on substance.

No. The 1 December 2022 Gen2 partial grant did not make SpaceX wait for the ITU finding, and the waiver did not erase the EPFD conditions in that order.

Section 25.146(c) requires an NGSO operator in the 10.7–30 GHz range to obtain a favorable or qualified-favorable ITU finding on EPFD limits, under Resolution 85, before beginning service, then to communicate that finding to the Commission. In *Space Exploration Holdings, LLC*, Order and Authorization, FCC 22-91 (adopted 29 November 2022, released 1 December 2022), the Commission granted a **partial waiver** of that timing rule. SpaceX could start operations with the 7,500 satellites authorized in that order before the ITU finding. The Commission said it was in the public interest to allow deployment "as soon as possible."

The same order kept the substance of the conditions:

- SpaceX still had to obtain a favorable or qualified-favorable ITU finding and communicate it to the Commission.
- That finding had to show the ITU considered the joint effect of SpaceX's multiple ITU filings for the Gen2 system.
- Deployment under the waiver was at SpaceX's own risk. An unfavorable finding required SpaceX to adjust operations to comply with the EPFD limits.
- SpaceX still had to make EPFD input and output data files, including the combined file, available to requesting parties.
- GSO operators could report harmful interference to the Commission.

The D.C. Circuit later described this as an interim waiver that did not relieve SpaceX of the obligation to obtain the finding. *International Dark-Sky Association, Inc. v. FCC*, No. 22-1337 (D.C. Cir. 12 July 2024).

Sources: IDA notice of appeal attaching FCC 22-91; D.C. Circuit opinion.

Cited: 1. darksky.org · 2. law.justia.com

Grok native — Correct — 28.1s · $0.207 · 3 searches · 1 fetches

> **Judge:** The answer commits to the waiver in clause 141 and its 'subject to the conditions' wording, and says the earlier conditions survive. Facts 3, 5, 6 and 8 are only implied rather than stated outright, and the combined-filings point is framed as a requirement rather than a reporting condition. Fact 9 is not graded.

No. The 1 December 2022 partial grant did not make SpaceX wait for that ITU finding, and the waiver did not erase the related conditions.

FCC Order FCC 22-91 (adopted 29 November 2022, released 1 December 2022) partially granted SpaceX authority for up to 7,500 Gen2 Starlink satellites. Under 47 CFR § 25.146(c), an NGSO FSS operator in the 10.7–30 GHz range must obtain a favorable or "qualified favorable" ITU finding on compliance with applicable EPFD limits, under Resolution 85, before starting service, then report that finding to the Commission. The order granted a partial waiver of that pre-service timing requirement so SpaceX could begin operations with those 7,500 satellites before the ITU finding. Operations under the waiver were at SpaceX's own risk: an unfavorable finding required SpaceX to change operations to meet the EPFD limits. See paras. 37 and 40, and ordering clause 141: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt

The waiver is expressly "subject to the conditions set forth above." It did not remove them. Condition 135(s) still requires SpaceX to receive a favorable or "qualified favorable" Resolution 85 finding, communicate it to the Commission, and, if the finding is unfavorable, adjust operations to satisfy the ITU requirements. The same order also requires SpaceX to give requesting parties the EPFD input data, including the consolidated Gen2 file (condition 135(t)), and the decision text requires an ITU finding that explicitly accounts for the joint effect of SpaceX's multiple ITU filings (paras. 32 and 34). Ordering clause 141 cites § 25.146(a) for the waived pre-operation finding; the discussion identifies the waived rule as § 25.146(c).

PROMPT 57 · REGULATION · FACTS AS OF 2026-10-08

Under the Communications Authority of Kenya's telecommunications market-structure review, may a foreign satellite operator keep delivering cross-border connectivity to Kenyan networks with no landing-rights authorization? From when does the transitional note say applications for the new categories are made, and does that note grant Starlink one?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Communications Authority of Kenya, Transitional Provisions, Telecommunication Market Structure Review, 2025, and the Authority's market-structure page.

Foreign firms that currently provide, or intend to provide, satellite or terrestrial cross-border connectivity to in-country infrastructure providers will be required to apply for a Landing Rights Authorization. An operator already providing that connectivity is in the class that must apply. The note does not grandfather current satellite service in place of the authorization.

The transitional table places applications for the new licence categories, including LRA, after 1 November 2025, and upon development of the licences for those categories. That date is the start of the application window described in the table. It is not, in this document, an order that service stop on that day.

Landing Rights Authorization is its own category. The market-structure page, describing the structure established in April 2026, lists it under international infrastructure and service licences, separate from an international gateway licence. The transitional note does not grant Starlink a landing-rights authorization, and it does not refuse one. Do not invent a Starlink Kenya licence number or a suspension.

Wrong: a foreign satellite firm already serving Kenyan networks was excused from landing rights. Wrong: the 2025 note is Starlink's Kenyan licence.

Sources: https://ca.go.ke/sites/default/files/2025-09/Transitional%20Provisions%20-%20Telecommunication%20Market%20Structure%20Review%20-%202025%20.pdf and https://www.ca.go.ke/market-structure

Exa — Correct

31.5s · $0.163 · 8 searches · 3 fetches

Judge: Only two context facts are missing. Fact 6 (the 1 November 2025 date is not a stop-service order) is not stated, and fact 9 (the market-structure page lists LRA as separate from IGSS) is not described. The answer credits the 1 November 2025 date to the earlier 2025 note and says the current note has no calendar date, which the DATA supports.

No. Under the Communications Authority of Kenya's current transitional provisions for the revised telecommunications market structure, a foreign satellite operator may not keep delivering cross-border connectivity to Kenyan networks without a Landing Rights Authorization (LRA).

The note linked from the Authority's market-structure page says foreign firms that currently provide, or intend to provide, satellite or terrestrial cross-border connectivity to in-country infrastructure providers will be required to apply for an LRA. Satellite providers already working with an International Gateway Systems and Services (IGSS) licensee must apply for an LRA immediately; IGSS holders must notify those partners and show the Authority the correspondence. Source: Transitional Provisions (Jan 2026, posted July 2026), also linked from CA market structure.

That same note says applications for the new categories (MNSP and LRA) are made upon gazettement after adoption of the revised telecoms market structure, and only once licences for those categories have been developed. It does not give a calendar date. An earlier September 2025 transitional note instead said applications after 1 November 2025; that date is not in the current note. Source: 2025 transitional provisions.

The note does not grant Starlink an LRA. Starlink is not named. The only automatic issue described is for existing Submarine Cable Landing Rights holders, who are to be issued an LRA and an IGSS licence and must surrender the original SCLR. That is not a Starlink grant.

Parallel — Correct

51.6s · $0.395 · 6 searches · 4 fetches

Judge: The core and required facts are covered. Two context facts are missing: the 1 November 2025 date is not stated to be a stop-service order, and the answer does not say the market-structure page lists LRA under international infrastructure and service licences, separate from the IGSS licence.

No. The Communications Authority of Kenya's current transitional provisions do not let a foreign satellite operator keep delivering satellite cross-border connectivity to in-country infrastructure providers without a Landing Rights Authorization (LRA). Those firms "will be required to apply for Landing Rights Authorization." Satellite providers already working with an International Gateway Systems and Services (IGSS) licensee "will be required to apply for LRA immediately," and the IGSS holder must notify them and give the Authority proof of that notice.

Applications for the new categories (Micro Network and Service Provider and LRA) are to be made after adoption of the revised telecommunications market structure. The timeline is "Upon Gazettement of Revised Market Structure," and only "upon development of Licences for the new categories." That note does not set a calendar date and does not grant Starlink, or any named operator, an LRA.

An earlier September 2025 transitional note had said applications after 1 November 2025. The version now linked from the Authority's market-structure page replaces that date with adoption and gazettement. Neither note names Starlink. A separate June 2026 licensee register lists Space Exploration Technologies Corp under satellite landing rights; that is not a grant in the transitional note.

Keenable search — Partly correct

Claim not in sources

19.1s · ~$0.070 · 6 searches · 1 fetches

Judge: The answer never gives the 1 November 2025 date and instead says applications open 'upon gazettement of the Revised Market Structure', which the shown sources do not support. It also omits that the date is not a stop-service order and does not mention the market-structure page's separate listing of LRA from the international gateway licence.

No. Under the Communications Authority of Kenya's revised telecommunications market structure, a foreign satellite operator may not keep delivering cross-border connectivity to Kenyan networks without landing-rights authorization.

The transitional provisions say applications for the new categories, including Landing Rights Authorization (LRA), are made upon gazettement of the Revised

Market Structure, and only after licences for those categories have been developed. The same note does not grant Starlink an LRA. It requires foreign firms that currently provide, or intend to provide, satellite or terrestrial cross-border connectivity to in-country infrastructure providers to apply for an LRA. Satellite providers already working with IGSS licensees must apply immediately, and current IGSS holders must notify those partners. Existing SCLR holders may be issued an LRA (and an IGSS licence) when they surrender the SCLR; that automatic issuance is not extended to Starlink or other foreign satellite operators.

K Keenable SELECT — Partly correct — Incomplete list — 2.7m · ~$0.096 · 5 searches · 1 fetches

> **Judge:** The answer never gives the 1 November 2025 date for when applications open, so facts 4, 5 and 6 are missing. It says applications follow gazettement and development of the licences instead. It also omits the market-structure page's separation of LRA from the international gateway licence (fact 9).

No. Under the Communications Authority of Kenya's transitional provisions for the telecommunications market-structure review, a foreign satellite operator may not keep delivering cross-border connectivity to Kenyan networks without landing-rights authorization.

The note says foreign firms that currently provide, or intend to provide, satellite or terrestrial cross-border connectivity to in-country infrastructure providers "will be required to apply for Landing Rights Authorization." That sits under "Introduction of new Licence categories" (MNSP, LRA). Applications for those new categories are made after adoption of the revised market structure, with the timeline "Upon Gazettement of Revised Market Structure," and only "Upon development of Licences for the new categories."

The same note does not grant Starlink anything. Starlink is not named. The only automatic issue of an LRA is for existing holders of Satellite Cable Landing Rights (SCLR) licences, who are to be issued an LRA and an IGSS licence and must surrender the SCLR. Satellite providers currently working with IGSS licensees must apply for an LRA immediately; current IGSS holders must notify those international partners.

PROMPT 58 · LIST-BUILDING · FACTS AS OF 2026-10-08

The Nigerian Communications Commission register lists SpaceX against 6,000 satellites and an end date of 31 December 2028. Is that landing permit a licence for 6,000 satellites running as long as Starlink's Nigerian gateway licences, and is the Ka-band uplink a continuous 27.5-30 GHz block?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Nigerian Communications Commission, authorized space-services operators register. Dates on that register are day/month/year. 31/12/2028 is 31 December 2028.

The SpaceX row is a landing permit, notifying administration Norway, for the STEAM-1, STEAM-2 and STEAM-2B constellation, NGSO LEO, fixed-satellite service. The register's own note says the Commission authorized the full constellation of 4,408 satellites and issued a landing permit of seven years for the 3,594 satellites launched at the time of the application. Signals may be beamed over Nigeria until December 2028. The permit is subject to review and extension pending launch of the full 4,408. A column on the same row shows 6,000. Those are three different figures. The landing permit described in the note is for the 3,594 then launched, not for 6,000, and it is not a grant of the full 4,408 without the stated review.

The row is dated 7 January 2021, duration shown as 7 years, end date 31 December 2028. Grade the end date the register prints. Do not replace it with 7 January 2028 by adding seven years yourself.

Frequencies on that row: Earth-to-space 27.5-29.1 GHz and 29.5-30.0 GHz, so not a continuous 27.5-30 GHz uplink. Space-to-Earth 17.8-18.6 GHz and 18.8-19.3 GHz. Earth-to-space 14.0-14.5 GHz. Space-to-Earth 10.7-12.7 GHz.

Separate rows, not this landing permit, licence Starlink Internet Services Nigeria Limited: five Ka-band gateway earth stations, at Tarau, Ibeju Lekki, Ikire, Sakpenwa, and Murfa, Kalam, each 4 July 2022 to 4 July 2032. A Ku-band VSAT authorization, nationwide, 28 June 2022 to 27 June 2032. Those 2032 dates are not the landing permit. A further nationwide Ku-band VSAT row for Africa Mobile Network Communications Ltd, 1 May 2024 to 1 May 2034, names the Starlink constellation and is not Starlink Internet Services Nigeria Limited.

Wrong: the landing permit is 6,000 satellites through 2032. Wrong: the Ka uplink is continuous from 27.5 to 30 GHz.

Source: https://www.ncc.gov.ng/authorized-space-services-operators

E Exa ✓ Correct ✓ ✓ ✓ ✓ 25.0s · $0.105 · 3 searches · 1 fetches

Judge: Core, required facts are all correct. Only context facts 4 (day/month/year format note), 12 (use printed end date, not 7 Jan 2028) and 20 (Africa Mobile Network Communications row) are not stated.

No on both points. The NCC register entry is a landing permit, not a licence for 6,000 satellites, and it does not run as long as Starlink's Nigerian gateway licences. The Ka-band uplink is also not a continuous 27.5–30 GHz block.

On the NCC authorized space-services list, the SpaceX row for STEAM-1, STEAM-2 and STEAM-2B (effective 7 January 2021, seven years, termination 31 December 2028) puts **6,000 in the bandwidth (MHz) column**, not as a satellite count. The remarks say the Commission authorized the constellation for a full set of 4,408 satellites and issued the landing permit for 3,594 satellites launched at the time of application, to beam signals until December 2028, subject to review and extension pending launch of the full 4,408. NCC states that a landing permit only authorizes landing signals over Nigeria and prohibits direct last-mile service.

Starlink Internet Services Nigeria Limited's gateway earth-station (Ka-band) frequency licences for Tarau, Ibeju Lekki, Ikire, Sakpenwa and Murfa/Kalam run from 4 July 2022 to 4 July 2032. Its nationwide Ku-band VSAT licence runs to 27 June 2032. Those end dates are later than the 31 December 2028 landing-permit termination, so the permit does not run for the same term as the gateway licences.

The same row lists Ka-band Earth-to-space (uplink) as **27.5–29.1 GHz and 29.5–30.0 GHz**, with a gap at 29.1–29.5 GHz. It is not a continuous 27.5–30 GHz block. The paired space-to-Earth ranges are 17.8–18.6 GHz and 18.8–19.3 GHz; Ku is listed separately (14.0–14.5 GHz uplink, 10.7–12.7 GHz downlink).

Cited: 1. ncc.gov.ng · 2. ncc.gov.ng · 3. ncc.gov.ng · 4. ncc.gov.ng · 5. ncc.gov.ng · 6. ha.ncc.gov.ng · 7. ncc.gov.ng · 8. ncc.gov.ng

P Parallel ✓ Correct ✓ ✓ ✓ ✓ 35.1s · $0.115 · 4 searches · 2 fetches

Judge: All core and required facts are correct. Two context facts are missing: the notifying administration (Norway) and fixed-satellite service on the SpaceX row, and the separate Africa Mobile Network Communications Starlink VSAT row.

I'll check the Nigerian Communications Commission register and related Starlink licence details before answering.No on both interpretations. The NCC register does list SpaceX with "6000" and a landing-permit end date of 31 December 2028, but 6000 is bandwidth in MHz, not a satellite count, and that permit is not co-terminous with Starlink's Nigerian gateway licences. The Ka-band uplink is also not one continuous 27.5–30 GHz block.

On the NCC authorized space-services list (page last updated 28 November 2024), row 67 is Space Exploration Technologies Corporation (SpaceX), STEAM-1, STEAM-2 and STEAM 2B (Starlink), NGSO LEO, Ka and Ku, effective 7 January 2021, duration 7 years, termination 31/12/2028. The figure 6000 is in the **Bandwidth (MHz)** column.

The same row's note says the Commission authorized the constellation for a full complement of 4,408 satellites and issued the seven-year landing permit for 3,594 satellites launched at the time of application, to beam signals over Nigeria until December 2028, subject to review and extension as the rest of the 4,408 are launched. A landing permit only authorizes landing signals in Nigeria; it does not authorize direct last-mile service.

Starlink Internet Services Nigeria Limited's gateway earth-station (GES) Ka-band frequency licences (Tarau, Ibeju Lekki, Ikire, Sakpenwa, and Murfa/Kalam) run from 4 July 2022 to 4 July 2032. Its nationwide Ku-band VSAT licence runs to 27 June 2032. Those ground-segment licences therefore outlast the STEAM landing permit by more than three years. They are separate instruments from the space-segment landing permit.

The Ka-band Earth-to-space ranges on that SpaceX row are **27.5–29.1 GHz and 29.5–30.0 GHz**, not a continuous 27.5–30 GHz block. There is a gap from 29.1 to 29.5 GHz. Downlink is listed as 17.8–18.6 GHz and 18.8–19.3 GHz; Ku is 14.0–14.5 GHz uplink and 10.7–12.7 GHz downlink.

A separate SpaceX row (USASAT-NGSO) is a different Ku-band landing permit, described as covering a 7,500-satellite constellation, and is not the 31 December 2028 STEAM entry.

Keenable search ✓ Correct ✓ ✓ ✓ ✓ `55.0s · ~$0.153 · 9 searches · 4 fetches`

> **Judge:** Only two context facts are missing. Fact 5 is missing because the answer never states Norway as the notifying administration or the NGSO LEO and FSS classification. Fact 20 is missing because the Africa Mobile Network Communications Ku-band VSAT row is not mentioned. All core and required facts are correct, and neither trap is asserted.

No on both counts.

The "6,000" is not a satellite count, and the landing permit does not run as long as the gateway licences. On the current NCC authorised space-services register, the SpaceX STEAM-1 / STEAM-2 / STEAM-2B (Starlink) row lists **6000 in the bandwidth (MHz) column**, not as the number of satellites. The remarks say the Commission authorised the constellation for a **full constellation of 4,408 satellites** and issued a **seven-year landing permit** for the **3,594 satellites launched at the time of application**. Effective date **7 January 2021**; termination **31 December 2028**. The permit is subject to review and extension pending launch of the full 4,408. Source: NCC authorised space-services operators.

A landing permit only authorises landing signals over Nigeria. It does **not** authorise last-mile service; that requires separate ground-segment licences. Source: NCC space-segment page.

Those ground/gateway authorisations end later than 31 December 2028:

- Gateway earth stations (Ka-band, several sites): **4 July 2022 – 4 July 2032**; nationwide Ku-band VSAT: **28 June 2022 – 27 June 2032**. Source: NCC ground segment.
- International gateway licence reported from NCC records: **1 May 2022 – 30 April 2032** (ISP licence shorter, to 30 April 2027). Source: Technology Times.

Older NCC pages had a **six-year** permit ending **7 November 2026** and referred to **893** satellites then launched. That has been superseded by the seven-year / 31 December 2028 entry above. Sources: older authorised-stations list; older space-services page.

The Ka-band uplink is not a continuous 27.5–30 GHz block. The same register gives Earth-to-space as **27.5–29.1 GHz and 29.5–30.0 GHz** (a gap at 29.1–29.5 GHz). Space-to-Earth is also split: **17.8–18.6 GHz and 18.8–19.3 GHz**, plus Ku-band **14.0–14.5 GHz** uplink and **10.7–12.7 GHz** downlink. Source: NCC authorised space-services operators.

Keenable SELECT ✗ Wrong ✗ ✗ ✓ ✗ Outdated information `4.0m · ~$0.147 · 5 searches · 2 fetches`

> **Judge:** The answer reports the row as 6 years ending 7 November 2026 with 893 satellites, contradicting the checklist's 7 years, 31 December 2028 end date, and 3,594 launched satellites (facts 2, 6, 7, 10, 11). It also misses the review/extension and the day/month/year point; it does not list 4,408/3,594 as the three-figure contrast correctly. The cited page appears to be an older version of the register.

No. The NCC landing-permit row for SpaceX is not a licence for 6,000 satellites running as long as the Nigerian gateway licences, and the Ka-band uplink is not one continuous 27.5–30 GHz block.

Landing permit, not the gateway licences. On the NCC list of authorised space stations, row 72 is a **Landing Permit** held by Space Exploration Technologies Corporation (SpaceX) for the STEAM-1, STEAM-2 and STEAM-2B Starlink constellation (Norway, non-GSO LEO). It is effective 7 January 2021, duration 6 years, termination 7 November 2026, service type FSS. The bandwidth column is 6000, which is the figure being read as a satellite count; the NCC's own note on that row says it authorised the constellation "for its full constellation of 4408 satellites" and issued the landing permit "to SpaceX's 893 satellites launched at time of application," with signals permitted "till November 2026." So 6,000 is the bandwidth-column figure, not a stated authorisation of 6,000 satellites, and the end date on that row is 7 November 2026, not 31 December 2028. Source: https://ncc.gov.ng/technical-regulation/spectrum/space-services (same row on the accessible list: https://ncc.gov.ng/accessible/technical-regulation/spectrum/list-of-authorized-space-stations-in-nigeria).

Gateway licences run longer and are a different instrument. Starlink Internet Services Nigeria Limited holds separate **Gateway Earth Station (GES) frequency licences** (Ka-band, FSS, associated with STEAM-1/2/2B) at Tarau, Ibeju Lekki, Ikire, Sakpenwa and Murfa, Kalam. Those are effective **04/07/2022** and terminate **04/07/2032**. They are not the landing permit, and they do not end on 31 December 2028. Source: https://ncc.gov.ng/ground-segment

Ka uplink is split. The landing-permit frequency range is written as **Tx: 27.5–29.1 GHz, 29.5–30.0 GHz** and **Rx: 17.8–18.6 GHz, 18.8–19.3 GHz**, plus Ku-band Tx 14.0–14.5 GHz and Rx 10.7–12.7 GHz. The Ka uplink therefore has a gap from 29.1 to 29.5 GHz; it is not a continuous 27.5–30 GHz block. Source: https://ncc.gov.ng/technical-regulation/spectrum/space-services

I could not find an NCC SpaceX/Starlink entry whose termination date is 31 December 2028 on these pages. The space-services page says it was last updated 3 March 2021 and is meant to be updated biannually, so a later amendment is possible, but the current published row does not support that date.

Cited: 1. ncc.gov.ng · 2. ncc.gov.ng · 3. ncc.gov.ng

Grok native ✓ Correct ✓ ✓ ✓ ✓ `27.6s · $0.228 · 4 searches · 1 fetches`

> **Judge:** All core and required facts are correct. Only context facts are missing: the dd/mm/yyyy date convention, Norway as notifying administration, the beaming-until-December-2028 statement, the end-date caveat, and the Africa Mobile Network row. The answer labels the 6000 column as bandwidth in MHz, which is a reasonable reading of the column header.

I'll look up the Nigerian Communications Commission register entry for SpaceX and the related Starlink gateway licence details.The register entry is clear on the landing permit; next I'll check Starlink's Nigerian gateway licences and the exact Ka-band uplink ranges.No on both counts. The NCC space-segment register does not treat that entry as a 6,000-satellite licence running in step with Starlink's Nigerian gateway licences, and the Ka-band uplink is not one continuous 27.5–30 GHz block.

The "6,000" figure is bandwidth, not satellites. On the NCC space-segment list (entry 67, last updated 28 November 2024), Space Exploration Technologies Corporation (SpaceX) holds a landing permit for the STEAM-1, STEAM-2 and STEAM-2B Starlink constellation. The column headed **Bandwidth (MHz)** shows **6000**. The remarks say the Commission authorised a full constellation of **4,408** satellites and issued a seven-year landing permit for the **3,594** satellites already launched at the time of application. The permit runs from **7 January 2021** to **31 December 2028** and is "subject to review and extension" pending launch of the full 4,408. A landing permit only authorises beaming over Nigeria; it does not itself licence last-mile service. Source: https://ncc.gov.ng/industry/spectrum-administration/space-services

It does not run as long as the gateway licences. Starlink Internet Services Nigeria Limited's five Ka-band gateway earth-station (GES) frequency licences (Tarau, Ibeju Lekki, Ikire, Sakpenwa, and Murfa, Kalam) run from **4 July 2022** to **4 July 2032**. Its nationwide Ku-band VSAT licence runs from **28 June 2022** to **27 June 2032**. Those end about three and a half years after the 31 December 2028 landing-permit date. Source: https://ncc.gov.ng/ground-segment

The Ka-band uplink is not continuous 27.5–30 GHz. The same SpaceX entry lists Earth-to-space as **27.5–29.1 GHz** and **29.5–30.0 GHz**, so there is a gap from 29.1 to 29.5 GHz. The other ranges on that permit are space-to-Earth 17.8–18.6 GHz and 18.8–19.3 GHz, plus Ku-band Earth-to-space 14.0–14.5 GHz and space-to-Earth 10.7–12.7 GHz. Source: https://ncc.gov.ng/industry/spectrum-administration/space-services

Fact 20 is missing because the Africa Mobile Network Communications Ku-band VSAT row is not mentioned. All core and required facts are correct, and neither trap is asserted.

No on both counts.

The "6,000" is not a satellite count, and the landing permit does not run as long as the gateway licences. On the current NCC authorised space-services register, the SpaceX STEAM-1 / STEAM-2 / STEAM-2B (Starlink) row lists **6000 in the bandwidth (MHz) column**, not as the number of satellites. The remarks say the Commission authorised the constellation for a **full constellation of 4,408 satellites** and issued a **seven-year landing permit** for the **3,594 satellites launched at the time of application**. Effective date **7 January 2021**; termination **31 December 2028**. The permit is subject to review and extension pending launch of the full 4,408. Source: NCC authorised space-services operators.

A landing permit only authorises landing signals over Nigeria. It does **not** authorise last-mile service; that requires separate ground-segment licences. Source: NCC space-segment page.

Those ground/gateway authorisations end later than 31 December 2028:

- Gateway earth stations (Ka-band, several sites): **4 July 2022 – 4 July 2032**; nationwide Ku-band VSAT: **28 June 2022 – 27 June 2032**. Source: NCC ground segment.
- International gateway licence reported from NCC records: **1 May 2022 – 30 April 2032** (ISP licence shorter, to 30 April 2027). Source: Technology Times.

Older NCC pages had a **six-year** permit ending **7 November 2026** and referred to **893** satellites then launched. That has been superseded by the seven-year / 31 December 2028 entry above. Sources: older authorised-stations list; older space-services page.

The Ka-band uplink is not a continuous 27.5–30 GHz block. The same register gives Earth-to-space as **27.5–29.1 GHz and 29.5–30.0 GHz** (a gap at 29.1–29.5 GHz). Space-to-Earth is also split: **17.8–18.6 GHz and 18.8–19.3 GHz**, plus Ku-band **14.0–14.5 GHz** uplink and **10.7–12.7 GHz** downlink. Source: NCC authorised space-services operators.

PROMPT 60 · REGULATION · FACTS AS OF 2026-10-08

SpaceX's Gen2 application proposed tracking beacons in the 137-138 MHz and 148-150.05 MHz bands. Did the 1 December 2022 partial grant authorize those beacons, and which direction did the application assign to each band?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FCC-22-91, paragraphs 1 and 8. The application proposes tracking beacons communicating in 137.00-138.00 MHz Earth-to-space and 148.00-150.05 MHz space-to-Earth. The 137 MHz band is the uplink in that proposal. The 148 MHz band is the downlink.

Paragraph 1 defers consideration of the proposed E-band frequencies and of the tracking beacons. The partial grant does not authorize the beacons. Authority to conduct telemetry, tracking, and command while removing satellites from orbit, consistent with the application, is a different grant. It is not an authorization of these VHF beacons.

A later order, in November 2024, is where beacons were addressed again. Do not treat that later grant as the 1 December 2022 order, and do not move these two bands onto that later beacon authorization unless that later order says so.

Wrong: the December 2022 grant authorized the beacons. Wrong: the application put 137-138 MHz on the space-to-Earth link.

Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt

E Exa ✗ Wrong ✓ ✗ ✗ ✓ Claim not in sources — 52.4s · $0.353 · 13 searches · 5 fetches

> **Judge:** The answer reverses the band directions: it puts 137-138 MHz on space-to-Earth and 148-150.05 MHz on Earth-to-space, contradicting facts 3-6 and asserting trap 2. DA-24-222A1 in the DATA states the opposite. It also omits the TT&C distinction and the November 2024 timing (facts 7-9).

No. The 1 December 2022 partial grant did not authorize the beacons. It deferred them.

In FCC 22-91 (adopted 29 November 2022, released 1 December 2022), the Commission granted only up to 7,500 Gen2 satellites in the Ku- and Ka-bands and stated: “We defer consideration of SpaceX’s proposed use of E-band frequencies and tracking beacons.” Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt

The application assigned the usual VHF directions, not the ones printed in that order:

- 137.00–138.00 MHz: space-to-Earth
- 148.00–150.05 MHz: Earth-to-space

That assignment is in SpaceX’s 4 October 2022 letter, Exhibit A, and in the 16 December 2022 beacon amendment (SAT-AMD-20221216-00175). The Space Bureau later confirmed both sources in DA 24-1160: beacons “would operate in … the 137.00-138.00 MHz (space-to-Earth) and 148.00-150.05 MHz (Earth-to-space) … bands … as requested in the second amendment,” with downlink channels in 137–138 MHz and uplink channels in 148–150.05 MHz. Source: https://docs.fcc.gov/public/attachments/DA-24-1160A1.txt

FCC 22-91 paragraph 8 reverses those parentheticals (137–138 MHz as Earth-to-space and 148–150.05 MHz as space-to-Earth) while citing the same October 2022 exhibit. That description conflicts with DA 24-1160’s reading of the exhibit and the amendment, and with the U.S. allocations used for Swarm. The formal beacon amendment was filed on 16 December 2022, after the partial grant; before that, the proposal was in the 19 August and 4 October 2022 letters, which the 1 December order treated as part of the pending record and deferred.

P Parallel ✗ Wrong ✓ ✗ ✗ ✓ Claim not in sources — 37.8s · $0.441 · 5 searches · 2 fetches

> **Judge:** The answer reverses the directions: it puts 137-138 MHz on space-to-Earth and 148-150.05 MHz on Earth-to-space, contradicting facts 3-6 and asserting trap 2. It also dismisses the order's own background paragraph as a drafting error without support, and it does not mention that TT&C during deorbit is a separate grant (fact 7).

No. The FCC’s 1 December 2022 partial grant (FCC 22-91) did not authorize the tracking beacons. It deferred them, along with E-band use, and authorized only up to 7,500 Gen2 satellites in Ku- and Ka-band. https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt

As described in that order’s beacon discussion (citing SpaceX’s 4 October 2022 letter, Exhibit A), the proposal assigned:

- 137.00–138.00 MHz: space-to-Earth
- 148.00–150.05 MHz: Earth-to-space

https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

The same order’s background paragraph reverses those directions. That appears to be a drafting error. The directions above match the ITU allocations and the FCC’s later description of the application, which was granted only on 20 November 2024 (DA 24-1160), not in the 1 December 2022 partial grant. https://docs.fcc.gov/public/attachments/DA-24-1160A1.pdf

K Keenable search ✓ Correct ✓ ✓ ✓ ✓ — 28.3s · ~$0.092 · 6 searches · 3 fetches

> **Judge:** Core and required facts are correct: beacons deferred, 137 MHz Earth-to-space, 148 MHz space-to-Earth. Context facts 7-9 (TT&C grant distinction, November 2024 later order) are not stated; the answer also adds claims that a later amendment reversed directions, which is supported by the cited notice.

No. The FCC’s 1 December 2022 partial grant (FCC 22-91, adopted 29 November 2022) deferred the tracking beacons; it did not authorize them. It authorized only up to 7,500 Gen2 satellites in Ku- and Ka-band at specified shells, and expressly deferred E-band and the beacons. https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

As described in that order, the application assigned 137.00–138.00 MHz to Earth-to-space and 148.00–150.05 MHz to space-to-Earth.

https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

Later filings reversed those directions (137–138 MHz space-to-Earth and 148–150.05 MHz Earth-to-space), including the 16 December 2022 amendment accepted for filing in January 2023. https://docs.fcc.gov/public/attachments/DOC-390651A1.pdf A March 2024 order still described the December 2022 amendment with the same directions as FCC 22-91, so the FCC's own descriptions of the application's band directions are inconsistent. https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf

K Keenable SELECT ✓ Correct ✓ ✓ ✓ ✓ 2.4m · ~$0.056 · 3 searches · 0 fetches

> **Judge:** The core and required facts are all correct. The answer omits the context facts: the separate TT&C deorbit authority (7), the November 2024 order that later addressed beacons (8), and the warning not to conflate that order with the 2022 one (9).

No. The 1 December 2022 partial grant did not authorize the tracking beacons. FCC 22-91 (adopted 29 November 2022, released 1 December 2022) granted in part and deferred in part SpaceX's Gen2 application, and it expressly deferred the beacons: "We defer consideration of SpaceX's proposed use of E-band frequencies and tracking beacons." https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

As the order describes the application, the directions are reversed from the usual VHF satellite allocation:

- 137.00–138.00 MHz: Earth-to-space
- 148.00–150.05 MHz: space-to-Earth

https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf

A later SpaceX amendment (SAT-AMD-20221216-00175), accepted for filing after the partial grant, proposed the opposite directions—137–138 MHz space-to-Earth and 148–150.05 MHz Earth-to-space. That is not what the Gen2 application, as recited in the 1 December 2022 order, assigned to each band. https://docs.fcc.gov/public/attachments/DOC-390651A1.pdf

Cited: 1. docs.fcc.gov · 2. docs.fcc.gov

Grok native ✗ Wrong ✓ ✗ ✗ ✓ Claim not in sources 1.1m · $0.652 · 12 searches · 3 fetches

> **Judge:** The answer correctly says the beacons were not authorized and cites the para 1 deferral. It claims para 68 gives the reverse direction pairing (137 MHz space-to-Earth) and calls that the more specific description, which the data does not support, so facts 3-6 are contradicted. It also omits facts 7-9, including the November 2024 order.

No. The 1 December 2022 partial grant did not authorize those beacons.

In FCC 22-91 (adopted 29 November 2022, released 1 December 2022), the Commission granted SpaceX authority for up to 7,500 Gen2 satellites in Ku- and Ka-band and expressly deferred the tracking/emergency beacons, along with E-band. It also said it was deferring any action on SpaceX's described beacon use pending further review. Source: https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt (paras. 1, 69).

On direction, that same order is internally inconsistent:

- Paragraph 68, citing SpaceX's 4 October 2022 letter, Exhibit A at 1, says the beacons would use 137.00–138.00 MHz space-to-Earth and 148.00–150.05 MHz Earth-to-space.
- Paragraph 8, citing the 19 August 2022 letter and the same October letter more generally, reverses that: 137.00–138.00 MHz Earth-to-space and 148.00–150.05 MHz space-to-Earth.

The Exhibit A citation in paragraph 68 is the more specific description of what SpaceX had put on the record before the grant. At that time SpaceX also said it was not seeking U.S. market access for the beacons and intended to use them only outside the United States. A formal amendment seeking beacon authority (SAT-AMD-20221216-00175) was filed on 16 December 2022, after this partial grant. A later FCC order, DA 24-222, describes that amendment with the reversed pairing used in paragraph 8, so the Commission's own summaries do not agree. Source for the deferral and the later description: https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf.

PROMPT 61 · REGULATION · FACTS AS OF 2026-10-08

In October 2025 the FAA adopted the environmental impact statement for Falcon launches at Vandenberg and selected redevelopment of SLC-6 plus a higher cadence at SLC-4. Did that record of decision issue the license, and what still has to be satisfied before a license for those operations can be granted?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FAA Record of Decision, October 2025, adopting the Environmental Impact Statement for changes to the Falcon launch program at Vandenberg Space Force Base. The Department of the Air Force was the lead agency. The FAA and the Coast Guard were cooperating agencies.

The FAA concurs with and adopts the EIS analysis. Its federal action would be issuance or modification of a license for Falcon 9 and Falcon Heavy operations, to increase the annual launch and landing cadence at SLC-4 and to establish Falcon 9 and Falcon Heavy operations at SLC-6, plus associated temporary airspace closures, and potential renewals and modifications inside the scope of the EIS.

The record of decision is not that license. The document says completion of the environmental review does not guarantee that the FAA will issue a license for Falcon 9 and Falcon Heavy operations at SLC-4 and SLC-6. The proposal must also meet the FAA's safety, risk, and indemnification requirements. If a license application changes the operations so they fall outside the EIS, further environmental review is required before a license for that application.

The FAA's preferred alternative is the proposed action, modified to include the avoidance, minimization, and mitigation measures in the record and in Chapter 3 of the final EIS. The environmentally preferable alternative in the EIS is the no-action alternative, because it would not redevelop SLC-6 and would not increase the cadence. The FAA does not prefer no action, because it does not meet the purpose and need. Do not invent the annual launch number. This record of decision extract does not state it.

Wrong: the October 2025 record of decision is the launch license for SLC-6. Wrong: the FAA preferred the no-action alternative.

Exa ✓ Correct ✓ ✓ ✓ ✓ 17.7s · $0.062 · 2 searches · 1 fetches

Judge: Core and required facts 1-4 are correctly stated. Context facts 5 and 7-11 (lead/cooperating agencies, the federal action scope, preferred and environmentally preferable alternatives, and the unstated launch number) are not stated in the answer. Fact 6 is covered by the adoption statement.

No. The FAA's October 16, 2025 Record of Decision adopted the Final EIS and completed the environmental review; it did not issue a launch license.

The ROD states that finishing NEPA review "does not guarantee that the FAA would issue a license" for Falcon 9 and Falcon Heavy operations at SLC-4 and SLC-6. Before a license can be granted, the proposal must also meet FAA safety, risk, and indemnification requirements in 14 CFR parts 400–450. The ROD only finds that applicable federal environmental requirements for the FAA's action have been met and that the agency may proceed with licensing within the scope analyzed in the EIS. Operations outside that scope would need further environmental review first.

Source: FAA ROD, October 2025 (PDF)

The same ROD also lists other permits and approvals required before construction and operation (not as a substitute for the license findings), including a Santa Barbara Air Pollution Control District permit and an NPDES permit from the Central Coast Regional Water Quality Control Board for SLC-6 operations. Mitigation measures identified in the ROD would be license conditions if a license is issued.

Judge: The core and required facts are all correct. Context facts 5 and 7 through 11 (lead and cooperating agencies, the federal action, preferred alternative, no-action as environmentally preferable and why it was not preferred, and the unstated launch number) are not stated in the answer.

No. The FAA's October 16, 2025 Record of Decision adopted the Department of the Air Force's final EIS and concluded that the environmental review for licensing Falcon operations at Vandenberg is complete within the scope analyzed. It did not issue a vehicle operator license.

The ROD states that SpaceX still must obtain an FAA license to operate from SLC-6 and to raise the annual launch and landing cadence at SLC-4, and that finishing NEPA review does not guarantee that license. Before a license can be granted, the proposal must also meet the FAA's safety, risk, and indemnification requirements in 14 CFR parts 400–450. If a license application proposes operations outside the scope of the EIS, additional environmental review would be required first.

The ROD also notes that other permits and approvals are required before construction and operation (including a Santa Barbara County Air Pollution Control District permit and an NPDES permit from the Central Coast Regional Water Quality Control Board for SLC-6). Those are separate from the FAA license decision itself.

Keenable search ◐ Partly correct ✓ × ✓ ✓ Incomplete list 54.6s · ~$0.167 · 12 searches · 5 fetches

Judge: The answer omits that a license application changing operations beyond the EIS scope needs further environmental review (fact 4), and omits the FAA's concurrence/adoption of the EIS (6), the preferred alternative (8), and the no-action alternative points (9, 10). It states annual launch numbers (up to 100) even though the checklist says the ROD extract does not give one (11), though the figures come from the Air Force ROD notice.

The October 2025 decision did not issue the license. It completed the environmental review that must come before licensing.

Two separate records of decision were signed:

- The Department of the Air Force signed its ROD on October 10, 2025, selecting Alternative 1: redevelopment of SLC-6 for Falcon 9 and Falcon Heavy, including a new hangar south of the existing horizontal integration facility, and an increase from 50 Falcon 9 launches per year at SLC-4 to up to 100 Falcon 9 and Falcon Heavy

launches per year at SLC-4 and SLC-6 combined, with up to five Falcon Heavy launches and landings per year at SLC-6. That decision authorizes the Air Force's range and facility actions; it is not an FAA license. https://www.vandenberg.spaceforce.mil/News/Article-Display/Article/4323318/notice-of-availability-of-the-final-environmental-impact-statement-and-record-o/ ; https://www.federalregister.gov/documents/2025/12/08/2025-22193/notice-of-record-of-decision-for-the-environmental-impact-statement-for-authorizing-changes-to-the-falcon-launch-program
- The FAA, a cooperating agency, issued its own ROD on October 16, 2025. https://vsfbfalconlauncheis.com/ ; https://www.faa.gov/space/stakeholder_engagement/SpaceX_Falcon_Program

The FAA's proposed action in the EIS is to issue, modify, or renew a vehicle operator license for SpaceX's Falcon operations at Vandenberg and to approve related temporary airspace closures. SpaceX already operates at SLC-4 under launch license LLO 18-111. The Final EIS states that, after the NEPA process, the FAA may issue its own ROD to support licensing, but that completing environmental review does not guarantee a license or airspace approval. https://vsfbfalconlauncheis.com/Portals/falconprogrameis/PublicDocuments/FEIS%20Documents/VSFBFalcon100LaunchFinalEIS20251014.pdf

FAA policy is the same: a NEPA finding is required before a license or permit, and a record of decision does not itself authorize a license or permit. https://www.faa.gov/space/environmental

What still has to be satisfied is the FAA's separate licensing determination. The project's notice of intent states that the project must also meet all FAA safety, risk, and indemnification requirements for the appropriate license. https://www.vandenberg.spaceforce.mil/News/Article-Display/Article/4001026/notice-of-intent-to-prepare-an-environmental-impact-statement-for-authorizing-c/ That means a complete vehicle-operator license application (or modification/renewal) under 14 CFR Chapter III, including Parts 413, 440 (financial responsibility), and 450, accepted and evaluated by the Office of Commercial Space Transportation, plus approval of related airspace closures. https://www.faa.gov/space/licenses/licensing_process/

I could not retrieve the text of the FAA's October 16, 2025 ROD PDF itself, so I cannot quote any license conditions written into that ROD. The sources above agree that the ROD is the environmental decision, not the license.

K Keenable SELECT — Partly correct — Incomplete list — 10.5m · ~$0.361 · 22 searches · 1 fetches

> **Judge:** The answer correctly says the ROD is not the license and that the EIS does not guarantee one. It never mentions the FAA safety, risk and indemnification requirements, or that further environmental review is needed if the operations fall outside the EIS scope. It also omits the lead and cooperating agency roles (Coast Guard), the preferred and no-action alternative points, and the note that the FAA ROD extract gives no launch number.

Hit its tool-call or time budget and was forced to answer.

No. The October 2025 records of decision did not issue a launch or reentry license. They are National Environmental Policy Act decisions. A license for the expanded operations is a separate FAA action under the commercial space licensing rules, and completing the environmental review does not grant it.

Two decisions were signed, and they do different things:

- On **October 10, 2025**, the **Department of the Air Force** signed the record of decision. It selected the proposed action: redevelopment of SLC-6 for Falcon 9 and Falcon Heavy, and a combined cadence of up to **100** Falcon 9 and Falcon Heavy launches per year at SLC-4 and SLC-6, up from 50 Falcon 9 launches per year at SLC-4. Falcon Heavy could launch and land up to five times per year at SLC-6. Instead of modifying the existing horizontal integration facility, the Air Force authorized a new hangar south of that facility and north of SLC-6. That notice was published at 90 FR 56738 (December 8, 2025). The Air Force notice is also summarized by Vandenberg Space Force Base.
- On **October 16, 2025**, the **FAA**, which had been a cooperating agency, issued its own record of decision after reviewing the final EIS. The project site and the FAA's NEPA pages identify that document as an adoption of the EIS for authorizing changes to the Falcon program at Vandenberg, not as a vehicle operator license: vsfbfalconlauncheis.com, FAA SpaceX Falcon Program page, and the FAA NEPA document list (PDF: VSFB-Falcon-Launch-EIS-ROD-Oct2025.pdf).

The final EIS, dated October 14, 2025, states the FAA's action as issuing, modifying, or renewing licenses for Falcon operations at Vandenberg under **14 CFR Part 400**, plus approving related temporary airspace closures. It also says that after NEPA the FAA may issue a record of decision to support that licensing decision, and that "successfully completing the environmental review process does not guarantee that the FAA would license SpaceX operations or approve related airspace closures." Under **14 CFR Part 450**, SpaceX must **modify its existing vehicle operator license or obtain a new one** for these operations. Source: Final EIS.

Before those operations can be licensed, the EIS says these still have to be satisfied:

- A complete Part 450 license application, and FAA issuance or modification of the vehicle operator license. The environmental record of decision is only one input to that decision.
- FAA approval of the related airspace closures.
- Space Launch Delta 30 approval to conduct the program, including the modifications, on the range.
- The other permits and consultations listed in the EIS, including Endangered Species Act and National Historic Preservation Act compliance, air-quality permitting, and an NPDES permit. On the Coastal Zone Management Act, the California Coastal Commission objected to the Air Force consistency determination on August 14, 2025 (letter August 26, 2025). The EIS notes the Air Force may still proceed if it finds the action fully consistent with the state coastal program under 15 CFR 930.43(d).

I could not retrieve the text of the FAA's October 16 PDF itself, so I cannot quote any extra conditions written only in that record of decision. I also did not verify whether a Part 450 license or modification covering SLC-6 and the higher cadence has since been granted.

> **Judge:** Core and required facts (1-4) are correct. Context facts 5 and 7-11 are not stated; fact 6 is covered by the answer saying the ROD adopted the EIS. The answer did not assert any trap.

No. The FAA's October 16, 2025 record of decision adopted the Final EIS and found that the environmental review for its action was complete. It did not issue a vehicle operator license.

The ROD says the EIS supports later issuance, renewal, or modification of licenses for Falcon operations at Vandenberg only within the scope analyzed. It also states that finishing environmental review "does not guarantee" a license for Falcon 9 and Falcon Heavy operations at SLC-4 and SLC-6. Before the FAA can grant one, the proposal must still meet FAA safety, risk, and indemnification requirements in 14 CFR parts 400–450. If a SpaceX application goes outside the EIS scope,

more environmental review is required first. Mitigation measures in the ROD would be license conditions.

Other permits and approvals are also required before construction and operation, including a Santa Barbara County Air Pollution Control District air permit and an NPDES permit from the Central Coast Regional Water Quality Control Board for SLC-6 operations.

K Keenable router → SELECT Partly correct Incomplete list `10.5m · ~$0.361 · 22 searches · 1 fetches`

> **Judge:** The answer correctly says the ROD is not the license and that the EIS does not guarantee one. It never mentions the FAA safety, risk and indemnification requirements, or that further environmental review is needed if the operations fall outside the EIS scope. It also omits the lead and cooperating agency roles (Coast Guard), the preferred and no-action alternative points, and the note that the FAA ROD extract gives no launch number.

Hit its tool-call or time budget and was forced to answer.

No. The October 2025 records of decision did not issue a launch or reentry license. They are National Environmental Policy Act decisions. A license for the expanded operations is a separate FAA action under the commercial space licensing rules, and completing the environmental review does not grant it.

Two decisions were signed, and they do different things:

- On **October 10, 2025**, the **Department of the Air Force** signed the record of decision. It selected the proposed action: redevelopment of SLC-6 for Falcon 9 and Falcon Heavy, and a combined cadence of up to 100 Falcon 9 and Falcon Heavy launches per year at SLC-4 and SLC-6, up from 50 Falcon 9 launches per year at SLC-4. Falcon Heavy could launch and land up to five times per year at SLC-6. Instead of modifying the existing horizontal integration facility, the Air Force authorized a new hangar south of that facility and north of SLC-6. That notice was published at 90 FR 56738 (December 8, 2025). The Air Force notice is also summarized by Vandenberg Space Force Base.
- On **October 16, 2025**, the **FAA**, which had been a cooperating agency, issued its own record of decision after reviewing the final EIS. The project site and the FAA's NEPA pages identify that document as an adoption of the EIS for authorizing changes to the Falcon program at Vandenberg, not as a vehicle operator license: vsfbfalconlauncheis.com, FAA SpaceX Falcon Program page, and the FAA NEPA document list (PDF: VSFB-Falcon-Launch-EIS-ROD-Oct2025.pdf).

The final EIS, dated October 14, 2025, states the FAA's action as issuing, modifying, or renewing licenses for Falcon operations at Vandenberg under 14 CFR Part 400, plus approving related temporary airspace closures. It also says that after NEPA the FAA may issue a record of decision to support that licensing decision, and that "successfully completing the environmental review process does not guarantee that the FAA would license SpaceX operations or approve related airspace closures." Under 14 CFR Part 450, SpaceX must modify its existing vehicle operator license or obtain a new one for these operations. Source: Final EIS.

Before those operations can be licensed, the EIS says these still have to be satisfied:

- A complete Part 450 license application, and FAA issuance or modification of the vehicle operator license. The environmental record of decision is only one input to that decision.
- FAA approval of the related airspace closures.
- Space Launch Delta 30 approval to conduct the program, including the modifications, on the range.
- The other permits and consultations listed in the EIS, including Endangered Species Act and National Historic Preservation Act compliance, air-quality permitting, and an NPDES permit. On the Coastal Zone Management Act, the California Coastal Commission objected to the Air Force consistency determination on August 14, 2025 (letter August 26, 2025). The EIS notes the Air Force may still proceed if it finds the action fully consistent with the state coastal program under 15 CFR 930.43(d).

I could not retrieve the text of the FAA's October 16 PDF itself, so I cannot quote any extra conditions written only in that record of decision. I also did not verify whether a Part 450 license or modification covering SLC-6 and the higher cadence has since been granted.

PROMPT 62 · REGULATION · FACTS AS OF 2026-10-08

The FAA's commercial-space waiver notice, docket FAA-2026-8614, lists the National Environmental Policy Act among laws to be waived for launch licenses. Has that notice already waived NEPA for a Falcon license?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FAA Notice of Proposed Rulemaking, Notice No. 26-11, RIN 2120-AM51, Docket No. FAA-2026-8614. It proposes to amend 14 CFR parts 400, 420, 433, 437, and 450. It is not a final rule. The comment date in the notice text is a publication placeholder. Do not invent a Federal Register effective date.

The proposal would add 14 CFR 400.3. As proposed, that section would apply to a launch-site license under part 420, a reentry-site license under part 433, an experimental permit under part 437, and a launch or reentry vehicle license under part 450. It would waive requirements of 13 listed statutes, including the National Environmental Policy Act, 42 USC 4321 and following, for specified actions. Those actions include issuance, renewal, or modification of a Chapter 509 license or experimental permit. The proposal says that, while the rulemaking is pending, the FAA will consult the heads of the named agencies under 51 USC 50905(b)(2)(C).

The related environmental sections, including proposed 14 CFR 450.47(a), would make the FAA responsible for NEPA except as provided in the proposed 400.3. That exception is not yet law in this document. A Falcon license is not freed from NEPA by this notice.

Wrong: Notice 26-11 has already waived NEPA for Falcon licenses. Wrong: the notice is a final rule with an effective date.

Exa **Partly correct** Incomplete list 32.2s · $0.272 · 8 searches · 4 fetches

Judge: The answer correctly says this is a proposed rule that has not waived NEPA for a Falcon license. It does not state the 13-statute scope, the parts being amended, which license types proposed 400.3 would cover, the pending consultation, or the 450.47 cross-reference, and it does not say the comment date is a placeholder.

No. Docket FAA-2026-8614 has not waived NEPA for a Falcon license.

The notice published July 30, 2026, is a notice of proposed rulemaking (NPRM), not a final waiver. It proposes that NEPA (42 U.S.C. 4321 et seq.) would no longer apply to certain commercial-space licenses and permits issued or modified on or after the effective date of a future final rule. The FAA states that the proposal itself "is not operative" and that a final decision will be made at the final-rule stage. Comments were due August 31, 2026. The notice does not identify or act on any Falcon license.

https://www.federalregister.gov/documents/2026/07/30/2026-15415/waiver-of-specified-statutory-requirements-for-commercial-space-launch-and-reentry-actions

The proposed waiver is also not in the current Code of Federal Regulations. 14 CFR part 400 still contains only §§ 400.1 and 400.2; proposed § 400.3 has not been added.

https://www.ecfr.gov/current/title-14/chapter-III/subchapter-A/part-400

An FAA PDF of the same docket repeats a banner saying the Secretary "signed this final rule," but the document body is the pre-publication NPRM, and the official Federal Register version is the proposed rule above. I did not find a final rule under this docket, or any Falcon license issued under it.

Parallel **Correct** 21.8s · $0.070 · 4 searches · 1 fetches

Judge: The core answer is right: it is a proposed rule and NEPA has not been waived. The answer omits the parts amended (14 CFR parts 400, 420, 433, 437, 450), the four license types covered by 400.3, the 450.47(a) NEPA-responsibility exception, and that the comment date is a placeholder.

No. Docket FAA-2026-8614 has not waived NEPA for a Falcon license, or for any other license.

It is a notice of proposed rulemaking, not a final waiver. The FAA published "Waiver of Specified Statutory Requirements for Commercial Space Launch and Reentry Actions" (Notice No. 26-11, RIN 2120-AM51) on July 30, 2026, at 91 FR 47997 (FR Doc. 2026-15415). The action line is "Notice of proposed rulemaking." Comments were due by August 31, 2026, and Regulations.gov lists the docket as pending and open for comment. See https://www.federalregister.gov/documents/2026/07/30/2026-15415/waiver-of-specified-statutory-requirements-for-commercial-space-launch-and-reentry-actions and https://www.regulations.gov/docket/FAA-2026-8614.

The proposal would add 14 CFR 400.3 so that NEPA (42 U.S.C. 4321 et seq.) and 12 other statutes would not apply to certain commercial-space licenses and permits. That text would cover only licenses or permits issued or modified on or after the effective date of a final rule. The notice does not name Falcon, SpaceX, or any existing vehicle license, and it does not grant a license-specific waiver.

The FAA also says the proposal itself is not operative: "By its nature, a proposed rule is not the type of final action to which NEPA attaches. A final decision on the level of NEPA analysis required will be made at the final rule stage." Required consultations with other agencies were still pending during the rulemaking.

One FAA PDF of the same docket carries a banner saying the Secretary "signed this final rule." That conflicts with the document's own "NPRM" action line and with the official Federal Register version, which is a proposed rule. The Federal Register text controls. https://www.faa.gov/newsroom/2120-AM51-FAA-Commercial-Space-Waiver-NPRM-Final.pdf

> **Judge:** Fact 2 is missing because the answer omits Notice No. 26-11, RIN 2120-AM51 and the docket together as identifiers. Fact 5 is contradicted because the answer states comments were due August 31, 2026, treating the placeholder date as real. Facts 4, 6, 9, 10 and 11 are not stated.

No. Docket FAA-2026-8614 is a notice of proposed rulemaking, not a completed waiver of NEPA for any Falcon license.

The Federal Register document (2026-15415, 91 FR 47997, July 30, 2026) is titled "Waiver of Specified Statutory Requirements for Commercial Space Launch and Reentry Actions" and is labeled a **Notice of proposed rulemaking**. It says the FAA "proposes" to waive requirements under 13 laws, including the National Environmental Policy Act (42 U.S.C. 4321 et seq.), for commercial space licenses and permits generally—launch-site licenses, reentry-site licenses, experimental permits, and launch or reentry vehicle licenses—not for a named Falcon or SpaceX license. Comments were due August 31, 2026. https://www.federalregister.gov/documents/2026/07/30/2026-15415/waiver-of-specified-statutory-requirements-for-commercial-space-launch-and-reentry-actions

Reporting on the docket states that none of the 13 proposed waivers is in force and that existing environmental-review requirements remain until a final rule takes effect. https://spacedaily.com/sd-the-dot-just-quietly-proposed-exempting-rocket-launches-from-13-environmental-laws-and-the-fine-print-reveals-it-was-never-really-about-spacex-at-all-but-about-a-supreme-court-ruling-nobody-outside

I did not find a final rule under this docket, or any order in it that has already waived NEPA for a Falcon license.

PROMPT 63 · MULTI-HOP · FACTS AS OF 2026-10-08

The Vandenberg Falcon decision raises the launch cadence to 100 a year. Is that 100 Falcon 9 launches from SLC-4, with Falcon Heavy counted on top? How many Falcon Heavy launches does the decision describe, had Falcon Heavy launched from Vandenberg before, and does the number itself issue the FAA license?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Federal Register notice of 8 December 2025, 2025-22193, Department of the Air Force, and the FAA record of decision of October 2025 for the Vandenberg Falcon launch program.

The Air Force signed its record of decision on 10 October 2025. The notice says the overall cadence will increase from 50 Falcon 9 launches per year at SLC-4 to up to 100 launches per year for Falcon 9 and Falcon Heavy at SLC-4 and SLC-6 combined. The FAA record of decision states the same combined increase, from 50 to up to 100 a year at both complexes together. One hundred is not 100 Falcon 9 launches from SLC-4 alone, and it is not 100 plus Falcon Heavy.

Falcon Heavy, which the notice says had not previously launched from Vandenberg, would launch and land up to five times per year from and at SLC-6. The notice does not state a combined total of 105. No modification of SLC-4 is proposed in the FAA record of decision. The Air Force would authorize a new hangar south of the horizontal integration facility and north of SLC-6. The FAA record of decision also describes two new landing zones adjacent to SLC-6.

The cadence figure is the scope of the environmental decision. The FAA record of decision says completion of that review does not guarantee a license. Safety, risk, and indemnification requirements still apply. Mitigation identified for a license is a license condition, not a statement that the license has been issued.

Wrong: the decision authorizes 100 Falcon 9 launches a year from SLC-4 and five Falcon Heavy launches in addition. Wrong: the number is the FAA launch license.

Sources: https://www.federalregister.gov/documents/2025/12/08/2025-22193/notice-of-record-of-decision-for-the-environmental-impact-statement-for-authorizing-changes-to-the and https://www.faa.gov/files/space/environmental/nepa_docs/VSFB-Falcon-Launch-EIS-ROD-Oct2025.pdf

Exa ✓ Correct ✓ ✓ ✓ ✓ — 30.0s · $0.104 · 4 searches · 2 fetches

Judge: All core and required facts are correct. The answer omits the new hangar (9), the two new landing zones adjacent to SLC-6 (10), and the license-condition point on mitigation (14), all context facts. Its implicit statement that Falcon Heavy is within the 100 and not extra matches fact 7 and rejects trap 1.

No. The 100 is a combined annual cap, not 100 Falcon 9 launches from SLC-4 with Falcon Heavy added on top.

The Department of the Air Force Record of Decision (signed October 10, 2025) and the FAA's October 2025 Record of Decision raise the cadence from 50 Falcon 9 launches per year at SLC-4 to **up to 100 Falcon 9 and Falcon Heavy launches per year at SLC-4 and SLC-6 combined**. Falcon Heavy is inside that 100, not extra. The decision does not fix a pad-by-pad split of the remaining launches. Sources: DAF ROD, Federal Register notice, FAA ROD.

Falcon Heavy: up to **five** launches per year, from and landing at **SLC-6** (two boosters landing at once). SLC-6 landings are capped at 12 missions a year, including those five Heavy missions. SLC-4 first-stage landings stay at up to 12 per year. No SLC-4 pad modification is authorized.

Prior Vandenberg Heavy flights: the decision states Falcon Heavy **had not previously launched from Vandenberg Space Force Base.**

License: the 100 figure does not itself issue an FAA license. The FAA ROD adopts the EIS and says that review supports later license issuance, renewal, or modification only within the analyzed scope. It also says completing environmental review **does not guarantee** a license; SpaceX must still meet FAA safety, risk, and indemnification requirements in 14 CFR parts 400–450. DAF range authorization and an FAA vehicle-operator license are separate actions.

Parallel Partly correct ✓ × ✓ ✓ Incomplete list — 1.1m · $0.510 · 5 searches · 5 fetches

Judge: Fact 8 is arguably contradicted: the answer says SpaceX must get a license to raise the SLC-4 cadence, whereas the checklist says no SLC-4 modification is proposed in the FAA ROD. Facts 9, 10 and 14 (new hangar, two landing zones, license conditions for mitigation) are missing, but they are context only.

No. The 100 is a combined annual cap for Falcon 9 and Falcon Heavy at SLC-4 and SLC-6 together, not 100 Falcon 9s from SLC-4 with Falcon Heavy added on top.

The Department of the Air Force's 10 October 2025 Record of Decision, noticed in the Federal Register, raises the cadence from 50 Falcon 9 launches a year at SLC-4 to **up to 100 launches a year for Falcon 9 and Falcon Heavy at both complexes combined**. Falcon Heavy is inside that 100. It would launch and land **up to five times a year, only from and at SLC-6**. Falcon 9 could fly from either pad; the split is set by the manifest and Western Range operations, not by a fixed 100-at-SLC-4 allocation. An example in the Final EIS (Table 2.1-1) reaches 100 as 70 Falcon 9s at SLC-4, 25 Falcon 9s at SLC-6, and 5 Falcon Heavies at SLC-6, but that is an illustration, not a hard pad cap. (Federal Register notice; Final EIS; project site)

Falcon Heavy had not launched from Vandenberg before this decision. The EIS and ROD both say it has not previously launched from VSFB. Prior Vandenberg flights have been Falcon 9 from SLC-4. Falcon Heavy has flown from Kennedy LC-39A since 2018. A 2011 environmental assessment looked at Falcon Heavy from SLC-4, but that was never carried out. (Final EIS)

The cadence number does not itself issue an FAA license. The FAA was a cooperating agency and signed its own Record of Decision on 16 October 2025, adopting the EIS so it can support licenses, renewals, and modifications within the analyzed scope, plus related airspace closures. The FAA ROD states that SpaceX still must obtain a license to operate from SLC-6 and to raise the SLC-4 cadence, and that finishing the environmental review does not guarantee a license. Safety, risk, and financial-responsibility requirements in 14 CFR parts 400–450 still apply. Space Launch Delta 30 also keeps authority to approve individual launches, so NEPA completion does not approve every flight. (FAA ROD; FAA Falcon Program page)

Judge: The answer covers the core and required facts. It does not mention the FAA ROD's combined-increase statement, the absence of a 105 total, no SLC-4 modification, the new

> hangar, the two landing zones, or license conditions, all of which are context facts only.

No. The 100 is a combined annual cap, not 100 Falcon 9s from SLC-4 with Falcon Heavy added on top.

The Department of the Air Force's Oct. 10, 2025 Record of Decision raises the cadence from 50 Falcon 9 launches per year at SLC-4 to up to 100 Falcon 9 and Falcon Heavy launches per year at SLC-4 and SLC-6 combined. Falcon Heavy is inside that 100. Sources: Vandenberg notice and the Federal Register notice.

The same decision describes up to five Falcon Heavy launches and landings per year, from and at SLC-6 only. It states Falcon Heavy had not previously launched from Vandenberg. The Final EIS uses the same figures: a maximum of five Falcon Heavy launches per year from SLC-6, and no prior Vandenberg Falcon Heavy launch. Source: Final EIS and project site.

The number itself does not issue the FAA license. The DAF decision authorizes base and range changes. FAA licensing is a separate action: the FAA was a cooperating agency, and the project site says it issued its own Record of Decision on Oct. 16, 2025. Earlier DAF notices said completing the environmental review does not guarantee an FAA vehicle-operator license; safety, risk, and indemnification requirements still apply. I could not retrieve the FAA ROD PDF, so I cannot quote its exact licensing language. Sources: Vandenberg notice, FAA Falcon Program page, and Draft EIS notice.

> **Judge:** All core facts are correct. Missing are the required fact that the FAA ROD says completing the environmental review does not guarantee a license (12) and several context facts: the FAA ROD's combined increase, no SLC-4 modification, the new hangar, the two landing zones, safety and indemnification requirements, and license conditions.

No. The 100 is not 100 Falcon 9 launches from SLC-4 with Falcon Heavy added on top.

The Department of the Air Force Record of Decision, signed October 10, 2025, raises the cadence from 50 Falcon 9 launches per year at SLC-4 to up to 100 launches per year for Falcon 9 and Falcon Heavy at SLC-4 and SLC-6 combined. Falcon Heavy is inside that 100, not extra. Source: Federal Register notice (FR Doc. 2025-22193) and the Vandenberg Space Force Base notice.

Falcon Heavy count. The same decision says Falcon Heavy would launch and land up to five times per year from and at SLC-6. It does not assign those five to SLC-4.

Had Falcon Heavy launched from Vandenberg before? No. The ROD states Falcon Heavy "has not previously launched from VSFB." Prior Falcon Heavy flights were from Florida (LC-39A), not Vandenberg.

Does the number itself issue the FAA license? No. The 100 is the cadence in the DAF's NEPA Record of Decision authorizing range and pad changes. The FAA was a cooperating agency and issued its own ROD in October 2025; that environmental finding is separate from issuing or modifying a vehicle operator license. The DAF notice says the EIS analyzes "the FAA's licensing" of Falcon operations at VSFB, and that the FAA "will issue an independent ROD." FAA's program page describes the October 2025 document as the EIS/ROD for the cadence increase, not as the license itself: FAA SpaceX Falcon Program.

Secondary reports (not the ROD text) split the 100 as about 70 Falcon 9 from SLC-4 and about 25 Falcon 9 plus 5 Falcon Heavy from SLC-6. Those pad splits are not in the Federal Register notice, which only states the combined cap and the five Heavy launches at SLC-6.

> **Judge:** Answer covers all core and required facts. It omits context facts 8, 9, 10 and 14 (no SLC-4 modification, the new hangar, the two landing zones, license conditions). The example schedule of 70/25/5 is not visible in the DATA window but is extra detail and does not contradict any fact.

No. The 100 is a combined annual cap, not 100 Falcon 9 launches from SLC-4 with Falcon Heavy added on top.

The Department of the Air Force Record of Decision (signed October 10, 2025) and the FAA's adoption of that EIS raise the cadence from 50 Falcon 9 launches per year at SLC-4 to up to 100 Falcon 9 and Falcon Heavy launches per year at SLC-4 and SLC-6 combined. Falcon 9 may fly from either pad; the split is set by the manifest and Western Range operations, not fixed as 100 from SLC-4. An example schedule in the Final EIS reaches 100 as 70 Falcon 9 from SLC-4, 25 Falcon 9 from SLC-6, and 5 Falcon Heavy.

Falcon Heavy: up to five launches per year, from and landing at SLC-6 only. Those five are inside the 100, not extra. The decision states Falcon Heavy had not previously launched from Vandenberg.

The number does not issue the FAA license. The FAA ROD says the environmental review supports licenses (and renewals or modifications) only within the analyzed scope, and that finishing NEPA does not guarantee a license. SpaceX still must meet FAA safety, risk, and indemnification requirements under 14 CFR parts 400–450. The DAF also notes that Space Launch Delta 30 keeps final authority to approve individual launches.

PROMPT 64 · REGULATION · FACTS AS OF 2026-10-08

The October 2025 Vandenberg record of decision studies a higher Falcon cadence. Does it find that the change causes no environmental harm? What unavoidable impacts does it name, and when do the mitigation measures bind SpaceX?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FAA Record of Decision, October 2025, adopting the environmental impact statement for changes to the Falcon launch program at Vandenberg Space Force Base.

This is an environmental impact statement and a record of decision. It is not a finding of no significant impact, and it does not find that the cadence increase causes no environmental harm.

The record states there would be unavoidable impacts to terrestrial biological resources, from vegetation clearing, and to Section 4(f) resources, from Jalama Beach closures. It also states that all practicable means to minimize harm to those resources were considered. Do not invent how many days the beach would close, or how many acres would be cleared. This extract does not state those figures.

Mitigation measures are described as measures SpaceX will be required to implement as a condition of a license, to avoid or minimize environmental harm. They bind through a license. The record of decision does not itself issue that license, so the measures are not already in force as license conditions merely because the record was signed.

Wrong: the record finds no environmental harm. Wrong: the Jalama Beach and vegetation measures are already license conditions because the record of decision exists.

Exa ✗ Wrong — Incomplete list — 1.1m · $0.346 · 13 searches · 3 fetches

Judge: The answer never says this is an EIS plus ROD rather than a FONSI (fact 2), and it does not note that the extract gives no closure-day or acreage figures (fact 7). It does give figures such as under 20 acres and 12 launches, but these are not contradicted by the checklist.

I'll look up the October 2025 Vandenberg record of decision on the higher Falcon cadence and check what it says about environmental impacts and mitigation.The search points to both a Department of the Air Force ROD and an FAA adoption ROD. I'll read those documents for the findings on harm, unavoidable impacts, and when mitigation applies.The FAA ROD names unavoidable impacts, but the timing language on SpaceX's mitigation obligations was cut off. I'll pull that section next.No. The October 2025 FAA record of decision on the higher Falcon cadence at Vandenberg does not find that the change causes no environmental harm. It finds that all practicable means to avoid or minimize harm have been adopted, and that the analyzed impacts are not significant under FAA thresholds. The No Action Alternative is identified as environmentally preferable because it would avoid SLC-6 redevelopment and the cadence increase.

The unavoidable impacts it names are vegetation clearing (terrestrial biological resources; less than 20 acres of native vegetation) and Jalama Beach closures (Section 4(f)). Those beach evacuations are described as occasional and temporary, and not to be issued for more than 12 launches. Surf Beach and Ocean Beach Park would be closed only up to 12 times per year during landings. The FAA still concludes there would be no substantial impairment of Section 4(f) resources.

Those mitigation measures bind SpaceX as a condition of an FAA license, not by the environmental review alone. The review does not guarantee a license. The Department of the Air Force, as lead agency, assumed responsibility for implementing or monitoring SpaceX's compliance, including environmental protection measures during SLC-6 redevelopment and the cadence increase. In its October 10, 2025 ROD, the Air Force also says it will not take an impact-inducing action tied to the cadence increase until the applicable measures are fully funded and in place, and that it will adopt a mitigation plan within 90 days of that ROD.

Judge: All checklist facts are stated correctly and neither trap is asserted. The answer adds acreage and launch-count figures from the Final EIS, which does not contradict the checklist.

No. The October 2025 decisions do not find that the higher Falcon cadence causes no environmental harm. They find that harm can be avoided or minimized, and the FAA record finds no significant impacts in the categories it analyzed.

Two related records were signed that month on the same EIS. The Department of the Air Force (DAF) signed the Vandenberg record of decision on October 10, 2025. The FAA, a cooperating agency, signed its own adoption record on October 16, 2025.

What the records actually find

The DAF selected Alternative 1: up to 100 Falcon 9 and Falcon Heavy launches per year at SLC-4 and SLC-6 combined, up from 50 Falcon 9 launches at SLC-4, including up to five Falcon Heavy launches and landings a year at SLC-6 and a new hangar. It states that, by implementing the mitigation in Attachment A and the mitigation plan, it "has adopted all practicable means to avoid or minimize environmental harm." That is not a finding of no harm. It also finds no practicable alternative to construction in floodplain and wetland areas at and next to SLC-6, and says best management practices and environmental protection measures would minimize those adverse effects. (DAF ROD; Federal Register notice)

The FAA record says the same action "would not have significant impacts" on the categories it reviewed, including air quality, climate, biological resources, coastal resources, Section 4(f), hazardous materials and solid waste, cultural resources, noise, socioeconomics, and water resources. It also says the No Action Alternative is the environmentally preferable alternative, and that the mitigation is "designed to avoid or minimize environmental harm," not eliminate it. (FAA ROD, October 2025)

Unavoidable impacts named

The FAA record names two: unavoidable impacts to terrestrial biological resources from vegetation clearing, and to Section 4(f) resources from Jalama Beach

closures. It says all practicable means to minimize harm to those resources were considered. (FAA ROD)

The Final EIS, which both records rely on, says vegetation in the construction area would be removed, resulting in less than 20 acres of native vegetation, avoided to the extent feasible. It also says some impacts on Jalama Beach County Park are unavoidable because of mission requirements, but evacuations would not be issued for more than 12 launches. (Final EIS)

The DAF record does not use the word “unavoidable” for those two items. It does treat wetland and floodplain effects as impacts that cannot practicably be avoided.

When the mitigation binds SpaceX

Under the DAF record, the Air Force will not implement an impact-inducing action tied to the cadence increase until the applicable measures in Attachment A are fully funded and in place. It also committed to a mitigation plan within 90 days of the October 10 signature, identifying the actions, the responsible organization, and timing. The DAF, not SpaceX alone, is responsible for ensuring those measures are carried out, including U.S. Fish and Wildlife Service biological-opinion terms and National Marine Fisheries Service letter-of-authorization conditions. (DAF ROD)

Under the FAA record, the listed mitigation measures are conditions of an FAA license. The DAF assumed responsibility for implementing them or monitoring SpaceX’s compliance. A license is still not guaranteed by the environmental decision; safety, risk, and indemnification requirements still apply. (FAA ROD)

K Keenable search — Partly correct — Incomplete list — `3.8m · ~$0.600 · 36 searches · 3 fetches`

> **Judge:** The answer omits the unavoidable terrestrial biological impacts from vegetation clearing, and it never says the measures bind SpaceX as a condition of an FAA license that the DAF ROD does not itself issue. It instead frames the binding as a DAF precondition tied to a 90-day plan and Attachment A, claims the DATA window does not show, and says the FAA decision was unavailable.

No. The October 10, 2025 Department of the Air Force record of decision does not find that the higher Falcon cadence causes no environmental harm. It approves the increase while requiring mitigation and recording impacts that cannot be avoided.

The decision selects Alternative 1: up to 100 Falcon 9 and Falcon Heavy launches per year combined at SLC-4 and SLC-6, including up to five Falcon Heavy launches per year from SLC-6, a new hangar, and two landing zones about 850 feet south of SLC-6. The signed ROD is written to state whether all practicable means to avoid or minimize environmental harm were adopted, and it includes a Finding of No Practicable Alternative for wetland and floodplain impacts. It finds no practicable alternative to carrying out the action at and next to SLC-6. (signed ROD)

Unavoidable impacts named in the ROD and the Final EIS it adopts:

- **Jalama Beach County Park:** some access impacts are unavoidable because of mission requirements. They come from temporary public evacuations during launches and landings; evacuations would not be issued for more than 12 launches. Surf Beach and Santa Barbara County Ocean Beach Park would be closed no more than 12 times a year. (Final EIS)
- **Wetlands and floodplains:** a seep south of N Road would be filled for the landing zones. The EIS says alternatives that avoid that wetland impact are not feasible. With best management practices, it anticipates no significant wetland impacts, but the fill itself is not avoided. (Final EIS; ROD)
- **Listed species and noise:** the ROD requires compliance with the U.S. Fish and Wildlife Service biological opinion specifically to monitor and mitigate potential adverse effects, so it does not treat those effects as nonexistent. Rocket noise and sonic booms are the main biological pathway. The EIS also says launch and landing noise may annoy building occupants in and around Lompoc, while concluding that community-noise thresholds for a significant impact would not be exceeded. (ROD; Final EIS)

The mitigation condition is a precondition, not a later cleanup. The Air Force must prepare a mitigation plan within 90 days of the October 10 signature. It will not carry out an impact-inducing action tied to the cadence increase until the applicable measures in Attachment A are fully funded and in place. Those measures include the Fish and Wildlife Service biological opinion and the National Marine Fisheries Service letter of authorization and 2023–2024 letters of concurrence. (ROD; Noozhawk summary of the same sentence)

The Federal Aviation Administration issued its own decision on October 16, 2025. That document was not available in readable form here, so this answer does not attribute the Air Force timing language to the FAA license. (project site)

K Keenable SELECT — Partly correct — Incomplete list — `7.4m · ~$0.402 · 23 searches · 5 fetches`

> **Judge:** The answer never says the measures bind SpaceX as a condition of a license (facts 8 and 9), and omits the 'all practicable means' statement (fact 6). It treats the document as an Air Force ROD with the FAA only a cooperating agency, which conflicts with fact 1's FAA ROD framing.

No. It does not find that the higher cadence causes no environmental harm. The October 10, 2025 Department of the Air Force Record of Decision authorizes the increase—from 50 Falcon 9 launches a year at SLC-4 to up to 100 Falcon 9 and Falcon Heavy launches a year at SLC-4 and SLC-6 combined, including up to five Falcon Heavy launches and landings at SLC-6—and selects Alternative 1 (a new hangar rather than modifying the existing horizontal integration facility). The Federal Register notice of that ROD does not itself make a “no harm” finding. It rests the decision on the Final EIS. The Final EIS finds no significant impact on the resource areas it studied, and for terrestrial biology that conclusion depends on mitigation being carried out. It still names real adverse effects.

Unavoidable impacts it names:

- Occasional, temporary public evacuations of Jalama Beach County Park during launches and landings. The EIS says some of those impacts are unavoidable because of mission requirements, and caps evacuations at no more than 12 launches.
- A seep south of N Road that would be filled for the landing zones and related infrastructure. The EIS says siting alternatives that avoid that wetland impact are not feasible and would not meet the purpose and need.
- Removal of native vegetation in the construction area, including an estimated 19.2 acres of permanent impact on native vegetation alliances.
- Launch-engine noise and sonic booms heard around the base, including noise-induced structural vibration that may annoy occupants in and around Lompoc. The EIS treats the cumulative landing sonic-boom level as below the FAA land-use threshold (a maximum estimated 58.0 dBC CDNL, under the 60 dBC threshold), not as zero impact.

Mitigation binds as part of implementing the action, not on the October 10 signature date. Environmental protection measures are to be carried out during construction and operations. Some duties attach before work starts: the contractor must prepare a hazardous-material spill prevention and response plan before the action is implemented, and drainage disturbed in the dry season must be restored before winter rains. SpaceX must obtain and comply with permits before the covered work—Santa Barbara County Air Pollution Control District authorization, NPDES Construction General Permit coverage and a stormwater pollution prevention plan, and an NPDES permit from the Central Coast Regional Water Quality Control Board for SLC-6 operations. The U.S. Fish and Wildlife Service Biological Opinion of August 21, 2025, including its reasonable and prudent measures and terms and conditions, "would be implemented." The Air Force must comply with the conditions of the NMFS marine-mammal Letter of Authorization. The FAA was a cooperating agency and issues its own licensing decision; it is not bound by the Air Force ROD.

Grok native ✓ Correct ✓ ✓ ✓ ✓ 51.8s · $0.229 · 13 searches · 5 fetches

> **Judge:** Fact 7 is missing: the answer does not say the extract lacks closure-day and acreage figures, and instead asserts 'less than 20 acres', which does not appear in the DATA window. All core and required facts are correct and neither trap is asserted.

No. The October 2025 FAA record of decision adopting the Vandenberg Falcon Launch EIS does not find that the higher cadence causes no environmental harm. It finds that all practicable means to avoid or minimize harm have been adopted, and that the impacts it reviewed would not be significant. It still names unavoidable impacts.

Those unavoidable impacts are vegetation clearing (terrestrial biological resources) and Jalama Beach closures (Department of Transportation Act Section 4(f) resources). The ROD says evacuations of Jalama Beach County Park would not be issued for more than 12 launches, and that those temporary closures would not substantially impair the park. It also says less than 20 acres of native vegetation would be removed.

The mitigation measures bind SpaceX as a condition of an FAA license for Falcon 9 and Falcon Heavy operations at SLC-6 and the higher cadence at SLC-4, including renewals and modifications within the scope of the EIS. Signing the ROD does not itself issue that license. The Department of the Air Force assumed responsibility for implementing the measures or monitoring SpaceX's compliance. In its own ROD, signed October 10, 2025, the Air Force also said it will not carry out an impact-inducing action tied to the cadence increase until the applicable measures in Attachment A are fully funded and in place.

PROMPT 67 · MULTI-HOP · FACTS AS OF 2026-10-08

After the insurance policy on a licensed Falcon launch expires, does the United States still pay only the layer above that policy? And did the rule that names a space flight participant as an additional insured expire on 30 September 2025?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

14 CFR part 440 and 51 USC 50914, 2024 edition, as amended by Public Law 118-159.

While the policy is in force, third-party claims for a licensed activity that exceed the insurance required under 440.9(c), and that do not exceed $1,500,000,000 above that insurance, as adjusted for inflation after 1 January 1989, are payable under 51 USC 50915 and 14 CFR 440.19. That layer starts above the required insurance. It is not first-dollar coverage.

After the policy period in 14 CFR 440.11(a) expires, the United States provides for payment of claims payable under 51 USC 50915 from the first dollar of loss, up to $1,500,000,000 as adjusted for inflation after 1 January 1989. The post-policy payment is not the same layer as the payment during the policy.

For purposes of part 440, a space flight participant is not a customer.

14 CFR 440.9(b)(4), the additional-insured requirement for space flight participants, and 14 CFR 440.17(f), the licensee-participant reciprocal waiver, each say they cease to be effective on 30 September 2025 unless public law modifies the limitation in 51 USC 50914.

51 USC 50914(a)(4)(E) includes space flight participants among the persons the insurance must protect. Subsection (a)(5) says that subparagraph ceases to be effective on 30 September 2028. Subsection (b)(1) makes space flight participants applicable parties to the statutory reciprocal waiver, and (b)(1)(C) says that clause ceases to be effective on 30 September 2028. The 2024 code notes that Public Law 118-159 replaced 30 September 2025 with 30 September 2028 in both places. The CFR's printed 2025 date is the date that governs only if Congress had not modified 50914. Congress did modify those two dates.

Wrong: after the policy expires the government still pays only above the old insurance limit. Wrong: participant additional-insured status ended on 30 September 2025 because the CFR still prints that date. Do not invent the inflation-adjusted dollar amount. The texts state the $1,500,000,000 base and the adjustment. They do not compute it.

Sources: https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-440 and https://www.govinfo.gov/content/pkg/USCODE-2024-title51/html/USCODE-2024-title51-subtitleV-chap509-sec50914.htm

Exa · Partly correct · Incomplete list · 1.4m · $0.164 · 7 searches · 3 fetches

Judge: Both main conclusions are right. The answer never mentions 14 CFR 440.17(f) and its 2025 sunset (fact 8), and it never says space flight participants are not customers (fact 7). It also omits the 50914(b)(1)(C) reciprocal-waiver date (fact 11) and that Public Law 118-159 changed the date in both places (fact 12); it covers only (a)(5).

No. After the required policy period ends, the United States does not pay only the layer above that policy. And no, the space-flight-participant additional-insured requirement did not expire on 30 September 2025.

After the policy expires. For an FAA-licensed launch (including a licensed Falcon launch; the rule is not Falcon-specific), required liability insurance attaches at the start of the licensed launch and, for an orbital launch, lasts until the later of 30 days after payload separation (or attempted separation) or 30 days from ignition, unless the license order sets a different period. 14 CFR 440.11(a).

While that insurance is in force, U.S. payment of successful third-party claims is only the excess over the required insurance amount, and not more than $1.5 billion (inflation-adjusted after 1 January 1989) above that amount. 14 CFR 440.19(a). Once that policy period expires, the same section says the United States shall provide for payment of claims payable under 51 U.S.C. 50915 **from the first dollar of loss** up to $1.5 billion (inflation-adjusted)—not only the layer above the expired policy. 14 CFR 440.19(d).

That payment is not automatic. It is only to the extent provided in an appropriation or other legislative authority, and it is subject to notice, a possible U.S. role in the defense, FAA approval of any settlement paid by the United States, and congressional approval of a compensation plan. 14 CFR 440.19(a), (e); 51 U.S.C. 50915. The statute's general excess-only wording in §50915(a)(1) is what the regulation implements for the post-expiration, first-dollar case.

Space flight participant as an additional insured. 14 CFR 440.9(b)(4) still says that naming space flight participants as additional insureds "shall cease to be effective on September 30, 2025, **unless public law modifies the limitation in section 50914.**" That condition was met. Public Law 118-159, §5702(2) (23 December 2024) changed the sunset in 51 U.S.C. 50914(a)(5) from 30 September 2025 to **30 September 2028.** Current law still requires the policy to protect space flight participants as additional insureds until that later date. The eCFR text of §440.9(b)(4) has not been rewritten to show 2028, but its own "unless" clause applies.

Judge: Fact 7 (a space flight participant is not a customer) is never stated. Fact 8 is only half covered: the answer gives the 440.9(b)(4) sunset but never mentions 440.17(f), the licensee-participant reciprocal waiver.

No. After the required policy period ends, the United States does not pay only the layer above that policy.

For an FAA-licensed launch—including a licensed Falcon launch—the excess-only rule applies while the required insurance is in force. Under 51 U.S.C. § 50915(a) and 14 CFR § 440.19(a), the United States pays successful covered third-party claims only to the extent they exceed the required insurance (or other financial responsibility) and only up to $1.5 billion, adjusted for inflation after January 1, 1989, above that amount. Payment is also limited to amounts provided in advance by an appropriation or other legislative authority, and it is subject to notice, a government opportunity to participate in the defense, approval of any government-funded settlement, and congressional approval of a compensation plan.

Once the policy period in 14 CFR § 440.11(a) expires, 14 CFR § 440.19(d) changes that structure: the United States is to pay claims payable under § 50915 **from the first dollar of loss** up to $1.5 billion (inflation-adjusted), not only the layer above the expired policy. Those same procedural and appropriation conditions still apply. Section 50915 covers licenses for which a complete, valid application was received by September 30, 2028; it does not apply to permits.

No. The additional-insured rule for space flight participants did not expire on September 30, 2025.

51 U.S.C. § 50914(a)(4)(E) requires the liability insurance, or other demonstration of financial responsibility, to protect space flight participants as additional insureds. The sunset in § 50914(a)(5) was originally September 30, 2025. Public Law 118-159, § 5702(2) (December 23, 2024) moved that date to **September 30, 2028.** The same law moved the related cross-waiver and indemnification sunsets for space flight participants to that date as well.

The FAA rule, 14 CFR § 440.9(b)(4), still recites September 30, 2025, but only "unless public law modifies the limitation in section 50914." Congress did modify that limitation, so the regulatory sunset condition was not met. The eCFR text has not been rewritten to say 2028.

> **Judge:** Missing: the 14 CFR 440.17(f) waiver sunset (fact 8, only 440.9(b)(4) mentioned), the space-flight-participant-not-a-customer point (7), the authority edition framing (3), and the note that no adjusted dollar figure is computed (14, though the answer did not compute one). No traps asserted.

No. After the required policy period ends, the United States does not pay only the layer above that insurance. And no, the space-flight-participant additional-insured rule did not expire on 30 September 2025.

After the policy expires. For an FAA-licensed launch or reentry—including a licensed Falcon launch; the rule is not vehicle-specific—14 CFR § 440.19(a) limits U.S. payment, while the required insurance is in force, to successful covered third-party claims that exceed the required insurance and are not more than $1.5 billion (plus inflation after 1 January 1989) above that amount. Section 440.19(d) changes that once the policy period in § 440.11(a) expires: the United States is to pay claims payable under 51 U.S.C. § 50915 **from the first dollar of loss** up to that same $1.5 billion inflation-adjusted cap, not only the excess over the expired policy. Payment is still conditional: it depends on an appropriation or other legislative authority, notice, a chance for the government to participate in the defense, FAA approval of any settlement it pays, and congressional approval of a compensation plan. See 14 CFR § 440.19 and 51 U.S.C. § 50915.

Space flight participant as an additional insured. 51 U.S.C. § 50914(a)(4)(E) requires the licensee's liability insurance (or other financial responsibility) to protect space flight participants. Section 50914(a)(5) now says that requirement ceases to be effective on **30 September 2028**, not 2025. Pub. L. 118-159, § 5702(2) (23 December 2024) substituted "September 30, 2028" for "September 30, 2025." The same extension applies to the participant cross-waiver sunset in § 50914(b)(1)(C) and to treating a space flight participant as a person for whom excess claims may be paid under § 50915(a)(3)(B). See 51 U.S.C. § 50914 and the 2024 amendment note in the U.S. Code compilation.

The FAA rule, 14 CFR § 440.9(b)(4), still prints "September 30, 2025," but only "unless public law modifies the limitation in section 50914." That public-law condition was met by the 2024 extension, so the regulatory sunset did not take effect on that date. The regulation text itself has not been updated to 2028.

Keenable SELECT · Partly correct · Incomplete list · 6.0m · ~$0.144 · 6 searches · 5 fetches

> **Judge:** Fact 8 is only partly covered: the answer quotes 440.9(b)(4) but never mentions 440.17(f), so it is marked missing. Facts 3 (Public Law 118-159 and the 2024 edition framing) and 7 (a space flight participant is not a customer) are not stated explicitly.

No. After the required policy period on a licensed launch ends, the United States does not pay only the layer above that policy. And no, the space-flight-participant additional-insured rule did not expire on 30 September 2025.

After the policy expires. While the policy required by 14 CFR 440.11(a) is in force, 14 CFR 440.19(a) limits U.S. payment to successful covered third-party claims that exceed the required insurance and are not more than $1.5 billion (inflation-adjusted after 1 January 1989) above that amount. That is the excess layer. 14 CFR 440.19(d) then changes the rule: "Upon the expiration of the policy period prescribed in accordance with § 440.11(a), the United States shall provide for payment of claims that are payable under 51 U.S.C. 50915 from the first dollar of loss up to $1,500,000,000 (as adjusted for inflation occurring after January 1, 1989)." https://www.ecfr.gov/current/title-14/section-440.19

For an orbital launch, that policy period runs until completion of licensed activities at the site and until the later of 30 days after payload separation (or attempted separation) or 30 days from ignition. https://www.ecfr.gov/current/title-14/section-440.11 The same first-dollar text appears in the current Part 440 compilation. https://www.ecfr.gov/current/title-14/part-440 Payment is still not automatic: it depends on appropriation or other legislative authority, notice, a chance for the government to participate in the defense, FAA approval of any settlement it pays, and congressional approval of a compensation plan. https://www.ecfr.gov/current/title-14/section-440.19

The statute's general excess formula is still written as claims "more than the amount of insurance or demonstration of financial responsibility required." https://www.govinfo.gov/content/pkg/USCODE-2024-title51/html/USCODE-2024-title51-subtitleV-chap509-sec50915.htm The first-dollar shift after expiration is the regulatory rule, not a separate sentence in § 50915. Nothing in these sources makes the rule Falcon-specific; it applies to licensed launch and reentry activity.

Space flight participant as additional insured. That requirement did not expire on 30 September 2025. Current 51 U.S.C. § 50914(a)(4)(E) still requires the insurance or financial-responsibility demonstration to protect space flight participants, and § 50914(a)(5) says that subparagraph "ceases to be effective September 30, 2028." The participant cross-waiver in § 50914(b)(1)(B)(iii) has the same date. The Office of the Law Revision Counsel text is the law in effect on 19 May 2026. https://uscode.house.gov/view.xhtml?edition=prelim&req=granuleid:USC-prelim-title51-section50914&num=0

The current eCFR has not caught up. 14 CFR 440.9(b)(4) still says the duty to name space flight participants as additional insureds "shall cease to be effective on September 30, 2025, unless public law modifies the limitation in section 50914." https://www.ecfr.gov/current/title-14/section-440.9 That clause is conditional, and public law did modify the limitation: the notes to § 50914 record that Pub. L. 118–159, § 5702(2), substituted "September 30, 2028" for "September 30, 2025." https://uscode.house.gov/view.xhtml?edition=prelim&req=granuleid:USC-prelim-title51-section50914&num=0 I did not find an FAA amendment that has rewritten the 2025 date in Part 440, so the regulation text and the statute currently disagree. The controlling date is the statute's 30 September 2028.

Grok native · Partly correct · Incomplete list · 47.2s · $0.289 · 6 searches · 5 fetches

> **Judge:** The answer reaches both conclusions correctly. It omits the 440.17(f) reciprocal-waiver sunset (fact 8), the (b)(1)(C) waiver date (fact 11), and that the statute replaced the date

> in both places (fact 12). It also never says a space flight participant is not a customer (fact 7).

No. After the required policy period ends, the United States does not pay only the layer above that policy.

For a licensed launch, including a licensed Falcon launch, third-party liability insurance must stay in force through the period in 14 CFR 440.11(a). For an orbital launch, that is until licensed launch activities at the site are complete and until the later of 30 days after payload separation (or attempted separation) or 30 days from ignition. While that insurance is in force, U.S. payment is only for successful covered third-party claims above the required insurance amount, and not more than $1.5 billion (adjusted for inflation after January 1, 1989) above that amount, and only to the extent provided in an appropriation or other legislative authority. See 14 CFR 440.19(a) and 51 U.S.C. 50915(a).

After that policy period expires, 14 CFR 440.19(d) instead requires the United States to provide for payment of claims payable under 51 U.S.C. 50915 from the first dollar of loss up to $1.5 billion (inflation-adjusted). That first-dollar shift is in the regulation; 51 U.S.C. 50915 itself still describes payment as claims above the required insurance amount and still conditions payment on an appropriation or other legislative authority. The rule is not Falcon-specific.

Sources: https://www.law.cornell.edu/cfr/text/14/440.19 ; https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-440 ; https://www.law.cornell.edu/uscode/text/51/50915

No. The rule naming a space flight participant as an additional insured did not expire on 30 September 2025.

51 U.S.C. 50914(a)(4)(E) still requires the insurance or financial-responsibility demonstration to protect space flight participants. The sunset in § 50914(a)(5) is now 30 September 2028. Public Law 118-159, § 5702(2) (23 December 2024) replaced “September 30, 2025” with “September 30, 2028.”

14 CFR 440.9(b)(4) still names space flight participants as additional insureds. Its text says that paragraph ceases to be effective on 30 September 2025 unless public law modifies the limitation in 51 U.S.C. 50914. That condition was met by the 2024 extension, so the paragraph did not sunset on that date. The CFR text still shows the 2025 date plus the “unless” clause; it has not been rewritten to 2028.

> **Judge:** Missing: the 14 CFR 440.17(f) waiver sunset (fact 8, only 440.9(b)(4) mentioned), the space-flight-participant-not-a-customer point (7), the authority edition framing (3), and the note that no adjusted dollar figure is computed (14, though the answer did not compute one). No traps asserted.

No. After the required policy period ends, the United States does not pay only the layer above that insurance. And no, the space-flight-participant additional-insured rule did not expire on 30 September 2025.

After the policy expires. For an FAA-licensed launch or reentry—including a licensed Falcon launch; the rule is not vehicle-specific—14 CFR § 440.19(a) limits U.S. payment, while the required insurance is in force, to successful covered third-party claims that exceed the required insurance and are not more than $1.5 billion (plus inflation after 1 January 1989) above that amount. Section 440.19(d) changes that once the policy period in § 440.11(a) expires: the United States is to pay claims payable under 51 U.S.C. § 50915 from the first dollar of loss up to that same $1.5 billion inflation-adjusted cap, not only the excess over the expired policy. Payment is still conditional: it depends on an appropriation or other legislative authority, notice, a chance for the government to participate in the defense, FAA approval of any settlement it pays, and congressional approval of a compensation plan. See 14 CFR § 440.19 and 51 U.S.C. § 50915.

Space flight participant as an additional insured. 51 U.S.C. § 50914(a)(4)(E) requires the licensee’s liability insurance (or other financial responsibility) to protect space flight participants. Section 50914(a)(5) now says that requirement ceases to be effective on 30 September 2028, not 2025. Pub. L. 118-159, § 5702(2) (23 December 2024) substituted “September 30, 2028” for “September 30, 2025.” The same extension applies to the participant cross-waiver sunset in § 50914(b)(1)(C) and to treating a space flight participant as a person for whom excess claims may be paid under § 50915(a)(3)(B). See 51 U.S.C. § 50914 and the 2024 amendment note in the U.S. Code compilation.

The FAA rule, 14 CFR § 440.9(b)(4), still prints “September 30, 2025,” but only “unless public law modifies the limitation in section 50914.” That public-law condition was met by the 2024 extension, so the regulatory sunset did not take effect on that date. The regulation text itself has not been updated to 2028.

PROMPT 68 · REGULATION · FACTS AS OF 2026-10-08

If third-party claims from a licensed Falcon launch exceed the required insurance, does the United States automatically pay the next $1.5 billion? Does that statute cover an experimental permit, or a loss caused by the licensee's willful misconduct?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

51 USC 50915, text in effect on 15 May 2026. The Secretary of Transportation provides for payment of a successful third-party claim only to the extent provided in advance in an appropriation law, or to the extent additional legislative authority is enacted for a compensation plan submitted under subsection (d). It is not an automatic payment.

Payment is only for the amount of successful claims from one launch or reentry that is more than the insurance or demonstration of financial responsibility required under 50914(a)(1)(A), and not more than $1,500,000,000, plus amounts necessary to reflect inflation after 1 January 1989, above that insurance. Do not compute the inflation-adjusted dollar figure. The statute states the base and the adjustment. It does not multiply it out.

The Secretary may not pay a part of a claim for death, bodily injury, or property damage that results from willful misconduct by the licensee or transferee. If a usual policy exclusion, as the Secretary decides that phrase, leaves a successful third-party claim uninsured, the Secretary may pay the excluded claim without regard to the limitation in 50914(a)(1).

Before a payment: the government must be notified of the claim or the civil action, the government must be given an opportunity to assist in the defense, and the Secretary must approve any part of a settlement to be paid from government appropriations. The Secretary may withhold a payment certified as not reasonable. An amount finally decided by a court of competent jurisdiction is deemed reasonable.

If a court determination indicates that liability for one launch or reentry may exceed the required insurance, the President, on the Secretary's recommendation, submits a compensation plan to Congress not later than 90 days after that determination. For a single event or incident, that plan may not be for more than $1,500,000,000. That sentence does not repeat the inflation adjustment stated in subsection (a).

Subsection (f): this section applies to a license issued or transferred under the chapter for which the Secretary receives a complete and valid application not later than 30 September 2028. It does not apply to permits.

Wrong: the $1.5 billion is paid automatically once claims exceed the insurance. Wrong: an experimental permit gets the same payment. Wrong: willful misconduct by the licensee is covered.

Source: https://uscode.house.gov/view.xhtml?req=granuleid:USC-prelim-title51-section50915&num=0&edition=prelim

Exa ✓ Correct ✓ ✓ ✓ ✓ 16.3s · $0.076 · 4 searches · 1 fetches

Judge: The answer gets every core fact right. It omits several context facts: the usual-exclusion payment (7), withholding of unreasonable payments (11), the court-determined amount being deemed reasonable (12), and the compensation plan timing and cap (13, 14).

No. Under 51 U.S.C. § 50915, the United States does not automatically pay the next tier of third-party claims from a licensed launch.

Payment is available only to the extent provided in advance in an appropriation law, or to the extent Congress enacts additional legislative authority for a compensation plan submitted under § 50915(d). Eligible claims are those above the insurance or financial responsibility required by § 50914(a)(1)(A), and not more than $1,500,000,000 (plus inflation after January 1, 1989) above that amount. Before payment, the government must get notice and a chance to participate in the defense, and the Secretary of Transportation must approve any settlement paid from government appropriations. The section applies only to licenses for which a complete, valid application is received by September 30, 2028.

The same statute does not cover an experimental permit: § 50915(f) states, “This section does not apply to permits.” It also does not cover willful misconduct: § 50915(a)(2) says the Secretary may not pay any part of a claim for death, bodily injury, or property damage or loss that results from willful misconduct by the licensee or transferee.

Parallel ✓ Correct ✓ ✓ ✓ ✓ 45.0s · $0.083 · 5 searches · 2 fetches

Judge: Facts 7, 11, 12, 13 and 14 (usual-exclusion payment, withholding of unreasonable payments, court-determined reasonableness, the 90-day compensation plan and its $1.5B cap) are not stated; these are context-only and the core facts are all correct.

No. Under 51 U.S.C. § 50915, the United States does not automatically pay the next $1.5 billion of third-party claims from a licensed launch.

Payment is available only to the extent Congress has already appropriated the money, or enacts further authority to pay claims under a compensation plan the President submits after the Secretary of Transportation surveys the damage and reports to Congress. Even then, the government pays only successful third-party claims (including reasonable litigation or settlement expenses) above the insurance or financial responsibility required by § 50914(a)(1)(A), and only up to **$1,500,000,000 plus inflation after January 1, 1989**—not a flat $1.5 billion. Before payment, the government must get notice and a chance to participate in the defense, and the Secretary must approve any settlement paid from government funds. The section currently applies only to a license for which the Secretary received a complete, valid application by September 30, 2028.

It does not cover an experimental permit. Section 50915(f) states: “This section does not apply to permits.”

It also does not cover a loss caused by the licensee’s willful misconduct. Section 50915(a)(2) says the Secretary may not pay any part of a claim for death, bodily injury, or property damage or loss that results from willful misconduct by the licensee or transferee.

> **Judge:** All core facts are correct. Missing only context facts: the 15 May 2026 reference date, the usual-exclusion payment, reasonableness and withholding, court-decided amounts, and the compensation plan details.

No. The United States does not automatically pay the next $1.5 billion.

Under 51 U.S.C. § 50915, the Secretary of Transportation may pay successful third-party claims for death, bodily injury, or property damage from an activity under a chapter 509 license only to the extent those claims exceed the insurance or financial responsibility required by § 50914(a)(1)(A), and only up to $1,500,000,000 (plus inflation after January 1, 1989) above that amount. Payment is authorized only "to the extent provided in advance in an appropriation law" or under additional legislative authority for a compensation plan submitted to Congress. Notice to the government, an opportunity to participate in the defense, and Secretarial approval of any government-funded settlement are also required. https://uscode.house.gov/view.xhtml?req=granuleid:USC-prelim-title51-section50915&num=0&edition=prelim

That statute does not cover an experimental permit. Section 50915(f) says it applies only to a license for which the Secretary received a complete and valid application by September 30, 2028, and that "[t]his section does not apply to permits." https://www.law.cornell.edu/uscode/text/51/50915

It also does not cover a loss caused by the licensee's willful misconduct. Section 50915(a)(2) says the Secretary may not pay any part of a claim for death, bodily injury, or property damage or loss that results from willful misconduct by the licensee or transferee. https://uscode.house.gov/view.xhtml?req=granuleid:USC-prelim-title51-section50915&num=0&edition=prelim

> **Judge:** Fact 5 is contradicted: the answer cites a secondary-source ~$3.4 billion inflation-adjusted figure, though it says the statute itself doesn't state one. Facts 7-14 (uninsured-exclusion payment, pre-payment conditions, reasonableness, compensation plan details) were not mentioned.

No. The United States does not automatically pay the next $1.5 billion, and that statute covers neither an experimental permit nor a loss caused by the licensee's willful misconduct.

Payment is conditional, not automatic. Under 51 U.S.C. § 50915(a), the Secretary of Transportation "shall" pay a successful third-party claim for death, bodily injury, or property damage from an activity under a chapter 509 license only "[t]o the extent provided in advance in an appropriation law," or if Congress enacts further authority to pay claims in a compensation plan under subsection (d). Payment is also limited to the band above the insurance (or demonstrated financial responsibility) required by § 50914(a)(1)(A), and not more than **$1,500,000,000 plus inflation after January 1, 1989**, above that amount. The $1.5 billion figure in the statute is the 1989 base, not a current automatic payout. One secondary summary puts the inflation-adjusted ceiling near $3.4 billion; the statute itself does not state a current dollar figure (policyrisk.com).

A licensed Falcon launch is in the class the section can cover: § 50915 applies to a license issued or transferred under chapter 509 for which a complete, valid application is received by **September 30, 2028**. It is not Falcon-specific.

Experimental permit: no. Section 50915(f) says: "This section does not apply to permits."

Willful misconduct: no. Section 50915(a)(2) says the Secretary may not pay any part of a claim for death, bodily injury, or property damage or loss that results from willful misconduct by the licensee or transferee.

> **Judge:** All core facts are correct. The answer omits the context facts on the usual-exclusion payment, pre-payment conditions, reasonableness, the compensation plan, and the as-in-effect date; none of these is contradicted.

No. The United States does not automatically pay the next $1.5 billion, and that statute does not cover an experimental permit or a loss caused by the licensee's willful misconduct.

For a launch or reentry under a chapter 509 license, 51 U.S.C. § 50915(a)(1) authorizes the Secretary of Transportation to pay successful third-party claims for death, bodily injury, or property damage only above the insurance or financial-responsibility amount required by § 50914(a)(1)(A), and only up to **$1,500,000,000 plus inflation after January 1, 1989** above that amount. Payment is limited to "the extent provided in advance in an appropriation law" or additional legislative authority enacted for a compensation plan under § 50915(d). Congress must act; payment is not automatic. The same limit appears in 14 C.F.R. § 440.19.

Experimental permits. Section 50915(f) states: "This section does not apply to permits." FAA has also said indemnification is not available to permittees. See the FAA report to Congress.

Willful misconduct. Section 50915(a)(2) bars payment of any part of a claim if the death, injury, or property damage or loss "results from willful misconduct by the licensee or transferee."

Two further limits: the section applies only to a license for which the Secretary received a complete and valid application by September 30, 2028 (§ 50915(f)), and the government ceiling is the inflation-adjusted amount, not a flat $1.5 billion in today's dollars. A licensed Falcon launch can fall under this regime; an activity conducted only under an experimental permit cannot.

PROMPT 69 · REGULATION · FACTS AS OF 2026-10-08

A space flight participant, or a third party, wants to sue in state court for injury from a licensed Falcon launch. Does federal law allow that forum, and does the same sentence cover an experimental permit?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

51 USC 50914(g). Any claim by a third party or a space flight participant for death, bodily injury, or property damage or loss resulting from an activity carried out under the license is within the exclusive jurisdiction of the federal courts.

A state-court forum clause does not move that claim. The sentence covers a third party and a space flight participant. It does not, in this subsection, name a crew member as a separate category. It says the activity is carried out under the license. It does not say an experimental permit. Do not extend the sentence to a permit.

Wrong: the participant may sue in state court. Wrong: subsection (g) is the permit rule as well as the license rule.

Source: https://www.govinfo.gov/content/pkg/USCODE-2024-title51/html/USCODE-2024-title51-subtitleV-chap509-sec50914.htm

Exa ⊗ Wrong × × × ✓ Claim not in sources — 44.4s · $0.172 · 5 searches · 4 fetches

Judge: The answer extends the rule to experimental permits through 50906(i), which contradicts fact 6 and asserts trap 2; that provision is not in the cited sources or the DATA window. It never addresses the state-court forum clause (fact 2) or the absence of a separate crew category (fact 4).

No. Federal law does not allow a state-court forum for that claim.

Under 51 U.S.C. § 50914(g), any claim by a third party or space flight participant for death, bodily injury, or property damage or loss resulting from an activity carried out under the license is in the exclusive jurisdiction of the federal courts. A licensed Falcon launch is an activity under a launch license, so a state court is not an available forum for those injury claims. https://www.law.cornell.edu/uscode/text/51/50914

That sentence itself says only “under the license”; it does not mention experimental permits. The same rule still covers an experimental permit, because a different provision treats a permit as a license for purposes of § 50914. 51 U.S.C. § 50906(i) provides that, for purposes of § 50914 (among other sections), a permit shall be considered a license, the holder a licensee, and a vehicle operating under a permit licensed. https://www.law.cornell.edu/uscode/text/51/50906

Judge: The answer never addresses a state-court forum clause (fact 2) or the absence of a separate crew category (fact 4). It also cites § 50906(i) as treating a permit as a license for § 50914, which the DATA does not support, so it effectively extends the subsection (g) rule to permits and contradicts fact 6.

No. For a licensed launch, federal law does not allow that claim in state court.

51 U.S.C. § 50914(g) provides that any claim by a third party or space flight participant for death, bodily injury, or property damage or loss resulting from an activity carried out under the license “shall be the exclusive jurisdiction of the Federal courts.” A licensed Falcon launch is an activity under a chapter 509 license, so that exclusive-federal-forum rule applies. https://www.govinfo.gov/content/pkg/USCODE-2024-title51/pdf/USCODE-2024-title51-subtitleV-chap509-sec50914.pdf

That same sentence does not itself cover an experimental permit. It refers only to an activity “carried out under the license.” Coverage of permits comes from a different provision: 51 U.S.C. § 50906(i) says that, for purposes of § 50914 (among other sections), a permit shall be considered a license. https://www.law.cornell.edu/uscode/text/51/50906

Cited: 1. statutes.capitol.texas.gov · 2. thespacereview.com · 3. uscode.house.gov · 4. congress.gov · 5. uscode.house.gov · 6. uscode.house.gov · 7. federalregister.gov · 8. digitalcommons.unl.edu · 9. govinfo.gov · 10. uscode.house.gov · 11. uscode.house.gov · 12. govinfo.gov · 13. codes.findlaw.com · 14. govinfo.gov · 15. uscode.house.gov · 16. law.cornell.edu · 17. codes.findlaw.com · 18. govinfo.gov · 19. govinfo.gov · 20. govinfo.gov · 21. govinfo.gov · 22. govinfo.gov · 23. uscode.house.gov · 24. govinfo.gov · 25. law.cornell.edu · 26. govregs.com

K Keenable search ⊗ Wrong × × × ✓ Claim not in sources — 1.1m · ~$0.080 · 6 searches · 3 fetches

Judge: The answer says 50906(i) deems a permit a license and thereby extends 50914(g) to experimental permits, which contradicts fact 6; the DATA window does not support this. It never addresses the state-court forum clause (fact 2) or that crew members are not a separate category (fact 4).

No. Federal law does not allow that state-court forum for a qualifying injury claim from a licensed launch, and the same sentence does not itself mention experimental permits—but a separate deeming provision treats a permit as a license for that section.

Licensed launch. 51 U.S.C. § 50914(g) provides: “Any claim by a third party or space flight participant for death, bodily injury, or property damage or loss resulting from an activity carried out under the license shall be the exclusive jurisdiction of the Federal courts.” A bodily-injury claim by a space flight participant or a third party from activity under the license therefore must be brought in federal court, not state court. The sentence is limited to those claimants and those harms; it does not, by its terms, cover every dispute arising from the launch (for example, an ordinary contract claim that is not a claim for death, bodily injury, or property damage or loss).

Experimental permit. Subsection (g) says “under the license,” not “permit.” Coverage comes from 51 U.S.C. § 50906(i), which states that, for purposes of § 50914 (among other listed sections), a permit shall be considered a license, the holder a licensee, a vehicle operating under a permit licensed, and issuance of a permit licensing. That deeming rule is what extends § 50914(g) to experimental-permit activity; it is not in the jurisdiction sentence itself. (By contrast, the government excess-claims statute, § 50915(f), expressly says it “does not apply to permits.”)

K Keenable SELECT ⊗ Wrong × ✓ ✓ ✓ Incomplete list — 1.2m · ~$0.032 · 2 searches · 0 fetches

Judge: The answer does not address a state-court forum clause (fact 2) or note that the sentence names no separate crew-member category (fact 4). The core jurisdiction rule and the

> experimental permit point are correct.

No. Federal law does not allow that state-court forum for a licensed launch, and the same sentence does not cover an experimental permit.

51 U.S.C. § 50914(g) (Federal Jurisdiction) says:

> Any claim by a third party or space flight participant for death, bodily injury, or property damage or loss resulting from an activity carried out under the license shall be the exclusive jurisdiction of the Federal courts.

That sentence assigns those claims to the federal courts only. It does not leave a state-court forum open. It is limited to "an activity carried out under the license." It does not mention an experimental permit.

PROMPT 70 · REGULATION · FACTS AS OF 2026-10-08

A suborbital licensed flight is insured on the same clock as an orbital launch: coverage runs until 30 days after payload separation. Is that the rule, and when does the coverage attach?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

14 CFR 440.11. Insurance required under 440.9, or another form of financial responsibility, attaches when a licensed launch or permitted activity starts. It does not attach when the policy is merely bound.

It remains in force until completion of the licensed launch or permitted activities at a launch or reentry site.

For an orbital launch, it also remains in force until the later of 30 days after payload separation, or attempted payload separation if separation is anomalous, and 30 days from ignition of the launch vehicle.

A suborbital launch does not use that 30-day clock. Coverage remains until the later of motor impact and payload recovery, or the FAA's determination that the risk to third parties and government property from the licensed launch or permitted activity is small enough that financial responsibility is no longer necessary. That determination is made in the risk analysis conducted before launch to determine maximum probable loss, and it is specified in a license or permit order.

Financial responsibility may not be replaced, cancelled, changed, withdrawn, or otherwise modified to reduce the limits or the extent of coverage, and it may not expire by its own terms, before the time specified in a license or permit order, unless the FAA is notified at least 30 days in advance and expressly approves the modification.

Wrong: a suborbital flight is insured until 30 days after payload separation. Wrong: coverage attaches when the policy is issued, even if the launch has not started.

Source: https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-440/subpart-A/section-440.11

Exa · Partly correct · Incomplete list · 22.8s · $0.096 · 5 searches · 1 fetches

Judge: Fact 4 is missing: the answer never states that coverage does not attach when the policy is merely bound, though it correctly says attachment occurs at the start of the licensed launch or permitted activity. All other facts are correct and no trap is asserted.

No. Under FAA financial-responsibility rules, a suborbital licensed launch is not on the orbital 30-day payload-separation clock.

Attachment. Insurance required by 14 CFR § 440.9 (or another form of financial responsibility) attaches when the licensed launch or permitted activity starts. 14 CFR § 440.11(a). Under 14 CFR § 401.5, that start is:

- **License:** arrival of the launch vehicle or payload at a U.S. launch site.
- **Permit:** the first pre-flight ground operation at a U.S. launch site that is closely proximate in time to flight, entails critical steps preparatory to flight, is unique to space launch, and is hazardous enough to warrant FAA oversight.

How long it must stay in force. It must remain in effect until completion of licensed launch or permitted activities at a launch or reentry site, and then:

- **Orbital launch:** until the later of (i) 30 days after payload separation (or attempted separation if separation fails) or (ii) 30 days after ignition. § 440.11(a)(2).
- **Suborbital launch:** until the later of (i) motor impact and payload recovery or (ii) the FAA's determination—made in the pre-launch maximum-probable-loss analysis and stated in the license or permit order—that risk to third parties and Government property is small enough that financial responsibility is no longer necessary. § 440.11(a)(3).

Coverage may not be reduced or allowed to expire before the time in the license or permit order unless the FAA is notified at least 30 days ahead and expressly approves. § 440.11(b).

This is the FAA third-party and Government-property financial-responsibility requirement in 14 CFR Part 440, not a private payload policy, which is set by contract.

Parallel · Partly correct · Incomplete list · 49.1s · $0.226 · 10 searches · 5 fetches

Judge: Fact 4 is missing: the answer never states that coverage does not attach merely when the policy is bound. Every other fact is correct and neither trap is asserted.

No. Under FAA financial-responsibility rules, a suborbital licensed launch is not on the orbital 30-day payload-separation clock.

14 CFR § 440.11 requires the insurance (or other financial responsibility) in § 440.9 to attach when a licensed launch or permitted activity starts, and to stay in force:

- until licensed launch or permitted activities at a launch or reentry site are complete; and
- **for an orbital launch**, until the later of 30 days after payload separation (or attempted separation, if separation fails) or 30 days after ignition; but
- **for a suborbital launch**, until the later of motor impact and payload recovery, or the FAA's pre-launch determination—made in the maximum-probable-loss analysis and written into the license or permit order—that third-party and Government-property risk is small enough that financial responsibility is no longer needed.

That determination, not a 30-day post-separation period, is what ends the suborbital flight portion of the required coverage.

When it attaches. Section 440.11 says coverage attaches when the licensed launch or permitted activity starts. For a vehicle-operator license, **14 CFR § 450.3(b)** says launch begins when hazardous pre-flight operations that may threaten the public start at a U.S. launch site (for example, pressurizing or loading propellants, work on a fueled vehicle, or transferring energy to initiate flight). It does not include the safe, dormant period between the end of the previous launch and reuse. At a

non-U.S. site, launch begins at ignition or at the first movement that initiates flight, whichever is earlier. 14 CFR § 401.7 also defines "launch" to include preparation of the vehicle or payload at a U.S. launch site.

This is the Part 440 third-party and Government-property requirement, not a private policy's contractual period. A commercial policy can be written differently, but it cannot drop below these limits before the time in the license or permit order unless the FAA is given at least 30 days' notice and expressly approves (§ 440.11(b)).

> **Judge:** Fact 4 (coverage does not attach merely when the policy is bound) is not stated explicitly, though the answer says coverage attaches when the launch starts. All other facts are correct and no traps are asserted.

No. Under FAA financial-responsibility rules, a licensed suborbital launch is not on the orbital 30-day payload-separation clock.

Attachment. Insurance (or other financial responsibility) required by 14 CFR § 440.9 attaches when the licensed launch or permitted activity starts. See 14 CFR § 440.11(a).

How long it must stay in force. It remains in effect until completion of licensed launch or permitted activities at a launch or reentry site, and:

- **Orbital launch:** until the later of (i) 30 days after payload separation (or attempted separation if separation fails) or (ii) 30 days from ignition of the launch vehicle. § 440.11(a)(2).
- **Suborbital launch:** until the later of (i) motor impact and payload recovery or (ii) the FAA's determination—made in the pre-launch risk analysis used to set maximum probable loss and written into the license or permit order—that third-party and Government-property risk is small enough that financial responsibility is no longer necessary. § 440.11(a)(3).

Coverage also may not be reduced or allowed to expire before the time in the license or permit order unless the FAA is notified at least 30 days ahead and expressly approves. § 440.11(b).

Cited: 1. ecfr.gov

Keenable SELECT · Partly correct · Incomplete list · `2.2m · ~$0.056 · 2 searches · 0 fetches`

> **Judge:** The answer never says that coverage does not attach when the policy is merely bound (fact 4), and it omits the rule on modifying or cancelling financial responsibility with 30 days' notice to the FAA (fact 9). All other facts are correct and no trap is asserted.

No. Under the FAA financial-responsibility rule, a suborbital licensed launch is not on the orbital 30-day payload-separation clock.

When coverage attaches. Insurance (or other financial responsibility) required by 14 CFR § 440.9 attaches when a licensed launch or permitted activity starts. 14 CFR § 440.11(a)

When it ends. It stays in force until licensed launch or permitted activities at a launch or reentry site are complete, and then:

- **Orbital launch:** until the later of 30 days after payload separation (or attempted separation if there is a separation anomaly) or 30 days from ignition of the launch vehicle. § 440.11(a)(2).
- **Suborbital launch:** until the later of motor impact and payload recovery, or the FAA's determination that risk to third parties and Government property is small enough that financial responsibility is no longer necessary. That determination comes from the pre-launch maximum probable loss analysis and is specified in the license or permit order. § 440.11(a)(3).

The 30-days-after-payload-separation period is the orbital rule only. A private policy can be written more broadly, but that is not what the regulation requires for a suborbital licensed flight.

> **Judge:** Fact 4 (coverage does not attach when the policy is merely bound) is not stated explicitly, though the answer says coverage attaches when the launch starts. All other facts are correct and no traps are asserted.

No. Under FAA financial-responsibility rules, a suborbital licensed launch is not on the orbital 30-day clock.

14 CFR § 440.11 sets the duration of insurance (or other financial responsibility) required by § 440.9:

- Coverage **attaches when a licensed launch or permitted activity starts**, and must stay in force until completion of those activities at a launch or reentry site, and for the flight-type period below.
- **Orbital launch:** until the later of (i) 30 days after payload separation (or attempted separation if there is a separation anomaly) or (ii) 30 days from ignition.
- **Suborbital launch:** until the later of (i) **motor impact and payload recovery**, or (ii) the FAA's determination—made in the pre-launch maximum probable loss analysis and **specified in the license or permit order**—that risk to third parties and Government property is small enough that financial responsibility is no longer necessary.

That period cannot be cut short, and the coverage cannot be reduced or allowed to expire before the time in the license or permit order, unless the FAA is notified at least 30 days ahead and expressly approves. See 14 CFR § 440.11 and the current eCFR text at eCFR § 440.11.

When "starts" means, for a part 450 vehicle operator license (14 CFR § 450.3):

- At a U.S. launch site, launch begins when hazardous pre-flight operations that may threaten the public begin (for example, pressurizing or loading propellants,

operations with a fueled vehicle, transferring energy to initiate flight, or other hazardous flight-prep). A safe, dormant period between reuse flights is not included.
- At a non-U.S. launch site, launch begins at ignition or at the first movement that initiates flight, whichever is earlier.

If the same license also covers **reentry**, that piece is separate under § 440.12: reentry coverage attaches when licensed reentry begins; ground operations run until reentry is complete at the site; other reentry activities run **30 days from initiation of reentry flight** (longer if an abort leaves the vehicle on orbit, until the FAA says the risk is small enough).

This is the regulatory liability/financial-responsibility period, not a private hull or payload policy, which can use different wording.

PROMPT 72 · REGULATION · FACTS AS OF 2026-10-08

Is every property-damage claim by the United States on a licensed launch paid from the $100 million government-property cover? If the operator shows financial responsibility without buying a policy, when is that evidence due, and is a certificate of insurance enough on its own?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

14 CFR 440.9 and 440.15.

A condition of each license or permit is to meet the insurance requirements, or otherwise to demonstrate the required amount of financial responsibility.

Under 440.9(c), the third-party amount is based on maximum probable loss and will not exceed the lesser of $500 million or the maximum liability insurance available on the world market at a reasonable cost, as determined by the FAA. A covered third-party claim includes a claim by the United States, its agencies, and its contractors and subcontractors for damage or loss to property other than property for which insurance is required under paragraph (d). A government claim for that other property is in the third-party bucket. It is not automatically the paragraph (d) cover.

Paragraph (e) sets the amount for property damage under paragraph (d). That amount is based on maximum probable loss and will not exceed the lesser of $100 million or the maximum available on the world market at a reasonable cost, as determined by the FAA.

Under 440.9(f), instead of a policy the licensee or permittee may demonstrate financial responsibility another way that meets the terms and conditions for insurance in this part. It must describe the method in detail and how the method covers the claims.

Evidence of insurance is due at least 30 days before a licensed launch or permitted activity, and for a licensed reentry no less than 30 days before launch activities involving the reentry licensee, unless the Administrator agrees to another time under 404.15. Evidence of financial responsibility in a form other than insurance, under 440.9(f), is due at least 60 days before the licensed or permitted activity, unless the Administrator agrees to another time. The 30-day insurance clock is not the clock for a non-insurance demonstration.

Proof of insurance includes a certificate of insurance, signed by the insurer, showing a currently effective and properly endorsed policy, the terms and amounts, and the exclusions. The certificate must be accompanied by an opinion of the insurance broker that the insurance complies with this part and any applicable license or permit order. The certificate alone is not that proof.

Wrong: every United States property claim is inside the $100 million cover. Wrong: an escrow or other non-insurance demonstration is due on the 30-day insurance schedule. Wrong: the insurer's certificate, without the broker's opinion, is the required proof.

Exa ✓ Correct ✓ ✓ ✓ ✓ — 32.0s · $0.059 · 2 searches · 2 fetches

> **Judge:** The answer omits the license-condition fact (2) and the 30-day insurance deadline (8). It does not state outright that the 30-day insurance clock differs from the non-insurance clock (10), though it gives 60 days for the latter. No traps asserted and no facts contradicted.

No. The $100 million figure is only a statutory ceiling on a separate government-property cover, and that cover does not apply to every U.S. property-damage claim.

Under 14 CFR 440.9(d)–(e), the licensee must carry insurance (or equivalent financial responsibility) for claims by the United States, its agencies, and involved contractors and subcontractors for damage to property they own, lease, occupy, or have in their care, custody, or control at a Federal range facility. The FAA sets that amount at maximum probable loss, not more than the lesser of $100 million or the maximum available on the world market at a reasonable cost. It is not a flat $100 million that pays every claim in full.

U.S. claims for damage to other property are treated as covered third-party claims under the liability insurance in § 440.9(b)–(c), whose ceiling is the lesser of $500 million or market availability at a reasonable cost—not the government-property cover.

If the operator demonstrates financial responsibility without a policy under § 440.9(f), that evidence is due at least 60 days before the licensed or permitted activity begins, unless the Administrator agrees to another time under § 404.15 (§ 440.15(a)(3)). The operator must describe the method in detail and, under § 440.15(f), prove it meets Part 440 and the license or permit order. A certificate of insurance is not enough on its own—and it is not the proof used for a non-insurance demonstration. Even when insurance is used, a certificate must be signed by the insurer and accompanied by a broker's opinion that the coverage complies, plus the licensee's certification and the required waiver agreements (§ 440.15(c)–(d)).

Parallel ✓ Correct ✓ ✓ ✓ ✓ — 31.8s · $0.058 · 3 searches · 2 fetches

> **Judge:** Only fact 2 (the license/permit condition to meet insurance requirements or demonstrate financial responsibility) is not stated. All core and required facts are correct, and no traps are asserted.

No. The $100 million figure is a ceiling on one insurance bucket, not a fund that pays every U.S. property-damage claim from a licensed launch.

Under 14 CFR 440.9(d)–(e), the operator must carry insurance (or an equivalent demonstration) for claims by the United States, its agencies, and involved contractors and subcontractors for damage to covered government property. That property must include property owned, leased, occupied, or in the care, custody, or control of those parties at a Federal range facility. The FAA sets the amount from maximum probable loss, and it may not exceed the lesser of $100 million or the maximum available on the world market at a reasonable cost. It is not automatically $100 million.

A U.S. claim for damage to property other than the property insured under § 440.9(d) is a covered third-party claim under § 440.9(c). That separate cover is also MPL-based and is capped at the lesser of $500 million or available market capacity at a reasonable cost. https://www.ecfr.gov/current/title-14/section-440.9

If the operator demonstrates financial responsibility without buying a policy, under § 440.9(f), that evidence is due at least 60 days before the licensed or permitted activity begins, unless the Administrator agrees to another time under § 404.15, or a license or permit order sets a different time because the start date is

close. Insurance evidence, by contrast, is generally due at least 30 days before. https://www.ecfr.gov/current/title-14/section-440.15

A certificate of insurance is not enough by itself. Section 440.15(c)–(d) also requires the licensee's certification of compliance, any required certification on exclusions, the required waiver agreements, and—for each certificate—the insurer's signature plus an insurance broker's opinion that the coverage meets this part and any applicable license or permit order. A non-insurance demonstration under § 440.9(f) is a separate proof under § 440.15(f); a certificate of insurance does not satisfy that path.

Keenable search — Correct

24.2s · ~$0.058 · 2 searches · 3 fetches

> **Judge:** The answer omits the license-condition framing (fact 2), the 30-day insurance deadline (fact 8), and the explicit statement that the 30-day clock does not apply to non-insurance demonstrations (fact 10). These are context facts, and the core and required facts are correct with no traps asserted.

No. The $100 million figure is a ceiling on what a licensee must obtain for certain U.S. Government property claims, not a fund that pays every such claim.

Under 51 U.S.C. § 50914(a), the required amount is the maximum probable loss (MPL) from Government property claims for that launch or reentry, and it need not exceed the lesser of $100 million or the maximum liability insurance available on the world market at reasonable cost. 14 CFR § 440.9(d)–(e) implements that rule: the FAA sets the amount from the MPL, capped at the lesser of $100 million or market availability at reasonable cost. That cover is for property owned, leased, occupied, or in the care, custody, or control of the United States, its agencies, and involved contractors and subcontractors at a Federal range facility.

U.S. claims for damage to property other than that range property are treated as third-party claims under § 440.9(c), which has a separate cap (the lesser of $500 million or world-market availability at reasonable cost). Above the required Government-property amount, the reciprocal waiver in § 50914(b)(2) can limit recovery, and usual policy exclusions may also leave some losses uncovered.

Non-insurance demonstration. If financial responsibility is shown other than by buying a policy, under 14 CFR § 440.9(f), the evidence is due at least 60 days before the licensed or permitted activity begins (14 CFR § 440.15(a)(3)). The Administrator may agree to another date under § 404.15, and a license or permit order may set a different date because the start date is close.

Certificate of insurance. A certificate is not enough by itself. For an insurance demonstration, § 440.15(c)(1) also requires the licensee's certification of compliance, any required certification that excluded risks are not commercially available at reasonable cost, and the required waiver agreements. Under § 440.15(d), each certificate must be signed by the insurer and accompanied by a broker's opinion that the insurance meets this part and any applicable license or permit order. Policies must be kept and made available for FAA inspection (§ 440.15(e)).

> **Judge:** Fact 3 is contradicted: the answer says the third-party MPL amount is capped at $500 million but omits the 'lesser of... maximum liability insurance available on the world market' limit. Facts 2, 7, 8 and 10 are missing: no mention of the license-condition language, the 440.9(f) detail requirement, the 30-day insurance deadline, or the explicit contrast with the 60-day clock.

No. The $100 million figure is a ceiling on required cover, not a fund that pays every U.S. property-damage claim.

Under 14 CFR 440.9(d)–(e), the FAA sets government-property insurance for each licensed or permitted launch or reentry from maximum probable loss. That amount cannot exceed the lesser of $100 million or the maximum available on the world market at a reasonable cost. The policy covers claims by the United States, its agencies, and involved contractors and subcontractors for property damage or loss from the activity, and the covered property is property they own, lease, occupy, or control at a Federal range facility. U.S. property damage outside that category can instead be a third-party claim under § 440.9(c), which has its own MPL amount capped at $500 million. Showing the required financial responsibility does not shift all remaining U.S. loss to that cover: under § 440.5(c), the licensee remains ultimately responsible except in specified cases, including a covered property claim that exceeds the § 440.9(e) amount and is not caused by the licensee's willful misconduct. https://www.ecfr.gov/current/title-14/section-440.9 https://www.ecfr.gov/current/title-14/section-440.5

If the operator demonstrates financial responsibility other than by buying a policy under § 440.9(f), that evidence is due at least 60 days before the licensed or permitted activity begins, unless the Administrator agrees to another time under § 404.15, or a license or permit order sets a different time because the start date is close. https://www.ecfr.gov/current/title-14/section-440.15

A certificate of insurance is not enough by itself. It must be signed by the issuing insurer and accompanied by a broker's opinion that the insurance meets this part and any applicable license or permit order. The operator must also certify compliance, and must keep the policies available for FAA inspection. https://www.ecfr.gov/current/title-14/section-440.15

Grok native — Correct

29.1s · $0.169 · 2 searches · 5 fetches

> **Judge:** Core and required facts are all correct. Context facts 2, 7, 8 and 10 are not stated: the license-condition framing, the 440.9(f) description requirement, the 30-day insurance deadline, and the explicit contrast with the 60-day clock. The answer is partly confused about the 440.9(f) cite (it cites 440.15(f), which does not exist), but this is not a checklist item.

No. The $100 million figure is a cap on one class of government-property cover, not the source of payment for every United States property-damage claim.

Under 14 CFR 440.9(d)–(e), the operator must carry insurance (or equivalent financial responsibility) for claims by the United States, its agencies, and involved contractors and subcontractors for property damage or loss from the licensed or permitted activity. That cover must include property owned, leased, occupied, or in the care, custody, or control of those parties at a Federal range facility. The FAA sets the amount from maximum probable loss, and it will not exceed the lesser of $100 million or the maximum available on the world market at a reasonable cost. It is not automatically $100 million. https://www.law.cornell.edu/cfr/text/14/440.9

Claims by the United States, its agencies, and its contractors and subcontractors for damage to other property are covered third-party claims under 14 CFR 440.9(c), not the paragraph (d) government-property cover. That third-party amount is also MPL-based and is capped at the lesser of $500 million or the maximum liability insurance available at a reasonable cost. https://www.law.cornell.edu/cfr/text/14/440.9

If the operator demonstrates financial responsibility without a policy, under 14 CFR 440.9(f), the evidence is due at least 60 days before commencement of the licensed or permitted activity, unless the Administrator agrees to a different time under 14 CFR 404.15, or a license or permit order sets another time because the activity is imminent. https://www.law.cornell.edu/cfr/text/14/440.15

A certificate of insurance is not enough by itself. For insurance, 14 CFR 440.15(c)–(d) also requires an officer's certification that the insurance complies, and each certificate must be signed by the issuing insurer and accompanied by an insurance broker's opinion that the coverage meets this part and any applicable license or permit order. Certain exclusions require a further certification that cover for the excluded risks is not commercially available at reasonable cost, and required waiver agreements must be submitted. For a non-insurance demonstration, 14 CFR 440.15(f) requires proof that the part and the license or permit order have been met—not a certificate of insurance. https://www.law.cornell.edu/cfr/text/14/440.15

K Keenable router → Search Correct

24.6s · ~$0.058 · 2 searches · 3 fetches

> **Judge:** The answer omits the license-condition framing (fact 2), the 30-day insurance deadline (fact 8), and the explicit statement that the 30-day clock does not apply to non-insurance demonstrations (fact 10). These are context facts, and the core and required facts are correct with no traps asserted.

No. The $100 million figure is a ceiling on what a licensee must obtain for certain U.S. Government property claims, not a fund that pays every such claim.

Under 51 U.S.C. § 50914(a), the required amount is the maximum probable loss (MPL) from Government property claims for that launch or reentry, and it need not exceed the lesser of $100 million or the maximum liability insurance available on the world market at reasonable cost. 14 CFR § 440.9(d)–(e) implements that rule: the FAA sets the amount from the MPL, capped at the lesser of $100 million or market availability at reasonable cost. That cover is for property owned, leased, occupied, or in the care, custody, or control of the United States, its agencies, and involved contractors and subcontractors at a Federal range facility.

U.S. claims for damage to property other than that range property are treated as third-party claims under § 440.9(c), which has a separate cap (the lesser of $500 million or world-market availability at reasonable cost). Above the required Government-property amount, the reciprocal waiver in § 50914(b)(2) can limit recovery, and usual policy exclusions may also leave some losses uncovered.

Non-insurance demonstration. If financial responsibility is shown other than by buying a policy, under 14 CFR § 440.9(f), the evidence is due at least 60 days before the licensed or permitted activity begins (14 CFR § 440.15(a)(3)). The Administrator may agree to another date under § 404.15, and a license or permit order may set a different date because the start date is close.

Certificate of insurance. A certificate is not enough by itself. For an insurance demonstration, § 440.15(c)(1) also requires the licensee's certification of compliance, any required certification that excluded risks are not commercially available at reasonable cost, and the required waiver agreements. Under § 440.15(d), each certificate must be signed by the insurer and accompanied by a broker's opinion that the insurance meets this part and any applicable license or permit order. Policies must be kept and made available for FAA inspection (§ 440.15(e)).

PROMPT 73 · REGULATION · FACTS AS OF 2026-10-08

Does the insurance on a launch license protect only the licensee? Does a customer's contractor have to pay the United States for its own cover?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

51 USC 50914(a)(4), 2024 edition. When a launch or reentry license is issued or transferred, the licensee or transferee must obtain liability insurance or demonstrate financial responsibility. The policy or demonstration under subsection (a) must protect the following, to the extent of their potential liability for involvement in launch services or reentry services, at no cost to the Government:

(A) the Government.
(B) executive agencies and personnel, contractors, and subcontractors of the Government.
(C) contractors, subcontractors, and customers of the licensee or transferee.
(D) contractors and subcontractors of the customer.

A customer's contractor is on that list. The protection is at no cost to the Government. The statute does not require that contractor to buy a separate policy from the United States. The printed list does not add a separate line for a space flight participant.

Wrong: the policy names only the licensee. Wrong: the customer's contractor pays the United States for this cover.

Source: https://www.govinfo.gov/content/pkg/USCODE-2024-title51/html/USCODE-2024-title51-subtitleV-chap509-sec50914.htm

Exa · Partly correct · Incomplete list · 30.8s · $0.076 · 3 searches · 2 fetches

Judge: Fact 11 is contradicted: the answer lists space flight participants as a separate protected category (expiring Sept 30, 2028), while the checklist says the printed list has no separate space flight participant line. All other facts are correct and no trap was asserted.

No. Launch-license insurance does not protect only the licensee, and a customer's contractor does not have to pay the United States for its own cover.

Under 51 U.S.C. § 50914(a)(1), the licensee or transferee must obtain liability insurance or demonstrate financial responsibility for maximum probable loss from third-party claims and from U.S. Government claims for damage to Government property. Section 50914(a)(4) requires that policy or demonstration to protect, to the extent of their potential liability for involvement in launch or reentry services, and **at no cost to the Government**:

- the Government;
- executive agencies and personnel, and Government contractors and subcontractors;
- the licensee's or transferee's contractors, subcontractors, and customers;
- **contractors and subcontractors of the customer**; and
- space flight participants (that last category expires September 30, 2028).

FAA rules implement this by requiring the licensee's third-party liability policy to name those persons, including the customer and the customer's contractors and subcontractors, as additional insureds. See 14 CFR § 440.9(b). The licensee, not each contractor, is the party that must obtain or demonstrate that financial responsibility.

Above that required insurance, 51 U.S.C. § 50915 provides for U.S. payment of successful third-party claims against a customer's contractor or subcontractor, subject to appropriation or other legislative authority, willful-misconduct limits, and the statutory cap. That is Government payment of excess claims, not a requirement that the contractor buy separate cover from, or pay, the United States.

Participants, including a customer's contractors, still assume responsibility for their own property damage and for injury to their own employees under the reciprocal waiver of claims in § 50914(b) and 14 CFR § 440.17. That is allocation of risk among participants, not a separate payment to the United States for insurance.

Judge: The answer adds space flight participants to the §50914(a)(4) protected-party list, contradicting fact 11. The cited statute text places space flight participants in the reciprocal-waiver provisions of (b), not the insurance list. The core answer is otherwise correct.

No. Launch-license insurance does not protect only the licensee, and a customer's contractor does not have to pay the United States for its own statutory cover.

Under 51 U.S.C. § 50914(a)(4), the liability insurance (or other financial responsibility) required when a launch or reentry license is issued must protect the following, to the extent of their potential liability for involvement in launch or reentry services, **at no cost to the Government**:

- the Government;
- executive agencies and personnel, and contractors and subcontractors of the Government;
- contractors, subcontractors, and customers of the licensee or transferee;
- **contractors and subcontractors of the customer**; and
- space flight participants (that last category expires September 30, 2028).

14 CFR § 440.9(b) implements this by requiring the licensee's liability policy to protect, as additional insureds, the licensee, its customer, and their respective contractors and subcontractors (and the employees of each) involved in the licensed or permitted activity, as well as the United States, its agencies, and its contractors and subcontractors. The same regime covers government-property claims under § 440.9(d), within the statutory caps (generally not more than $500 million for third-party claims and $100 million for government property, or less if that is the maximum available at reasonable cost).

A customer's contractor is therefore an additional insured under the licensee's required policy. It does not buy that cover from the United States or pay the United States for it. The phrase "at no cost to the Government" means the Government is not charged for that protection; the licensee obtains the policy.

That coverage is for third-party claims and specified government-property claims. It is not a substitute for the reciprocal waivers of claims among participants

(licensee, customers, their contractors, and the United States) under § 50914(b) and 14 CFR § 440.17, under which each party remains responsible for its own property loss and for injury to its own employees.

`23.8s · ~$0.047 · 2 searches · 2 fetches`

> **Judge:** Only fact 11 (no separate space flight participant line in the printed list) is missing. The answer does not mention space flight participants, but this does not affect the core conclusions.

No. The required launch-license insurance does not protect only the licensee, and a customer's contractor does not pay the United States for that cover.

Under 51 U.S.C. § 50914(a), the licensee (or transferee) must obtain liability insurance or otherwise demonstrate financial responsibility for maximum probable loss from third-party claims and from damage to U.S. Government property. That insurance or demonstration must protect, to the extent of their potential liability and at no cost to the Government:

- the Government, its executive agencies and personnel, and its contractors and subcontractors;
- the licensee's contractors, subcontractors, and customers; and
- the customer's contractors and subcontractors.

https://www.law.cornell.edu/uscode/text/51/50914

The FAA rule implements that by requiring the licensee or permittee to carry the policy and to name those parties—including the customer and the customer's contractors and subcontractors—as additional insureds against covered third-party claims. Separate insurance covers U.S. Government property at a Federal range and must protect the United States, its agencies, and its contractors and subcontractors involved in the activity. https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-440/subpart-A/section-440.9

A customer's contractor therefore gets that third-party and Government-property protection on the licensee's required insurance. It does not buy a separate policy for the United States, and it does not pay the United States for the cover. The statute's "at no cost to the Government" language means the Government is protected without paying for the insurance; the duty to obtain it sits on the licensee.

That is different from each participant's own losses. The license must also require reciprocal waivers among the licensee, its contractors and customers, and the customers' contractors and subcontractors. Each party bears personal injury, death, or property damage sustained by itself or its own employees, regardless of fault, subject to the willful-misconduct exception in the FAA rule. https://www.law.cornell.edu/uscode/text/51/50914

Keenable SELECT Partly correct Claim not in sources

`5.0m · ~$0.124 · 3 searches · 6 fetches`

> **Judge:** Fact 11 is contradicted: the answer lists space flight participants as a line in the 50914(a)(4) list, which the checklist says the printed list does not include. All core and required facts are correct, and neither trap is asserted.

No. The insurance required for a U.S. launch or reentry license does not protect only the licensee, and a customer's contractor does not have to buy or pay the United States for its own cover.

Under 51 U.S.C. § 50914(a)(4), the licensee's insurance or other demonstration of financial responsibility must protect, to the extent of their potential liability for involvement in launch or reentry services, and at no cost to the Government:

- the Government;
- executive agencies and their personnel, contractors, and subcontractors;
- contractors, subcontractors, and customers of the licensee or transferee;
- contractors and subcontractors of the customer; and
- space flight participants (that clause currently sunsets September 30, 2028).

The FAA rule says the same thing in operational terms. 14 CFR § 440.9(b) requires the licensee or permittee to carry liability insurance that names, as additional insureds, the licensee or permittee, its customer, their respective contractors and subcontractors and employees, the United States and its agencies and contractors and subcontractors, government personnel, and (until the statutory sunset) space flight participants. Separate government-property insurance under § 440.9(d) is also the licensee's obligation and must protect the United States and its agencies and involved contractors.

So the customer's contractor is covered by the licensee's required policy. It is not required to obtain a separate policy or pay the United States for that cover. "At no cost to the Government" means the Government is not charged for that protection; it does not mean the contractor must pay the United States.

That protection is for third-party claims and, separately, claims for damage to government property, up to the FAA's maximum-probable-loss amounts (statutory caps of $500 million and $100 million). It is not a promise that every loss the contractor itself suffers is insured: under § 50914(b), the licensee must also execute reciprocal waivers with customers and the customers' contractors, under which each party bears its own employee injury and its own property loss.

Grok native Partly correct Claim not in sources

`35.8s · $0.123 · 3 searches · 4 fetches`

> **Judge:** The answer gets the core points right: the policy protects more than the licensee, a customer's contractor is covered, and the cover is at no cost to the Government. It contradicts fact 11 by listing space flight participants (expiring Sept 30, 2028) as a separate protected category, and the DATA window does not show that.

No. Launch-license insurance does not protect only the licensee, and a customer's contractor does not have to pay the United States for its own cover under that requirement.

Under 51 U.S.C. § 50914(a)(4), the liability insurance (or other financial responsibility) the licensee must obtain protects the following, to the extent of their potential liability for involvement in launch or reentry services, at no cost to the Government:

- the Government;
- executive agencies and personnel, and contractors and subcontractors of the Government;

- contractors, subcontractors, and customers of the licensee;
- **contractors and subcontractors of the customer**; and
- space flight participants (that last category expires September 30, 2028).

Source: 51 U.S.C. § 50914 (text in effect July 22, 2026).

FAA rules implement that duty. Under 14 CFR § 440.9(b), the licensee must carry third-party liability insurance that names as additional insureds the licensee, its customer, **and their respective contractors and subcontractors** (and employees of each) involved in the licensed activity, as well as the United States, its agencies, and its contractors and subcontractors. Section 440.9(d) separately requires insurance for U.S. Government property damage at a Federal range facility, protecting the United States, its agencies, and its contractors and subcontractors. Source: 14 CFR § 440.9.

So a customer's contractor is already covered by the policy the licensee must buy. That protection is statutory and is at no cost to the Government; the contractor is not required to buy a separate policy and pay the United States for the same cover. Coverage is limited to the maximum-probable-loss amounts the FAA sets for that launch (not more than $500 million for third-party claims or $100 million for Government property claims, or less if that is all that is available on the world market at reasonable cost). It is not a substitute for other insurance a contractor may want for its own property or employees; reciprocal waivers under § 50914(b) allocate each party's own losses.

PROMPT 76 · REGULATION · FACTS AS OF 2026-10-08

Did the FAA's finding on a higher Starship cadence at Boca Chica license 25 launches a year, including night landings back at the pad?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FAA Mitigated Finding of No Significant Impact and Record of Decision for the Final Tiered Environmental Assessment of a higher Starship/Super Heavy cadence at Boca Chica, issued in April 2025. This document is tiered from the June 2022 programmatic assessment. It is not license VOL 23-129 and it is not the April 2023 order.

The FAA determined that modifying VOL 23-129 to support the higher cadence would not significantly affect the quality of the human environment within the meaning of NEPA. An environmental impact statement is not required. The final tiered assessment is incorporated by reference. That determination is not the issuance of the modified license.

SpaceX's proposed action is up to 25 launches a year and 50 landings a year, 25 of Starship and 25 of Super Heavy, plus vehicle and operational upgrades. Up to three of those 25 launches would be at night from the vertical launch area. Landings at the vertical launch area would be in daytime only, up to 22 Starship and 22 Super Heavy. Daytime landings of either vehicle may also be offshore. Up to three Starship landings and three Super Heavy landings may be at night, and only offshore. Licensed daytime static-fire testing is capped at 90 seconds a year for Starship and 70 seconds a year for Super Heavy. Those are durations, not a count of tests.

The FAA's federal action is to modify the existing vehicle operator license for that cadence, including potential renewals and modifications inside the scope of the assessment, and to issue temporary airspace closures.

Under the no-action alternative the FAA would not modify a license for the higher cadence. Existing licenses would still allow up to five Starship launches and five Starship/Super Heavy launches a year, up to ten Starship landings, and up to five Super Heavy landings. No action is not a ban.

SpaceX must tell the FAA's Operational Safety Directorate, Safety Assurance Division, within 15 calendar days of a change to a representation in the license application, or in a document the FAA relied on, for the Boca Chica Starship/Super Heavy license. If a federal, state, or local environmental regulator alleges a violation in an investigative report, an administrative order, or a notice of violation, SpaceX must give the FAA copies within the time that regulator gave SpaceX to respond, or within 15 calendar days, whichever is shorter. If a Boca Chica launch is scheduled within 15 days after SpaceX receives such a notice, the notice to the FAA must be immediate and in writing.

Wrong: this finding is a license for 25 launches. Wrong: the pad is authorized for night landings. Wrong: the no-action case allows no flights.

Source: https://www.faa.gov/media/94336

Exa ✗ Wrong ✗ ✗ ✓ ✓ Incomplete list 20.0s · $0.076 · 3 searches · 1 fetches

Judge: The answer dates the Mitigated FONSI/ROD to May 2025 (the Federal Register notice date) rather than April 2025, which contradicts fact 1. It omits the 2022 PEA tiering, the no-EIS determination, the static-fire caps, the no-action alternative, and the 15-day notification conditions (facts 2, 4-6, 11, 13-21).

No. The FAA's increased-cadence finding supports up to 25 launches a year at Boca Chica, but not night landings back at the pad.

In the May 2025 Mitigated Finding of No Significant Impact and Record of Decision for the Final Tiered Environmental Assessment, the FAA's federal action is to modify SpaceX's existing vehicle operator license for up to 25 annual Starship/Super Heavy launches and 50 annual landings (25 Starship and 25 Super Heavy), plus vehicle and operational upgrades. Up to three of those 25 launches may be at night. Landings at the vertical launch area are daytime only (up to 22 Starship and 22 Super Heavy). Up to three Starship and three Super Heavy landings may occur at night, only offshore.

That finding is the NEPA decision that lets the FAA modify the license; it is not itself the license. A later February 12, 2026 FONSI on additional trajectories and Starship return-to-launch-site profiles still assumes no nighttime Starship reentries or Super Heavy landings at the Boca Chica site.

Judge: The core and required facts are correct, but the answer leaves out several context facts: the 2022 PEA tiering, no EIS required, incorporation by reference, offshore daytime landings, static-fire caps, the airspace closures, the no-action alternative, and the license-change reporting duties (facts 2, 5, 6, 11, 13-21). It also never states the April 2025 issue date explicitly.

No. The FAA's finding covers up to 25 launches a year, but not night landings back at the pad.

In its Mitigated Finding of No Significant Impact and Record of Decision for the increased-cadence environmental assessment at Boca Chica, the FAA found that modifying SpaceX's vehicle operator license for a higher cadence would not significantly affect the environment. The proposed action it approved for that review is:

- Up to 25 annual Starship/Super Heavy launches, of which up to three may be at night.
- Up to 50 annual landings (25 Starship and 25 Super Heavy).
- Pad (VLA) landings only in daytime — up to 22 Starship and 22 Super Heavy landings at the vertical launch area.
- Night landings only offshore — up to three Starship and three Super Heavy landings at night, and only offshore.

Source: FAA Mitigated FONSI/ROD (media/94336); summary on the FAA Boca Chica project page.

That document is the environmental finding that supports a license modification; it is not itself the vehicle operator license. The operational limits above are what the finding analyzed and accepted.

> **Judge:** The answer gets the core points right: daytime-only pad landings, night landings offshore only, and the 25 launch and 50 landing cadence. It omits the explicit statement that this is not the modified license, the VOL 23-129 distinction, the no-action alternative, the static-fire caps and the notification requirements. It says the document was issued in May 2025 where the checklist says April, which the judge treated as a minor date slip.

No — not night landings back at the pad. The FAA's finding does support up to 25 Starship/Super Heavy launches a year from Boca Chica, but landings at the vertical launch area must be daytime only.

In May 2025 the FAA issued a Final Tiered Environmental Assessment and a mitigated Finding of No Significant Impact / Record of Decision for a higher Starship cadence at Boca Chica. Under that action, the FAA would modify SpaceX's vehicle operator license to allow:

- Up to 25 **launches per year** (up to 3 **at night**).
- Up to 25 **Starship landings** and 25 **Super Heavy landings** per year.
- **Landings at the Boca Chica pad only in daytime** (up to 22 of each vehicle at the vertical launch area).
- Night landings only **offshore**: up to three Starship and three Super Heavy.

Sources: Federal Register notice (May 12, 2025), GovInfo text of the same notice.

Cited: 1. federalregister.gov · 2. govinfo.gov

Keenable SELECT ✗ Wrong Incomplete list 7.2m · ~$0.130 · 7 searches · 0 fetches

> **Judge:** The answer dates the finding to May 6, 2025 where the checklist says April 2025 (fact 1). It also omits the June 2022 tiering, no EIS required, incorporation by reference, the static-fire caps, the no-action alternative, and the 15-day notification requirements (facts 2, 5, 6, 13, 14, 16-21).

Yes on the 25-launch cadence, no on night landings back at the pad.

On May 6, 2025, the FAA issued a Final Tiered Environmental Assessment, a mitigated Finding of No Significant Impact, and a Record of Decision for a higher Starship/Super Heavy cadence at the Boca Chica vertical launch area. The Federal Register notice of that finding (published May 12, 2025) describes the proposed action as modifying SpaceX's existing vehicle operator license to allow:

- up to 25 orbital launches a year
- up to 25 Starship (second-stage) landings a year
- up to 25 Super Heavy (first-stage) landings a year

Night operations are limited. Up to three of the 25 launches may be at night. Landings at the Boca Chica pad itself are daytime only (up to 22 Starship and 22 Super Heavy landings at the pad). Up to three Starship landings and three Super Heavy landings may occur at night, and those night landings are offshore only. Daytime landings may also be offshore.

That May 2025 action was the environmental finding, not by itself the license grant. The FAA said SpaceX still had to meet licensing requirements before the modification could be granted. The FAA's own May 6, 2025 statement confirms the 25-launch environmental review and that the license modification was still conditional.

PROMPT 77 · REGULATION · FACTS AS OF 2026-10-08

Does the April 2025 finding on a higher Starship cadence let Boca Chica beach stay closed for as long as the launch campaign needs, including summer weekends?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

The same April 2025 mitigated finding of no significant impact and record of decision as the cadence question. It is not the license.

Beach access restrictions continue under the memorandum of agreement between Cameron County and the Texas General Land Office, and only when necessary for public safety. They are limited to 500 hours a year for operations plus 300 hours a year for anomalies. The finding does not add anomaly hours beyond the 300 analyzed in the 2022 programmatic assessment. The total duration of access restrictions would not exceed 500 hours annually.

SpaceX has been not restricting access on holidays and weekends during summer months, as the 2022 assessment required. A year-round or summer-weekend closure is not what this finding allows.

On section 4(f), the proposed action would not permanently incorporate any section 4(f) property and would not cause a constructive use from visual effects, access limits, noise, or vibration. An anomaly could temporarily occupy some historic properties, Boca Chica State Park, and Brazos Island State Park. Those impacts are expected to be de minimis, and the FAA had concurrence from the officials with jurisdiction, including the Texas Historical Commission, Texas Parks and Wildlife, the Fish and Wildlife Service, and the Texas General Land Office. SpaceX continues the measures in the memorandum of agreement with Texas Parks and Wildlife for Boca Chica State Park, Brazos Island State Park, and other department land, and notifies the General Land Office of anomalies as appropriate.

Wrong: the beach can be closed for the whole campaign. Wrong: summer weekends are ordinary closure days. Wrong: an anomaly permanently takes the state parks.

Source: https://www.faa.gov/media/94336

Exa — Partly correct — Incomplete list

Judge: The answer gets the core conclusion and the 500+300 hour caps and summer weekend/holiday protection right. It omits the Cameron County/GLO memorandum of agreement and public-safety-only condition, the 500-hour total ceiling, the fact that the finding is not the license, and all the section 4(f) and concurrence details.

No. The FAA's April 2025 finding on a higher Starship cadence does not authorize keeping Boca Chica Beach closed for as long as a launch campaign needs, and it does not allow closures on summer weekends.

The April 2025 Final Tiered Environmental Assessment and Mitigated Finding of No Significant Impact/Record of Decision authorize up to 25 annual Starship/Super Heavy launches and related landings, but they leave beach-access limits unchanged:

- Operational access restrictions remain capped at 500 hours per year, plus up to 300 hours per year for anomaly response. The EA lists those limits as "No change" from the 2022 programmatic assessment.
- SpaceX is not proposing additional operational access restrictions and must continue to follow the 2022 terms.
- Required mitigation still includes not restricting access on holidays and on weekends during summer months (Memorial Day through Labor Day), as required in the 2022 PEA.

Sources: FAA Mitigated FONSI/ROD (April 2025); Final Tiered EA.

Judge: The answer is correct on the core 'no' and on the 500+300 hour caps and the summer weekend and holiday mitigation. It omits the Cameron County/GLO memorandum of agreement and its public-safety condition (required fact 4), that the finding is not the license, and all the Section 4(f) and de minimis details.

No. The April 2025 FAA finding does not let Boca Chica Beach stay closed for as long as a launch campaign needs, including summer weekends.

The FAA's April 2025 Final Tiered Environmental Assessment (and related mitigated finding of no significant impact) for a higher Starship/Super Heavy cadence at Boca Chica keeps the 2022 access limits in place. It states that SpaceX is not proposing any additional operational access restrictions and would continue to follow Section 2.1.3.5 of the 2022 Programmatic Environmental Assessment. Licensed access restrictions "would not change" under the higher-cadence action.

Those continuing limits include:
- No State Highway 4 / beach access restrictions on listed holidays.
- From Memorial Day to Labor Day, no weekend access restrictions from Friday at 6:00 a.m. through Sunday (weekday restrictions only, with narrow holiday-related exceptions).
- Weekend access restrictions limited to no more than five times per calendar year.
- Nominal closures capped at up to 500 hours per year, plus up to 300 hours for anomalies—not open-ended campaign closures.

The April 2025 documents also restate the mitigation of not restricting access on holidays and weekends during summer months, as required in the 2022 PEA.

Sources: FAA April 2025 Executive Summary; FAA April 2025 Final Tiered EA; 2022 PEA / FONSI-ROD access limits.

Judge: The answer correctly says no and gives the 500-hour and 300-hour limits with no change. It omits that the finding is not the license, the Cameron County/GLO memorandum of agreement and public-safety condition, SpaceX's record on summer holidays and weekends, and all the section 4(f) and state-park facts (9-15).

No. The April 2025 higher-cadence finding does not let Boca Chica Beach stay closed for as long as a launch campaign needs, including summer weekends.

The FAA's April 2025 Final Tiered Environmental Assessment and mitigated Finding of No Significant Impact/Record of Decision authorizes a license modification for up to 25 Starship/Super Heavy launches a year (and related landings and tests) at Boca Chica. That action covers launch licensing and temporary airspace closures. It is not a grant of open-ended beach-closure authority. See the Federal Register notice: https://www.govinfo.gov/content/pkg/FR-2025-05-12/html/2025-08232.htm

The environmental review that led to that finding kept the existing access limits rather than expanding them. The July 2024 draft tiered EA, carried into the revised draft, lists nominal closures at **500 hours a year** and anomaly-response closures at **up to 300 hours a year**, both marked "**No change**" from the 2022 programmatic review: https://downloads.regulations.gov/FAA-2024-2006-0001/attachment_1.pdf

Those 2022 conditions also bar closures on 18 identified holidays and limit weekend restrictions to no more than five weekends a year: https://www.faa.gov/newsroom/faa-requires-spacex-take-over-75-actions-mitigate-environmental-impact-planned

Texas law adds a separate limit. Under Natural Resources Code § 61.132, Cameron County may not close the beach on a primary launch date that falls on Memorial Day weekend, Memorial Day, July 4, Labor Day, or a Saturday or Sunday between Memorial Day and Labor Day **without Texas General Land Office approval**: https://codes.findlaw.com/tx/natural-resources-code/nat-res-sect-61-132/

I could not retrieve the final April 2025 PDF text itself. I did not find a source saying that final finding raised the hour caps or removed the summer-weekend restriction.

> **Judge:** The answer gets the core 'no' and the 500+300 hour limits right. It omits that the finding is not the license, the Cameron County/GLO MOA and public-safety-only basis, SpaceX's compliance with the summer holiday/weekend rule, and all the section 4(f) and agency-concurrence facts.

No. The higher-cadence finding does not let Boca Chica Beach stay closed for as long as a launch campaign needs, and it does not lift the summer-weekend limits.

The FAA's Final Tiered Environmental Assessment and Mitigated Finding of No Significant Impact/Record of Decision, issued May 6, 2025, authorizes up to 25 Starship/Super Heavy launches a year at Boca Chica, up from five. It does not authorize open-ended beach closures. The revised draft assessment that the final document is based on says SpaceX expects to need less than 20 hours of access restrictions per launch campaign, including landings, and keeps the 2022 limits: about 500 hours a year for normal operations and up to 300 more hours a year for anomaly cleanup. It says the higher cadence would not increase those totals or change the 2022 access-restriction terms. https://www.federalregister.gov/documents/2025/05/12/2025-08232/notice-of-availability-of-the-final-tiered-environmental-assessment-and-mitigated-finding-of-no https://driveteslacanada.ca/wp-content/uploads/2024/11/87646.pdf

Those 2022 terms also bar State Highway 4 closures on listed holidays, including Memorial Day, July 4, and Labor Day. From Memorial Day to Labor Day, weekend restrictions are barred from Friday at 6:00 a.m. through Sunday, with limited exceptions.
http://krgv.s3.amazonaws.com/files/department_of_transportation_spacex_pdf.pdf

Separately, Texas Natural Resources Code § 61.132 still requires Texas General Land Office approval before a beach or beach-access closure on the Saturday or Sunday before Memorial Day, Memorial Day, July 4, Labor Day, or any Saturday or Sunday between Memorial Day and Labor Day.
https://texas.public.law/statutes/tex._nat._resources_code_section_61.132

I could not retrieve the final EA PDF itself. The "no change" language is from the November 2024 revised draft, which the FAA says was revised again before the May 2025 final. News reports do not describe any relaxation of these closure limits.

Cited: 1. federalregister.gov · 2. driveteslacanada.ca · 3. krgv.s3.amazonaws.com · 4. texas.public.law

---

Grok native · Partly correct · Incomplete list · 25.4s · $0.092 · 5 searches · 2 fetches

> **Judge:** The answer gets the core 'no' and the 500+300 hour limits, the MOA process and summer-weekend commitment right, but omits the no-added-anomaly-hours point, the section 4(f) findings (no permanent incorporation, no constructive use, de minimis temporary occupation, concurrence from officials), and the Texas Parks and Wildlife MOA and GLO anomaly notification. Fact 7 (total not exceeding 500 hours) is stated only implicitly as 500 operations plus 300 anomaly hours.

No. The FAA's April 2025 finding on a higher Starship cadence does not let Boca Chica Beach stay closed for as long as a launch campaign needs, including summer weekends.

The April 2025 Final Tiered Environmental Assessment and Mitigated Finding of No Significant Impact/Record of Decision authorize up to 25 annual Starship/Super Heavy launches and related landings and upgrades at Boca Chica. They do **not** change beach or State Highway 4 access limits. The FAA states that licensed access restrictions would not change, that SpaceX is not proposing additional operational access restrictions, and that SpaceX would continue the 2022 Programmatic Environmental Assessment (PEA) mitigation measures. Those include not restricting access on holidays and weekends during summer months, and keeping restrictions to **500 hours per year for operations plus 300 hours per year for anomalies**.

Under the 2022 PEA measures that the 2025 finding keeps in place:

- From Memorial Day to Labor Day, road/beach access restrictions are generally limited to Monday through Friday at 6:00 a.m., so the public has access from Friday at 6:00 a.m. through Sunday.
- A "Weekend Access Restriction" (including summer Friday–Sunday windows) may be requested only up to **five times per calendar year**, with at least 48 hours' notice, unless it is an anomaly.
- Listed holidays are off-limits for access restrictions, with extra rules when a holiday falls on a Monday or Friday and around Thanksgiving.

The FAA also notes that it does not approve the road and beach closures themselves; those remain under the Cameron County–Texas General Land Office process. Separate 2025 Texas legislation on Starbase and weekday closures is not this FAA finding and, as reported, does not raise the FAA hour limits.

PROMPT 78 · REGULATION · FACTS AS OF 2026-10-08

Did the later Boca Chica airspace study authorize Starship to land back at the pad at night, and is the closed airspace only over the Gulf?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

FAA final tiered environmental assessment of additional Starship-Super Heavy launch trajectories and Starship return-to-launch-site profiles at Boca Chica. SpaceX is seeking a modification of the existing vehicle operator license. This assessment studies that request. It is not the license, and it is not the April 2025 cadence finding. It is tiered from the 2022 programmatic assessment and from the April 2025 cadence assessment. Do not invent this document's signature date.

Daytime in the assumptions carried forward is 7:00 a.m. to 10:00 p.m. Night is 10:00 p.m. to 7:00 a.m. No Starship reentry at the Boca Chica launch site would occur at night. The three nighttime Starship reentries would be expended in the Gulf of America. No Super Heavy landing at the Boca Chica launch site would occur at night. Nighttime Super Heavy landings are assumed in the Gulf of America. The study uses the April 2025 assumption of up to 22 Starship reentries in daytime.

A Florida-overflight aircraft hazard area for launch and for Super Heavy landing could affect as few as 10 commercial aircraft an hour in the midnight period, and as many as 200 an hour in peak travel. Starship return-to-launch-site hazard areas could affect up to 200 commercial aircraft an hour in peak daytime, and up to 4,400 flights a year. The closed airspace is not a Gulf-only box.

Temporary closures are determined at least 72 hours before the launch or reentry, and the notice to airmen is issued after that determination. The hazard area can shrink as the vehicle becomes more reliable and empirical data accumulate. Its location and size vary by mission.

This assessment does not reanalyze biological resources, cultural resources, or section 4(f). Those categories stay with the earlier assessments.

Wrong: this study licenses a night landing of Starship at the pad. Wrong: the only airspace at issue is over the Gulf.

Source:

Exa · Partly correct · Incomplete list · 23.2s · $0.112 · 4 searches · 2 fetches

Judge: Both core facts (no night Starship reentry at the site; closed airspace not Gulf-only) are right. Missing: the EA-is-not-the-license point (3), tiering (4), the 10-200 and 4,400 aircraft impact figures (11, 12), the 72-hour notice (14), shrinking hazard areas (15) and the unanalyzed resource categories (16). Fact 5 is also missing, since the answer gives a Feb 12 approval date that the DATA window does not show.

No on both counts.

The later study is the FAA's Final Tiered Environmental Assessment and FONSI/ROD for updates to airspace closures for additional launch trajectories and Starship return-to-launch-site (RTLS) profiles at Boca Chica (FONSI/ROD approved February 12, 2026; notice of availability February 19, 2026). It authorizes license changes for those trajectories and RTLS profiles, plus temporary aircraft hazard areas (AHAs). It does not authorize Starship (or Super Heavy) to land back at the Boca Chica pad at night.

It keeps the April 2025 cadence assumptions: daytime is 7:00 a.m.–10:00 p.m.; nighttime is 10:00 p.m.–7:00 a.m. Up to 22 Starship reentries could be daytime; no Starship reentries at the Boca Chica launch site at night. The up to three nighttime Starship reentries would be expended in the Gulf of America, Pacific Ocean, or Indian Ocean. Super Heavy landings at the Boca Chica site also would not occur at night; nighttime booster landings are assumed in the Gulf of America. Sources: Final Tiered EA (FAA PDF); FONSI/ROD; Federal Register notice.

The closed airspace is not only over the Gulf. The same EA says AHAs can cover:

- Launch and booster-landing corridors eastward over parts of the Gulf of America, northern Florida, and the Atlantic Ocean (about 1,600 nautical miles). The southernmost trajectories could also require closures over Mexico, Cuba, Jamaica, and the Cayman Islands.
- Starship RTLS corridors westward from Boca Chica through Mexico and parts of Texas, New Mexico, Arizona, and California (about 3,700 nautical miles), plus routes from the Pacific across Southern California, Mexico, and southern Texas into the Gulf of America.

So closures can include U.S. inland and coastal airspace, oceanic routes, and foreign airspace—not the Gulf alone.

Parallel · Partly correct · Incomplete list · 1.0m · $0.393 · 11 searches · 4 fetches

Judge: The core facts (no night pad reentry, closures not Gulf-only) and the three expended nighttime reentries are correct. Missing are the required facts: that this is not the license or the April 2025 finding (3), the Florida-overflight aircraft figures (11), and the 200 aircraft per hour and 4,400 flights per year figures (12). Several context facts are also missing.

No. The later FAA Boca Chica airspace reviews did not authorize Starship to land back at the pad at night, and the closed airspace is not limited to the Gulf.

The February 2026 final tiered environmental assessment and finding of no significant impact for additional launch trajectories and Starship return-to-launch-site profiles kept the April 2025 rule: up to 22 Starship returns to the Boca Chica site only in daytime hours, 7:00 a.m. to 10:00 p.m. No reentries at the launch site were assumed between 10:00 p.m. and 7:00 a.m. The three nighttime Starship events were to be expended in the Gulf of America, not landed at the pad. The September 2026 follow-on assessment for an additional Starbase landing trajectory used the same daytime-only pad assumption. Its aircraft table covers only 7:00 a.m. to 10:00 p.m.

Those closures also extend well beyond the Gulf. The February 2026 decision says return-to-site and Gulf landings can affect routes west through Mexico and parts of Texas, Arizona, New Mexico, and California, about 3,700 nautical miles. Other profiles can affect Mexico, Cuba, Jamaica, the Cayman Islands, northern Florida, the Atlantic, the Pacific, and the Caribbean. The later trajectory assessment adds closures from the northern Pacific across the southwestern United States into the Gulf, plus impacts on Mexico and more than 90 high-altitude U.S. routes.

Sources: FAA Boca Chica project page; February 2026 FONSI/ROD; February 2026 final EA; July 2026 draft EA carried into the September 2026 final.

---

Keenable search · Partly correct · Incomplete list · `1.1m · ~$0.247 · 14 searches · 6 fetches`

> **Judge:** The core answers are right: no night landing at the pad and the closed airspace is not Gulf-only. It omits the 2022 programmatic tiering, the Gulf expended nighttime Starship reentries (it says only 'offshore'), the 22 daytime reentries, the commercial aircraft impact figures (200 an hour, 4,400 a year), the 72-hour closure determination, hazard area variability, and the unanalyzed resource categories.

No. The later Boca Chica airspace study did not authorize Starship (or Super Heavy) to land back at the pad at night, and the closed airspace is not limited to the Gulf.

The relevant review is the FAA's tiered environmental assessment for updates to airspace closures for additional launch trajectories and Starship Boca Chica landings. The draft was released September 19, 2025; the final assessment and FONSI/ROD were announced February 19, 2026 (Docket FAA-2025-3124). It supports a possible license modification for extra trajectories and Starship return-to-launch-site profiles, plus temporary airspace closures. Completing that review does not by itself issue the license. (Federal Register notice; FAA project page)

Night pad landings. The study keeps the April 2025 cadence limits. Daytime is 7:00 a.m.–10:00 p.m.; nighttime is 10:00 p.m.–7:00 a.m. It states that no landings at the Boca Chica launch site would occur at night, and that all nighttime Super Heavy landings are assumed to be in the Gulf of America. For Starship return-to-launch-site aircraft-hazard areas, the nighttime case is listed as "None (no nighttime landings of the Starship)." Up to three nighttime Starship landings and three nighttime Super Heavy landings remain offshore only, as in the May 2025 increased-cadence decision. (September 2025 draft EA; Federal Register, May 12, 2025)

Airspace. Closures are temporary aircraft hazard areas along the trajectory, not a Gulf-only box. Starship return-to-launch-site operations are described as affecting routes westward from Boca Chica through Mexico and parts of Texas and California (about 3,700 nautical miles), and reentries from the Pacific, Southern California, Mexico, and South Texas into the Gulf. Other trajectories in the same study can affect the Gulf, northern Florida, the Atlantic, and possibly Mexico, Cuba, Jamaica, and the Cayman Islands. (Draft EA)

Cited: 1. govinfo.gov · 2. faa.gov · 3. talkoftitusville.com · 4. govinfo.gov

---

Keenable SELECT · Partly correct · Incomplete list · `10.4m · ~$0.146 · 8 searches · 0 fetches`

> **Judge:** Both core facts are right (no night Starship pad landing; closures not Gulf-only). It omits the three nighttime Gulf expended reentries, the 22 daytime reentries, the aircraft-per-hour and annual flight impact figures, the 72-hour notice timing, and the license-modification and tiering context.

Hit its tool-call or time budget and was forced to answer.

No. The later Boca Chica airspace study did not authorize Starship to land back at the pad at night, and the closed airspace is not only over the Gulf.

The relevant study is the FAA's Tiered Environmental Assessment for updates to airspace closures for additional launch trajectories and Starship Boca Chica (return-to-launch-site) landings. The FAA has posted a final version and a FONSI/ROD; the September 2025 draft is the text that could be read. The final PDFs are listed here: https://www.faa.gov/space/stakeholder_engagement/spacex_starship

Night pad landings. The draft does not authorize them. It carries forward the April 2025 assumption that no landings at the Boca Chica launch site occur at night (10:00 p.m. to 7:00 a.m.). Nighttime Super Heavy landings are assumed to be in the Gulf, not at the pad. For Starship return-to-launch-site landings, the impact table is "None (no nighttime landings of the Starship)." Source: https://old-man-par.com/wp-content/uploads/2025/09/20250919_Draft-Tiered-EA-for-Additional-Trajectories-and-Starship-RTLS_508.pdf

Airspace. Closures are not Gulf-only. The same draft says the aircraft hazard area and NOTAM would close airspace over part of Mexico and parts of the United States, plus the Atlantic and Pacific, the Gulf, and the Caribbean. A Starship return to Boca Chica is described as affecting routes west through Mexico and parts of Texas and California, about 3,700 nautical miles, from the Pacific across Southern California and Mexico into the Gulf. Florida-overflight trajectories extend east over the Gulf, northern Florida, and the Atlantic (about 1,600 nautical miles) and can affect Mexico, Cuba, Jamaica, and the Cayman Islands. Same draft URL.

The final PDF text itself could not be retrieved, so a late change in the signed FONSI is not independently confirmed. Nothing on the FAA project page indicates that the final study added night pad landings or limited closures to the Gulf.

Cited: 1. faa.gov · 2. old-man-par.com

Grok native · Partly correct · Incomplete list · `23.2s · $0.087 · 4 searches · 2 fetches`

> **Judge:** The answer commits to the core claims (no night RTLS reentry, airspace not Gulf-only) but omits the aircraft-impact figures (10 to 200 per hour, up to 4,400 flights a year), the 72-hour determination, the shrinking hazard area, the license modification request and the unreanalyzed resource categories. Fact 3 is treated as correct since the answer distinguishes the study from the April 2025 cadence EA.

No. The later study did not authorize night pad landings, and the closed airspace is not limited to the Gulf.

The relevant document is the FAA's February 2026 *Final Tiered Environmental Assessment* (and FONSI/ROD) for updates to airspace closures for additional launch trajectories and Starship return-to-launch-site (RTLS) profiles at Boca Chica. It tiers from the April 2025 increased-cadence EA and keeps that study's day/night limits.

Night landings at the pad: Not authorized. The February 2026 EA states that the April 2025 EA assumed **no Starship reentries at the Boca Chica launch site at night** (10:00 p.m.–7:00 a.m.). Up to three nighttime Starship reentries would be **expended** in the Gulf of America, Pacific Ocean, or Indian Ocean—not landed at the pad. It also states there would be **no nighttime Super Heavy landings at Boca Chica**; those would be in the Gulf. Daytime RTLS landings at the site (up to 22 per year in the 2025 assumptions) are what the airspace study covers.
Sources: FAA Final Tiered EA (Feb. 2026); Federal Register notice, Feb. 19, 2026; earlier cadence limits in the 2025 Tiered EA.

Airspace: Not Gulf-only. For Starship RTLS, notional aircraft hazard areas extend **west from Boca Chica through Mexico and parts of Texas, New Mexico, Arizona, and California**, about **3,700 nautical miles**, and reentry routes can run from the Pacific across Southern California, Mexico, and South Texas into the Gulf. Launch and booster-landing closures can also cover the Gulf, northern Florida, and the Atlantic (Florida overflight), and southern trajectories can affect airspace of

Mexico, Cuba, Jamaica, and the Cayman Islands. Closures are temporary aircraft hazard areas noticed by NOTAM, not a standing Gulf-only zone.
Sources: FAA Final Tiered EA; FONSI/ROD.

Does a favorable FAA determination for the communications-satellite class clear every satellite on the next launch, including the parts the FCC regulates?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

14 CFR 450.43. A favorable payload determination, when one is required, issues only if the applicant, payload owner, or payload operator has obtained all required licenses, authorizations, and permits, and the launch or reentry would not jeopardize public health and safety, safety of property, US national security or foreign policy interests, or international obligations of the United States.

The FAA does not make that second determination for aspects of a payload that the Federal Communications Commission or the Department of Commerce regulates, or for a payload the US Government owns or operates. An FCC license is not an FAA payload determination, and an FAA determination does not re-decide the FCC-regulated aspects.

The FAA may review a class of payload, including communications, remote sensing, or navigation. Before a launch or reentry, each payload is still subject to FAA verification that its launch or reentry would not jeopardize public health and safety, safety of property, national security or foreign policy interests, or international obligations. A class finding is not a clearance of every satellite in the class.

A payload owner or payload operator may request the review. The launch operator is not the only person who can.

The FAA consults the Department of Defense on national security, the Department of State on foreign policy and international obligations, and other federal agencies, including NASA, on the same set of interests. If an issue would impede a license, the FAA advises the requester in writing. The requester may respond in writing or amend the application under 413.17. A denial is in writing, states the reasons, and may be reviewed under 413.21.

A favorable determination for a payload or a class may be put into a license application. A change in the information required for the review must be reported under 413.17. The FAA decides whether the determination is still valid and may review the payload again.

Wrong: a class determination clears each later satellite. Wrong: the FAA's determination covers the aspects the FCC regulates.

Source: https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-450/subpart-B/section-450.43

Exa · Partly correct · Incomplete list · 12.2s · $0.043 · 2 searches · 2 fetches

Judge: The answer misses several context facts (US Government payloads, owner/operator may apply, agency consultation, written advisory and denial procedures) and does not explicitly say an FCC license is not an FAA payload determination. The core claims are correct and no traps were asserted.

No. A favorable FAA finding for the communications-satellite class does not by itself clear every satellite on the next launch, and it does not cover the aspects the FCC regulates.

Under 14 CFR § 450.43(c), the FAA may review and issue findings for a proposed class of payload, including communications. Before launch or reentry, though, each payload is still subject to FAA verification that the launch or reentry would not jeopardize public health and safety, safety of property, U.S. national security or foreign policy interests, or international obligations of the United States. A class determination can be included in a license application, but changes must be reported, and the FAA decides whether the determination remains valid. See § 450.43(h).

Under § 450.43(b)(1), the FAA does not make the § 450.43(a)(2) determination for those aspects of payloads that are subject to regulation by the FCC (or the Department of Commerce). A favorable payload determination also requires that all required licenses, authorizations, and permits have been obtained (§ 450.43(a)(1)), which for a communications satellite includes the applicable FCC authorization. The FAA's payload-review page states the same limit: it does not determine those FCC-regulated aspects.

Sources: https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-450/subpart-B/section-450.43 and https://www.faa.gov/space/licenses/payload_reviews

Judge: The answer gets the core points right. It does not state that an FCC license is not an FAA payload determination (required fact 6), and it omits several context facts (5, 9-14), including the US Government payload exception and the 413.17/413.21 procedures.

No. A favorable FAA finding for the communications-satellite class does not clear every satellite on the next launch, and it does not cover the parts the FCC regulates.

Under 14 CFR § 450.43(c), the FAA may review and issue findings for a proposed class of payload, including communications. Before a launch or reentry, though, each payload still has to be verified by the FAA so that its launch or reentry would not jeopardize public health and safety, safety of property, U.S. national security or foreign policy interests, or international obligations of the United States.

Separately, § 450.43(b)(1) says the FAA does not make that safety/security determination for aspects of payloads regulated by the FCC (or the Department of Commerce). Those aspects need the FCC's own authorization. A favorable FAA payload determination also requires that all required licenses, authorizations, and permits already have been obtained (§ 450.43(a)(1)).

> **Judge:** Missing fact 6 (an FCC license is not an FAA payload determination), which the answer does not state explicitly, plus context facts 9-14 (who may request review, agency consultation, written advisement and denial, license application use, and change reporting). Core facts and the required fact 8 are correct, and neither trap is asserted.

No. A favorable FAA determination for the communications-satellite class does not clear every satellite on the next launch, and it does not cover the parts the FCC regulates.

Under 14 CFR § 450.43(c), the FAA may review and issue findings for a proposed class of payload, including communications. Before a launch or reentry, however, each payload is still subject to FAA verification that launching or reentering it would not jeopardize public health and safety, safety of property, U.S. national security or foreign policy interests, or international obligations of the United States. https://www.ecfr.gov/current/title-14/section-450.43

A favorable determination also requires that the applicant, payload owner, or operator has obtained all required licenses, authorizations, and permits. The FAA does not make the safety/security/policy determination for aspects of payloads regulated by the FCC or the Department of Commerce. https://www.ecfr.gov/current/title-14/section-450.43

The FAA states the same limit on its payload-review page: it does not determine those FCC- or Commerce-regulated aspects, or U.S. government-owned or -operated payloads. https://www.faa.gov/space/licenses/payload_reviews

Cited: 1. ecfr.gov · 2. faa.gov

Grok native · Correct · 18.1s · $0.058 · 3 searches · 1 fetches

> **Judge:** Core and required facts are correct. Context facts 5 (US Government payloads), 9 (payload owner may request), 10 (agency consultation), 11 (written advisement under 413.17) and 12 (denial under 413.21) are not stated.

No. A favorable FAA determination for the communications-satellite class does not clear every satellite on the next launch, and it does not cover the aspects the FCC regulates.

Under 14 CFR § 450.43(c), the FAA may review and issue findings for a proposed class of payload, including communications satellites. Before a launch or reentry, though, each payload is still subject to FAA verification that the launch or reentry would not jeopardize public health and safety, safety of property, U.S. national security or foreign policy interests, or international obligations of the United States. A class finding can be included in a license application, but changes must be reported, and the FAA decides whether the determination remains valid and may do another review (§ 450.43(h)).

The FAA also does not make the safety, security, and foreign-policy determination in § 450.43(a)(2) for those aspects of payloads that the FCC (or the Department of Commerce) regulates (§ 450.43(b)). A favorable payload determination still requires that the applicant, owner, or operator has obtained all required licenses, authorizations, and permits (§ 450.43(a)(1)). FCC licensing of communications satellites and related transmitters is a separate requirement; the FAA's payload page states the same limit on FCC-regulated aspects.

PROMPT 85 · REGULATION · FACTS AS OF 2026-10-08

Crew training is an allowed use of an experimental permit. Can the permittee charge a passenger for the flight, or fly a customer's payload for a fee?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

14 CFR 437.5 and 437.91. An experimental permit may be issued to launch or reenter a reusable suborbital vehicle for crew training, for research and development, or for showing compliance with the requirements for a license. Section 437.91 is separate. No permittee may carry any property or human being for compensation or hire on a reusable suborbital vehicle.

The training purpose does not create an exception. A passenger carried for compensation or hire is prohibited. A customer's payload carried for a fee is property carried for compensation or hire, and it is prohibited as well. The section does not limit the ban to human beings.

The section was amended on 19 September 2024, 89 FR 76728.

Wrong: crew training authorizes a paying passenger. Wrong: a payload flown for a fee is allowed because the ban covers only people.

Sources: https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-437/subpart-A and https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-437/subpart-D/section-437.91

Exa Correct

11.6s · $0.039 · 2 searches · 2 fetches

Judge: Only fact 10 (the 19 September 2024 amendment, 89 FR 76728) is missing, and it is context only. All required facts are correct, and no trap is asserted.

No. Crew training is an allowed purpose of an experimental permit, but the permittee still may not carry a person or property for compensation or hire.

Under 14 CFR § 437.5, the FAA issues an experimental permit only for research and development, showing compliance toward a license, or crew training on the reusable suborbital vehicle design covered by the permit. Separately, 14 CFR § 437.91 states: “No permittee may carry any property or human being for compensation or hire on a reusable suborbital vehicle.” The FAA restates the same limit: no one may operate under an experimental permit to carry any property or human being for compensation or hire; receiving compensation or hire is reserved for licensed operations. See https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-437/section-437.91 and https://www.faa.gov/space/licenses/experimental-permits-reusable-suborbital-rockets.

So the permittee may not charge a passenger for the flight, and may not fly a customer’s payload for a fee. An FAA interpretation of § 437.91 treats “compensation or hire” broadly (money, operating costs, third-party payment, or other exchange of value). Flying property without compensation to the permittee is not a violation of that prohibition, but a fee is. https://www.faa.gov/media/11976

Judge: Only fact 10 (the 19 September 2024 amendment, 89 FR 76728) is missing from the answer; all other facts are stated correctly and no trap is asserted.

No. Even when the allowed purpose is crew training, an experimental permit cannot be used to carry a person or property for compensation or hire.

Under 14 CFR § 437.5, the FAA may issue an experimental permit only for research and development, showing compliance toward a license, or crew training on the design covered by the permit. Separately, 14 CFR § 437.91 states: “No permittee may carry any property or human being for compensation or hire on a reusable suborbital vehicle.”

The FAA states the same limit in plain language: no one may operate a reusable suborbital rocket or reusable launch vehicle under an experimental permit to carry any property or human being for compensation or hire. Charging a passenger, or flying a customer’s payload for a fee, is therefore not allowed. Compensation or hire is available only under a license, not an experimental permit.

Keenable search Correct

13.9s · ~$0.040 · 4 searches · 0 fetches

Judge: Core answer is correct. The answer does not mention the 437.5 provision, the separate-section structure, or the 2024 amendment (context facts 2, 4, 10 are missing). Fact 3 is credited because the answer lists the permitted purposes via the statute.

No. Crew training is an allowed purpose of an experimental permit, but the permittee may not carry any human being or property for compensation or hire.

Under 51 U.S.C. § 50906(d), the Secretary may issue an experimental permit only for reusable suborbital rockets or reusable launch vehicles launched or reentered solely for research and development, showing compliance toward a license, or crew training. Section 50906(h) then bars for-hire use: “No person may operate a reusable suborbital rocket or reusable launch vehicle under a permit for carrying any property or human being for compensation or hire.”

The FAA implements that bar in 14 CFR § 437.91: “No permittee may carry any property or human being for compensation or hire on a reusable suborbital vehicle.” FAA guidance states the same rule and notes that receiving compensation or hire is allowed under a license, not under an experimental permit.

Charging a passenger for the flight, or flying a customer’s payload for a fee, is carrying a human being or property for compensation or hire. That is prohibited even if the flight is also used for crew training.

Keenable SELECT Partly correct Incomplete list 1.6m · ~$0.035 · 2 searches · 0 fetches

> **Judge:** The answer never says outright that training creates no exception to the ban, although it implies this by saying crew training is allowed but the ban still applies. It also omits the 19 September 2024 amendment (89 FR 76728).

No. Crew training is an allowed purpose of an experimental permit, but the permittee may not charge a passenger for the flight or fly a customer's payload for a fee.

Under 14 CFR § 437.5, the FAA issues an experimental permit to launch or reenter a reusable suborbital vehicle only for:

- research and development to test design concepts, equipment, or operating techniques;
- showing compliance with requirements for obtaining a license; or
- crew training for a launch or reentry using the design of the vehicle for which the permit would be issued.

14 CFR § 437.91 (For-hire prohibition) states: "No permittee may carry any property or human being for compensation or hire on a reusable suborbital vehicle." That bars both charging a passenger and carrying a customer payload for a fee. The FAA states the same rule: no person may operate under an experimental permit for carrying any property or human being for compensation or hire.

Sources: 14 CFR Part 437 (eCFR); FAA, Experimental Permits for Reusable Suborbital Rockets.

> **Judge:** Facts 4 (437.91 is separate from the purposes section) and 10 (the 19 September 2024 amendment, 89 FR 76728) are not stated. The core answer and the required facts are correct and no trap is asserted.

No. Crew training is an allowed purpose of an experimental permit, but the permittee still may not carry a person or property for compensation or hire.

Under 14 CFR § 437.5, the FAA issues an experimental permit to launch or reenter a reusable suborbital vehicle only for research and development, showing compliance toward a license, or crew training for a launch or reentry using that vehicle design. That does not authorize paid carriage. 14 CFR § 437.91 states: "No permittee may carry any property or human being for compensation or hire on a reusable suborbital vehicle."

The FAA states the same limit: no one may operate a reusable suborbital rocket or reusable launch vehicle under an experimental permit to carry any property or human being for compensation or hire. Compensation or hire is allowed under a license, not a permit.

So the permittee may not charge a passenger for the flight or fly a customer's payload for a fee under the permit.

PROMPT 86 · LIST-BUILDING · FACTS AS OF 2026-10-08

DA-26-36, released 9 January 2026, grants SpaceX's request to remove the condition that limited operations to one co-frequency, co-polarization beam in any given location in the 12.2-12.7 GHz and 19.7-20.2 GHz bands. What cap replaces that condition, in which band does the order state the new cap, and what GSO arc exclusion does the same waiver require? Answer from DA-26-36. The December 2022 one-beam condition is the condition being removed.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

DA-26-36, adopted and released 9 January 2026. Grant stamp paragraph 4, and the discussion at paragraphs 17 and 19.

The request to remove the condition requiring operation with only one co-frequency, co-polarization beam in any given location in the 12.2-12.7 GHz and 19.7-20.2 GHz bands is GRANTED. An answer that says the December 2022 one-beam condition still applies in those two bands is wrong.

The substitute is not an unlimited number of beams. Stamp condition (a): in the Ku-band, SpaceX may not use more than eight satellite beams from any of its authorized Gen2 Starlink satellites in the same frequency in the same or overlapping areas at a time. Paragraph 19 requires no more than eight co-frequency, co-polarization beams in any given location, an NCo of 8, in the Ku-band. The order states that eight-beam cap for the Ku-band. It does not state an eight-beam cap for 19.7-20.2 GHz.

Stamp condition (b): SpaceX must maintain a minimum GSO arc exclusion zone of at least four degrees with respect to operational GSO satellites. Paragraph 17 states that four-degree zone together with the Ku-band NCo of 8. This is a condition of the DA-26-36 waiver. It is not a three-degree rule from a different proceeding.

Wrong: the one-beam limit remains in force for 12.2-12.7 GHz and 19.7-20.2 GHz. Wrong: Ku-band beams are unlimited once the one-beam condition is removed. Wrong: the eight-beam cap is the rule in 19.7-20.2 GHz.

Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

Exa — Partly correct — Incomplete list — 27.0s · $0.087 · 2 searches · 1 fetches

Judge: The answer is correct on the core facts. It never gives the paragraph numbers for the grant stamp (fact 2) and says nothing about 19.7-20.2 GHz having no eight-beam cap (fact 9); it also cites ¶¶ 18-19 rather than 17 and 19, though it commits to no wrong claim.

DA-26-36 replaces the one-beam (NCo of 1) condition with an **NCo of 8 cap**, stated for the **Ku-band**, and the same waiver requires a **minimum 4-degree GSO arc exclusion** from operational GSO satellites.

The order grants removal of the condition that limited operations to one co-frequency, co-polarization beam in any given location in the 12.2–12.7 GHz and 19.7–20.2 GHz bands (NCo of 1). In its place, it requires SpaceX to use **no more than eight co-frequency, co-polarization beams in any given location (NCo of 8)**. The order states that replacement cap **in the Ku-band**. Grant condition 4.a is the same limit: in the Ku-band, no more than eight satellite beams from authorized Gen2 Starlink satellites in the same frequency in the same or overlapping areas at a time.

The same waiver requires SpaceX to maintain a **minimum GSO arc exclusion zone of at least four (4) degrees** with respect to operational GSO satellites (grant condition 4.b; also stated in the Order as a 4-degree minimum exclusion zone).

Source: DA-26-36A1 (grant condition 4 and Order ¶¶ 18–19).

Judge: Fact 1 (adoption and release date of 9 January 2026) is not restated in the answer. Fact 9 (no eight-beam cap stated for 19.7-20.2 GHz) is not stated explicitly, though the answer limits the cap to the Ku-band. Fact 2 is credited because the answer cites paragraphs 17 and 19 and the grant conditions, but the paragraph 4 stamp location is not named.

I'll look up DA-26-36 and extract the replacement cap, the band it applies to, and the GSO arc exclusion from the order itself.The order text is available. I'll read the relevant conditions so the cap, band, and exclusion match DA-26-36 exactly.DA-26-36 replaces the one-beam (NCo of 1) condition with a cap of no more than eight co-frequency, co-polarization beams in any given location (NCo of 8). The order states that cap in the Ku-band. The same waiver requires a minimum GSO arc exclusion zone of at least four degrees with respect to operational GSO satellites.

The grant conditions state: “In the Ku-band, SpaceX may not use more than eight (8) satellite beams from any of its authorized Gen2 Starlink satellites in the same frequency in the same or overlapping areas at a time,” and “SpaceX must maintain a minimum GSO arc exclusion zone of at least four (4) degrees with respect to operational GSO satellites.” Paragraph 19 of the order uses the same NCo of 8 formulation for the Ku-band when it removes the prior one-beam condition in the 12.2–12.7 GHz and 19.7–20.2 GHz bands. Paragraph 17 likewise limits Ku-band operations under the waiver to an NCo of 8 and a 4-degree GSO arc exclusion.

Keenable search — Partly correct — Incomplete list — 1.2m · ~$0.212 · 16 searches · 3 fetches

Judge: The answer commits to all core facts (grant, eight-beam Ku-band cap, 4-degree GSO exclusion). Context facts on the date and paragraph numbers are not stated, and it does not say that no eight-beam cap is stated for 19.7-20.2 GHz, though it implies the cap is Ku-band only.

DA-26-36 replaces the December 2022 one-beam condition with an eight-beam cap in the Ku-band and requires a minimum 4-degree GSO arc exclusion zone.

The order grants removal of the condition that limited operations to one co-frequency, co-polarization beam in any given location in the 12.2–12.7 GHz and 19.7–20.2 GHz bands, “to the extent set forth below.” The replacement cap is stated for the Ku-band, not restated as a 12.2–12.7 GHz-only limit: SpaceX may not use more than eight satellite beams from any authorized Gen2 Starlink satellites in the same frequency in the same or overlapping areas at a time. The order’s narrative puts the same limit as an Nco of 8 for Ku-band operations under the waiver.

The same waiver requires SpaceX to maintain a minimum GSO arc exclusion zone of at least four degrees with respect to operational GSO satellites.

> **Judge:** Paragraph references (stamp at para 4, discussion at paras 17 and 19) and the paragraph 17 pairing of the four-degree zone with NCo 8 are not stated; all core and required facts are correct and no trap is asserted.

DA-26-36 (released 9 January 2026) grants removal of the one co-frequency, co-polarization beam condition (NCo of 1) in the 12.2–12.7 GHz and 19.7–20.2 GHz bands. That condition had been extended to Gen2 in the SpaceX Gen2 First Partial Grant, 37 FCC Rcd 14882 (2022), at 14911–12, 14915, paras. 46, 55.

What replaces it, as stated in the order:

- **Cap:** no more than eight co-frequency, co-polarization beams in any given location — an NCo of 8. The ordering clause says SpaceX may not use more than eight satellite beams from any of its authorized Gen2 Starlink satellites in the same frequency in the same or overlapping areas at a time.
- **Band the order assigns to that cap:** the Ku-band only. The order does not restate the NCo of 8 cap for 19.7–20.2 GHz.
- **GSO arc exclusion required by the same waiver:** a minimum exclusion zone of at least 4 degrees with respect to operational GSO satellites.

> **Judge:** All core and required facts are stated correctly. Only context facts 1 (adoption and release date) and 2 (paragraph locations of the grant stamp and discussion) are not explicitly stated; the answer cites paragraphs 17 and 19 but not paragraph 4.

The one-beam condition is replaced by an NCo of 8: no more than eight co-frequency, co-polarization beams in any given location (the grant also phrases this as no more than eight satellite beams in the same frequency in the same or overlapping areas at a time).

DA-26-36 states that cap **in the Ku-band**, not as a restated limit in both 12.2–12.7 GHz and 19.7–20.2 GHz. Paragraph 19 of the Order says SpaceX must operate with "no more than eight (8) co-frequency, co-polarization beams in any given location, an NCo of 8, in the Ku-band." Paragraph 17 likewise limits Ku-band operations to an NCo of 8. Grant condition 4.a is the same Ku-band eight-beam cap.

The same waiver requires a **minimum GSO arc exclusion zone of at least four (4) degrees** with respect to operational GSO satellites (Order paragraph 17: "a minimum GSO arc exclusion zone of 4 degrees").

PROMPT 93 · REGULATION · FACTS AS OF 2026-10-08

A new crew member is told on launch day that the government has not certified the vehicle. Is that on time, and does someone who was already employed on 23 December 2004 follow the same clock?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

14 CFR 460.9. An operator must inform in writing any individual serving as crew that the United States Government has not certified the launch vehicle and any reentry vehicle as safe for carrying flight crew or space flight participants.

For a person who was not already employed as crew on 23 December 2004, that writing is due before the operator enters into any contract or other arrangement to employ the individual. Launch day is late. The disclosure is a condition of the employment arrangement, not a briefing at the pad.

For a crew member employed as of 23 December 2004, the writing is due as early as possible and prior to any launch in which that individual will participate as crew. That person does not follow the before-hire clock. A crew member hired after that date does not get the 2004 clock.

Wrong: every crew member may be told on launch day. Wrong: a person employed on 23 December 2004 had to be told before being hired.

Judge: Fact 4 (the disclosure is a condition of the employment arrangement, not a pad briefing) is not stated in those terms, though the before-contract timing implies it. Every other fact is correct and neither trap is asserted.

No. Telling a new crew member only on launch day is not on time. Someone already employed on 23 December 2004 does not follow that same clock.

Under 14 CFR § 460.9, an operator must inform any individual serving as crew, in writing, that the United States Government has not certified the launch vehicle and any reentry vehicle as safe for carrying flight crew or space flight participants. For a new hire, that notice must be given **before** any contract or other arrangement to employ the person. Launch-day notice is too late. https://www.ecfr.gov/current/title-14/chapter-III/subchapter-C/part-460/subpart-A

A crew member already employed as of 23 December 2004 is on a different schedule: notice must be given as early as possible and **prior to any launch** in which that person will participate as crew—not before the employment arrangement. The same split appears in 51 U.S.C. § 50905(b)(4)(B). https://www.law.cornell.edu/cfr/text/14/460.9

Keenable SELECT — Correct

1.4m · ~$0.043 · 2 searches · 1 fetches

Judge: All facts are stated correctly and neither trap is asserted. Fact 4 is covered by the answer's statement that the writing is due before any contract or arrangement to employ, not on launch day.

No. Launch-day notice is late for a new crew member, and someone already employed on 23 December 2004 is on a different clock.

Under 14 CFR § 460.9, the operator must tell any crew member **in writing** that the U.S. Government has not certified the launch vehicle and any reentry vehicle as safe for carrying flight crew or space flight participants. The same text is mirrored at customsmobile.com and faraim.org.

- **New hire:** that writing is due **before** any contract or other arrangement to employ the person — not on launch day, and not merely before flight.
- **Already employed on 23 December 2004:** they do **not** follow that pre-employment clock. For them, the operator must give the same written notice **as early as possible and before any launch** in which they fly as crew. Launch day can still be "before launch," but waiting until then may fail the "as early as possible" part.

FAA guidance restates the same split: the statement goes to the crew member before employment, and a crew member already employed as of that date must get it as early as possible and before launch (FAA informing-crew guidance PDF). The official eCFR page did not load here; the mirrors and the FAA guidance quote the same rule.

PROMPT 95 · REGULATION · FACTS AS OF 2026-10-08

If destroying the vehicle would put more people at risk than letting it fly, do the flight-safety limits still require an abort, and does a lost track force one?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

14 CFR 450.108, which applies when flight abort is used as a hazard control to meet 14 CFR 450.101.

The flight-safety limits must be designed to avoid a flight abort that increases collective risk to the public in uncontrolled areas, compared with continued flight. An abort is not required merely because it is available. If aborting would raise that collective risk, the limits are written to avoid the abort.

A lost track does not by itself force an abort. The flight safety system must abort when tracking data is invalid and further flight has the potential to violate a flight safety limit, using the methods that account for losing the data needed to evaluate the abort rules. It must also abort when valid real-time data show a flight-safety limit has been violated, and when the vehicle state approaches a condition expected to compromise the flight safety system if further flight could violate a limit.

Which flight-safety-system standard applies depends on the consequence. Greater than 1 × 10−2 conditional expected casualties in uncontrolled areas, from any reasonably foreseeable failure mode in any significant period of flight, requires a system meeting 14 CFR 450.145. A consequence between 1 × 10−2 and 1 × 10−3 requires a system meeting 14 CFR 450.143. The section does not assign either standard below that lower figure.

Abort to protect against a high-consequence event in uncontrolled areas does not have to continue for the whole flight. It can end immediately after critical vehicle parameters are validated, if the vehicle can still achieve a useful mission, abort would not materially decrease the risk from that high-consequence event, and there are no key flight-safety events for the rest of the flight.

In place of the useful-mission and 1 × 10−2 objectives in 450.108(c)(2) and (c)(4), the operator may instead keep debris capable of causing a casualty out of uncontrolled areas with a flight safety system that meets 450.145.

Wrong: the vehicle must be destroyed whenever it leaves the planned path. Wrong: invalid tracking always means abort. Wrong: every flight uses the highly reliable abort standard through landing.

Exa Correct

29.1s · $0.107 · 4 searches · 2 fetches

Judge: All core and required facts are correct. The answer omits the context facts: the abort on a valid-data violation (7), the abort for a compromised flight safety system (8), the 450.145 and 450.143 consequence thresholds (9-11), and the alternative debris-containment option (14).

No. Under FAA flight-abort rules, limits must not require an abort that raises collective public risk, and a lost track does not by itself force an immediate abort.

Abort that increases risk. 14 CFR § 450.108(d)(6) requires flight safety limits that are "designed to avoid flight abort that results in increased collective risk to the public in uncontrolled areas, compared to continued flight." FAA Advisory Circular 450.108-1 § 10.6 treats that as a requirement that abort not present higher public risk than continued flight. Limits are placed so the lower-risk choice is used—abort or continued flight—including when the vehicle has left the limits of a useful mission (§ 450.108(c)(2) and AC § 9.3). Separately, § 450.108(e) says a flight need not be aborted to protect against high-consequence events in uncontrolled areas once critical parameters are validated, the vehicle can still achieve a useful mission, abort would not materially decrease that risk, and there are no key flight safety events.

Lost track. Invalid tracking data does not automatically require abort. § 450.108(f)(2)(iii) requires abort only "in accordance with methods used to satisfy (d)(3)" when tracking data is invalid and further flight has the potential to violate a flight safety limit. Section 450.108(d)(3) only requires that the limits account for possible loss of the data needed to evaluate abort rules. The accepted approach in AC 450.108-1 § 10.3 is a precomputed Duration of Acceptable Data Loss (also called data-loss flight time or "green numbers"): if all tracking data are lost, a countdown starts, and abort is taken when it reaches zero—not at the instant of track loss. If further flight has no potential to violate a flight safety limit, (f)(2)(iii) does not require abort. A valid-data limit violation under (f)(2)(i) also does not apply while the track is invalid.

Sources: 14 CFR § 450.108; AC 450.108-1 (July 27, 2021).

Parallel Correct

30.5s · $0.150 · 5 searches · 2 fetches

Judge: The answer gets all the core and required points right (avoid abort that raises collective risk, lost track not an automatic abort, data-loss abort tied to potential limit violation). It omits the context facts 7-14: the other abort triggers, the 450.143/450.145 consequence thresholds, end-of-flight abort, and the 450.145 alternative.

I'll look up current flight-safety rules on abort versus continued flight when termination would increase risk, and on lost-track requirements.No. Under FAA launch and reentry rules, flight-safety limits must not require an abort that raises public risk, and a lost track does not by itself force an immediate abort.

Abort when destruction is riskier. Flight safety limits must be designed to avoid a flight abort that increases collective risk to the public in uncontrolled areas compared with continued flight. 14 CFR § 450.108(d)(6). FAA guidance states that abort action should not present a higher risk than not aborting, and that limits should be placed so the lower-risk choice is used. AC 450.108-1, ¶¶ 9.3 and 10.6.

Lost track. Invalid tracking data requires abort only under the operator's pre-established data-loss method, and only if further flight still has the potential to violate a flight safety limit. 14 CFR § 450.108(f)(2)(iii); limits must account for loss of the data needed to evaluate abort rules. § 450.108(d)(3). The accepted means of compliance uses a duration of acceptable data loss (a countdown), not an automatic immediate destruct. Abort on data loss is not required once the vehicle can no longer reach a flight safety limit (including after orbital insertion). If the hazard footprint is already over an uncontrolled populated area, termination is delayed rather than taken immediately, and if the vehicle is still inside the normal envelope the allowed data-loss time should cover reasonably expected dropouts. AC 450.108-1, ¶¶ 10.3 and 12.2.3.

Keenable search ✓ Correct — 21.0s · ~$0.055 · 3 searches · 2 fetches

> **Judge:** The core and required facts are all correct. Only context facts are missing: the abort on valid data showing a limit violation (7), the abort on approaching a compromising vehicle state (8), the 450.145 and 450.143 flight safety system thresholds (9-11), and the alternative debris-containment option (14).

Under FAA 14 CFR § 450.108, no. Limits must be drawn so abort is not required when it would raise public risk, and invalid tracking forces abort only if further flight could still violate a flight safety limit.

Abort that increases risk. Flight safety limits must be "designed to avoid flight abort that results in increased collective risk to the public in uncontrolled areas, compared to continued flight" (14 CFR § 450.108(d)(6)). FAA AC 450.108-1 (July 27, 2021) states the same point: abort action should not present a higher risk to the public than not aborting, and that comparison can change where the limits are placed (AC 450.108-1). Related rules: abort is not required against high-consequence events once critical parameters are validated, the vehicle can still achieve a useful mission, abort would not materially decrease that risk, and there are no key flight safety events (§ 450.108(e)). Limits must also keep conditional expected casualties from abort (or from flight outside a useful mission) at or below \(1 \times 10^{-2}\) in uncontrolled areas (§ 450.108(c)(4)).

Lost track. Invalid tracking does not by itself force an abort. The flight safety system must abort "if tracking data is invalid and further flight has the potential to violate a flight safety limit," using methods that already account for loss of valid data (§ 450.108(f)(2)(iii) and (d)(3)). AC 450.108-1 treats allowable data-loss duration as something the operator calculates (normal envelope, populated overflight, unintended trajectory), not as an automatic destruct on loss of track.

This is the FAA commercial launch/reentry rule. Military range procedures can differ and are not covered here.

Keenable SELECT ✗ Wrong — Incomplete list — 4.2m · ~$0.086 · 4 searches · 0 fetches

> **Judge:** The answer covers the core facts (collective-risk limit, lost track not forcing abort, conditional abort on invalid data). It omits the other abort triggers, the 450.145/450.143 consequence thresholds, and the provisions for ending abort protection or substituting a 450.145 system. It also never states that an abort is not required merely because it is available.

No. Under current FAA rules, flight-safety limits must not force an abort that raises public risk, and a lost track forces an abort only if further flight could still violate a limit.

Abort when destruction is riskier. 14 CFR § 450.108(d)(6) requires flight safety limits that "avoid flight abort that results in increased collective risk to the public in uncontrolled areas, compared to continued flight." AC 450.108-1 states the same point: abort action should not present a higher risk than not aborting, and termination should be delayed if uncontrolled populated areas would be hazarded. That is also how range safety has been applied in practice: on a 2018 Ariane 5 that veered toward Kourou, the range safety officer did not terminate because debris could hit the adjacent town (Range safety).

Lost track. A lost track does not by itself force an abort. § 450.108(f)(2)(iii) requires abort only if tracking data is invalid and further flight has the potential to violate a flight safety limit. Limits must account for loss of the data needed to evaluate the abort rules (§ 450.108(d)(3)). AC 450.108-1 describes one compliant method: a predefined data-loss countdown, with abort when the timer reaches zero—and delay if abort would hazard an uncontrolled populated area.

Older range rules were stricter. Under EWR 127-1, complete loss of both required tracking sources was treated as a prima facie reason to terminate even with no sign the vehicle was off course; loss of only one source was not (National Academies, *Streamlining Space Launch Range Safety*, ch. 4). That is not the current FAA rule.

Grok native ✗ Wrong — Incomplete list — 28.5s · $0.104 · 4 searches · 3 fetches

> **Judge:** The answer covers the core points on risk-increasing aborts, lost track and invalid-data aborts, but never says an abort is not required merely because it is available (core fact 3). It also omits the compromised-FSS abort condition, the 450.143/450.145 consequence thresholds, and the provisions on ending abort protection and the alternative to (c)(2) and (c)(4).

I'll look up the flight-safety rules on abort versus risk, and whether a lost track forces an abort.The FAA flight-abort rule looks like the right source. I'll read the regulation and the advisory circular on risk and lost track.No. Under the FAA commercial launch and reentry flight-abort rules in 14 CFR § 450.108, flight-safety limits are not supposed to command an abort when destroying the vehicle would raise public risk, and a lost track does not by itself force an immediate abort.

Abort that increases risk. Limits must be designed to avoid a flight abort that increases collective risk to the public in uncontrolled areas compared with continued flight. That is a design constraint on where the limits are drawn, not a real-time waiver after a limit is already violated. If valid real-time data show a limit has been crossed, the flight safety system must abort. FAA guidance treats this as a common-sense rule: abort action should not present a higher public risk than not aborting, and the comparison is between abort and continued flight (including conditional expected casualties).

Lost track. Invalid tracking data forces an abort only under the methods used to account for loss of valid data, and only if further flight has the potential to violate a flight safety limit. It is not an automatic destruct the moment the track is lost. FAA guidance describes a Duration of Acceptable Data Loss: if all tracking data are lost while the abort system is active, a pre-set countdown starts from the vehicle state at loss of data, and abort action is taken when that timer reaches zero. The uncertainty is that data loss may be benign (sensor or link drop, breakup where abort would do nothing) or may accompany an off-nominal trajectory, so the rule is a timed criterion, not an instant one.

Sources: 14 CFR § 450.108 (especially (d)(3), (d)(6), and (f)(2)); AC 450.108-1, Flight Abort Rule Development (data-loss and "abort should never increase risk" guidance). This is the FAA Part 450 rule set, not a general aviation or military range-safety standard.

> **Judge:** The core and required facts are all correct. Only context facts are missing: the abort on valid data showing a limit violation (7), the abort on approaching a compromising vehicle state (8), the 450.145 and 450.143 flight safety system thresholds (9-11), and the alternative debris-containment option (14).

Under FAA 14 CFR § 450.108, no. Limits must be drawn so abort is not required when it would raise public risk, and invalid tracking forces abort only if further flight could still violate a flight safety limit.

Abort that increases risk. Flight safety limits must be "designed to avoid flight abort that results in increased collective risk to the public in uncontrolled areas, compared to continued flight" (14 CFR § 450.108(d)(6)). FAA AC 450.108-1 (July 27, 2021) states the same point: abort action should not present a higher risk to the public than not aborting, and that comparison can change where the limits are placed (AC 450.108-1). Related rules: abort is not required against high-

consequence events once critical parameters are validated, the vehicle can still achieve a useful mission, abort would not materially decrease that risk, and there are no key flight safety events (§ 450.108(e)). Limits must also keep conditional expected casualties from abort (or from flight outside a useful mission) at or below \(1 \times 10^{-2}\) in uncontrolled areas (§ 450.108(c)(4)).

Lost track. Invalid tracking does not by itself force an abort. The flight safety system must abort "if tracking data is invalid and further flight has the potential to violate a flight safety limit," using methods that already account for loss of valid data (§ 450.108(f)(2)(iii) and (d)(3)). AC 450.108-1 treats allowable data-loss duration as something the operator calculates (normal envelope, populated overflight, unintended trajectory), not as an automatic destruct on loss of track.

This is the FAA commercial launch/reentry rule. Military range procedures can differ and are not covered here.

PROMPT 97 · LIST-BUILDING · FACTS AS OF 2026-10-08

If the Space Bureau determines that Gen2 operations under the January 2026 EPFD waiver have caused harmful interference, may SpaceX keep the higher power while it studies the complaint, and can the Bureau take the waiver back?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

DA-26-36 grant stamp on the EPFD waiver, and paragraph 17.

If the Space Bureau notifies SpaceX of a determination that it has caused harmful interference, SpaceX must immediately return to operating in accordance with the Commission's EPFD limits in the affected frequency bands. SpaceX must also communicate to its affected customers how it is rectifying the situation if that mediation will affect their service.

The grant stamp says the Space Bureau will revoke the waiver in the event of unresolved harmful interference. Paragraph 17 says the Space Bureau may revoke the waiver in that event. Both sentences are in the order. An answer that reports only one of those verbs should say which sentence it is using.

Wrong: SpaceX may keep operating above the EPFD limits while it studies the complaint. Wrong: the waiver cannot be revoked.

---

Exa ✓ Correct ✓ ✓ ✓ ✓ — 26.6s · $0.142 · 4 searches · 1 fetches

> **Judge:** All facts are correct: the answer says SpaceX must immediately return to EPFD limits, cites grant condition 4.d and paragraph 17, and distinguishes the 'will revoke' (grant) from the 'may revoke' (paragraph 17) wording.

No. Once the Space Bureau notifies SpaceX that it has determined Gen2 operations under the January 9, 2026 EPFD waiver caused harmful interference, SpaceX must immediately drop back to the Commission's EPFD limits in the affected bands. It may not keep the higher power while it studies the complaint.

That condition is in the Space Bureau's January 9, 2026 partial grant, DA 26-36 (ICFS File Nos. SAT-LOA-20200526-00055 and related), grant condition 4.d, and is restated in Order paragraph 17. Operations under the waiver are unprotected and non-interference. SpaceX must also tell affected customers how it is fixing the problem if mediation will affect their service; paragraph 17 adds that it must tell the Commission as well.

The Bureau can take the waiver back if the harmful interference is unresolved. The operative grant condition says the Bureau will revoke the waiver in that case. The discussion in paragraph 17 says the Bureau may revoke it. Both texts require the immediate return to the EPFD limits upon the Bureau's notice.

> **Judge:** All facts are correct: the answer states the immediate return to EPFD limits, the customer notice duty, and the 'will revoke' (grant stamp) vs 'may revoke' (¶17) distinction. No traps asserted.

No. Once the Space Bureau notifies SpaceX that it has determined Gen2 operations under the January 9, 2026 EPFD waiver caused harmful interference, SpaceX must immediately return to the Commission's EPFD limits in the affected bands. It may not keep the higher-power waiver operations while it studies the complaint.

The Bureau can also take the waiver back if the harmful interference is unresolved. The grant condition says the Bureau will revoke the waiver in that case; the accompanying order says the Bureau may revoke it.

Source: FCC Space Bureau Authorization and Order, DA 26-36 (adopted and released January 9, 2026), grant condition 4.d and Order ¶ 17: https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf

The same paragraphs require SpaceX to tell affected customers (and, in the order text, the Commission) how it is fixing the problem if mediation will affect service. That notice duty does not delay the immediate return to the EPFD limits after the Bureau's determination.

> **Judge:** All facts are correct. The answer cites DA 26-36 and ¶17, says SpaceX must immediately return to EPFD limits, tells affected customers, and reports both the 'may revoke' and 'will revoke' wording.

No. Once the Space Bureau determines that Gen2 operations under the waiver caused harmful interference, SpaceX may not keep the higher power while it studies the complaint. The Bureau can take the waiver back.

In the January 9, 2026 Authorization and Order, DA 26-36, the Space Bureau granted SpaceX a time-limited waiver of the Commission's single-entry EPFD downlink limits for Gen2 operations inside the United States. The condition is:

- If the Bureau notifies SpaceX that it has determined those operations caused harmful interference, SpaceX must **immediately** return to the Commission's EPFD limits in the affected bands. It must also tell the Commission and affected customers how it is fixing the situation if that will affect service.
- The order does not allow continued higher-power operation during a post-determination study. The return to the limits is triggered by the Bureau's determination and notice, not by the end of SpaceX's own investigation.
- The Bureau **may revoke** the waiver if harmful interference is unresolved. The grant conditions also say the Bureau **will revoke** it in that event.

Source: DA 26-36 (PDF), adopted and released January 9, 2026 (Order ¶ 17 and the EPFD waiver grant conditions). Secondary accounts that describe an immediate "kill switch" if interference is proven are consistent with that order, but they are less precise than the order itself.

PROMPT 98 · LIST-BUILDING · FACTS AS OF 2026-10-08

DA-26-36 authorizes Gen2 W-band operations in 92.0-94.0, 94.1-95.0, 95.0-100.0, 102.0-109.5, and 111.8-114.25 GHz. Are those operations a protected downlink, and what minimum earth-station elevation does the order require at each satellite altitude?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

DA-26-36 paragraph 9, footnote 21, and paragraph 11.

The Bureau grants a waiver of the U.S. Table for global uplink (Earth-to-space) communications in 92.0-94.0 GHz, 94.1-95.0 GHz, 95.0-100.0 GHz, 102.0-109.5 GHz, and 111.8-114.25 GHz, on an unprotected and non-interference basis. Footnote 21: operations in those W-band frequencies are non-conforming with the International Table of Frequency Allocations and are on an unprotected, non-interference basis under ITU Radio Regulations Article 4.4.

Paragraph 11: SpaceX seeks to use the W-band frequencies on a receive-only basis, meaning the satellite receives the uplink. The W-band earth stations will have a minimum elevation angle of 10 degrees for satellites operating below 400 km, 20 degrees for satellites operating between 400 km and 500 km, and 25 degrees for satellites operating above 500 km. Operations under the waiver are unprotected and non-interference.

Wrong: these W-band operations have primary status under the International Table. Wrong: the grant is a space-to-Earth downlink. Wrong: the order sets no elevation floor.

Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

Exa — Correct

38.0s · $0.190 · 6 searches · 1 fetches

Judge: All checklist facts are stated correctly and no trap is asserted. The 10/20/25 degree angles come from the amendment text in the DATA window, and the unprotected Earth-to-space waiver basis is consistent with the DA-26-36 text.

No. Those Gen2 W-band operations are not a protected downlink. DA-26-36 authorizes them as Earth-to-space (uplink) operations, and only on an unprotected, non-interference basis.

The grant lists 92.0–94.0, 94.1–95.0, 95.0–100.0, 102.0–109.5, and 111.8–114.25 GHz as Earth-to-space and grants a waiver of the U.S. Table for NGSO uplink use in those bands. Condition 7 requires SpaceX to operate on an unprotected, non-interference basis. The order also says the operations are non-conforming with the International Table and are unprotected under ITU Radio Regulations Article 4.4. Satellites use the bands on a receive-only basis (uplink reception), mainly for parabolic earth-station backhaul—not as a protected space-to-Earth downlink.

In the waiver discussion (Order ¶ 11), the authorized W-band earth stations have these minimum elevation angles:

- Below 400 km: 10 degrees
- 400–500 km: 20 degrees
- Above 500 km: 25 degrees

Those angles are stated as the operating parameters of the operations being granted, not as a separately numbered grant condition. The grant also requires operations to follow the applicant's technical specifications and commitments unless the order says otherwise.

22.5s · $0.119 · 2 searches · 1 fetches

Judge: All core and required facts are stated correctly. Only the context fact about footnote 21 and ITU Article 4.4 non-conformance is missing; no traps asserted.

No. Those bands are not a protected downlink.

In DA-26-36 (released January 9, 2026), the Space Bureau authorizes SpaceX Gen2 W-band use of 92.0–94.0, 94.1–95.0, 95.0–100.0, 102.0–109.5, and 111.8–114.25 GHz as **Earth-to-space uplinks**, on a **receive-only** basis at the satellite, and only on an **unprotected, non-interference** basis. The protected-downlink characterization does not apply. See grant condition 7 and Order ¶¶ 9 and 11: https://docs.fcc.gov/public/attachments/DA-26-36A1.txt

The same paragraph states the minimum W-band earth-station elevation angles the Bureau relies on for the waiver:

- **Below 400 km:** 10 degrees
- **400–500 km:** 20 degrees
- **Above 500 km:** 25 degrees

Those angles are SpaceX commitments incorporated into the grant ("operations under this grant must comport with the legal and technical specifications and commitments set forth by the applicant").

> **Judge:** All facts are stated, including the 10/20/25 degree elevation angles. The answer asserts that the order sets no elevation requirement, only recites SpaceX's proposal, which matches the trap and conflicts with the expected answer that the order requires these angles.

No. Those operations are not a protected downlink.

DA-26-36 authorizes them as Earth-to-space NGSO uplinks, and only under a waiver of the U.S. Table of Frequency Allocations. Paragraph 7 says SpaceX must operate in 92.0–94.0, 94.1–95.0, 95.0–100.0, 102.0–109.5, and 111.8–114.25 GHz on an unprotected, non-interference basis. Paragraph 9 repeats that these W-band operations are non-conforming with the International Table and are unprotected and non-interference. Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf

The order does not impose a minimum earth-station elevation as a grant condition. Paragraph 11 only recites SpaceX's proposal: receive-only use of these frequencies, with earth stations at a minimum elevation of 10° below 400 km, 20° between 400 and 500 km, and 25° above 500 km. The operative W-band condition in paragraph 7 requires only unprotected, non-interference operation.

Cited: 1. docs.fcc.gov

PROMPT 99 · LIST-BUILDING · FACTS AS OF 2026-10-09

Avant la décision 2021-0116 sur les fréquences utilisateurs, l'Arcep avait autorisé des stations terriennes passerelles Starlink en France, d'abord au nom de TIBRO France SARL. Pour chaque station (Belin-Béliet, Gravelines, Villenave-d'Ornon, Saint-Senier-de-Beuvron), donnez le numéro et la date de la décision d'attribution, les bandes et la durée, la décision qui a remplacé TIBRO par Starlink France SARL, et, le cas échéant, le numéro et la date de la décision d'abrogation. Combien de ces quatre autorisations restent en vigueur au 9 octobre 2026 ? Ne vous fiez pas aux articles de presse qui parlent de « trois stations prévues » : comptez les décisions.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Nine Arcep decisions, all on arcep.fr/uploads/tx_gsavis/. Attributions: Belin-Béliet 2020-0727 du 30 juin 2020; Gravelines 2020-0744 du 2 juillet 2020; Villenave-d'Ornon 2020-0884 du 17 août 2020; Saint-Senier-de-Beuvron 2020-1452 du 1er décembre 2020 (this one already in the name of Starlink France SARL). All four: bandes 18 GHz et 28 GHz, durée de dix ans à compter de la décision, satellite STEAM-2B, renewal request at least four months before expiry. Annex replacements: 2020-0764 and 2020-0765 du 8 juillet 2020 (Belin-Béliet, Gravelines), no change of duration. Name change: 2020-1415 du 26 novembre 2020 replaces TIBRO France SARL by Starlink France SARL in 2020-0727, 2020-0744 and 2020-0884 without changing durations (note: its recitals wrongly place Gravelines in Gironde; the attribution says Nord 59). Abrogations: Belin-Béliet by 2021-0062 du 14 janvier 2021; Saint-Senier by 2022-0032 du 4 janvier 2022; Gravelines by 2022-0182 du 20 janvier 2022, all at Starlink's request. Villenave-d'Ornon (2020-0884) is the only one not abrogated in these records, so one of four remains, expiring 17 August 2030 absent renewal. Wrong: three stations only (Belin-Béliet is the fourth, abrogated a year before the others); wrong: abrogations dated to the Conseil d'État ruling of April 2022 (that annulled 2021-0116, not these); wrong: TIBRO as the holder of 2020-1452. Sources: https://www.arcep.fr/uploads/tx_gsavis/20-0727.pdf, 20-0744.pdf, 20-0884.pdf, 20-0764.pdf, 20-0765.pdf, 20-1415.pdf, 20-1452.pdf, 21-0062.pdf, 22-0032.pdf, 22-0182.pdf (same path).

Exa ✓ Correct ✓ ✓ ✓ ✓ — 1.1m · $0.262 · 11 searches · 3 fetches

Judge: Every required and core fact is correct and no trap is asserted. Only context facts are missing: the renewal-request deadline (fact 6), the replacement decisions 2020-0764 and 2020-0765 (fact 7), and the total of nine decisions (fact 15).

Je vais chercher les décisions Arcep officielles sur les stations terriennes passerelles Starlink/TIBRO, plutôt que les articles de presse.Les trois premières attributions sont identifiées ; je vérifie Saint-Senier-de-Beuvron et les éventuelles abrogations.Villenave-d'Ornon semble encore citée en 2023 ; je vérifie s'il existe une abrogation ultérieure de la décision n° 2020-0884.Je confirme les bandes exactes et l'absence d'abrogation de Villenave-d'Ornon dans les textes des décisions.Quatre autorisations distinctes ont été délivrées. Une seule, celle de Villenave-d'Ornon, reste en vigueur au 9 octobre 2026. Les trois autres ont été abrogées. Seules les trois premières l'ont été au nom de TIBRO France SARL.

Belin-Béliet (Gironde). La décision n° 2020-0727 du 30 juin 2020 autorise TIBRO France SARL, pour la station BELIN-BELIET STARLINK associée au satellite STEAM-2B, dans les bandes 18 GHz et 28 GHz, pour dix ans à compter de cette date. La décision n° 2020-1415 du 26 novembre 2020 remplace TIBRO France SARL par Starlink France SARL, sans modifier la durée. Elle est abrogée par la décision n° 2021-0062 du 14 janvier 2021, à compter de cette date. Elle n'est donc plus en vigueur.

Gravelines (Nord). La décision n° 2020-0744 du 2 juillet 2020 autorise TIBRO, pour GRAVELINES STARLINK / STEAM-2B, dans les mêmes bandes 18 GHz et 28 GHz, pour dix ans à compter du 2 juillet 2020. Le même transfert de titulaire est opéré par la décision n° 2020-1415 du 26 novembre 2020. Elle est abrogée par la décision n° 2022-0182 du 20 janvier 2022. Elle n'est plus en vigueur. (Un visa de la décision n° 2020-1415 situe à tort Gravelines en Gironde ; le dispositif de la décision n° 2020-0744 indique bien le Nord.)

Villenave-d'Ornon (Gironde). La décision n° 2020-0884 du 17 août 2020 autorise TIBRO, pour VILLENAVE D ORNON STARLINK / STEAM-2B, bandes 18 GHz et 28 GHz, pour dix ans à compter du 17 août 2020 (échéance le 17 août 2030). Le titulaire est remplacé par Starlink France SARL par la même décision n° 2020-1415 du 26 novembre 2020. Aucune décision d'abrogation de la n° 2020-0884 n'a été publiée. L'inventaire Arcep mis à jour au 28 mars 2023 la cite encore parmi les autorisations de passerelles en vigueur, et la page consultée le 9 octobre 2026 n'enregistre pas d'abrogation. Elle reste donc en vigueur.

Saint-Senier-de-Beuvron (Manche). Cette station n'a pas été autorisée au nom de TIBRO. La décision n° 2020-1452 du 1er décembre 2020 est délivrée directement à Starlink France SARL (station S SENIER DE BEUVRON STARLINK / STEAM-2B), bandes 18 GHz et 28 GHz, pour dix ans à compter du 1er décembre 2020. La décision n° 2020-1415 ne la vise pas : elle ne porte que sur les n° 2020-0727, 2020-0744 et 2020-0884. Elle est abrogée par la décision n° 2022-0032 du 4 janvier 2022. Elle n'est plus en vigueur.

Bilan au 9 octobre 2026 : 1 autorisation sur 4 (Villenave-d'Ornon, n° 2020-0884, titulaire Starlink France SARL depuis la n° 2020-1415). Les articles qui parlent de « trois stations prévues » omettent Saint-Senier-de-Beuvron, autorisée quelques jours après le changement de raison sociale.

> **Judge:** All required and core facts are correct. Context facts 6 (STEAM-2B renewal clause), 7 (decisions 2020-0764/0765), 9 (Gravelines misplaced in Gironde) and 15 (nine decisions total) are not stated in the answer. The "at the request of Starlink" detail is also not stated, but the abrogation numbers and dates match.

Je vais chercher les décisions Arcep officielles pour chacune des quatre stations passerelles, puis vérifier les remplacements et abrogations.Les décisions d'attribution sont identifiées. Je vérifie maintenant les abrogations et le statut de Saint-Senier-de-Beuvron.Il reste à confirmer si l'autorisation de Villenave-d'Ornon a été abrogée après 2022, et le statut exact de Saint-Senier.Une seule de ces quatre autorisations est encore en vigueur au 9 octobre 2026 : celle de Villenave-d'Ornon. Les trois autres ont été abrogées. Saint-Senier-de-Beuvron n'a jamais été attribuée à TIBRO.

Les décisions d'attribution sont toutes antérieures à la décision n° 2021-0116. Chaque article 1er vise les bandes 18 GHz et 28 GHz ; chaque article 2 fixe une durée de dix ans à compter de la date de la décision.

Belin-Béliet (Gironde). Décision n° 2020-0727 du 30 juin 2020, au nom de TIBRO France SARL, bandes 18 GHz et 28 GHz, dix ans à compter du 30 juin 2020. Le titulaire est devenu Starlink France SARL par la décision n° 2020-1415 du 26 novembre 2020, qui ne modifie pas la durée. Abrogation : décision n° 2021-0062 du 14 janvier 2021, à compter de cette date.
Sources : https://www.arcep.fr/uploads/tx_gsavis/20-0727.pdf ; https://www.arcep.fr/uploads/tx_gsavis/20-1415.pdf ; https://www.arcep.fr/uploads/tx_gsavis/21-0062.pdf

Gravelines (Nord). Décision n° 2020-0744 du 2 juillet 2020, TIBRO France SARL, mêmes bandes, dix ans à compter du 2 juillet 2020. Remplacement du titulaire par la même décision n° 2020-1415 du 26 novembre 2020. Abrogation : décision n° 2022-0182 du 20 janvier 2022, à compter de cette date.
Sources : https://www.arcep.fr/uploads/tx_gsavis/20-0744.pdf ; https://www.arcep.fr/uploads/tx_gsavis/20-1415.pdf ; https://www.arcep.fr/uploads/tx_gsavis/22-0182.pdf

Villenave-d'Ornon (Gironde). Décision n° 2020-0884 du 17 août 2020, TIBRO France SARL, mêmes bandes, dix ans à compter du 17 août 2020 (échéance le 17 août 2030). Remplacement du titulaire par la décision n° 2020-1415 du 26 novembre 2020. Aucune décision d'abrogation trouvée. L'inventaire Arcep mis à jour au 28 mars 2023 la cite encore, via la n° 2020-1415, parmi les autorisations passerelles en vigueur.
Sources : https://www.arcep.fr/uploads/tx_gsavis/20-0884.pdf ; https://www.arcep.fr/uploads/tx_gsavis/20-1415.pdf ; https://www.arcep.fr/actualites/actualites-et-communiques/detail/n/frequences-180221.html

Saint-Senier-de-Beuvron (Manche). Décision n° 2020-1452 du 1er décembre 2020, attribuée directement à Starlink France SARL, pas à TIBRO. Il n'y a donc pas de décision de substitution. Mêmes bandes, dix ans à compter du 1er décembre 2020. Abrogation : décision n° 2022-0032 du 4 janvier 2022, à compter de cette date.
Sources : https://www.arcep.fr/uploads/tx_gsavis/20-1452.pdf ; https://www.arcep.fr/uploads/tx_gsavis/22-0032.pdf

En vigueur au 9 octobre 2026 : 1 sur 4 (Villenave-d'Ornon / n° 2020-0884). Les n° 2020-0727, 2020-0744 et 2020-1452 sont abrogées. Réserve : l'inventaire public Arcep consulté s'arrête au 28 mars 2023 ; aucune abrogation ultérieure de la n° 2020-0884 n'a été trouvée, mais une décision non indexée après cette date ne peut pas être exclue avec certitude.

- **Abrogation :** n° 2022-0032 du 4 janvier 2022, qui abroge la 2020-1452 à compter de cette date.
  https://www.arcep.fr/uploads/tx_gsavis/22-0032.pdf

Les articles qui parlent de « trois stations prévues » (Gravelines, Saint-Senier-de-Beuvron, Villenave-d'Ornon) omettent Belin-Béliet, déjà abrogée en janvier 2021, et parfois datent à tort toutes les attributions du 1er décembre 2020. En comptant les décisions, il y en a bien quatre : trois abrogées, une encore en vigueur au 9 octobre 2026.

PROMPT 100 · LIST-BUILDING · FACTS AS OF 2026-10-09

Starlink Chile SpA ha pedido a la Subtel modificar dos concesiones distintas para instalar estaciones terrenas (gateways) Ka y banda E. Para cada uno de los extractos 24-SP157939, 25-SP69683 y 25-SP69681 indique: qué decreto supremo (número y año) y qué tipo de concesión se modifica, cuántos gateways se piden y en qué comunas, la fecha y número del Diario Oficial cuando el extracto lo trae, y el número de domos (antenas) declarado por estación. Diga también qué restricción geográfica aplica a los gateways en 71-76 / 81-86 GHz según la nota 5 citada. Ojo: el nombre de una estación no coincide con su comuna.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Three Subtel/Diario Oficial extracts. 24-SP157939 (PDF on subtel.gob.cl, signed 17 Jan 2025; no Diario Oficial masthead in the file): modifies the concesión de Servicio Público de Transmisión de Datos granted by decreto supremo N° 156 de 2021; four gateways: Space X San Bernardo 1 (San Bernardo), Limache 1 (Limache), Cabrero 1 (comuna Chillán Viejo, Región de Ñuble, not Cabrero), Pudahuel 1 (Pudahuel); each station between 8 and 40 Gateway V4 domes. 25-SP69683: Diario Oficial Núm. 44.235, miércoles 27 de agosto de 2025, CVE 2690368; modifies the concesión de Servicio Intermedio de Telecomunicaciones granted by decreto supremo N° 5 de 2025; six gateways with antenna counts: San Bernardo 1 (30), Limache 1 (10), Cabrero 1 (20), Pudahuel 1 (20), Las Condes 1 (20), Quilicura 1 (30). 25-SP69681: Diario Oficial Núm. 44.406, sábado 21 de marzo de 2026, CVE 2785277; modifies DS 156/2021 again; one gateway, SpaceX Las Condes 1 (Las Condes, Parque Natural La Plaza Sur), 20 domes. All three: Ka uplink 27,5-29,1 and 29,5-30 GHz, downlink 17,8-18,6 and 18,8-19,3 GHz; E band 81-86 up / 71-76 down; plazos 1 mes obras, 22 meses término, 24 meses servicio from publication of the authorising decree. Nota 5 of Res. Ex. 6.966/2009 art. 2: in 71-76 and 81-86 GHz only gateways located from the Región de Coquimbo southwards, with possible minimum-elevation limits to protect ALMA. Wrong: treating the three as one concession; putting Cabrero 1 in the comuna of Cabrero; claiming any of these extracts is the granting decree (they are requests open to 30 días hábiles of opposition). Sources: https://www.subtel.gob.cl/wp-content/uploads/2025/02/SSPP-Extracto-de-solicitud-24-SP157939-de-modificacion-de-concesion-de-Servicio-Publico-de-Transmision-de-Datos-a-STARLINK-CHILE-SpA-que-incorpora-estaciones-terrenas-en-distintas-comunas.pdf ; https://www.subtel.gob.cl/wp-content/uploads/2025/08/2690368.pdf ; https://www.subtel.gob.cl/wp-content/uploads/2026/03/Solicitud-numero-25-SP69681.-Starlink-Chile-SpA.pdf

Exa · Partly correct · Incomplete list · 30.8s · $0.168 · 5 searches · 4 fetches

Judge: All core facts are correct. Missing: the 17 January 2025 signing date of 24-SP157939 (fact 1), the Ka and E band frequencies (13, 14), the deadlines (15), and the note that these are open-for-opposition requests, not the granting decree (17).

Starlink Chile SpA pide modificar dos concesiones distintas para gateways Ka y banda E (constelación Starlink LEO). El desajuste de nombre es SpaceX Cabrero 1, que no está en Cabrero sino en Chillán Viejo (Región de Ñuble).

24-SP157939
- Concesión: Servicio Público de Transmisión de Datos, decreto supremo N° 156 de 2021 (MTT).
- Gateways: 4 — SpaceX San Bernardo 1 (San Bernardo), SpaceX Limache 1 (Limache), SpaceX Cabrero 1 (Chillán Viejo, no Cabrero), SpaceX Pudahuel 1 (Pudahuel).
- Domos: no hay cifra por estación. El extracto dice que cada estación tendrá entre 8 y 40 domos Gateway V4.
- Diario Oficial: Núm. 44.057, viernes 24 de enero de 2025 (CVE 2600427). El PDF de Subtel no trae esa carátula; la fecha y el número salen del registro del Diario Oficial.

Fuentes: PDF Subtel; vLex / Diario Oficial.

25-SP69683
- Concesión: Servicio Intermedio de Telecomunicaciones, decreto supremo N° 5 de 2025 (MTT).
- Gateways: 6 — San Bernardo (30), Limache (10), Cabrero en Chillán Viejo (20), Pudahuel (20), Las Condes (20), Quilicura (30). El número entre paréntesis es el de antenas/domos declarado.
- Diario Oficial: Núm. 44.235, miércoles 27 de agosto de 2025 (CVE 2690368).

Fuente: PDF Diario Oficial / Subtel.

25-SP69681
- Concesión: la misma de Servicio Público de Transmisión de Datos, decreto supremo N° 156 de 2021.
- Gateways: 1 — SpaceX Las Condes 1, comuna Las Condes (Parque Natural La Plaza Sur, Av. Plaza s/n), 20 domos Gateway V4.
- Diario Oficial: Núm. 44.406, sábado 21 de marzo de 2026 (CVE 2785277).

Fuente: PDF Diario Oficial / Subtel.

Nota 5 (71–76 / 81–86 GHz)
En los tres extractos se cita la misma restricción de la resolución exenta N° 6.966 de 2009 (y modificaciones): en 71–76 GHz y 81–86 GHz solo se autorizarán gateways desde la Región de Coquimbo al sur, sin perjuicio de eventuales restricciones de elevación mínima de las antenas para evitar interferencias al radiotelescopio ALMA o a otros servicios.

Parallel · Partly correct · Incomplete list · 54.8s · $0.160 · 9 searches · 3 fetches

Judge: Missing fact 1 (the answer does not mention the signing date of 17 January 2025, though it correctly says the PDF has no Diario Oficial header), and the context facts 13-15 and 17 (bands, deadlines, 30-day opposition window). The core facts are all correct.

Son dos concesiones distintas. El nombre “Cabrero” no coincide con la comuna: esa estación está en Chillán Viejo.

24-SP157939 — modifica la concesión de Servicio Público de Transmisión de Datos del decreto supremo N° 156 de 2021. Pide 4 gateways (Ka y banda E): Space X San Bernardo 1 (San Bernardo), Space X Limache 1 (Limache), Space X Cabrero 1 (Chillán Viejo, Ñuble) y Space X Pudahuel 1 (Pudahuel). Domos: entre 8 y 40 por estación (Gateway V4); no fija un número por sitio. El PDF de Subtel no trae fecha ni número del Diario Oficial. Un índice de vLex lo ubica el 24 de enero de 2025, edición Núm. 44.057 (CVE 2600427); eso no está en el extracto oficial consultado.
https://www.subtel.gob.cl/wp-content/uploads/2025/02/SSPP-Extracto-de-solicitud-24-SP157939-de-modificacion-de-concesion-de-Servicio-Publico-de-Transmision-de-Datos-a-STARLINK-CHILE-SpA-que-incorpora-estaciones-terrenas-en-distintas-comunas.pdf

25-SP69683 — modifica la concesión de Servicio Intermedio de Telecomunicaciones del decreto supremo N° 5 de 2025. Pide 6 gateways: San Bernardo (30 domos), Limache (10), Cabrero en Chillán Viejo (20), Pudahuel (20), Las Condes (20) y Quilicura (30). Diario Oficial: Núm. 44.235, miércoles 27 de agosto de 2025 (CVE 2690368).
https://www.subtel.gob.cl/wp-content/uploads/2025/08/2690368.pdf

25-SP69681 — modifica otra vez el Servicio Público de Transmisión de Datos del DS N° 156 de 2021. Pide 1 gateway: SpaceX Las Condes 1, comuna Las Condes, 20 domos. Diario Oficial: Núm. 44.406, sábado 21 de marzo de 2026 (CVE 2785277).
https://www.subtel.gob.cl/wp-content/uploads/2026/03/Solicitud-numero-25-SP69681.-Starlink-Chile-SpA.pdf

Nota 5 (Res. Ex. N° 6.966 de 2009, citada en los tres extractos): en 71–76 GHz y 81–86 GHz solo se autorizan gateways desde la Región de Coquimbo hacia el sur, sin perjuicio de eventuales restricciones de elevación mínima para no interferir al radiotelescopio ALMA u otros servicios.

Keenable search — Partly correct — Incomplete list — 55.1s · ~$0.109 · 6 searches · 3 fetches

> **Judge:** Missing: the 17 January 2025 signing date for 24-SP157939 (the answer only says the PDF has no Diario Oficial header), the 1/22/24-month deadlines, and the point that the extracts are open requests with a 30 business-day opposition period. The vLex publication date it adds is hedged and is not among the cited sources.

Las tres solicitudes de Starlink Chile SpA (RUT 77.073.851-2) piden gateways Ka y banda E hacia la constelación Starlink LEO, pero modifican dos concesiones distintas. El desajuste de nombre y comuna es SpaceX Cabrero 1, que queda en Chillán Viejo (Ñuble), no en Cabrero.

24-SP157939
- Concesión: Servicio Público de Transmisión de Datos, decreto supremo N° 156 de 2021 (MTT).
- Gateways: 4 — Space X San Bernardo 1 (San Bernardo), Space X Limache 1 (Limache), Space X Cabrero 1 (Chillán Viejo), Space X Pudahuel 1 (Pudahuel). Bandas Ka (uplink 27,5–29,1 y 29,5–30 GHz; downlink 17,8–18,6 y 18,8–19,3 GHz) y E (uplink 81–86 GHz; downlink 71–76 GHz).
- Domos: cada estación, entre 8 y 40 antenas Gateway V4 (2,1 / 2,5 m).
- Diario Oficial: el PDF de Subtel no trae fecha ni número. Un índice secundario (vLex) indica publicación el 24 de enero de 2025, Gaceta 44.057 (CVE-2600427); no pude contrastarlo con el PDF oficial.
- Fuente: https://www.subtel.gob.cl/wp-content/uploads/2025/02/SSPP-Extracto-de-solicitud-24-SP157939-de-modificacion-de-concesion-de-Servicio-Publico-de-Transmision-de-Datos-a-STARLINK-CHILE-SpA-que-incorpora-estaciones-terrenas-en-distintas-comunas.pdf

25-SP69683
- Concesión: Servicio Intermedio de Telecomunicaciones, decreto supremo N° 5 de 2025 (MTT). No es el DS 156.
- Gateways: 6 — SpaceX San Bernardo 1 (San Bernardo), Limache 1 (Limache), Cabrero 1 (Chillán Viejo), Pudahuel 1 (Pudahuel), Las Condes 1 (Las Condes, Av. Plaza S/N) y Quilicura 1 (Quilicura, C. Maulén 491). Mismas bandas Ka y E.
- Domos (declarados por estación): San Bernardo 30, Limache 10, Cabrero 20, Pudahuel 20, Las Condes 20, Quilicura 30 (Gateway V4).
- Diario Oficial: miércoles 27 de agosto de 2025, Núm. 44.235, CVE 2690368.
- Fuente: https://www.subtel.gob.cl/wp-content/uploads/2025/08/2690368.pdf

25-SP69681
- Concesión: otra vez Servicio Público de Transmisión de Datos, decreto supremo N° 156 de 2021.
- Gateways: 1 — SpaceX Las Condes 1, comuna de Las Condes (Parque Natural La Plaza Sur, Av. Plaza S/N). Mismas bandas Ka y E.
- Domos: 20 antenas Gateway V4.
- Diario Oficial: sábado 21 de marzo de 2026, Núm. 44.406, CVE 2785277.
- Fuente: https://www.subtel.gob.cl/wp-content/uploads/2026/03/Solicitud-numero-25-SP69681.-Starlink-Chile-SpA.pdf

Restricción geográfica (nota 5)
Los tres extractos citan la nota 5 del art. 2° de la Resolución Exenta N° 6.966 de 2009 de Subtel: en 71–76 GHz y 81–86 GHz solo se autorizan gateways desde la Región de Coquimbo hacia el sur, sin perjuicio de eventuales restricciones de elevación mínima de las antenas para evitar interferencias al radiotelescopio ALMA o a otros servicios.

Keenable SELECT — Wrong — Incomplete list — 18.2m · ~$3.195 · 74 searches · 26 fetches

> **Judge:** Contradicted: 24-SP157939 was dated 24 Jan 2025 in the Diario Oficial rather than a PDF signed 17 Jan 2025; 25-SP69681 gateway is said to have 10 domos rather than 20, with an unverified comuna; nota 5 is stated as 'independent of' elevation limits. Missing: the 24-SP157939 gateway list and domos, the 25-SP69681 Diario Oficial number and date, and the band/timeline/opposition context.

Hit its tool-call or time budget and was forced to answer.

Los tres extractos piden modificar concesiones ya otorgadas para agregar gateways Ka y banda E. El nombre de la estación no es la comuna: en el único extracto cuyo cuadro pude leer completo, SpaceX Cabrero 1 queda en Chillán Viejo, no en Cabrero. La prensa que ubica ese sitio en Cabrero (Biobío) no coincide con el Diario Oficial.

24-SP157939
Modifica el decreto supremo N° 156, de 2021, concesión de servicio público de transmisión de datos. Pide cuatro gateways. El extracto salió en el Diario Oficial Núm. 44.057, del viernes 24 de enero de 2025 (vLex registra además el CVE-2600427). El cuadro de ubicación y el número de antenas por estación no quedaron en el texto accesible; no los verifico. El decreto exento N° 234, de 9 de abril de 2025, publicado el 16 de mayo de 2025, autorizó esos cuatro gateways sobre el ingreso Subtel N° 157.939, de 13 de diciembre de 2024, pero su tabla también está en imagen.

https://vlex.cl/vid/solicitud-numero-24-sp157939-1067598496
https://www.bcn.cl/leychile/navegar?idNorma=1213434

25-SP69683
Modifica el decreto supremo N° 5, de 2025, concesión de servicio intermedio de telecomunicaciones. Pide seis gateways, todos con antena Gateway V4. Diario

Oficial Núm. 44.235, miércoles 27 de agosto de 2025, CVE 2690368.

Estación	Antenas declaradas	Comuna	Región
SpaceX San Bernardo 1	30	San Bernardo	Metropolitana
SpaceX Limache 1	10	Limache	Valparaíso
SpaceX Cabrero 1	20	Chillán Viejo	Ñuble
SpaceX Pudahuel 1	20	Pudahuel	Metropolitana
SpaceX Las Condes 1	20	Las Condes	Metropolitana
SpaceX Quilicura 1	30	Quilicura	Metropolitana

El extracto dice “Nro. de antenas”, no “domos”. El decreto exento N° 157, de 9 de febrero de 2026, publicado el 18 de febrero de 2026, autorizó solo cinco; su tabla es una imagen, así que no consta cuál de los seis se excluyó ni el número de esa edición del Diario Oficial.

https://www.subtel.gob.cl/wp-content/uploads/2025/08/2690368.pdf
https://www.bcn.cl/leychile/navegar?idNorma=1221585

25-SP69681
No encontré el PDF del extracto ni su fecha o número de Diario Oficial. El decreto exento N° 547, de 11 de junio de 2026, publicado el 25 de junio de 2026, resuelve el ingreso Subtel N° 69.681, de 16 de junio de 2025: modifica la concesión de servicio público de transmisión de datos del decreto supremo N° 156, de 2021, y autoriza un gateway con 10 domos (antenas) Gateway V4. La comuna está en una imagen y no la verifico.

https://www.bcn.cl/leychile/navegar?idNorma=1225500

Nota 5 (71-76 y 81-86 GHz)
Según la nota 5 del artículo 2° de la resolución exenta N° 6.966, de 2009, citada en el extracto 25-SP69683 y reiterada en los decretos 234, 157 y 547: en esas bandas solo se autorizan gateways desde la Región de Coquimbo al sur, con independencia de eventuales restricciones de elevación mínima para evitar interferencias al radiotelescopio ALMA o a otros servicios.

> **Judge:** All core facts are correct and no trap is asserted. Missing: the signing date and absent Diario Oficial header of the 24-SP157939 PDF (1), the Ka and E band frequencies (13, 14), the deadlines (15), and that the extracts are requests open to opposition rather than decrees (17).

Son dos concesiones distintas. Los extractos 24-SP157939 y 25-SP69681 modifican el decreto supremo N° 156 de 2021 (Servicio Público de Transmisión de Datos). El extracto 25-SP69683 modifica el decreto supremo N° 5 de 2025 (Servicio Intermedio de Telecomunicaciones). En los tres casos las estaciones son gateways Ka y banda E hacia la constelación Starlink LEO.

24-SP157939
- **Concesión:** decreto supremo N° 156 de 2021, Servicio Público de Transmisión de Datos.
- **Gateways:** cuatro (4).
- **Comunas (el nombre no siempre coincide con la comuna):**
  - SpaceX San Bernardo 1 → **San Bernardo** (RM).
  - SpaceX Limache 1 → **Limache** (Valparaíso).
  - SpaceX Cabrero 1 → **Chillán Viejo** (Ñuble), no Cabrero. Dirección: Ruta 5 Sur km 407, Santa Elisa, loteo 2202.
  - SpaceX Pudahuel 1 → **Pudahuel** (RM).
- **Domos:** el extracto **no fija un número por estación**. Dice que cada estación tendrá **entre 8 y 40** domos Gateway V4.
- **Diario Oficial:** viernes 24 de enero de 2025, Núm. 44.057 (CVE 2600427).

Fuente: PDF Subtel 24-SP157939; número y fecha del DO en vLex.

25-SP69683
- **Concesión:** decreto supremo N° 5 de 2025, Servicio Intermedio de Telecomunicaciones.
- **Gateways:** seis (6).
- **Domos y comunas:**
  - SpaceX San Bernardo 1: 30 domos, **San Bernardo** (RM).
  - SpaceX Limache 1: 10, **Limache** (Valparaíso).
  - SpaceX Cabrero 1: 20, **Chillán Viejo** (Ñuble), no Cabrero (misma dirección Ruta 5 Sur km 407).
  - SpaceX Pudahuel 1: 20, **Pudahuel** (RM).
  - SpaceX Las Condes 1: 20, **Las Condes** (RM), Av. Plaza S/N.
  - SpaceX Quilicura 1: 30, **Quilicura** (RM), C. Maulén 491.
- **Diario Oficial:** miércoles 27 de agosto de 2025, Núm. 44.235 (CVE 2690368).

Fuente: PDF Diario Oficial / Subtel, CVE 2690368.

25-SP69681
- **Concesión:** decreto supremo N° 156 de 2021, Servicio Público de Transmisión de Datos (la misma que el extracto de 2024, no la del DS 5/2025).
- **Gateways:** una (1): SpaceX Las Condes 1 (en la tabla de ubicación figura como SpaceX Condes 1).
- **Comuna:** Las Condes (RM), Parque Natural La Plaza Sur, Av. Plaza S/N. Coordenadas 33°24′23,82″ S, 70°29′33,46″ O (las mismas que “SpaceX Las Condes 1” del extracto 25-SP69683).
- **Domos:** 20 Gateway V4.
- **Diario Oficial:** sábado 21 de marzo de 2026, Núm. 44.406 (CVE 2785277).

Fuente: PDF Subtel 25-SP69681.

Restricción de la nota 5 (71–76 / 81–86 GHz)
Los tres extractos remiten a la resolución exenta N° 6.966 de 2009 de Subtel y sus modificaciones. La nota 5 del art. 2° dice que en 71–76 GHz y 81–86 GHz solo se autorizarán gateways ubicados desde la Región de Coquimbo al sur, sin perjuicio de eventuales restricciones de elevación mínima de las antenas para evitar interferencias al radiotelescopio ALMA o a otros servicios. Esa redacción aparece en los tres extractos citados arriba.

PROMPT 101 · LIST-BUILDING · FACTS AS OF 2026-10-09

Starlink is licensed in several small British-linked jurisdictions through different corporate entities and licence types. For Guernsey (GCRA), Jersey (JCRA), the Cayman Islands (URCO/OfReg), the Turks and Caicos Islands (Telecommunications Commission) and the Falkland Islands, give the licensee's exact legal name, the licence type or class, the date the licence was decided or took effect, and one distinctive condition or term from the document (for example term length, spectrum listed, or MNO partnership). For Cayman, also state what Amendment No. 1 added and its date. Do not assume the same Irish company holds all of them.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Five jurisdictions, six documents. Guernsey: GCRA case T1582G, notice of proposed decision dated 8 June 2022 to grant Starlink Internet Services Limited (registered in Ireland, Dublin address) a fixed telecommunications licence for satellite user-terminal network and ESIM services; comments by 15 June 2022; became final from 22 June 2022; Ku band under its Ofcom Earth Station Network licence which covers the Channel Islands. Jersey: JCRA case T-050, Final Notice JCRA 24/23 issued 3 April 2024 (order dated 27 March 2024), Class II licence under the Telecommunications (Jersey) Law 2002 to Starlink Internet Services Limited (Irish company 677409); licence commencement 3 May 2024; term 15 years from commencement; Sure (Jersey) objected on 15 February 2024 to the omission of the local-management condition. Cayman: licence to Starlink (Cayman Islands) Limited dated 22 December 2025 (press release 23 December 2025 says Starlink Cayman Islands Ltd), first under the satellite service provider framework; Amendment No. 1 dated 28 May 2026 adds non-exclusive MSS frequencies for direct-to-device (1518-1559, 1626.5-1660.5, 1668-1675, 1990-2010, 2180-2200, 2483.5-2500 MHz) alongside Ku 10700-12700 / 14000-14500 MHz in Annex 4. Turks and Caicos: Decision Notice 2026-8 of 19 August 2026, Starlink Caribbean LLC, Satellite Network/Service Licence and Spectrum Licence (shared basis), 10.7-12.7 GHz (2000 MHz) and 14.0-14.5 GHz (500 MHz); Board approved 12 August 2026, Minister 14 August 2026; D2D requires partnership with at least one local MNO; framework DN 2026-2 of 20 March 2026, resubmission 23 March 2026. Falklands: FIG statement 30 October 2025, VSAT Broadband Connectivity Licence to Starlink Internet Services Limited; Regulator resumed issuing VSAT licences 3 November 2025 from midday; Sure may claim up to £6.167m. Wrong: one entity everywhere (Cayman and TCI use local entities); wrong: Jersey Class III; wrong: TCI licence dated March 2026. Sources: https://www.gcra.gg/media/598605/starlink-telco-licence-application-notice-of-proposed-decision.pdf ; https://www.jcra.je/media/598928/t-050-final-notice-issuing-a-class-ii-licence-to-starlink-internet-services-limited.pdf ; https://www.jcra.je/media/598929/t-050-starlink-internet-services-limited-class-ii-licence.pdf ; https://www.ofreg.ky/viewPDF/documents/2025-12-23-17-23-27-PressReleaseSateliteStarlink-FINAL.pdf ; https://www.ofreg.ky/viewPDF/documents/2026-08-05-20-58-25-AMENDMENT-No-1-TO-THE-LICENCE-OF--STARLINK.pdf ; https://telecommission.tc/wp-content/uploads/2026/08/2026-08-19-V2-Final-Decision-Notice-2026-8-Starlink-SNS-Application-.pdf ; FIG statement reproduced at https://openfalklands.com/fig-press-statement-fig-and-sure-reach-vsat-licensing-agreement/ (original PDF on falklands.gov.fk was unreachable on 9 Oct 2026).

Exa ✗ Wrong — Incomplete list — 49.3s · $0.240 · 12 searches · 10 fetches

Judge: The Guernsey section is thin. It omits case T1582G, the 8 June notice and 15 June comment deadline, the Irish registration, the fixed/ESIM licence description and the Ku band/Ofcom term, and it explicitly says the incorporation place is not stated. Also missing are the Jersey 3 April 2024 notice date and Sure objection, Cayman's first-under-framework status, the TCI DN 2026-2 framework, and the Falklands 3 November 2025 resumption and Sure £6.167m claim.

These are five different licensees. Dates below are the decision, grant, or commencement date stated in the regulator's document.

Guernsey (GCRA). Licensee: **Starlink Internet Services Limited.** Licence: telecommunications licence under the Telecommunications (Bailiwick of Guernsey) Law 2001, including Part VI for satellite networks and services. Issued **22 June 2022**; GCRA lists the end date as **21 June 2037** (a 15-year term from commencement). A distinctive term is that the licence is personal and may not be sub-licensed, assigned, or transferred without prior written GCRA consent. The GCRA register page does not state the company's place of incorporation.
https://www.gcra.gg/gcra/licenced-operators/starlink-internet-services-limited
https://www.gcra.gg/sites/default/files/case-document/starlink-telco-licence-application-proposed-licence.pdf

Jersey (JCRA). Licensee: **Starlink Internet Services Limited**, an Irish company, registration number **677409**, registered office Floor 3, Block 3, Mieisan Plaza, Dublin 2. Licence: modified **Class II** telecoms licence under the Telecommunications (Jersey) Law 2002. Final Notice ordered on **27 March 2024**; the licence **took effect on 3 May 2024** and the register end date is **2 May 2039**. A distinctive modification is that the usual requirement for administration and management to be conducted from Jersey was omitted; public-emergency-call obligations apply only to the extent voice services are provided.
https://www.jcra.je/cases-documents/licensees-licences/starlink-internet-services-limited/
https://www.jcra.je/media/598928/t-050-final-notice-issuing-a-class-ii-licence-to-starlink-internet-services-limited.pdf

Cayman Islands (URCO/OfReg). The 22 December 2025 licence is issued to **Starlink Cayman Islands Ltd.** Amendment No. 1 styles the same licensee **Starlink (Cayman Islands) Limited**. Licence: ICT licence under the Information and Communications Technology Act for **Type H – Satellite Service Provider**, plus services **Type 9 (ISP)**, **Type 12 (retail sale of ICT equipment)** and **Type 17 (connectivity provider)**. Granted **22 December 2025**, each authorisation for **15 years**. A rollout condition requires satellite networks and Type 9/17 services within two months of commencement.
Amendment No. 1, dated **28 May 2026**, added non-exclusive mobile-satellite frequencies for direct-to-device service to ICT licensees (including 1518–1559 MHz, 1626.5–1660.5 MHz, 1668–1675 MHz, 1990–2010 MHz, 2180–2200 MHz and 2483.5–2500 MHz), subject to ITU coordination, and requires those services to be offered to any Cayman ICT licensee on a fair, reasonable and non-discriminatory basis on reasonable request. The OfReg file is dated 5 August 2026; the instrument itself is dated 28 May 2026.
https://www.ofreg.ky/viewPDF/documents/2025-12-24-10-29-30-20251222-STARLINK-CAYMAN-LICENCE---FINAL-.pdf
https://www.ofreg.ky/viewPDF/documents/2026-08-05-20-58-25-AMENDMENT-No-1-TO-THE-LICENCE-OF--STARLINK.pdf

Turks and Caicos Islands (Telecommunications Commission). Licensee: **Starlink Caribbean LLC.** Licences: a **Satellite Network & Service Licence** and a **Spectrum Licence**. The Board approved both on **12 August 2026**; the Minister approved the network/service licence on **14 August 2026**; Decision Notice 2026-8 is dated **19 August 2026**. Licences were signed and presented on **27 August 2026**. A distinctive condition is that direct-to-device mobile service may not be brought into use until there is a partnership with at least one local MNO; the spectrum (10.7–12.7 GHz downlink and 14.0–14.5 GHz uplink) is on a shared basis. The decision notice does not state the licence term.
https://telecommission.tc/wp-content/uploads/2026/08/2026-08-19-V2-Final-Decision-Notice-2026-8-Starlink-SNS-Application-.pdf
https://telecommission.tc/signing-and-presentation-of-licences-ceremony/

Falkland Islands (Communications Regulator). Licensee: **Starlink Internet Services Limited** (spectrum schedule gives an Irish address at Miesian Plaza, Dublin). Licence: **VSAT Broadband Connectivity Licence** (individual electronic communications licence) under sections 33 and 55A of the Communications Ordinance 2017, plus spectrum licence 202502. Granted **30 October 2025**. It runs until **31 December 2027** unless ended on six months' notice, and may be extended by

agreement up to a maximum of 10 years. It authorises only VSAT broadband, and only to subscribers who themselves hold a Regulator VSAT licence; it expressly excludes mobile broadband, direct-to-device, and fixed-line services. Authorised spectrum in the schedule is 10.7–12.7 GHz downlink and 14.0–14.5 GHz uplink (the schedule states the uplink bandwidth as 200 MHz, which does not match that range).

Parallel · Partly correct · Incomplete list · 2.1m · $0.366 · 13 searches · 15 fetches

> **Judge:** Missing: Guernsey case T1582G and the 8 June 2022 notice (1), the 15 June comment deadline (4), the Ku band under the Ofcom licence as the Guernsey distinctive term (5), Sure's 15 February 2024 objection in Jersey (11), Cayman being the first licence under the framework (14), the TCI framework notice DN 2026-2 (23), and Sure's Falklands claim of up to £6.167m (27).

The licensees are not the same entity. Guernsey, Jersey and the Falklands name the Irish company Starlink Internet Services Limited. Cayman uses a local company, and the Turks and Caicos Islands use Starlink Caribbean LLC.

Guernsey (GCRA). The licensee is Starlink Internet Services Limited. The instrument is a telecommunications licence under Part 1, section 2(1) of the Telecommunications (Bailiwick of Guernsey) Law, 2001, with Part VI authorising satellite networks and services. It is dated 22 June 2022 (GCRA lists the end date as 21 June 2037). A distinctive term is the 15-year term from the commencement date.
https://www.gcra.gg/sites/default/files/licence/starlink_licence_final_22jun22_signed.pdf https://www.gcra.gg/gcra/licenced-operators/starlink-internet-services-limited

Jersey (JCRA). The licensee is Starlink Internet Services Limited (Ireland, company number 677409). It holds a Class II licence under the Telecommunications (Jersey) Law 2002, dated 3 April 2024 and taking effect on 3 May 2024, for 15 years. A distinctive term is that, if it does not itself provide a public voice service, it must use reasonable endeavours to tell each user that they cannot access a public emergency call service, including a prominent statement in the user terms (Condition 14.3). The Final Notice also records that the usual requirement to administer and manage the licensed system from Jersey was omitted.
https://www.jcra.je/media/598929/t-050-starlink-internet-services-limited-class-ii-licence.pdf https://www.jcra.je/media/598928/t-050-final-notice-issuing-a-class-ii-licence-to-starlink-internet-services-limited.pdf

Cayman Islands (OfReg/URCO). The licence is issued to Starlink Cayman Islands Ltd. (styled in capitals as STARLINK CAYMAN ISLANDS LTD.). It is a Licence for the Provision of Satellite Services, document TL-01 of 2025, granted 22 December 2025. Annex 1 authorises a Type H Satellite Service Provider network and Type 9 (ISP), Type 12 (retail sale of ICT equipment) and Type 17 (connectivity provider) services, each for 15 years. Annex 4 lists 10.7–12.7 GHz downlink and 14.0–14.5 GHz uplink. https://www.ofreg.ky/viewPDF/documents/2025-12-24-10-29-30-20251222-STARLINK-CAYMAN-LICENCE---FINAL-.pdf https://www.ofreg.ky/register-of-licensees/starlink

Amendment No. 1, dated 28 May 2026 and headed for Starlink (Cayman Islands) Limited, added non-exclusive mobile-satellite frequencies to Annex 4 for direct-to-device service to ICT licensees: 1518–1559 MHz and 2180–2200 MHz and 2483.5–2500 MHz (space-to-Earth), and 1626.5–1660.5 MHz, 1668–1675 MHz and 1990–2010 MHz (Earth-to-space). Use is subject to ITU Article 9 coordination, and services on that spectrum must, on reasonable request by any Cayman ICT licensee, be offered on a fair, reasonable and non-discriminatory basis. https://www.ofreg.ky/viewPDF/documents/2026-08-05-20-58-25-AMENDMENT-No-1-TO-THE-LICENCE-OF--STARLINK.pdf

Turks and Caicos Islands (Telecommunications Commission). The applicant and licensee is Starlink Caribbean LLC. Decision Notice 2026-8 (19 August 2026) records approval of a Satellite Network & Service Licence and a Spectrum Licence. The Board approved both on 12 August 2026; the Minister approved the network/service licence on 14 August 2026. A distinctive condition is that Direct-to-Device mobile service requires a partnership with at least one local mobile network operator before it can be brought into use. The spectrum grant is shared use of 10.7–12.7 GHz (user-terminal downlink) and 14.0–14.5 GHz (user-terminal uplink). A signing ceremony was set for 27 August 2026; the decision notice itself does not state the licence term. https://telecommission.tc/wp-content/uploads/2026/08/2026-08-19-V2-Final-Decision-Notice-2026-8-Starlink-SNS-Application-.pdf https://telecommission.tc/decisions/decision-notice-2026-8-starlink-caribbean-llc

Falkland Islands. The Communications Regulator's notice, reproduced with a link to the licence PDF dated 30 October 2025, states that a VSAT Broadband Connectivity Licence was granted to Starlink Internet Services Limited. The licence file is dated 30 October 2025; the regulator said it would resume issuing personal VSAT licences on 3 November 2025, from which date licensed users could use Starlink legally. A distinctive condition is that Starlink may provide broadband only to customers who hold a VSAT licence issued by the Communications Regulator; use without that user licence remained illegal. The licence PDF itself did not load in this session, so the term length is not verified from the instrument. https://www.openfalklands.com/fig-press-statement-fig-and-sure-reach-vsat-licensing-agreement https://regulatorfi.org.fk/telecoms/starlink/263-starlink-licence-30-10-25-pdf

Keenable search · Partly correct · Incomplete list · 2.5m · ~$0.663 · 43 searches · 12 fetches

> **Judge:** Missing: Cayman Amendment No. 1 (28 May 2026) and the D2D MSS frequencies it added, the Cayman 'first under the framework' point, Guernsey's Ku-band/Ofcom term and the 15 June comment deadline, Jersey's 15-year term, and the Falklands 3 Nov 2025 resumption of VSAT licensing. Context facts on the Sure objection, the TCI framework notice and Sure's claim were also omitted.

The five licences are held by three different legal entities, not one Irish company. I could not verify a Cayman "Amendment No. 1."

Guernsey (GCRA)
- Licensee: Starlink Internet Services Limited (Irish company).
- Type: fixed telecommunications licence under Part 1, section 2(1) of the Telecommunications (Bailiwick of Guernsey) Law, 2001, with satellite services authorised in Part VI (user-terminal network and ESIM).
- Date: the proposed decision of 8 June 2022 became final from 22 June 2022 unless the GCRA notified otherwise. I did not find a separately dated signed instrument; the published proposed licence leaves the date blank and defines commencement as the date the GCRA signs.
- Distinctive term: 15 years from the commencement date, with a renewal request window after the 11th and before the 12th anniversary.
Sources: GCRA proposed decision (T1582G); proposed licence.

Jersey (JCRA)
- Licensee: **Starlink Internet Services Limited**, Irish company number 677409, registered office Floor 3, Block 3, Miesian Plaza, Dublin 2, D02 Y754.
- Type: **Class II** licence under the Telecommunications (Jersey) Law 2002 (no significant market power).
- Date: licence dated 3 **April** 2024; the licence itself sets the commencement date as 3 **May** 2024. Final Notice issued 3 April 2024.
- Distinctive term: commencement is deferred to 3 May 2024, one month after the grant date.
Sources: signed Class II licence; Jersey Gazette notice; JCRA case T-050.

Cayman Islands (URCO/OfReg)
- Licensee: **Starlink Cayman Islands Ltd.** (not the Irish company).
- Type: ICT licence under section 23 of the Information and Communications Technology Act (2019 Revision), document **TL-01 of 2025**, "Licence for the Provision of Satellite Services"; OfReg's register lists it as **Type H – Satellite Service Provider**.
- Date: granted **22 December 2025**; Condition 13.1 says it takes effect on the date granted by the Office.
- Distinctive term: Type H term is **fifteen (15) years**. Direct-to-handset is defined in the licence, and 9-1-1 obligations apply only if the licensee starts DTH public voice service (or if DTH is offered through a licensed MNO, that MNO's 9-1-1 conditions apply).
- **Amendment No. 1:** I could not find an OfReg document titled or described as Amendment No. 1 to this licence, so I cannot state what it added or its date. The 22 December 2025 PDF is the original grant (Condition 14 only sets the amendment procedure).
Sources: licence PDF; OfReg licensee register.

Turks and Caicos Islands (Telecommunications Commission)
- Licensee: **Starlink Caribbean LLC.**
- Types: **Satellite Network & Service Licence** and a separate **Spectrum Licence** (register service description: "VSAT ESIM – Satellite Services").
- Dates: Board approval **12 August 2026**; Minister's approval of the network/service licence **14 August 2026**; Decision Notice 2026-8 dated **19 August 2026**; licences signed/presented **27 August 2026**. The Commission's spectrum register lists issue **24 August 2026** and expiry **27 August 2041**.
- Distinctive terms: shared Ku-band **14.0–14.5 GHz** uplink (500 MHz) and **10.7–12.7 GHz** downlink (2,000 MHz). Direct-to-device may be provided only in partnership with at least one local MNO before it is brought into use. Press reporting of the Director General, not the decision notice itself, says the network licence runs 15 years and the network fee is 7% of gross annual revenue.
Sources: Decision Notice 2026-8; spectrum register; signing report.

Falkland Islands (Communications Regulator)
- Licensee: **Starlink Internet Services Limited.**
- Type: individual electronic communications licence titled **VSAT Broadband Connectivity Licence**, under sections 33 and 55A of the Communications Ordinance 2017.
- Date: granted and issued **30 October 2025** (also the commencement date).
- Distinctive terms: service may be supplied only to subscribers who themselves hold a VSAT licence from the Regulator; the licence runs until **31 December 2027** unless ended on six months' notice, and may be extended by agreement up to a maximum of 10 years; it expressly excludes mobile broadband, direct-to-device, and fixed-line services.
Source: signed licence.

Keenable SELECT · Partly correct · Incomplete list · 13.2m · ~$1.253 · 46 searches · 9 fetches

> **Judge:** The answer missed Cayman Amendment No. 1 (date and D2D MSS frequencies) and the Cayman first-under-framework point. It also omitted Guernsey's 15 June comment deadline and Ku band/Ofcom licence term, the Falklands 3 November 2025 VSAT resumption, and several context items. The Guernsey case number appears only inside a URL and is not stated.

The five licences are held by three different companies, not one Irish entity. I could not find a public Cayman Amendment No. 1.

Guernsey (GCRA). Licensee: **Starlink Internet Services Limited.** Licence: a telecommunications licence under Part 1, section 2(1) of the Telecommunications (Bailiwick of Guernsey) Law, 2001, with Part VI authorising satellite telecommunications networks and services. Dated and signed **22 June 2022**, after a proposed decision that was to become final that day unless the GCRA notified otherwise. Distinctive term: the term is **15 years** from the licence commencement date, and satellite services are authorised only through Part VI. The company is Irish. Sources: signed licence PDF; proposed decision, 8 June 2022.

Jersey (JCRA). Licensee: **Starlink Internet Services Limited**, the same Irish company (registered number 677409). Licence: **Class II** under the Telecommunications (Jersey) Law 2002. The licence is dated 3 **April 2024**; the commencement date in the licence is 3 **May 2024**. Distinctive term: **15 years** from commencement, and it is non-exclusive. Source: signed Class II licence; JCRA case page.

Cayman Islands (OfReg/URCO). Licensee: **Starlink Cayman Islands Ltd.**, not the Irish company. Licence: **Licence for the Provision of Satellite Services**, document TL-01 of 2025, under section 23 of the Information and Communications Technology Act (2019 Revision). Granted **22 December 2025**. Distinctive term: **15 years**, authorising a Type H Satellite Service Provider network and Types 9, 12 and 17 services, with Annex 4 frequencies **10.7–12.7 GHz** downlink and **14.0–14.5 GHz** uplink. Sources: licence PDF; OfReg register.

Amendment No. 1: I could not verify it. The published TL-01 licence and the 2025 OfReg annual report do not contain an Amendment No. 1, and searches of OfReg PDFs, the licensee register, and Cayman news did not return a document stating what it added or its date. I am not inferring one.

Turks and Caicos (Telecommunications Commission). Licensee: **Starlink Caribbean LLC.** Licences granted: a **Satellite Network/Service Licence** and a **Spectrum Licence**. The Board approved them on **12 August 2026**; the Minister approved the network/service licence on **14 August 2026**; Decision Notice 2026-8 is dated **19 August 2026**. Licences were signed and presented on **27 August 2026**. Distinctive term: spectrum is **10.7–12.7 GHz** (user-terminal downlink) and **14.0–14.5 GHz** (uplink), shared, and Direct-to-Device service requires a partnership with at least one local mobile network operator before it can be used. Secondary reporting says the term is 15 years; the decision notice itself does not state the duration, so I am not treating 15 years as verified from the licence. Sources: Decision Notice 2026-8; signing report.

Falkland Islands. Licensee: **Starlink Internet Services Limited.** Licence: an individual electronic communications licence titled **VSAT Broadband Connectivity Licence**, under sections 33 and 55A of the Communications Ordinance 2017. Granted and commenced **30 October 2025**. Distinctive term: it runs until **31 December 2027** unless ended on six months' notice, and may be extended by agreement to a maximum of 10 years. It covers VSAT broadband only, not mobile, direct-to-device, or fixed-line service, and customers need their own VSAT licence. Sources: licence PDF; regulator notice.

Grok native | Partly correct | Incomplete list | 1.9m · $2.232 · 14 searches · 13 fetches

> **Judge:** Cayman Amendment No. 1 is the main failure: the answer gives only a file timestamp of 5 August 2026 (the correct date is 28 May 2026) and says it could not verify what was added (the D2D MSS frequencies). It also omits the Guernsey proposed-decision date and comment deadline, the Guernsey Ku band term, Cayman being the first licence under the framework, the Sure objection in Jersey, the TCI framework notice, and the Falklands £6.167m figure.

These are five different licensees. Only Guernsey, Jersey and the Falklands use the Irish company Starlink Internet Services Limited. Cayman and the Turks and Caicos use local entities.

Guernsey (GCRA). Licensee: Starlink Internet Services Limited. Type: telecommunications licence under Part I, section 2(1) of the Telecommunications (Bailiwick of Guernsey) Law, 2001, with Part VI satellite-network and satellite-service conditions. Decided and issued 22 June 2022; register end date 21 June 2037. Distinctive term: a 15-year term from the commencement date (the date the GCRA signs). Sources: GCRA register, case T1582G, proposed licence.

Jersey (JCRA). Licensee: Starlink Internet Services Limited (Ireland company no. 677409). Type: Class II licence under the Telecommunications (Jersey) Law 2002. Final notice issued 3 April 2024; the licence took effect on 3 May 2024 and runs to 2 May 2039. Distinctive term: no Jersey company is required; the Irish company is the contracting party with Jersey subscribers. Sources: JCRA licensee page, Final Notice JCRA 24/23.

Cayman Islands (URCO/OfReg). Licensee: Starlink Cayman Islands Ltd. (not the Irish company). Type: ICT licence under the Information and Communications Technology Act (2019 Revision), document TL-01 of 2025: network Type H (Satellite Service Provider) and services Type 9 (ISP), Type 12 (retail sale of ICT equipment) and Type 17 (Connectivity Provider). Granted and effective 22 December 2025; each authorised type is for 15 years. Distinctive term: for the Type H network, the licensee must establish the satellite networks needed to serve the Islands within two months of commencement. Sources: OfReg register, licence PDF, 23 December 2025 press release.

Amendment No. 1. OfReg publishes it on the same register as AMENDMENT No 1 TO THE LICENCE OF STARLINK. The file timestamp is 5 August 2026. The PDF text could not be extracted here, so what it added is not verified.

Turks and Caicos (Telecommunications Commission). Licensee: Starlink Caribbean LLC. Types: a Satellite Network or Service Licence and a linked Spectrum Licence. The Board approved both on 12 August 2026; the Minister approved the network/service licence on 14 August 2026; Decision Notice 2026-8 is dated 19 August 2026. The public register lists issue 24 August 2026 and expiry 27 August 2041 (the framework term is 15 years). Distinctive term: spectrum is shared 10.7–12.7 GHz (user-terminal downlink) and 14.0–14.5 GHz (user-terminal uplink), and direct-to-device service cannot be used until there is a partnership with at least one local mobile network operator. Sources: Decision Notice 2026-8, decision PDF, network-licence register.

Falkland Islands (Communications Regulator). Licensee: Starlink Internet Services Limited. Type: VSAT Broadband Connectivity Licence. The published licence is dated 30 October 2025 (file "Starlink licence 30.10.25"); the regulator's announcement is the same day, and personal VSAT licensing reopened on 3 November 2025. Distinctive term: Starlink may serve only customers who hold their own Communications Regulator VSAT licence, and the regulator states that Starlink does not have to comply with the price cap or key performance indicators. Sources: OpenFalklands republication of the regulator notice (licence link: Starlink licence 30.10.25.pdf), regulator VSAT page.

Keenable router → Search | Partly correct | Incomplete list | 2.5m · ~$0.663 · 43 searches · 12 fetches

> **Judge:** Missing: Cayman Amendment No. 1 (28 May 2026) and the D2D MSS frequencies it added, the Cayman 'first under the framework' point, Guernsey's Ku-band/Ofcom term and the 15 June comment deadline, Jersey's 15-year term, and the Falklands 3 Nov 2025 resumption of VSAT licensing. Context facts on the Sure objection, the TCI framework notice and Sure's claim were also omitted.

The five licences are held by three different legal entities, not one Irish company. I could not verify a Cayman "Amendment No. 1."

Guernsey (GCRA)
- Licensee: Starlink Internet Services Limited (Irish company).
- Type: fixed telecommunications licence under Part 1, section 2(1) of the Telecommunications (Bailiwick of Guernsey) Law, 2001, with satellite services authorised in Part VI (user-terminal network and ESIM).
- Date: the proposed decision of 8 June 2022 became final from 22 June 2022 unless the GCRA notified otherwise. I did not find a separately dated signed instrument; the published proposed licence leaves the date blank and defines commencement as the date the GCRA signs.
- Distinctive term: 15 years from the commencement date, with a renewal request window after the 11th and before the 12th anniversary.
Sources: GCRA proposed decision (T1582G); proposed licence.

Jersey (JCRA)
- Licensee: Starlink Internet Services Limited, Irish company number 677409, registered office Floor 3, Block 3, Miesian Plaza, Dublin 2, D02 Y754.
- Type: Class II licence under the Telecommunications (Jersey) Law 2002 (no significant market power).
- Date: licence dated 3 April 2024; the licence itself sets the commencement date as 3 May 2024. Final Notice issued 3 April 2024.
- Distinctive term: commencement is deferred to 3 May 2024, one month after the grant date.
Sources: signed Class II licence; Jersey Gazette notice; JCRA case T-050.

Cayman Islands (URCO/OfReg)
- Licensee: Starlink Cayman Islands Ltd. (not the Irish company).
- Type: ICT licence under section 23 of the Information and Communications Technology Act (2019 Revision), document TL-01 of 2025, "Licence for the Provision of Satellite Services"; OfReg's register lists it as Type H – Satellite Service Provider.
- Date: granted 22 December 2025; Condition 13.1 says it takes effect on the date granted by the Office.
- Distinctive term: Type H term is fifteen (15) years. Direct-to-handset is defined in the licence, and 9-1-1 obligations apply only if the licensee starts DTH public voice service (or if DTH is offered through a licensed MNO, that MNO's 9-1-1 conditions apply).
- Amendment No. 1: I could not find an OfReg document titled or described as Amendment No. 1 to this licence, so I cannot state what it added or its date. The 22 December 2025 PDF is the original grant (Condition 14 only sets the amendment procedure).
Sources: licence PDF; OfReg licensee register.

Turks and Caicos Islands (Telecommunications Commission)
- Licensee: Starlink Caribbean LLC.

- Types: **Satellite Network & Service Licence** and a separate **Spectrum Licence** (register service description: “VSAT ESIM – Satellite Services”).
- Dates: Board approval **12 August 2026**; Minister’s approval of the network/service licence **14 August 2026**; Decision Notice 2026-8 dated **19 August 2026**; licences signed/presented **27 August 2026**. The Commission’s spectrum register lists issue **24 August 2026** and expiry **27 August 2041**.
- Distinctive terms: shared Ku-band **14.0–14.5 GHz** uplink (500 MHz) and **10.7–12.7 GHz** downlink (2,000 MHz). Direct-to-device may be provided only in partnership with at least one local MNO before it is brought into use. Press reporting of the Director General, not the decision notice itself, says the network licence runs 15 years and the network fee is 7% of gross annual revenue.
Sources: Decision Notice 2026-8; spectrum register; signing report.

Falkland Islands (Communications Regulator)
- Licensee: **Starlink Internet Services Limited**.
- Type: individual electronic communications licence titled **VSAT Broadband Connectivity Licence**, under sections 33 and 55A of the Communications Ordinance 2017.
- Date: granted and issued **30 October 2025** (also the commencement date).
- Distinctive terms: service may be supplied only to subscribers who themselves hold a VSAT licence from the Regulator; the licence runs until **31 December 2027** unless ended on six months’ notice, and may be extended by agreement up to a maximum of 10 years; it expressly excludes mobile broadband, direct-to-device, and fixed-line services.
Source: signed licence.

PROMPT 102 · LIST-BUILDING · FACTS AS OF 2026-10-09

ComReg handled Starlink's second Irish gateway in 2025. Using ComReg's own documents, give: the date ComReg received the Killala application and the information notice number and date; the Killala site coordinates and antenna diameter; the consultation closing date and time; the four centre frequencies already licensed at Garrettstown with bandwidth and EIRP; the number and date of the notice containing ComReg's final view, who the only respondent was, and what ComReg said it would do. Do not report the 27 May 2025 notice as a grant.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Three ComReg documents. ComReg 25/31, Information Notice dated 27/05/2025: application received 19 March 2025 from Starlink Internet Services Limited for an SES licence in the 18 GHz (17.7-19.7 space-to-Earth) and 28 GHz (27.5-29.5 Earth-to-space) bands at Killala, Co. Mayo; Table 2 gives Lat/Long 54.194077, -9.2114458, site height 49.75 m AMSL, antenna diameter 1.85 m, elevation 20-90 degrees; consultation runs until 17:00 on 25 June 2025; ComReg's preliminary view was that it would not cause harmful interference and it proposed to grant. Table 1, Garrettstown, Co Cork licensed frequencies: 27.75, 28.3, 28.85 and 29.75 GHz, each 500 MHz bandwidth, each 67 dBW EIRP. A fixed link at the same Killala site operates 17727.5/18737.5 MHz (28 MHz). ComReg 25/36R (20 June 2025) is the parallel Amazon Kuiper notice. ComReg 25/79, Information Notice dated 04/11/2025: ViaSat Inc. was the only interested party to respond to either notice (Article 22 EPFD arguments); ComReg's final view is that it will grant SES licences to Amazon and Starlink and publish on its Siteviewer portal; it notes Inmarsat/Space Norway (Viasat group) told Ofcom they had coordination agreements with Starlink. Wrong: a licence number or grant date in 25/31; a respondent other than Viasat; EPFD assessment performed by ComReg (it says that sits with the ITU and DCCS). Sources: https://www.comreg.ie/media/2025/05/ComReg-25_31.pdf (also at https://www.comreg.ie/publication-download/starlink-internet-services-limited-application-for-a-satellite-earth-station-licence) ; https://www.comreg.ie/publication-download/satellite-earth-station-licences-amazon-kuiper-services-europe-sarl-and-starlink-internet-services-limited (ComReg 25/79).

Judge: All required and core facts are correct. Only context facts are missing: site height, antenna elevation range, the fixed link at Killala, and the Inmarsat/Space Norway coordination note.

I'll look up ComReg's own notices on Starlink's Killala gateway and the related Garrettstown licences.The 27 May notice is the application consultation, not a grant. I'll pull ComReg's PDFs for the application details and the later final view.The application notice is ComReg 25/31. Next I'll find the later notice that sets out ComReg's final view.ComReg's own notices treat the 27 May 2025 document as an application consultation, not a grant. The later notice is where ComReg set out its final view.

Application received and consultation notice. On 19 March 2025 ComReg received Starlink Internet Services Limited's application for a satellite earth station licence at Killala, Co. Mayo, in the 18 GHz (17.7–19.7 GHz, space-to-Earth) and 28 GHz (27.5–29.5 GHz, Earth-to-space) bands. ComReg published that as Information Notice **ComReg 25/31**, dated **27 May 2025.** In that notice ComReg's view was only preliminary: it proposed to grant a licence, subject to comments. It was not a grant.
Source: https://www.comreg.ie/media/2025/05/ComReg-25_31.pdf (also https://www.comreg.ie/?dlm_download=starlink-internet-services-limited-application-for-a-satellite-earth-station-licence)

Killala site. Latitude/longitude **54.194077, -9.2114458** (decimal degrees). Antenna diameter **1.85 m.**
Source: Annex 1, Table 2 of ComReg 25/31, same URL.

Consultation close. 17:00 on 25 June 2025. Written responses by email only to marketframeworkconsult@comreg.ie, marked "Submissions to ComReg Information Notice 25/31".

Source: section 3.1 of ComReg 25/31, same URL.

Frequencies already licensed at Garrettstown, Co. Cork (Table 1 of ComReg 25/31):

Centre frequency	Bandwidth	EIRP
27.75 GHz	500 MHz	67 dBW
28.3 GHz	500 MHz	67 dBW
28.85 GHz	500 MHz	67 dBW
29.75 GHz	500 MHz	67 dBW

Source: https://www.comreg.ie/media/2025/05/ComReg-25_31.pdf

Final view. Information Notice **ComReg 25/79**, dated **4 November 2025**, section 3, "ComReg's final view". It covers both the Starlink Killala notice (25/31) and Amazon Kuiper's notice (25/36R of 20 June 2025). **ViaSat Inc.** was the only interested party to respond to either notice. ComReg said it remained of the view that the proposed NGSO earth stations were unlikely to cause harmful interference to existing licensed satellite earth stations and fixed radio links, and that it **would grant SES licences to Amazon and Starlink** for the proposed stations, with the licence information to be published on ComReg's Siteviewer portal (https://siteviewer.comreg.ie/#/satellite/fixed).

> **Judge:** All required and core facts are correct. Only context facts were missing: the SES bands, site height, elevation range, fixed link detail and the Inmarsat/Space Norway coordination remark.

From ComReg's own notices, not the 27 May 2025 notice as a grant:

Application and consultation notice — ComReg 25/31 (27 May 2025)
- ComReg received Starlink Internet Services Limited's Killala SES application on **19 March 2025**.
- The information notice is **ComReg 25/31**, dated **27/05/2025**.
- Killala coordinates (lat/long, decimal degrees): **54.194077, -9.2114458**. Antenna diameter: **1.85 m**.
- Comments closed at **17:00 on 25 June 2025**.
- Frequencies already licensed at Garrettstown, Co. Cork (Table 1):

Centre frequency	Bandwidth	EIRP
27.75 GHz	500 MHz	67 dBW
28.3 GHz	500 MHz	67 dBW
28.85 GHz	500 MHz	67 dBW
29.75 GHz	500 MHz	67 dBW

That notice only set out a **preliminary** view and a proposal to grant, subject to comments. It is not a grant.

Final view — ComReg 25/79 (4 November 2025)
- **ViaSat Inc.** was the only interested party to respond (to 25/31 and to the related Amazon notice 25/36R).

- After considering that submission, ComReg said it remained of the view that harmful interference to existing licensed SES and fixed links was unlikely, and that it will grant SES licences to Amazon and Starlink for the proposed stations, with the details to be published on Siteviewer.

> **Judge:** All required and core facts are correct. Only context facts were missing (site height, elevation range, fixed link at Killala, Inmarsat/Space Norway coordination remark). The Table 1 values are not in the visible DATA window but match the checklist.

ComReg's own documents distinguish a May 2025 consultation from its later final view. The 27 May 2025 notice is not a grant.

Application and consultation notice. ComReg received Starlink Internet Services Limited's Killala satellite earth station application on 19 March 2025. It published that application as **Information Notice ComReg 25/31, dated 27 May 2025.** In that notice ComReg's view was only preliminary: it said it "proposes to grant" a licence and invited submissions. Source: ComReg 25/31.

Killala site. Annex 1, Table 2 gives latitude/longitude **54.194077, -9.2114458** (decimal degrees) and an **antenna diameter of 1.85 m.** Source: ComReg 25/31.

Consultation close. The consultation ran until **17:00 on 25 June 2025.** Responses were to be emailed to marketframeworkconsult@comreg.ie and marked "Submissions to ComReg Information Notice 25/31". Source: ComReg 25/31.

Frequencies already licensed at Garrettstown. Table 1 of ComReg 25/31 lists four centre frequencies, each with 500 MHz bandwidth and 67 dBW EIRP:

Centre frequency (GHz)	Bandwidth (MHz)	EIRP (dBW)
27.75	500	67
28.3	500	67
28.85	500	67
29.75	500	67

Source: ComReg 25/31.

Final view. ComReg's final view is in **Information Notice ComReg 25/79, dated 4 November 2025.** That notice covers both the Starlink Killala consultation (25/31) and a related Amazon Kuiper consultation (25/36R). **ViaSat Inc. was the only respondent** to either notice. ComReg said it remained of the view that the proposed NGSO earth stations were unlikely to cause harmful interference to existing licensed earth stations and fixed radio links, and that it **will grant SES licences to Amazon and Starlink** for the proposed stations, with the licence information to be published on ComReg's Siteviewer. PROMPT 103 · LIST-BUILDING · FACTS AS OF 2026-10-09

CRAN refused Starlink's Namibian licence in March 2026 and then closed a reconsideration round in June. From the Government Gazette notice and CRAN's own releases, give: the gazette number, notice number and date; the two licences declined and the frequency ranges and Namibian ownership percentage shown; the date the applications were lodged and which of the six criteria were met and not met; how many public reconsideration requests were received and how many were dismissed on procedural grounds; the date Starlink filed its own request, why it was dismissed, and the deadline date CRAN gave. Note where CRAN's own documents disagree on the reconsideration window, and do not rely on news reports for whether Starlink itself filed.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Four primary documents. Government Gazette No. 8872, 23 March 2026, General Notice No. 197: CRAN declined a Class Comprehensive Telecommunications Service Licence (ECS and ECNS) and a Spectrum Licence for Starlink Internet Services Namibia (Pty) Limited; table shows United States of America incorporation, 0% Namibian ownership, 10.7-14.7 GHz applied, downlink 10.7-12.7 GHz (2000 MHz), uplink 14.0-14.5 GHz (500 MHz), national, fixed-satellite; reconsideration under section 31 'within 90 days of this notice'. Media release 24 March 2026: applications submitted 1 June 2024; met competition, technical and financial capacity, frequency availability; not met ownership and control (section 46, 51% Namibian, no exemption), national defence and public security, compliance history (operating without a licence, ignoring a summons); 3 of 6 criteria; reconsideration 'within thirty (30) days, from 23 March 2026'. Media release 8 June 2026 (page dated 11 June): 624 public applications received and Starlink's own application received 'today', i.e. 8 June 2026. Media release 22 June 2026: 622 of 624 dismissed for failing procedural and jurisdictional requirements, two assessed on merits with no new facts; Starlink's own application dismissed as lodged outside the statutory period with no power to condone; a petition of 17 June 2026 also late; release says the deadline 'expired on 23 April 2026' while the CEO remarks of the same day say the 30 days lapsed on 22 April 2026; section 46(2) exemptions are for the Minister; remedy is High Court review under section 32. Internal inconsistency to flag: 90 days (gazette) vs 30 days (releases), and 22 vs 23 April. Wrong: that Starlink never filed (some press repeated an earlier CRAN line); that the appeal was decided on the merits. Exa · Partly correct · Incomplete list · 3.9m · $1.063 · 14 searches · 33 fetches

Judge: The answer gives only 'June 2024' and a hedge for the lodging date, not 1 June 2024. It omits the 23 April deadline from the 22 June release and the 22-vs-23 April discrepancy. It does not attribute the 30-day window to the 24 March release. It also leaves out the 17 June petition, the Minister's section 46(2) exemption role and the High Court review under section 32.

I'll look up the Government Gazette notice and CRAN's own releases on the Starlink Namibia licence refusal and the June reconsideration round.The gazette notice is identified. Next I'll pull the full notice and CRAN's own statements on the criteria, filing dates, and the reconsideration window.The gazette and news accounts diverge on the reconsideration period. I'll check CRAN's own statements and the original application notice for the filing date and criteria.Search is capped, so I'll open CRAN's pages and the application gazette directly.CRAN's site lists a reconsideration release that names Starlink. I'll open that file and the March decision statement.The refusal is in Government Gazette No. 8872 of 23 March 2026, General Notice No. 197 of 2026. CRAN's own later account of the reconsideration round is the CEO's 22 June 2026 briefing. One CRAN text uses a 90-day window and another a 30-day window.

Gazette. Government Gazette No. 8872, Windhoek, 23 March 2026, General Notice No. 197 of 2026, signed by Board Chair Tulimevava K. Mufeti. Source: https://www.lac.org.na/laws/2026/8872.pdf

Licences declined, frequencies, ownership. CRAN declined both:
- a Class Comprehensive Telecommunications Service Licence (ECS and ECNS) for Starlink Internet Services Namibia (Pty) Ltd; and
- a spectrum licence for satellite services.

The spectrum table shows the applicant as incorporated in the United States, with 0% of stock owned by Namibian citizens or Namibian-controlled companies. Frequencies applied for: **10.7–14.7 GHz**. Frequencies considered: downlink **10.7–12.7 GHz** (2,000 MHz) and uplink **14.0–14.5 GHz** (500 MHz), national fixed-satellite service. Same bands and 0% ownership appear in the application notices, Gazette No. 8795, Notices 897 and 898, 28 November 2025: https://www.lac.org.na/laws/2025/8795.pdf

When the applications were lodged, and the six criteria. Notices 897 and 898, and Notice 197, do not state the lodging date. CRAN's 2 December 2025 release, as reported the next day, said the applications were submitted in **June 2024**. I could not open that PDF on cran.na, so the exact day is not verified from a CRAN file. Starlink's own December 2025 response, which is not a CRAN document, says the telecommunications application was submitted on **31 May 2024**.

The decision gazette does not set out the six criteria. At the 22 June 2026 briefing, CEO Emilia Nghikembua said an applicant must meet six criteria and that Starlink failed three: **ownership and control, compliance history, and national security and public safety**. She said **competition and market access** had been met. The 24 March 2026 CRAN/MICT session, as reported by NAMPA rather than from a CRAN PDF I could open, is the only account that names all six and the split: met — competition, technical and financial capacity, and frequency availability; not met — ownership and control, national defence and public security, and compliance history. Note the wording difference: March briefing "national defence and public security"; June briefing "national security and public safety". https://www.youtube.com/watch?v=d1mdhKED_Hs and https://www.nampa.org/text/22895760

Public reconsideration. At the same 22 June briefing, CRAN said it received **624** reconsideration requests from members of the public. **622** were declined because they did not meet the procedural and jurisdictional requirements to trigger reconsideration. The other two cleared that threshold and were dismissed on the merits: no new evidence and no material error. Those two were not procedural dismissals.

Starlink's own request. Do not treat news copy as the source for this. CRAN's own download, listed 11 June 2026, is titled "UPDATED – CRAN RECEIVES RECONSIDERATION APPLICATIONS, INCLUDING FROM STARLINK, REGARDING LICENCE DECISION": https://www.cran.na/download/updated-cran-receives-reconsideration-applications-including-from-starlink-regarding-licence-decision/ (catalogue: https://www.cran.na/download-category/media-statements-2026/page/2/). I could not extract that PDF. In the 22 June briefing the CEO said Starlink Internet Services Namibia (Pty) Ltd filed on **8 June 2026**, separately from the 624 public requests. It was dismissed without a merits review because it was outside the period CRAN applied, and because neither the Act nor the regulations let CRAN condone a late reconsideration. The deadline CRAN gave was **22 April 2026** — 30 days from the 23 March 2026 decision. https://www.youtube.com/watch?v=d1mdhKED_Hs

Where CRAN's own documents disagree on the window. Notice 197 says that, under section 31 of the Communications Act, the Authority may reconsider any order or decision, on its own motion or on a petition by an aggrieved party, **within 90 days of that notice** (23 March 2026). Ninety days runs to 21 June 2026, which would include 8 June. The 22 June briefing instead treats the filing deadline as **30 days**, lapsing on **22 April 2026**, and says CRAN cannot condone lateness. Those two CRAN statements are not the same rule.

> **Judge:** The answer does not commit to the 1 June 2024 lodging date (fact 7) or to 8 June 2026 as the date Starlink filed (fact 13); it only attributes these to news reports. It also omits the 24 March release's 30-day wording (fact 11) and the High Court review route under section 32 (fact 21).

Gazette decision. Government Gazette No. 8872, General Notice **No. 197 of 2026**, dated **23 March 2026**, records that CRAN declined both applications by Starlink Internet Services Namibia (Pty) Limited: a **Class Comprehensive Telecommunications Service Licence (ECS and ECNS)** and a **Spectrum Licence** for satellite services. The notice table shows **0%** of stock owned by Namibian citizens or Namibian-controlled companies, place of incorporation the United States, and national fixed-satellite use. Frequencies applied for are shown as **10.7–14.7 GHz**; the ranges listed as considered for assignment are **downlink 10.7–12.7 GHz (2,000 MHz)** and **uplink 14.0–14.5 GHz (500 MHz)**. The same table names the applicant "Starlink Namibia Internet Services (Pty) Ltd," which does not match the name in the notice text. Source: CRAN copy of Gazette 8872.

Six criteria and lodging date. I could not open the PDF of CRAN's 24 March 2026 release, "CRAN concludes assessment of Starlink licence application." Briefings attributed to board chair Tulimevava Mufeti say the applicant met **competition, technical and financial capacity, and frequency availability**, and did not meet **ownership and control** (section 46; wholly foreign-owned, and no ministerial exemption from the 51% Namibian-ownership rule), **national defence/public security**, and **compliance history**. I could not verify from a CRAN document the date the licence applications were lodged; news reports say June 2024, which I have not confirmed against CRAN's file.

Reconsideration. CRAN's 22 June 2026 media release, as republished from that statement, says **624** public reconsideration requests were received and **622** were dismissed because they did not meet procedural and jurisdictional requirements (they did not identify the decision, state grounds, or give enough information). The other two were assessed and dismissed because they raised no new facts and no material error. Sources: Business Express republication; CRAN download page 22 Jun 2026 release.

Starlink's own request. That Starlink itself filed is CRAN's statement, not a news inference: CRAN published "UPDATED – CRAN receives reconsideration applications, including from Starlink" (file dated 11 June 2026), and the 22 June release says Starlink Internet Services Namibia (Pty) Ltd filed under section 31 and was dismissed because the request was late. CRAN said neither the Act nor the regulations let it condone late filing, so the merits were not considered. A NAMPA-based report of that release gives the filing date as **8 June 2026**; the verbatim-style republications I could read do not state that date, and I could not open the PDF to confirm it. Download page: updated CRAN notice.

Window disagreement in CRAN's own documents. Notice 197 says CRAN may reconsider under section 31 **within 90 days of the 23 March 2026 notice.** The 22 June release instead treats the period as **30 days**, already expired in April. Even reports of that release disagree on the deadline CRAN gave: **23 April 2026** in the Business Express/Omutumwa text of the statement, and **22 April 2026** in the NAMPA account. A petition received on 17 June 2026 was also rejected as late.

> **Judge:** The agent could not read CRAN's 22 June release and relied on secondary reports. It hedged on Starlink's 8 June filing date and did not attribute 23 April to the release and 22 April to the CEO remarks. It omitted the 17 June petition, the Minister's role under section 46(2), and High Court review under section 32.

Gazette. Government Gazette No. 8872, General Notice No. 197, dated 23 March 2026.
https://archive.gazettes.africa/archive/na/2026/na-government-gazette-dated-2026-03-23-no-8872.pdf

Licences declined. CRAN declined both:
- a Class Comprehensive Telecommunications Service Licence (ECS and ECNS); and
- a Spectrum Licence for satellite services.

The notice lists the applicant as incorporated in the United States, with 0% of stock owned by Namibian citizens or Namibian-controlled companies. Frequencies applied for: 10.7–14.7 GHz. Frequencies considered for assignment: downlink 10.7–12.7 GHz (2,000 MHz bandwidth) and uplink 14.0–14.5 GHz (500 MHz bandwidth), national fixed-satellite service. The 51% figure is the statutory minimum under section 46, not the ownership shown in the notice.

Lodging date and criteria. CRAN's 24 March 2026 release says the applications were submitted on 1 June 2024.
https://www.namibia-forum.ch/media/kunena/attachments/102/MEDIA-RELEASE-CRAN-CONCLUDES-ASSESSMENT-OF-STARLINK-LICENCE-APPLICATION.pdf

Met: competition; technical and financial capacity; frequency availability.
Not met: ownership and control; national defence and public security; compliance history. CRAN said only three of six criteria were met, and each unmet criterion was a ground for refusal. The spectrum application was also declined under section 101(6) because a spectrum licence cannot be held without the service licence.

Public reconsideration. CRAN's 22 June 2026 statement, as reproduced by outlets quoting that release, says 624 public requests were received and 622 were dismissed because they did not meet procedural and jurisdictional requirements. The other two were considered and did not change the decision.
https://omutumwa.com/2026/06/cran-turns-down-starlink-reconsideration-requests

Starlink's own request. CRAN's own 22 June release page is https://www.cran.na/download/media-release-cran-confirms-dismissal-of-starlink-reconsideration-requests-22-jun-2026/. I could not extract the PDF text. Secondary reports of CRAN CEO Emilia Nghikembua's 22 June briefing say Starlink filed on 8 June 2026 and the request was dismissed as late, with no power to condone late filing. Those reports disagree on the deadline she gave: 22 April 2026 or 23 April 2026. I cannot verify the filing date from the CRAN document itself.

Disagreement inside CRAN's documents. Notice 197 says an aggrieved party may petition for reconsideration **within 90 days of the notice.** CRAN's 24 March release instead says reconsideration may be requested **within 30 days from 23 March 2026.** The June material then treats the deadline as having expired on 22 or 23 April 2026, which matches the 30-day formulation, not the gazette's 90-day formulation.

PROMPT 104 · LIST-BUILDING · FACTS AS OF 2026-10-09

En México, Starlink Satellite Systems México, S. de R.L. de C.V. opera bajo tres títulos distintos del IFT inscritos en el Registro Público de Concesiones. Para la autorización IFT/223/UCS/AUT-SAT-EXT-029/2021, su modificación IFT/223/UCS/1262/2022 y la concesión única P/IFT/070721/319, indique: fecha de otorgamiento, vigencia (10 o 30 años), redes satelitales (expedientes UIT) y bandas de frecuencia que cada uno ampara, la reserva del Estado fijada, y la fecha y número de inscripción de la modificación en el Registro. ¿La modificación de 2022 amplió la banda Ku/Ka de Starlink o añadió otra cosa? No confunda la constelación añadida con los satélites de banda ancha de Starlink.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Three IFT instruments on the Registro Público (rpc.ift.org.mx now redirects to rpc.crt.gob.mx). Autorización IFT/223/UCS/AUT-SAT-EXT-029/2021: application 2 April 2021; oficio IFT/223/UCS/952/2021 of 24 May 2021; the 2022 resolution records it as granted 28 May 2021; vigencia diez años, extendable for equal terms; condición 1.8 no exclusivity; Reserva del Estado condición 5.1: 5% of ingresos brutos tarifados paid semi-annually; Anexo Técnico lists Constelación SpaceX-Starlink, redes STEAM-1, STEAM-2 and STEAM-2B, downlink 10700-12700 MHz (Ku) and 17800-18600 / 18800-19300 MHz (Ka), uplink 14000-14500 MHz (Ku) and 27500-29100 / 29500-30000 MHz (Ka), Fijo por Satélite, national coverage. Modificación IFT/223/UCS/1262/2022 dated 4 de julio de 2022: request filed 19 May 2022; resolves to authorise modification to include the ITU network USASAT-NGSO-7 operated through the SWARM constellation (SWARM-1), downlink 137-138 MHz, uplink 148-150 MHz, Móvil por Satélite, 30 kHz capacity, PIRE 1.76 dBW; the Secretaría said the Reserva del Estado of 5% need not change; registered in the Registro Público de Concesiones on 10 de agosto de 2022, inscripción 061647, folio FET100298AU-519564. So the 2022 act added a narrowband MSS IoT network, not more Ku/Ka spectrum. Concesión única P/IFT/070721/319: approved unanimously at the XIII Sesión Ordinaria del Pleno on 07 de julio de 2021; application filed 19 December 2020 for a network using Ka and Ku satellite capacity with national coverage; Resolutivo Primero grants a título de concesión única para uso comercial for 30 (treinta) años to provide any telecommunications or broadcasting service with national coverage; it does not itself confer spectrum de uso determinado or orbital resources, which must be obtained separately under the Ley Federal de Telecomunicaciones y Radiodifusión; the resolution notes the May 2021 authorization already covered Ka and Ku. Wrong: saying the 2022 modification covers Gen2 or E-band; saying USASAT-NGSO-3X appears in either document (it does not); giving the registry date as the resolution date. Sources: https://rpc.crt.gob.mx/vrpc/pdfs/100298_210621144132_9550.pdf ; https://rpc.crt.gob.mx/vrpc/pdfs/100298_220812175852_1878.pdf ; https://www.ift.org.mx/sites/default/files/conocenos/pleno/sesiones/acuerdoliga/pift070721319.pdf

Exa Correct

4.9m · $0.508 · 13 searches · 8 fetches

Judge: All core and required facts are correct. Only context facts are missing: the RPC redirect, the filing dates (2 April 2021, 19 May 2022, 19 Dec 2020), the no-exclusivity condition 1.8, the Servicio Fijo por Satélite description, and the concesión única resolution's note that the May 2021 authorization covers Ka and Ku.

Voy a buscar en fuentes oficiales del IFT los tres títulos y la inscripción de la modificación para no mezclar constelaciones ni bandas.Encontré la concesión única y el folio de la autorización satelital; ahora busco los oficios de 2021 y 2022 con redes UIT, bandas y reserva del Estado.El buscador ya no da más resultados; voy a leer el folio del Registro y los PDFs de los títulos para extraer fechas, redes y reserva.La modificación de 2022 ya está clara; falta el anexo técnico original de 2021 para las redes UIT y las bandas Ku/Ka.La modificación de 2022 no amplió la banda Ku/Ka de Starlink: añadió la constelación Swarm (IoT, VHF), distinta de los satélites de banda ancha.

1. Autorización IFT/223/UCS/AUT-SAT-EXT-029/2021
- Otorgamiento: 28 de mayo de 2021 (el oficio que resolvió otorgarla es el IFT/223/UCS/952/2021, del 24 de mayo de 2021). Vigencia: 10 años desde su expedición.
- Redes UIT y bandas (constelación SpaceX-Starlink, no geoestacionaria):
  - **STEAM-1 (Ku):** descendente 10 700–10 950 y 11 200–11 450 MHz (Ku-AP30B); 10 950–11 200 y 11 450–11 700 MHz (Ku ext.); 11 700–12 200 MHz (Ku); 12 200–12 700 MHz (Ku-AP30/30A). Ascendente 14 000–14 500 MHz (Ku).
  - **STEAM-2 y STEAM-2B (Ka):** descendente 17 800–18 600 y 18 800–19 300 MHz; ascendente 27 500–29 100 y 29 500–30 000 MHz.
- Reserva del Estado (condición 5.1): en numerario, 5% de los ingresos brutos tarifados por los servicios de la autorización.
Fuentes: título; RPC, folio FET100298AU-519564; la reserva se cita en la modificación de 2022.

2. Modificación IFT/223/UCS/1262/2022
- Fecha: 4 de julio de 2022. No cambia la vigencia de 10 años ni la reserva del 5%: la SICT (oficio 2.1.-040/2022) dijo que no era necesario modificarla.
- No amplía Ku/Ka. Añade la constelación SWARM (no los satélites de banda ancha Starlink), expediente UIT USASAT-NGSO-7, servicio móvil por satélite: descendente 137–138 MHz y ascendente 148–150 MHz; capacidad a explotar en México de 30 kHz.
- Inscripción en el Registro Público de Concesiones: **10 de agosto de 2022, número 061647** (mismo folio FET100298AU-519564).
Fuente: oficio y constancia.

3. Concesión única P/IFT/070721/319
- Otorgamiento: 7 de julio de 2021. Vigencia: 30 años desde la notificación del título (16 de julio de 2021).
- No ampara expedientes UIT ni bandas concretas. Habilita cualquier servicio público de telecomunicaciones y radiodifusión con fines de lucro y cobertura nacional; el proyecto inicial es acceso a internet usando capacidad satelital Ka/Ku. El espectro de uso determinado y los recursos orbitales deben obtenerse aparte.
- No fija reserva del Estado; esa obligación está en la autorización satelital, no en este título.
Fuentes: resolución; título.

Parallel Correct

2.4m · $0.319 · 14 searches · 7 fetches

Judge: All core and required facts are correct. Only context facts are missing: the filing dates (2 April 2021, 19 May 2022, 19 Dec 2020), the no-exclusivity condition, the FSS national coverage, and the concesión única note that the May 2021 authorization already covered Ka and Ku.

La modificación de 2022 no amplió la banda Ku/Ka de la constelación de banda ancha Starlink. Añadió otra constelación: la no geoestacionaria SWARM (expediente UIT USASAT-NGSO-7), en VHF de servicio móvil por satélite.

1. Autorización IFT/223/UCS/AUT-SAT-EXT-029/2021
Título de aterrizaje de señales de sistemas satelitales extranjeros (art. 170, fr. IV, LFTR).

- **Otorgamiento:** 28 de mayo de 2021 (el oficio IFT/223/UCS/952/2021, del 24 de mayo de 2021, resolvió otorgarla). Vigencia de **10 años** desde su emisión (vence el 28

de mayo de 2031). Folio electrónico FET100298AU-519564.
- **Redes (UIT) y bandas** de la constelación SpaceX-Starlink, según el anexo técnico y el Registro:
  - **STEAM-1 (Ku):** descendente 10 700–10 950 y 11 200–11 450 MHz (Ku-AP30B); 10 950–11 200 y 11 450–11 700 MHz (Ku ext.); 11 700–12 200 MHz (Ku); 12 200–12 700 MHz (Ku-AP30-30A). Ascendente 14 000–14 500 MHz (Ku).
  - **STEAM-2 y STEAM-2B (Ka):** descendente 17 800–18 600 y 18 800–19 300 MHz. Ascendente 27 500–29 100 y 29 500–30 000 MHz.
- **Reserva del Estado (condición 5.1):** 5% de los ingresos brutos tarifados por los servicios de la autorización, en numerario, durante toda la vigencia (fijada por la entonces SCT con base en el art. 150 de la LFTR).

Fuentes: título; ficha del RPC.

2. Modificación IFT/223/UCS/1262/2022
- **Fecha del oficio:** 4 de julio de 2022. Forma parte integral de la autorización de 2021; no cambia la vigencia de 10 años ni la reserva del 5% (la SICT, oficio 2.1.-040/2022, indicó que no era necesario modificarla).
- **Qué añade:** la constelación no geoestacionaria **SWARM**, expediente UIT **USASAT-NGSO-7**. No es la constelación de banda ancha Starlink.
- **Bandas:** descendente 137–138 MHz; ascendente 148–150 MHz; atribución móvil por satélite; capacidad a explotar en territorio nacional de 30 kHz.
- **Inscripción en el Registro Público de Concesiones:** número **061647**, **10 de agosto de 2022**, folio FET100298AU-519564.

Fuente: resolución e inscripción.

3. Concesión única P/IFT/070721/319
- **Otorgamiento:** resolución del Pleno del 7 de julio de 2021; el título está fechado el 7 de julio de 2021 y fue **notificado el 16 de julio de 2021**. Vigencia de **30 años** contados desde la notificación (hasta el 16 de julio de 2051). Folio asociado FET100409CO-519564.
- **Qué ampara:** concesión única de uso comercial para prestar servicios públicos de telecomunicaciones y radiodifusión con fines de lucro y cobertura nacional. El proyecto inicial descrito es acceso a internet nacional usando capacidad satelital en Ka y Ku. **No autoriza por sí misma expedientes UIT ni bandas de frecuencia**; la condición 5 exige obtener por separado espectro de uso determinado o recursos orbitales.
- **Reserva del Estado satelital:** no se fija en este título. La del 5% está solo en la autorización satelital.

Fuentes: título; resolución del Pleno.

  https://www.eleconomista.com.mx/empresas/IFT-expide-la-ultima-concesion-que-le-faltaba-a-Starlink-para-vender-internet-en-Mexico-20210804-0093.html
- **Bandas:**
  - **STEAM-1 (Ku):** descendente 10 700–10 950 y 11 200–11 450 MHz (Ku-AP30B); 10 950–11 200 y 11 450–11 700 MHz (Ku ext.); 11 700–12 200 MHz (Ku); 12 200–12 700 MHz (Ku-AP30/30A). Ascendente 14 000–14 500 MHz.
  - **STEAM-2 y STEAM-2B (Ka):** descendente 17 800–18 600 y 18 800–19 300 MHz. Ascendente 27 500–29 100 y 29 500–30 000 MHz.
  https://rpc.ift.org.mx/vrpc/RpcSearchController/showConcesionInfo?idConcesion=FET100298AU-519564
- **Reserva del Estado:** condición 5.1: capacidad satelital en **numerario, equivalente al 5% de los ingresos brutos tarifados**. La SICT la mantuvo sin cambio en modificaciones posteriores.
  https://rpc.crt.gob.mx/vrpc/pdfs/100298_240228212857_2985.pdf

2. Modificación IFT/223/UCS/1262/2022 (también citada como IFT/223/UCS/DG-AUSE/1262/2022)
- **Otorgamiento:** 4 de julio de 2022. No crea un título nuevo: modifica la autorización de 2021, que sigue con vigencia de **10 años**.
  https://rpc.ift.org.mx/vrpc/pdfs/100298_241011183656_2835.pdf
  https://rpc.crt.gob.mx/vrpc/pdfs/100298_240228212857_2985.pdf
- **Qué ampara:** constelación NGSO **SWARM**, expediente **USASAT-NGSO-7**, **137–138 MHz** (espacio–Tierra) y **148–150 MHz** (Tierra–espacio).
  https://rpc.ift.org.mx/vrpc/RpcSearchController/showConcesionInfo?idConcesion=FET100298AU-519564
- **Inscripción en el Registro:** no pude verificar fecha ni número de la constancia de 2022 en los PDF públicos del RPC. Las constancias localizadas de ese folio son posteriores (078172, 23 de febrero de 2024, por USASAT-NGSO-3X; y 084820, 8 de octubre de 2024, por MARS-K3/MARS-K4).

3. Concesión única P/IFT/070721/319
- **Otorgamiento:** resolución del Pleno del **7 de julio de 2021**; título de concesión única para uso comercial. Folio **FET100409CO-519564**.
  https://www.ift.org.mx/sites/default/files/conocenos/pleno/sesiones/acuerdoliga/pift070721319.pdf
  https://rpc.ift.org.mx/vrpc/pdfs/100409_210812173340_1474.pdf
  https://rpc.ift.org.mx/vrpc/RpcSearchController/showConcesionInfo?idConcesion=FET100409CO-519564
- **Vigencia: 30 años** desde la notificación del título. PROFECO registra el vencimiento el **16 de julio de 2051** (notificación hacia el 16 de julio de 2021).
  https://rpc.ift.org.mx/vrpc/pdfs/100409_210812173340_1474.pdf
  https://burocomercial.profeco.gob.mx/ca_spt/Starlink%20Satellite%20Systems%20M%C3%A9xico,%20S.%20de%20R.L.%20de%20C.V.!!Starlink%20485-2026.pdf
- **Qué ampara:** cualquier servicio público de telecomunicaciones y radiodifusión, cobertura nacional. El proyecto inicial es acceso a internet usando capacidad satelital **Ka y Ku** de la autorización del 28 de mayo de 2021. **No asigna expedientes UIT ni bandas**; el uso de espectro determinado o recursos orbitales exige títulos aparte.

https://www.ift.org.mx/sites/default/files/conocenos/pleno/sesiones/acuerdoliga/pift070721319.pdf
- **Reserva del Estado:** no aplica a este título. La del 5% está en la autorización satelital, no en la concesión única.

Nota: el mismo folio FET100298AU-519564 incorporó después, sin ser la modificación de 2022, **USASAT-NGSO-3X** (banda E, oficio del 18 de enero de 2024) y **MARS-K3 / MARS-K4** (Ku, oficio del 27 de agosto de 2024).

Cited: 1. rpc.ift.org.mx · 2. rpc.ift.org.mx · 3. eleconomista.com.mx · 4. rpc.crt.gob.mx · 5. ift.org.mx · 6. rpc.ift.org.mx · 7. rpc.ift.org.mx · 8. burocomercial.profeco.gob.mx

---

Keenable SELECT — Partly correct — Incomplete list — 5.6m · ~$0.584 · 26 searches · 3 fetches

> **Judge:** Missing the 2022 modification's registry date (10 Aug 2022) and inscription number 061647, which the answer says it could not verify; also missing several context facts (filing dates, exclusivity, MSS capacity). The 2024 USASAT-NGSO-3X mention is explicitly attributed to a later modification, not the 2022 documents, so no trap is asserted. The Reserva statement for 2022 cites the 2024 modification rather than the 2022 resolution, but the 5% substance matches.

No. La modificación de 2022 no amplió la banda Ku/Ka de Starlink: añadió la constelación no geoestacionaria Swarm (expediente UIT USASAT-NGSO-7), en VHF, distinta de los satélites de banda ancha de Starlink.

Los tres títulos son de Starlink Satellite Systems México, S. de R.L. de C.V. La reserva del Estado se fijó solo en la autorización satelital; la concesión única no otorga espectro ni redes UIT.

1. Autorización IFT/223/UCS/AUT-SAT-EXT-029/2021
- **Otorgamiento:** 28 de mayo de 2021 (oficio de resolución IFT/223/UCS/952/2021, de 24 de mayo de 2021). PDF del título
- **Vigencia:** 10 años desde su emisión, prorrogable por plazos iguales. PDF
- **Redes (expedientes UIT) y bandas**, según la ficha vigente del Registro (folio **FET100298AU-519564**), que separa lo que el anexo del título agrupa: RPC
  - **STEAM-1** (Ku): descendente 10 700–10 950 y 11 200–11 450 MHz (Ku-AP30B); 10 950–11 200 y 11 450–11 700 (Ku ext.); 11 700–12 200 (Ku); 12 200–12 700 (Ku-AP30/30A). Ascendente 14 000–14 500 MHz (Ku).
  - **STEAM-2 y STEAM-2B** (Ka): descendente 17 800–18 600 y 18 800–19 300 MHz; ascendente 27 500–29 100 y 29 500–30 000 MHz.
- **Reserva del Estado:** 5% de los ingresos brutos tarifados por los servicios de la autorización, durante su vigencia, en numerario, fijada por la entonces SCT con base en el art. 150 de la LFTR (condición 5.1). PDF
- **Inscripción:** el archivo del RPC se llama `100298_210621144132_9550.pdf` (21 de junio de 2021), pero ese PDF no trae la carátula con fecha y número de inscripción. No pude verificarlos.

2. Modificación IFT/223/UCS/1262/2022
El número completo, citado en oficios posteriores, es **IFT/223/UCS/DG-AUSE/1262/2022.**
- **Otorgamiento:** 4 de julio de 2022. Oficio 2024 que la cita; igual en el oficio de agosto de 2024
- **Vigencia:** no crea un plazo nuevo; modifica la autorización de 10 años.
- **Qué ampara:** adición de la constelación Swarm, expediente USASAT-NGSO-7. Bandas en la ficha del RPC: descendente 137–138 MHz, ascendente 148–150 MHz. RPC
- **Reserva:** no se fijó una nueva. En la modificación de 2024 la Secretaría dijo que no era necesario modificar el 5% original. PDF
- **Fecha y número de inscripción: no los verifiqué.** El PDF de esa constancia no está indexado; las dos constancias posteriores del mismo folio sí lo están (078172, 23 de febrero de 2024; 084820, 8 de octubre de 2024) y no corresponden a 1262/2022.

3. Concesión única P/IFT/070721/319
- **Otorgamiento:** 7 de julio de 2021, por el Pleno. Resolución; título
- **Vigencia:** 30 años contados desde la notificación, 16 de julio de 2021, prorrogable. Título
- **Qué ampara:** concesión única de uso comercial para todo servicio público de telecomunicaciones y radiodifusión técnicamente factible, cobertura nacional; el proyecto inicial es acceso a internet usando capacidad satelital Ka/Ku. **No asigna bandas ni expedientes UIT.** Resolución; ficha RPC, folio FET100409CO-519564
- **Reserva del Estado:** no se fija en este título.
- **Inscripción:** el PDF del título está en el RPC (`100409_210812173340_1474.pdf`, 12 de agosto de 2021), pero no trae número de inscripción. La ficha no publica fecha ni número.

Modificaciones posteriores del mismo folio, para no confundirlas con 2022: el 18 de enero de 2024 se añadió USASAT-NGSO-3X (banda E, ~71–85 GHz), inscripción 078172 del 23 de febrero de 2024; el 27 de agosto de 2024 se añadieron MARS-K3 y MARS-K4 (Ku, constelación SpaceX-Starlink), inscripción 084820 del 8 de octubre de 2024.

Keenable router → SELECT — Partly correct — Incomplete list — 5.6m · ~$0.584 · 26 searches · 3 fetches

> **Judge:** Missing the 2022 modification's registry date (10 Aug 2022) and inscription number 061647, which the answer says it could not verify; also missing several context facts (filing dates, exclusivity, MSS capacity). The 2024 USASAT-NGSO-3X mention is explicitly attributed to a later modification, not the 2022 documents, so no trap is asserted. The Reserva statement for 2022 cites the 2024 modification rather than the 2022 resolution, but the 5% substance matches.

No. La modificación de 2022 no amplió la banda Ku/Ka de Starlink: añadió la constelación no geoestacionaria Swarm (expediente UIT USASAT-NGSO-7), en VHF, distinta de los satélites de banda ancha de Starlink.

Los tres títulos son de Starlink Satellite Systems México, S. de R.L. de C.V. La reserva del Estado se fijó solo en la autorización satelital; la concesión única no otorga espectro ni redes UIT.

1. Autorización IFT/223/UCS/AUT-SAT-EXT-029/2021
- **Otorgamiento:** 28 de mayo de 2021 (oficio de resolución IFT/223/UCS/952/2021, de 24 de mayo de 2021). PDF del título

- **Vigencia: 10 años** desde su emisión, prorrogable por plazos iguales. PDF
- **Redes (expedientes UIT) y bandas**, según la ficha vigente del Registro (folio **FET100298AU-519564**), que separa lo que el anexo del título agrupa: RPC
  - **STEAM-1** (Ku): descendente 10 700–10 950 y 11 200–11 450 MHz (Ku-AP30B); 10 950–11 200 y 11 450–11 700 (Ku ext.); 11 700–12 200 (Ku); 12 200–12 700 (Ku-AP30/30A). Ascendente 14 000–14 500 MHz (Ku).
  - **STEAM-2 y STEAM-2B** (Ka): descendente 17 800–18 600 y 18 800–19 300 MHz; ascendente 27 500–29 100 y 29 500–30 000 MHz.
- **Reserva del Estado: 5% de los ingresos brutos tarifados** por los servicios de la autorización, durante su vigencia, en numerario, fijada por la entonces SCT con base en el art. 150 de la LFTR (condición 5.1). PDF
- **Inscripción:** el archivo del RPC se llama `100298_210621144132_9550.pdf` (21 de junio de 2021), pero **ese PDF no trae la carátula** con fecha y número de inscripción. No pude verificarlos.

2. Modificación IFT/223/UCS/1262/2022
El número completo, citado en oficios posteriores, es **IFT/223/UCS/DG-AUSE/1262/2022.**
- **Otorgamiento: 4 de julio de 2022.** Oficio 2024 que la cita; igual en el oficio de agosto de 2024
- **Vigencia:** no crea un plazo nuevo; modifica la autorización de **10 años.**
- **Qué ampara:** adición de la constelación **Swarm**, expediente **USASAT-NGSO-7.** Bandas en la ficha del RPC: descendente **137–138 MHz**, ascendente **148–150 MHz.** RPC
- **Reserva:** no se fijó una nueva. En la modificación de 2024 la Secretaría dijo que no era necesario modificar el 5% original. PDF
- **Fecha y número de inscripción: no los verifiqué.** El PDF de esa constancia no está indexado; las dos constancias posteriores del mismo folio sí lo están (078172, 23 de febrero de 2024; 084820, 8 de octubre de 2024) y no corresponden a 1262/2022.

3. Concesión única P/IFT/070721/319
- **Otorgamiento: 7 de julio de 2021**, por el Pleno. Resolución; título
- **Vigencia: 30 años** contados desde la **notificación, 16 de julio de 2021**, prorrogable. Título
- **Qué ampara:** concesión única de uso comercial para todo servicio público de telecomunicaciones y radiodifusión técnicamente factible, cobertura nacional; el proyecto inicial es acceso a internet usando capacidad satelital Ka/Ku. **No asigna bandas ni expedientes UIT.** Resolución; ficha RPC, folio FET100409CO-519564
- **Reserva del Estado:** no se fija en este título.
- **Inscripción:** el PDF del título está en el RPC (`100409_210812173340_1474.pdf`, 12 de agosto de 2021), pero **no trae número de inscripción.** La ficha no publica fecha ni número.

Modificaciones posteriores del mismo folio, para no confundirlas con 2022: el 18 de enero de 2024 se añadió **USASAT-NGSO-3X** (banda E, ~71–85 GHz), inscripción **078172** del 23 de febrero de 2024; el 27 de agosto de 2024 se añadieron **MARS-K3 y MARS-K4** (Ku, constelación SpaceX-Starlink), inscripción **084820** del 8 de octubre de 2024.

Between 2022 and 2024 Ofcom granted, then saw surrendered, then varied Starlink's UK Ka-band gateway licences. From Ofcom's November 2022 statement, its April 2024 consultation and its 1 August 2024 statement, list: the six sites granted in 2022 and how many UK gateways SpaceX had before and after; the two sites surrendered and when; the four licences varied in 2024 with their licence numbers, the antenna count before and after at each, and the Ka-band ranges stated in 2024; which company name holds the Isle of Man licence; and who responded to the 2024 consultation. Do not merge these with the 2025 E-band or 2026 Harlow decisions.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Three Ofcom documents. Statement 10 November 2022 'Decision on applications for six non-geostationary earth station gateway licences': applications received 27 May 2022 from Starlink Internet Services Limited; six sites Bristol, Fawley, Hoo St Werburgh, Morn Hill, Wherstead, Woodwalton; SpaceX already operated three UK gateways (licences held by Arqiva at Chalfont, Goonhilly, and Starlink) so the grant takes it to nine; Ka ranges applied 27.5-27.8185, 28.4545-28.8265 and 29.4625-30 GHz; licences issued on payment of fee; gateways must commence within 12 months. Consultation 26 April 2024 (closing 31 May 2024): Starlink surrendered Bristol and Hoo St Werburgh in October 2023; variation sought for Fawley (licence 1293217), Isle of Man (249304/1), Wherstead (1293534), Woodwalton (1293303); each currently up to 9 Ka-band antennas; Fawley, Wherstead, Woodwalton to add 24 for 32 each; Isle of Man to add 32 for 40; bands 27.5-28.0525, 28.4445-29.0605, 29.4525-30 GHz (wider than 2022 because gateway spectrum was added to the licences in March 2023); Table 3 lists seven remaining gateways, with the Isle of Man held by Starlink Internet Services UK Limited and the others by Starlink Internet Services Limited; Chalfont (Arqiva) and Goonhilly are not Starlink licences. Statement 1 August 2024: approves the variation for all four sites; Viasat was the respondent published. Wrong: nine sites still licensed; Morn Hill among the varied sites; the 2022 band edges quoted as the 2024 ones; Isle of Man licence in the Irish company's name. Sources: https://www.ofcom.org.uk/__data/assets/pdf_file/0029/247178/statement-starlink-ngso-application.pdf ; https://www.ofcom.org.uk/__data/assets/pdf_file/0031/283729/consultation-spacex-application-ngso-gateway-licence-april24.pdf ; https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-3-4-weeks/283714-starlink-internet-services-limited-spacex-application/associated-documents/statement-starlink-internet-services-limited-spacex.pdf ; page https://www.ofcom.org.uk/spectrum/space-and-satellites/spacex-application-variation-non-geostationary-gateway-licence

Exa **Partly correct** ✓ × ✓ ✓ Incomplete list 2.6m · $0.383 · 10 searches · 4 fetches

Judge: All core and required facts are correct. Missing context facts: the 2022 statement title, the 27 May 2022 application date, the 2022 Ka-band ranges, the fee and 12-month commencement terms, the 31 May 2024 closing date, and that Chalfont and Goonhilly are not Starlink licences. Fact 15 is contradicted: the answer dates the spectrum addition to a March 2024 statement, not March 2023.

Ofcom's 10 November 2022 statement granted six Ka-band NGSO gateway licences and took SpaceX from three UK gateways to nine. Two of those licences were surrendered in October 2023. On 1 August 2024 Ofcom varied four remaining licences. These points are only from the 2022 statement, the 26 April 2024 consultation and the 1 August 2024 statement (and the applicant narrative published with that consultation). They are not the later E-band or Harlow decisions.

Six sites granted in 2022, and gateway counts. The 10 November 2022 statement decided to grant six additional NGSO gateway licences. SpaceX already operated three UK gateways, so the grant took the total to nine. The three existing licences were held by Arqiva, Goonhilly and Starlink. The six applications decided that day, as listed on the decision page and restated in the 2024 documents, were Bristol, Fawley, Hoo St Werburgh, Morn Hill, Wherstead and Woodwalton. The June 2022 consultation paragraph that the November statement relies on mis-lists those six as "Bedford, Bristol, Fawley, Hoo, Morn Hill, Wherstead and Woodwalton" (seven names). Bedford was not one of the six applications. The three pre-existing sites named in that consultation were Goonhilly, Isle of Man and Chalfont.

Sources: November 2022 statement (PDF); decision page; June 2022 consultation (PDF); NGSO licensing page.

Two licences surrendered. Bristol and Hoo St Werburgh were surrendered in October 2023. Ofcom's April 2024 consultation and 1 August 2024 statement both say October 2023 and do not give a day. The SpaceX narrative published with the April consultation dates the surrender 5 October 2023 and gives licence numbers Bristol 1293048/1 and Hoo St Werburgh 1294111/1. The April consultation spells the place once as "Hoo St Wherburgh" and once as "Hoo St Werburgh"; the August statement uses Hoo St Werburgh. After the surrender, Ofcom treated Starlink as having seven remaining UK gateway sites.

Sources: April 2024 consultation (PDF); 1 August 2024 statement (PDF); SpaceX narrative (PDF).

Four licences varied in 2024. Ofcom approved variations for Fawley, Wherstead, Woodwalton and the Isle of Man. Each site was authorised for up to nine Ka-band parabolic antennas. The variation added 24 antennas at Fawley, Wherstead and Woodwalton (32 each) and 32 at the Isle of Man (40). The SpaceX narrative said the seven sites were then using eight antennas each; Ofcom's authorised figure is "up to 9".

Licence numbers, which the two Ofcom documents do not fully agree on:

Site	April 2024 consultation	1 August 2024 statement	Antennas before → after
Fawley	1293217	1293217	up to 9 → 32
Wherstead	1293534	1293534	up to 9 → 32
Woodwalton	1293303	1293303	up to 9 → 32
Isle of Man	249304/1	1249304	up to 9 → 40

The SpaceX narrative uses the same 249304/1 figure as the April consultation. The August statement's footnote uses 1249304. Fawley, Wherstead and Woodwalton match in both Ofcom documents.

Ka-band ranges stated in 2024: for Fawley, Wherstead and Woodwalton, the April consultation states 27.5–28.0525 GHz, 28.4445–29.0605 GHz and 29.4525–30 GHz. It says the Isle of Man already had access to 27.5–30 GHz. The August statement states the decision enables use of 27.5–28.0525 GHz, 28.4445–29.0605 GHz and 29.4525–30 GHz, and says all of Starlink's NGSO gateways operate in those three ranges. A footnote says extra gateway frequencies were added after the March 2024 28 GHz statement, that the gateways can operate across 27.5–30 GHz, and that the NGSO gateway licence does not itself authorise the whole of 27.5–30 GHz; other 28 GHz use depends on commercial agreements with the relevant licensee.

The April consultation was published on 26 April 2024. The August statement says the variation request was made in March 2024. The decision webpage's "In May 2024" wording conflicts with that April publication date.

Sources: April 2024 consultation (PDF); 1 August 2024 statement (PDF); decision page.

Isle of Man licence holder. The April 2024 consultation's gateway table names the holder as **Starlink Internet Services UK Limited.** The other Starlink-held sites in that table (Fawley, Morn Hill, Wherstead, Woodwalton) are listed under Starlink Internet Services Limited. The August statement does not repeat the "UK Limited" distinction; it says five licences, including the Isle of Man, are held by Starlink.

Source: April 2024 consultation (PDF).

2024 consultation responses. Two responses: a non-confidential response from Viasat, which Ofcom published, and one confidential response, which is not named. Ofcom said other NGSO licensees and key stakeholders did not raise issues through routine engagement; those are not counted as consultation responses.

Parallel ✓ Correct ✓ ✓ ✓ ✓ `44.3s · $0.231 · 5 searches · 4 fetches`

> **Judge:** All core and required facts are correct and no traps are asserted. Only context facts are missing: the 2022 statement title, the 27 May 2022 application date, the 2022 Ka-band ranges, the fee and 12-month commencement terms, the March 2023 spectrum addition, Table 3 listing seven gateways, and the point that Chalfont and Goonhilly are not Starlink licences.

I'll look up Ofcom's November 2022 statement and the April and August 2024 Ka-band gateway documents, and keep later E-band and Harlow decisions out of the answer.The page dates look inconsistent, so I'm opening the 2022 decision and the 2024 consultation and statement to confirm sites, licence numbers, and antenna counts.The 2022 statement gives the before-and-after totals, but the site names sit mainly in the later documents. I'll confirm the six locations and the Isle of Man licence holder against Ofcom's application page.Ofcom's 10 November 2022 statement granted six additional UK Ka-band NGSO gateway licences, taking SpaceX from three UK gateways to nine. The two later surrenders and the 2024 antenna variations are separate from that grant.

Six sites granted in 2022, and the before/after count. The 10 November 2022 statement says SpaceX already operated three UK gateway earth stations and that the six new licences would raise the total to nine. Those three existing licences were held by Arqiva, Goonhilly and Starlink. The statement itself does not name the six sites. Ofcom's page for that decision lists the applications as Bristol, Fawley, Hoo, Morn Hill, Wherstead and Woodwalton. The 1 August 2024 statement names the six granted sites as Bristol, Fawley, Hoo St Werburgh, Morn Hill, Wherstead and Woodwalton. The 26 April 2024 consultation uses the same list but spells the third site "Hoo St Wherburgh".

Sources: November 2022 statement (paras 1.3, 2.1 and 8.3); Ofcom decision page; 1 August 2024 statement (para 2.7); 26 April 2024 consultation (para 2.2).

Two licences surrendered. Both the April 2024 consultation and the 1 August 2024 statement say the Bristol and Hoo licences were surrendered in October 2023. The August statement uses "Hoo St Werburgh"; the consultation uses "Hoo St Wherburgh" and, later, "Hoo".

Sources: April 2024 consultation (paras 2.3 and 2.57); 1 August 2024 statement (para 2.7).

Four licences varied in 2024. Ofcom approved variations for Fawley, Wherstead, Woodwalton and the Isle of Man. Each site was authorised for up to nine Ka-band parabolic antennas. Fawley, Wherstead and Woodwalton each gained 24 antennas, to 32. The Isle of Man gained 32, to 40.

Licence numbers as stated in the 1 August 2024 statement: Fawley 1293217; Wherstead 1293534; Woodwalton 1293303; Isle of Man 1249304. The April consultation gives the same three mainland numbers, but gives the Isle of Man number as 249304/1. The documents do not reconcile that difference.

Ka-band ranges stated in 2024 for Starlink's NGSO gateways, including the varied mainland sites: 27.5–28.0525 GHz, 28.4445–29.0605 GHz and 29.4525–30 GHz. The April consultation adds that, at the Isle of Man, SpaceX already had access to the frequencies it wished to use across 27.5–30 GHz. Both documents note that the licensed ranges do not authorise the whole 27.5–30 GHz band, and that other 28 GHz frequencies depend on commercial agreements with the relevant licensees.

Sources: 1 August 2024 statement (overview and paras 2.7–2.8, footnote 2); April 2024 consultation (paras 1.4 and 2.9–2.12, footnote 2).

Isle of Man licence holder. Table 3 of the April 2024 consultation lists the Isle of Man Ka-band gateway licence holder as Starlink Internet Services UK Limited. The other Starlink sites in that table are listed under Starlink Internet Services Limited. The August statement treats the Isle of Man licence as one of Starlink's licences and does not restate a different holder name.

Source: April 2024 consultation, Table 3.

2024 consultation responses. The consultation ran from 26 April to 31 May 2024. Ofcom received two responses: a non-confidential response from Viasat, and one confidential response. Both were mainly about interference into geostationary services. No respondent answered the future-coexistence, equality or Welsh-language questions.

Source: 1 August 2024 statement (paras 2.11–2.12, 3.32 and 5.22).

Keenable search ✗ Wrong ✗ ✗ ✓ ✓ Incomplete list `10.5m · ~$2.160 · 84 searches · 16 fetches`

> **Judge:** The answer omits the six 2022 sites (core), the Bristol and Hoo St Werburgh surrenders in October 2023 (core), and the Viasat respondent. It also contradicts the Isle of Man holder: it says Starlink Internet Services Limited rather than Starlink Internet Services UK Limited.

Hit its tool-call or time budget and was forced to answer.

I could not open the three Ofcom PDFs (they returned 403). What follows is only what the Ofcom landing pages and contemporaneous write-ups of those documents actually state. Where a detail is missing or the secondary lists conflict, that is flagged rather than filled in. The 2025 E-band and 2026 Harlow decisions are not included.

November 2022 statement
Ofcom's 10 November 2022 statement page says that on 27 May 2022 it received **six** Ka-band NGSO gateway applications from **Starlink Internet Services Limited**, and that SpaceX **already operated three** UK gateways. Contemporary reports of that decision say the grant took the total **from three to nine**.

- Statement page: https://ofcom.org.uk/consultations-and-statements/category-3/starlink-gateway-licence-applications
- Three to nine: https://spacenews.com/uk-grants-starlink-and-telesat-ngso-licenses/ and https://www.electronicsweekly.com/news/ofcom-updates-space-spectrum-strategy-grants-ngso-licences-2022-11/ (the latter quotes the statement on coexistence and on "SpaceX's nine gateway earth stations")

The six site names are not on the statement landing page, and I could not read the PDF. Secondary accounts of the June 2022 applications list **seven** names — Bedford, Bristol, Fawley, Hoo, Morn Hill, Wherstead and Woodwalton — for six applications, so those lists cannot be treated as the granted set. See https://www.technologyslegaledge.com/2022/06/first-test-of-ofcoms-new-non-geostationary-satellite-orbit-ngso-system-licensing-process/ and https://spacenews.com/uk-mulls-starlink-expansion-plan-under-new-ngso-regulations/.

Two surrenders
Not verified. The April 2024 consultation, as summarised by ISPreview, refers to "four of its **remaining seven** sites," which implies two of the nine post-2022 licences had gone by then. I could not find, in any page I could read, Ofcom naming those two sites or the surrender date. I will not infer them from later site lists.

1 August 2024 variation (consultation opened 26 April 2024)
Ofcom's page says it approved a variation of four Ka-band NGSO gateway licences, for **Fawley, Wherstead, Woodwalton and the Isle of Man**. Consultation published 26 April 2024 (closed 31 May 2024); statement 1 August 2024. The same page says the request was received "in May 2024," which does not match the 26 April publication date. https://www.ofcom.org.uk/spectrum/space-and-satellites/spacex-application-variation-non-geostationary-gateway-licence

Antenna counts, licence numbers and bands are **not** on that landing page. They are as reported from the April 2024 consultation by ISPreview (https://ispreview.co.uk/index.php/2024/04/spacex-looks-to-expand-starlinks-broadband-capacity-in-the-uk.html) and Geekabit (https://geekabit.co.uk/2024/04/30/starlink-expand-broadband-capacity). I could not check that the 1 August statement left them unchanged.

Site	Licence no. (as cited)	Antennas before	After	Ka-band ranges stated for the new antennas
Fawley	1293217	up to 9	32 (+24)	27.5–28.0525 GHz, 28.4445–29.0605 GHz, 29.4525–30 GHz
Wherstead	1293534	up to 9	32 (+24)	same three ranges
Woodwalton	1293303	up to 9	32 (+24)	same three ranges
Isle of Man	249304/1	up to 9	40 (+32)	already authorised for 27.5–30 GHz; no new ranges requested

Isle of Man licence holder
In the 2024 Ofcom text, the Isle of Man gateway licence is one of four held by **Starlink Internet Services Limited**. I could not read the licence schedule, so I cannot confirm a different company name on the face of licence 249304/1.

Who responded to the 2024 consultation
Not verified. The response table and statement PDF were not accessible. I will not substitute the 2022 respondents (Arc Accountancy and Bookkeeping Ltd, Inmarsat, Mangata, and two individuals whose names were withheld), who responded to the 2022 gateway consultation, not the 2024 variation.

Cited: 1. ofcom.org.uk · 2. spacenews.com · 3. electronicsweekly.com · 4. technologyslegaledge.com · 5. spacenews.com · 6. ofcom.org.uk · 7. ispreview.co.uk · 8. geekabit.co.uk

Keenable SELECT ⊗ Wrong × × × × Tool error / timeout 23.2m · ~$2.969 · 76 searches · 24 fetches

Judge: The run failed with a timeout error and no answer. Graded wrong by the harness rule, not by the judge model.

Run error: TimeoutError:

Hit its tool-call or time budget and was forced to answer.

(no answer)

No sources cited.

Grok native ◐ Partly correct ✓ × ✓ ✓ Claim not in sources 1.4m · $1.325 · 15 searches · 7 fetches

Judge: All core and required facts are correct. Fact 15 is contradicted: the answer says gateway spectrum was added in March 2024, not March 2023. Context facts 1, 2, 6, 7, 8 (closing date) and 18 are missing.

2022 grants (10 November 2022 statement). Ofcom granted six Ka-band NGSO gateway licences at **Bristol, Fawley, Hoo St Werburgh, Morn Hill, Wherstead and Woodwalton.** SpaceX already operated **three** UK gateways (Goonhilly, Isle of Man and Chalfont); the grants took the total to **nine.** Sources: Ofcom statement page and the April 2024 consultation, which records that the November 2022 statement granted those six sites. The June 2022 consultation that the statement confirmed had listed the three existing sites and the nine-site total; contemporaneous reporting of the statement also quotes Ofcom on "nine gateway earth stations" (Electronics Weekly, SpaceNews). The November 2022 PDF itself could not be text-extracted here.

Surrenders. The April 2024 consultation says Starlink surrendered **Bristol** and **Hoo St Werburgh** in **October 2023**, leaving seven sites. SpaceX's narrative published with that consultation gives the date as **5 October 2023** and the licence numbers as Bristol **1293048/1** and Hoo St Werburgh **1294111/1** (narrative). Ofcom's own consultation text does not repeat those licence numbers or the exact day.

2024 variations (26 April 2024 consultation; decision 1 August 2024). Ofcom approved variations of four licences:

Site	Licence	Antennas before (Ofcom)	After
Fawley	1293217	up to 9	32 (plus 24)
Wherstead	1293534	up to 9	32 (plus 24)

Site	Licence	Antennas before (Ofcom)	After
Woodwalton	1293303	up to 9	32 (plus 24)
Isle of Man	249304/1	up to 9	40 (plus 32)

Ka-band ranges stated in the 2024 consultation: for Fawley, Wherstead and Woodwalton, **27.5–28.0525 GHz, 28.4445–29.0605 GHz and 29.4525–30 GHz**; for the Isle of Man, **27.5–30 GHz** (already authorised). Ofcom notes that some of the three-site range was added to gateway licences in March 2024, and that use of auctioned 28 GHz spectrum still depends on commercial agreements. Sources: April 2024 consultation and the 1 August 2024 statement page, which records approval of those four variations. The August statement PDF could not be text-extracted, so the antenna and frequency figures above are from the consultation that the statement approved, not re-quoted from the statement body.

SpaceX's accompanying narrative says the sites were then using 8 antennas, not "up to 9". Eight plus 24 is 32, and eight plus 32 is 40; "up to 9" plus 24 is not 32. Ofcom states both "up to 9" and the totals 32 and 40.

Isle of Man licensee. Ofcom's April 2024 table lists the Isle of Man licence as held by **Starlink Internet Services UK Limited**, not Starlink Internet Services Limited (which holds Fawley, Morn Hill, Wherstead and Woodwalton).

2024 consultation responses. The only response Ofcom published on the statement page is **Viasat.** The August statement PDF could not be read, so it is not verified here whether the statement also records any confidential respondent.

PROMPT 106 · LIST-BUILDING · FACTS AS OF 2026-10-09

Starlink Argentina S.R.L. no obtuvo su licencia TIC por un acto directo sino por transferencia, y en 2026 recibió dos actos más del ENACOM. Para las Resoluciones ENACOM 4/2024, 372/2026 y 663/2026 indique: fecha de firma, fecha de publicación en el Boletín Oficial, expediente, qué dispone cada una (qué resoluciones previas se citan en la transferencia; qué autoriza la 372 y con qué carácter; qué proyecto aprueba la 663, el monto total y cómo se reparte entre donación y FSU), y el firmante. No confunda la 663/2026 con la resolución posterior que aprobó el convenio.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Three ENACOM resolutions. Resolución Sintetizada 4/2024, RESOL-2024-4-APN-ENACOM#JGM, fecha 23/2/2024, Boletín Oficial 26/02/2024 (e. 26/02/2024 N° 8799/24): 1) inscribe TIBRO NETHERLANDS B.V. SUCURSAL ARGENTINA in the Registro de Servicios TIC for Servicio Fijo y Móvil por Satélite; 2) authorises Tibro to transfer the licence and registrations of Servicio Fijo Satelital, Valor Agregado - Acceso a Internet, and Fijo y Móvil por Satélite, granted by Resoluciones N° 1291/2020 and 1157/2023, to STARLINK ARGENTINA S.R.L.; signed Juan Martín Ozores, Interventor. Resolución Sintetizada 372/2026, RESOL-2026-372-APN-ENACOM#JGM, fecha 28/05/2026, expediente EX-2025-139631951-APN-DGDYD#JGM, Boletín Oficial 01/06/2026 (N° 36841/26): authorises Starlink Argentina S.R.L. 'con carácter de excepción' to operate in requested frequency segments not yet attributed to the Servicio Fijo por Satélite in Argentina, subject to conditions in article 2 (no harmful interference and no protection, RNI limits, protect radio astronomy per footnote 5.149, tied to the sites and parameters of the application; any change needs a new electromagnetic compatibility analysis), under apercibimiento de caducidad; signed Ozores. The published extract names no band; law-firm notes call it W band. Resolución 663/2026, RESOL-2026-663-APN-ENACOM#JGM, signed 24 de julio de 2026 (digital signature Ozores 2026.07.24), EX-2026-71541314-APN-DNPYD#ENACOM, Boletín Oficial 29/07/2026 in extract: approves the Proyecto Específico 'CONECTIVIDAD SATELITAL EN ESTABLECIMIENTOS EDUCATIVOS DE GESTIÓN PÚBLICA DE LA REPÚBLICA ARGENTINA' under programme C.I.P. (Res. 1072/24); assigns USD 21.876.000 from the FSU: USD 9.978.000 as a donación con cargo by Starlink Argentina S.R.L. (CUIT 30-71754087-1) for 6.000 kits, accessories and 24 months of service, and USD 11.898.000 of FSU funds for installation, service management, technical support, an API platform and 12 further months of service. The convenio and donation contract were approved later by Resolución 857/2026 (2 September 2026), not by 663. Wrong: a direct licence to Starlink in 2024; a general W-band attribution; reading USD 9.978.000 as 'millones'. Judge: Facts 13 (the 372 extract names no band; law-firm notes call it W band) and 22 (Resolution 857/2026 of 2 September 2026 approved the convenio) are not stated; the answer only says a later act did so, without naming it. All other facts are correct and no traps asserted.

Voy a buscar las tres resoluciones de ENACOM y sus publicaciones en el Boletín Oficial para extraer fecha, expediente, objeto y firmante.Los extractos ya identifican las tres resoluciones; voy a leer las publicaciones oficiales para confirmar expediente, fechas y el texto dispositivo.Datos tomados de las resoluciones sintetizadas publicadas en el Boletín Oficial. Las tres las firmó Juan Martín Ozores, interventor del ENACOM.

Resolución ENACOM 4/2024
- **Firma:** 23/2/2024 (RESOL-2024-4-APN-ENACOM#JGM).
- **Boletín Oficial:** 26/02/2024 (e. 26/02/2024 N° 8799/24).
- **Expedientes:** EX-2023-69451757-APN-REYS#ENACOM y EX-2023-129535107-APN-REYS#ENACOM.
- **Qué dispone:** inscribe a TIBRO NETHERLANDS B.V. SUCURSAL ARGENTINA en el Registro de Servicios TIC por el Servicio Fijo y Móvil por Satélite, y la autoriza a transferir a STARLINK ARGENTINA S.R.L. la licencia y el registro de los servicios Fijo Satelital, de Valor Agregado – Acceso a Internet, y Fijo y Móvil por Satélite. Esos títulos se citan como otorgados por las Resoluciones ENACOM N° 1291/2020 y 1157/2023, más el propio acto 4/2024.
- Fuente: https://www.boletinoficial.gob.ar/detalleAviso/primera/304028/20240226

Resolución ENACOM 372/2026
- **Firma:** 28/05/2026 (RESOL-2026-372-APN-ENACOM#JGM).
- **Boletín Oficial:** 01/06/2026 (e. 01/06/2026 N° 36841/26).
- **Expediente:** EX-2025-139631951- -APN-DGDYD#JGM (así figura en el extracto).
- **Qué dispone:** autoriza a STARLINK ARGENTINA S.R.L., **con carácter de excepción** y sujeta al cumplimiento de las condiciones del artículo 2° (bajo apercibimiento de caducidad), a operar en los segmentos de frecuencias solicitados que aún no están atribuidos al Servicio Fijo por Satélite en la República Argentina. El artículo 2° impone condiciones de no interferencia, RNI, radioastronomía (nota 5.149 y Recomendaciones UIT-R RA.769 y SA.1513), compartición y limitación a los sitios y parámetros técnicos de la solicitud.
- Fuente: https://www.boletinoficial.gob.ar/detalleAviso/primera/342644/20260601

Resolución ENACOM 663/2026
No es el acto posterior que aprobó el convenio y el contrato de donación: esta resolución solo aprueba el proyecto y encomienda elaborar esos instrumentos.

- **Firma:** 24/07/2026 (RESOL-2026-663-APN-ENACOM#JGM).
- **Boletín Oficial:** 29/07/2026 (e. 29/07/2026 N° 52459/26).
- **Expediente:** EX-2026-71541314- -APN-DNPYD#ENACOM (así figura en el extracto).
- **Qué dispone:** aprueba el proyecto específico “CONECTIVIDAD SATELITAL EN ESTABLECIMIENTOS EDUCATIVOS DE GESTIÓN PÚBLICA DE LA REPÚBLICA ARGENTINA”, en el marco del programa “Conectividad de Interés Público (C.I.P.)” de la Resolución ENACOM N° 1072/24 (anexo IF-2026-71532188-APN-DNPYD#ENACOM).
- **Monto total:** USD 21.876.000, del Fondo del Servicio Universal (Ley N° 27.078), repartidos así:
  - **USD 9.978.000** de la donación con cargo de STARLINK ARGENTINA S.R.L. (CUIT 30-71754087-1) al FSU, solo para kits, accesorios y el servicio de Internet satelital de los primeros 24 meses;
  - **USD 11.898.000** del propio FSU, para instalación, gestión del servicio e incidencias, atención técnica, plataforma API de control y monitoreo, y la continuidad del servicio durante los 12 meses siguientes.
- También encomienda a la Dirección Nacional de Licencias, Autorizaciones y Registros elaborar el modelo de convenio/contratos, y a la Dirección Nacional de Control y Fiscalización definir auditoría y seguimiento.
- Fuentes: https://www.boletinoficial.gob.ar/detalleAviso/primera/345097/20260729 y https://servicios.infoleg.gob.ar/infolegInternet/anexos/425000-429999/428313/norma.htm

> **Judge:** Two context facts are missing. Fact 10: the answer only refers to the article 2 conditions without detailing them (no harmful interference or protection, RNI limits, note 5.149, new compatibility analysis). Fact 13: the answer does not say that the published extract names no band. All core and required facts are correct and no trap is asserted.

Las tres resoluciones están firmadas por Juan Martín Ozores, Interventor del ENACOM. La 663/2026 aprueba el proyecto y asigna fondos; no es la posterior que aprobó el contrato de donación (Resolución ENACOM 857/2026, firmada el 31/08/2026 y publicada el 02/09/2026).

Resolución ENACOM 4/2024 (RESOL-2024-4-APN-ENACOM)
- **Firma:** 23/02/2024.
- **Boletín Oficial:** 26/02/2024.
- **Expedientes:** EX-2023-69451757-APN-REYS y EX-2023-129535107-APN-REYS.
- **Qué dispone:** inscribe a Tibro Netherlands B.V. Sucursal Argentina en el Registro de Servicios TIC por el Servicio Fijo y Móvil por Satélite, y la autoriza a transferir a Starlink Argentina S.R.L. (CUIT 30-71754087-1) la licencia y el registro de los servicios Fijo Satelital, Valor Agregado – Acceso a Internet, y Fijo y Móvil por Satélite. Esos títulos se citan como otorgados por las Resoluciones ENACOM N° 1291/2020 y N° 1157/2023, más el propio acto (el registro del Servicio Fijo y Móvil por Satélite).
- Fuentes: PDF ENACOM; Boletín Oficial.

Resolución ENACOM 372/2026 (RESOL-2026-372-APN-ENACOM)
- **Firma:** 28/05/2026.
- **Boletín Oficial:** 01/06/2026.
- **Expediente:** EX-2025-139631951- -APN-DGDYD (en el PDF, con sufijo #JGM).
- **Qué autoriza y con qué carácter:** autoriza, **con carácter de excepción** y sujeta al cumplimiento de las condiciones del artículo 2° (bajo apercibimiento de caducidad), a Starlink Argentina S.R.L. a operar en los segmentos de frecuencias solicitados que **aún no están atribuidos** al Servicio Fijo por Satélite en la Argentina. El pedido era uso de banda W en enlace ascendente (Tierra-espacio): 92-94, 94,1-95, 95-100, 102-109,5 y 111,8-114,25 GHz, para estaciones terrenas (gateways) V5.
- Fuentes: PDF ENACOM; Boletín Oficial.

Resolución ENACOM 663/2026 (RESOL-2026-663-APN-ENACOM)
- **Firma:** 24/07/2026.
- **Boletín Oficial:** 29/07/2026 (BO N° 35959).
- **Expediente:** EX-2026-71541314- -APN-DNPYD (en el VISTO del PDF: EX-2026-71541314-APN-DNPYD; el encabezado del PDF agrega #ENACOM).
- **Qué aprueba:** el proyecto específico **"Conectividad satelital en establecimientos educativos de gestión pública de la República Argentina"**, en el marco del Programa "Conectividad de Interés Público (C.I.P.)" de la Resolución ENACOM N° 1072/24 (anexo IF-2026-71532188-APN-DNPYD).
- **Monto y reparto:** total **USD 21.876.000**, imputados al Fondo del Servicio Universal (Ley 27.078):
  - **USD 9.978.000** de donación con cargo de Starlink Argentina S.R.L. al FSU, solo para kits, accesorios y servicio de internet satelital los primeros 24 meses;
  - **USD 11.898.000** de recursos propios del FSU, para instalación, gestión de servicio e incidencias, atención técnica, plataforma API de control y monitoreo, y la continuidad del servicio los 12 meses siguientes.
- También encomienda elaborar el modelo de convenio/contratos (no los aprueba) y definir auditoría y seguimiento.
- Fuentes: PDF ENACOM; Boletín Oficial; ficha Infoleg.

Resolución ENACOM 372/2026

- **Firma:** 28 de mayo de 2026 (InfoLeg y Argentina.gob.ar la registran como fecha de sanción; el PDF de ENACOM está fechado el 28/05/2026). **Boletín Oficial:** 1 de junio de 2026, número 35920, página 88.
- **Expediente:** EX-2025-139631951-APN-DGDYD#JGM.

- **Qué autoriza y con qué carácter:** autoriza **con carácter de excepción**, sujeta al cumplimiento de las condiciones del artículo 2° y bajo apercibimiento de caducidad, a Starlink Argentina S.R.L. a operar en los segmentos de banda W solicitados (92-94, 94,1-95, 95-100, 102-109,5 y 111,8-114,25 GHz, Tierra-espacio) para estaciones terrenas Gateway V5 del Servicio Fijo por Satélite, segmentos que todavía no están atribuidos a ese servicio en la Argentina. No es una atribución general de la banda.
- **Firmante:** Juan Martín Ozores, Interventor. El PDF se dicta como “EL INTERVENTOR DEL ENTE NACIONAL DE COMUNICACIONES”; la agencia NA, al reproducir el extracto del Boletín, lo identifica como Ozores. No pude abrir el extracto del Boletín de la 372 para citar la línea de firma con la misma literalidad que en las otras dos.
- Fuentes: InfoLeg 426294; Argentina.gob.ar; res372.pdf.

Resolución ENACOM 663/2026 (RESOL-2026-663-APN-ENACOM#JGM). Es la que aprueba el proyecto, no la posterior que aprueba el convenio.

- **Firma:** 24 de julio de 2026 (firma digital de Ozores a las 15:18:59 ART; InfoLeg: FECHA 24/07/2026). **Boletín Oficial:** 29 de julio de 2026, número 35959, página 87 (aviso 345097; “e. 29/07/2026 N° 52459/26”).
- **Expediente:** EX-2026-71541314-APN-DNPYD#ENACOM.
- **Qué aprueba:** el Proyecto Específico “Conectividad satelital en establecimientos educativos de gestión pública de la República Argentina”, en el marco del Programa “Conectividad de Interés Público (C.I.P.)” de la Resolución ENACOM 1072/24. El anexo es IF-2026-71532188-APN-DNPYD#ENACOM.
- **Monto y reparto:** USD 21.876.000 en total, imputados al Fondo del Servicio Universal. De ellos, **USD 9.978.000** provienen de la donación con cargo de Starlink al FSU y cubren kits, accesorios y el servicio durante los primeros 24 meses; **USD 11.898.000** salen del FSU y cubren instalación, gestión del servicio e incidencias, atención técnica, plataforma API de control y monitoreo, y la continuidad del servicio durante los 12 meses siguientes.
- **Firmante:** Juan Martín Ozores, Interventor del ENACOM.

PROMPT 107 · LIST-BUILDING · FACTS AS OF 2026-10-09

A Starlink tem três frentes abertas na Anatel sobre o Direito de Exploração de Satélite Estrangeiro do sistema Starlink: o pedido Gen2 relatado pelo conselheiro Alexandre Freire (processo 53500.114602/2023-73), a Consulta Pública nº 9/2026 e a Consulta Pública nº 29/2026. Para cada uma indique: número(s) de processo, data do pedido ou do ato, data de publicação no DOU (seção, edição e página quando houver), o que exatamente se pede (número de satélites, faixas de subida e descida ou bloco em MHz), prazo de contribuição e quem assina. Diferencie claramente as faixas da CP 9 das faixas Ku/Ka/E já autorizadas, e não trate as consultas como autorizações concedidas.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Three documents. Relatório SEI nº 12964217 (signed 02/12/2024 by Alexandre Reis Siqueira Freire), Processo nº 53500.114602/2023-73, interessado Starlink Brazil Holding Ltda.: request of 26 December 2023 (SEI 11313487) for 7.500 new non-geostationary satellites (Gen2) and addition of 71-76 GHz (descida) and 81-86 GHz (subida), Banda E; Anatel opened Consulta Pública nº 38 de 19 de julho de 2024 (processo 53500.057247/2024-17) under Ato nº 4.430/2023; sent to the Conselho Diretor 12 November 2024 (Matéria para Apreciação nº 928/2024) and distributed 14 November 2024. (The Conselho approved on 8 April 2025, Acórdão 91, with a public price of R$ 102.677 and validity to 28 March 2027 per press and the earlier audit prompt; the relatório itself predates that.) Consulta Pública nº 9, de 23 de fevereiro de 2026, DOU 27/02/2026, Seção 1, edição 39, página 14, signed by Vinicius Oliveira Caram Guimarães, Superintendente de Outorga e Recursos à Prestação; processos 53500.003778/2026-43 and 53500.011767/2026-37; requester Starlink Brazil Holding LTDA. for Space Exploration Holdings LLC; new uplink 12,70-13,25; 13,75-14; 14,50-14,80; 15,43-15,63; 29,10-29,50; 47,20-50,20; 50,40-51,40 GHz and downlink 17,70-17,80; 18,60-18,80; 19,30-20,20; 37,50-39,50; 40-42,50 GHz; 'mais de mil satélites'; 10 days from publication (press: until 9 March 2026). Consulta Pública nº 29, de 8 de julho de 2026, DOU 10/07/2026, Seção 1, edição 128, página 63, signed by Sidney Azeredo Nince (substituto); processos 53500.062879/2026-56 and 53500.020054/2026-64; Banda S for direct-to-device, a 10 + 10 MHz block in the lower portion of the S band, with a question on whether 15 + 15 MHz in 1.980-1.995 / 2.170-2.185 MHz is needed; 10 days. Wrong: presenting CP 9 or CP 29 as granted; listing E band among CP 9 bands; dating CP 9 by the signature date as the publication date. Sources: https://static.poder360.com.br/2025/04/relatorio-anatel-starlink.pdf (copy of SEI 12964217, verifiable at anatel.gov.br/autenticidade with CRC 7D75EF58) ; DOU texts mirrored at https://atlaspublico.com.br/regulacao/dou/consulta-publica-n-9-de-23-de-fevereiro-de-2026-291132 and https://atlaspublico.com.br/regulacao/dou/consulta-publica-n-29-de-8-de-julho-de-2026-621308 (official: in.gov.br DOU of 27/02/2026 and 10/07/2026).

Exa ✗ Wrong × × ✓ ✓ Claim not in sources 5.8m · $0.737 · 15 searches · 25 fetches

Judge: The answer gives CP 29 DOU page as 62 instead of 63, which contradicts fact 18. It omits the 02/12/2024 signature date of the Gen2 relatório (fact 1) and the 12 Nov 2024 referral to the Conselho (fact 6).

Vou buscar nas fontes oficiais da Anatel e no DOU os três processos/consultas da Starlink, sem tratar consulta pública como autorização.Os textos das consultas já aparecem no Participa Anatel; agora vou cruzar publicação no DOU, assinatura e o estado atual do processo Gen2.Faltam assinatura, página do DOU e as faixas Ku/Ka/E já conferidas. Vou abrir os atos e as notícias que citam esses dados.O limite de busca foi atingido; vou abrir diretamente o DOU, o Jusbrasil e as páginas da Anatel que já localizei.A CP 9 e a CP 29 estão no DOU; falta o ato que lista as faixas Ku/Ka/E já conferidas, para não misturá-las com o pedido em consulta.As três frentes não estão no mesmo estágio. As Consultas Públicas nº 9/2026 e nº 29/2026 apenas submetem pedidos a comentários; não conferem direito de exploração nem autorizam faixa. O pedido Gen2 já foi deferido pelo Conselho Diretor, condicionado ao preço público e à minuta de ato. Não localizei, nesta pesquisa, o extrato posterior desse ato nem decisão final das duas consultas depois dos prazos de contribuição.

1. Gen2 — processo 53500.114602/2023-73

- **Pedido:** 26/12/2023, requerimento SEI nº 11313487, da Starlink Brazil Holding Ltda., representante da Space Exploration Holdings, LLC. Objeto: mais **7.500** satélites não geoestacionários (Gen2), atualização das redes associadas e inclusão da **Banda E: 71–76 GHz (descida) e 81–86 GHz (subida)**. O direito então vigente era o Ato nº 2.174, de 7/02/2022, com **4.408** satélites. Fontes: relatório SEI nº 12964217 e nota da Anatel de 8/04/2025.
- **Consulta ligada a esse pedido, já encerrada:** Consulta Pública nº 38, de 19/07/2024, processo nº 53500.057247/2024-17 (SEI nº 12308279). O relatório confirma a abertura; o TeleTime registra publicação em 22/07/2024 e prazo de 10 dias. Não abri o DOU dessa CP, então edição, página e assinatura ficam sem confirmação. Fonte: relatório; TeleTime, 22/07/2024.
- **Decisão:** Acórdão nº 91, de 8/04/2025, Circuito Deliberativo nº 76. Relator: Alexandre Reis Siqueira Freire. Deferimento unânime da alteração do direito, até **28/03/2027**, nos termos da minuta de ato SEI nº 13224832, **condicionado ao pagamento do preço público**. Não é consulta.
- **DOU:** 9/04/2025, Seção 1, edição nº 68, página 11. O extrato publicado é assinado por **Carlos Manuel Baigorri**, Presidente do Conselho. Fonte: DOU de 9/04/2025, p. 11.
- A imprensa posterior fala em até 11.908 satélites (4.408 + 7.500) em Ku, Ka e E. Esse total não está no acórdão; a premissa de Ku/Ka/E já autorizadas aparece no texto oficial da CP 29, abaixo.

2. Consulta Pública nº 9, de 23/02/2026 — não é autorização

- **Processos:** 53500.003778/2026-43 e 53500.011767/2026-37. A data do protocolo do pedido da Starlink não consta do ato.
- **DOU:** 27/02/2026, Seção 1, edição 39, página 14 (o texto segue na página seguinte). Fonte: DOU.
- **O que se submete a comentários, e só isso:** inclusão, no direito estrangeiro do sistema Starlink, de:
  - **subida:** 12,70–13,25 GHz; 13,75–14 GHz; 14,50–14,80 GHz; 15,43–15,63 GHz; 29,10–29,50 GHz; 47,20–50,20 GHz; 50,40–51,40 GHz;
  - **descida:** 17,70–17,80 GHz; 18,60–18,80 GHz; 19,30–20,20 GHz; 37,50–39,50 GHz; 40–42,50 GHz.
  - Também se pedem comentários sobre limites concorrenciais e sobre a largura necessária. A CP só registra que o sistema tem mais de mil satélites; não pede novo quantitativo.
- **Prazo:** 10 dias a contar da publicação de 27/02/2026. O TeleTime indica o termo em **9/03/2026**. Fonte: DOU; TeleTime.
- **Assina: Vinicius Oliveira Caram Guimarães**, no ato do Superintendente de Outorga e Recursos à Prestação. O HTML do DOU não repete o cargo sob o nome.

Diferença em relação a Ku/Ka/E já autorizadas. A CP 29 afirma que a operação já está autorizada em subfaixas das Bandas Ku, Ka e E. A Banda E decidida no Gen2 é **71–76 GHz (descida) e 81–86 GHz (subida)** — não está na CP 9. A CP 9 pede **inclusão** de fatias adicionais de Ku/Ka e de Q/V (37,5–42,5 GHz na descida; 47,2–51,4 GHz na subida, com o vão 50,2–50,4 GHz de fora). Não abri o anexo de frequências do Ato nº 2.174/2022 nem o extrato do ato pós-Acórdão 91, então não confirmo, faixa a faixa, se 17,70–17,80 GHz, 19,30–20,20 GHz ou 29,10–29,50 GHz já integravam o direito anterior. O que o ato da CP 9 faz é tratá-las como pedido de inclusão, não como faixa concedida. Texto também em Participa Anatel.

3. Consulta Pública nº 29, de 8/07/2026 — não é autorização

- **Processos:** 53500.062879/2026-56 e 53500.020054/2026-64. O ato não data o protocolo. TeleTime e TeleSíntese dizem que o pedido de Banda S foi protocolado em

março de 2026; isso não está no texto da CP.
- **DOU:** 10/07/2026, Seção 1, edição 128, página 62. Fonte: DOU.
- **O que a CP põe em avaliação:** eventual uso de um bloco de **10 + 10 MHz** na porção inferior da Banda S. Em separado, pede comentários sobre a alegação técnica da interessada de largura mínima de **15 + 15 MHz**, nas subfaixas **1.980–1.995 MHz e 2.170–2.185 MHz**, para D2D (voz, SMS e banda larga). A CP não concede nenhum desses blocos. O pedido integral de **30 + 30 MHz** (1.980–2.010 MHz na subida e 2.170–2.200 MHz na descida) é relato de imprensa, não texto da consulta. Fonte: TeleTime, 10/07/2026.
- **Prazo do ato:** 10 dias a contar de 10/07/2026. O TeleSíntese informa que o prazo, previsto para terminar em 21/07/2026, foi prorrogado até **31/07/2026** pelo Despacho Decisório nº 10/2026/ORER/SOR, publicado no Boletim de Serviço Eletrônico em 21/07/2026 — não no DOU. Não abri esse boletim. Fonte: TeleSíntese.
- **Assina: Sidney Azeredo Nince**, Substituto do Superintendente de Outorga e Recursos à Prestação.

A própria CP 29 separa o que já existe do que se consulta: operação autorizada em subfaixas Ku, Ka e E; pedido em exame apenas para radiofrequências da Banda S. Texto também em Participa Anatel.

> **Judge:** The answer gives CP 29 DOU page as 62 instead of 63, which contradicts fact 18. It never gives the 02/12/2024 signature date of the Gen2 relatório (fact 1), omits the Conselho referral and Matéria para Apreciação nº 928/2024 (fact 6), and does not name the requester in the CP 9 section (fact 12).

Vou buscar nas fontes oficiais da Anatel e no DOU os três processos/consultas da Starlink, sem tratar consulta pública como autorização.Os extratos já separam as consultas das autorizações. Vou abrir os textos oficiais e o acórdão do processo Gen2 para conferir datas, prazos e o que ainda está em aberto.As publicações do DOU já têm URL. Vou ler os atos e o status atual do Gen2 e da banda S, porque a CP 29 pode já ter saído da fase de contribuições.A CP 9 e a CP 29 estão no DOU. Falta o ato do Gen2 e a lista das faixas Ku/Ka/E já autorizadas, para não misturá-las com o que a consulta apenas submete.As três frentes não estão no mesmo estágio. A Consulta Pública não é autorização. A relação oficial de satélites autorizados, atualizada em 21/08/2026, lista o Starlink só em Ku, Ka e E. As faixas da CP 9 e a Banda S da CP 29 não aparecem nessa relação.

1. Gen2 — processo 53500.114602/2023-73

Não está aberto como pedido pendente. O Conselho Diretor já deferiu a alteração.

- **Pedido:** 26/12/2023, requerimento SEI nº 11313487, pela Starlink Brazil Holding Ltda., representante da Space Exploration Holdings, LLC. Pedia **7.500 satélites adicionais** (Gen2) e as faixas **71–76 GHz (descida)** e **81–86 GHz (subida)**, Banda E. Os novos satélites também operariam nas faixas já vigentes. Fonte: relatório de Alexandre Freire, SEI 12964217.
- **Consulta que instruiu o pedido:** Consulta Pública nº 38, de 19/07/2024, processos **53500.114602/2023-73** e **53500.057247/2024-17**. O relatório confirma o objeto (7.500 satélites e Banda E). A publicação no DOU (seção, edição e página) não foi localizada aqui. A imprensa registrou abertura em 22/07/2024, por 10 dias. Fonte: TELETIME, 22/07/2024.
- **Decisão:** Acórdão nº 91, de 08/04/2025, Circuito Deliberativo nº 76. Relator: Alexandre Reis Siqueira Freire. Assina o acórdão **Carlos Manuel Baigorri**, presidente, em 08/04/2025. Publicação: **DOU de 09/04/2025, seção 1, página 11**, e Boletim de Serviço Eletrônico de 09/04/2025. Deferiu a alteração até **28/03/2027**, condicionada ao preço público de R$ 102.677,00. Fonte: Acórdão SEI 13531779.
- **Ato de alteração do direito:** Ato nº 4.139, de 11/04/2025, DOU de 14/04/2025. A página dessa edição não foi conferida. A lista de prioridade correlata é o Ato nº 4.141, de 11/04/2025, DOU de 14/04/2025, seção 1, página 75. Fonte: relação de satélites autorizados, atualização de 21/08/2026; Ato 4.141.

O acórdão não escreve o total "11.908". Esse número é a soma de 4.408 (direito anterior, citado pela imprensa) com os 7.500 do pedido, e reaparece na cobertura da CP 29. Não o tratei como cifra do acórdão.

2. Consulta Pública nº 9/2026 — não é autorização

- **Ato:** Consulta Pública nº 9, de 23/02/2026.
- **Processos:** 53500.003778/2026-43 e 53500.011767/2026-37. A data do protocolo do pedido não consta do texto publicado.
- **DOU:** 27/02/2026, edição 39, seção 1, página 14. Texto oficial.
- **Quem assina: Vinicius Oliveira Caram Guimarães**, na qualidade de Superintendente de Outorga e Recursos à Prestação (o preâmbulo identifica o cargo; a assinatura traz o nome).
- **Prazo:** 10 dias contados da publicação, portanto até **09/03/2026**. Confirmado pela TELETIME.
- **O que se submete a contribuições**, não o que se autoriza: inclusão, no direito estrangeiro do sistema Starlink, de:
  - **subida:** 12,70–13,25 GHz; 13,75–14 GHz; 14,50–14,80 GHz; 15,43–15,63 GHz; 29,10–29,50 GHz; 47,20–50,20 GHz; 50,40–51,40 GHz;
  - **descida:** 17,70–17,80 GHz; 18,60–18,80 GHz; 19,30–20,20 GHz; 37,50–39,50 GHz; 40–42,50 GHz.
  - Também pede comentários sobre limites concorrenciais e sobre a largura necessária às aplicações. O texto só qualifica o sistema como não geoestacionário de grande porte, com mais de mil satélites. Não pede novo quantitativo de satélites.

Diferença em relação ao que já está autorizado (relação de 21/08/2026, processos 53500.030333/2021-21, 53500.039292/2021-39, 53500.114602/2023-73 e 53500.022411/2025-48; validade até 28/03/2027):

Já autorizado	Faixa
Ku, subida	14,00–14,50 GHz
Ku, descida	10,70–12,70 GHz
Ka, subida	27,50–28,60; 28,60–29,10; 29,50–30,00 GHz
Ka, descida	17,80–18,60; 18,80–19,30 GHz
E, subida	81–86 GHz
E, descida	71–76 GHz

A CP 9 não repete a Banda E já deferida no Gen2. Pede trechos de Ku/Ka que estão fora ou na borda do direito vigente (por exemplo 13,75–14 e 14,50–14,80 GHz; o vão 29,10–29,50 GHz; 17,70–17,80; 18,60–18,80; 19,30–20,20) e faixas de Q/V (37,50–39,50; 40–42,50; 47,20–50,20; 50,40–51,40 GHz). Na lista de prioridade, Q/V aparece para AST e Spacesail, não para Starlink. Fonte da lista de prioridade: Ato 4.141/2025.

Até a relação de 21/08/2026, essas faixas da CP 9 não tinham sido incorporadas ao direito publicado. Não localizei ato posterior que as autorize.

3. Consulta Pública nº 29/2026 — não é autorização

- **Ato:** Consulta Pública nº 29, de 08/07/2026.
- **Processos:** 53500.062879/2026-56 e 53500.020054/2026-64.
- **DOU:** 10/07/2026, edição 128, seção 1, página 62. Texto oficial.
- **Quem assina a consulta:** Sidney Azeredo Nince, Substituto.
- **O que a consulta submete:** avaliação de autorização de um **bloco de 10 + 10 MHz na porção inferior da Banda S.** Não fixa, no texto do DOU, os extremos numéricos desse bloco de 10 + 10. Pede, em separado, comentários sobre a tese da interessada de largura mínima de **15 + 15 MHz**, nas subfaixas **1.980–1.995 MHz** e **2.170–2.185 MHz**, e sobre impactos em D2D, convivência e competição. O próprio texto diz que a operação já autorizada está em subfaixas das Bandas Ku, Ka e E, e que a Banda S é pedido de alteração.
- **Prazo original:** 10 dias da publicação de 10/07/2026.
- **Prorrogação:** Despacho Decisório nº 10/2026/ORER/SOR, processo 53500.062879/2026-56, Boletim de Serviço Eletrônico de 21/07/2026. Assina Vinícius Oliveira Caram Guimarães, Superintendente de Outorga e Recursos à Prestação. O prazo passa a encerrar em 31/07/2026. Fonte: SEI 15991461.

A imprensa descreve o pedido protocolado em março de 2026 como 1.980–2.010 MHz (subida) e 2.170–2.200 MHz (descida), isto é, 30 + 30 MHz, e diz que a consulta avalia só um bloco de 10 + 10. Isso não está no texto do DOU da CP 29; está em TELETIME, 10/07/2026 e Convergência Digital. A relação oficial de 21/08/2026 não inclui Banda S para o Starlink. A EchoStar Global, operadora distinta, é que consta com 1.980–1.995 e 2.170–2.185 MHz.

Em 08/10/2026, a TELETIME noticiou votação em circuito, ainda não encerrada, para 15 + 15 MHz. Não localizei acórdão nem ato no DOU que converta a CP 29 em autorização. Fonte: TELETIME, 08/10/2026.

Keenable search ✗ Wrong ✗ ✗ ✓ ✓ Incomplete list 6.0m · ~$1.037 · 49 searches · 10 fetches

> **Judge:** Missing: the Gen2 Relatório SEI nº 12964217 signed 02/12/2024 by Freire, the 26/12/2023 request date (answer hedges), and the 12/11/2024 referral and MPA 928/2024. Contradicted: CP 38 is dated 22 July 2024 instead of 19 July, and CP 29 is given as DOU página 62 instead of 63.

As três frentes não estão no mesmo estágio. A Gen2 (processo 53500.114602/2023-73) já foi deferida em 8 de abril de 2025. As Consultas Públicas nº 9/2026 e nº 29/2026 são apenas submissões a contribuições: não conferem nem alteram o Direito de Exploração.

1. Pedido Gen2 — processo 53500.114602/2023-73 (já decidido)

Não é consulta em aberto. O Conselho Diretor deferiu a alteração em circuito deliberativo, por unanimidade, no Acórdão nº 91, de 8 de abril de 2025, relatado por Alexandre Freire. A notícia oficial da Anatel é de 8 de abril de 2025; não localizei, nas fontes consultadas, edição, seção e página do DOU do extrato do ato de alteração. O acórdão está no SEI.

- **Processos citados na consulta que antecedeu o julgamento:** 53500.114602/2023-73 e 53500.057247/2024-17. O relatório anual do gabinete de Freire registra o processo principal como distribuído em 14/11/2024, com objeto de ampliação do número de satélites, atualização das redes e adição de faixas. A data exata do protocolo em dezembro de 2023 não aparece nos atos oficiais que li; a imprensa especializada fixa o pedido em dezembro de 2023.
- **O que se pediu e o que foi deferido:** mais 7.500 satélites Gen2, além dos 4.408 do Ato nº 2.174, de 7 de fevereiro de 2022, totalizando até 11.908, com vigência mantida até 28 de março de 2027, e inclusão da Banda E: 71–76 GHz (descida) e 81–86 GHz (subida). Preço público de R$ 102.677. A outorga ficou condicionada a não causar interferência prejudicial e a não ter proteção contra ela enquanto pendente a coordenação.
- **Consulta que instruiu o processo (já encerrada, não é autorização):** Consulta Pública nº 38/2024, aberta em 22 de julho de 2024, prazo de 10 dias, sobre ampliação do número de satélites e adição de 71–76 GHz (descida) e 81–86 GHz (subida). Não confirmei no DOU a data formal do ato, a edição, a seção, a página nem o signatário. O texto do Participa Anatel é assinado na forma do Superintendente de Outorga e Recursos à Prestação.

Fontes: notícia Anatel; TeleSíntese, 8/4/2025; ementa do Acórdão 91/2025; texto da CP 38 no Participa; TELETIME, 22/7/2024.

2. Consulta Pública nº 9/2026 — não é autorização

Ato de 23 de fevereiro de 2026, publicado no DOU de 27/02/2026, edição 39, seção 1, página 14. Assina Vinicius Oliveira Caram Guimarães, Superintendente de Outorga e Recursos à Prestação.

- **Processos:** 53500.003778/2026-43 e 53500.011767/2026-37. A data do protocolo da Starlink Brazil Holding Ltda. (representante da Space Exploration Holdings LLC) não consta do ato.
- **O que se submete a contribuições:** alteração do Direito de Exploração para incluir faixas, não para aumentar o número de satélites. O ato só qualifica o sistema como não geoestacionário de grande porte, “composto por mais de mil satélites”.
  - Subida: 12,70–13,25 GHz; 13,75–14 GHz; 14,50–14,80 GHz; 15,43–15,63 GHz; 29,10–29,50 GHz; 47,20–50,20 GHz; 50,40–51,40 GHz.
  - Descida: 17,70–17,80 GHz; 18,60–18,80 GHz; 19,30–20,20 GHz; 37,50–39,50 GHz; 40–42,50 GHz.
- **Prazo:** 10 dias a contar da publicação no DOU (27/02/2026). A TELETIME indica o termo em 9 de março de 2026. Também se pedem comentários sobre condições concorrenciais e sobre quais faixas seriam necessárias.

Diferença em relação ao que já está autorizado (Ku/Ka/E), segundo a descrição do pedido Gen2 e da imprensa que reproduz o direito vigente — não é texto do ato da CP 9:

Já autorizadas (não são o objeto da CP 9)	Pedidas na CP 9 (ainda não conferidas)
Ku: 10,7–12,7 GHz descida; 14–14,5 GHz subida	Subfaixas Ku adjacentes ou intercaladas: 12,70–13,25; 13,75–14; 14,50–14,80; 15,43–15,63 GHz (subida)
Ka: 17,8–18,6 e 18,8–19,3 GHz descida; 27,5–28,6 e 28,8–30 GHz subida	Buracos/extensões de Ka: 17,70–17,80; 18,60–18,80; 19,30–20,20 GHz (descida) e 29,10–29,50 GHz (subida, que se sobrepõe em parte à Ka já citada em 28,8–30)
E (Gen2, 2025): 71–76 GHz descida; 81–86 GHz subida	Não se pede Banda E. Pedem-se Q/V: 37,50–39,50 e 40–42,50 GHz (descida); 47,20–50,20 e 50,40–51,40 GHz (subida)

A CP 9 não reabre nem concede de novo Ku, Ka ou E. Parte de 29,10–29,50 GHz cai dentro da Ka de subida já descrita como autorizada (28,8–30 GHz); o ato mesmo assim a lista entre as faixas cuja inclusão se consulta. Não tratei essa sobreposição como fato do ato de outorga, porque não li o Ato nº 2.174 nem o ato de 2025.

Fontes: DOU da CP 9; Participa Anatel; faixas Ku/Ka/E já descritas em ABRANET, 23/7/2024 e Canaltech.

3. Consulta Pública nº 29/2026 — não é autorização

Ato de 8 de julho de 2026, publicado no DOU de 10/07/2026, edição 128, seção 1, página 62. Assina Sidney Azeredo Nince, substituto do Superintendente de Outorga e Recursos à Prestação.

- **Processos:** 53500.062879/2026-56 e 53500.020054/2026-64. O ato não data o protocolo. A imprensa diz que o pedido de inclusão da Banda S foi protocolado em março de 2026; não confirmei o dia no DOU.
- **O que se consulta:** alteração do Direito de Exploração para avaliar um bloco de 10+10 MHz na porção inferior da Banda S, a ser delimitado. Não se pede número novo de satélites. O próprio ato registra que a operação já está autorizada em subfaixas de Ku, Ka e E, e que a interessada quer Banda S para direct-to-device (voz, SMS e banda larga).
- **Largura alegada pela interessada, também em consulta, não deferida:** mínimo de 15+15 MHz, nas subfaixas 1.980–1.995 MHz e 2.170–2.185 MHz.
- **Prazo original:** 10 dias a contar de 10/07/2026. A TELETIME e a TeleSíntese indicam término inicial em 21 de julho de 2026. Houve prorrogação de 10 dias, até 31 de julho de 2026, pelo Despacho Decisório nº 10/2026/ORER/SOR, publicado no Boletim de Serviço Eletrônico em 21 de julho de 2026, não no DOU. Não li o despacho; a data e o veículo vêm da TeleSíntese.

Fonte: DOU da CP 29; Participa; TeleSíntese, 22/7/2026.

O que não fechei: data exata do protocolo de dezembro de 2023; publicação no DOU (edição, seção, página) do Acórdão 91/2025 ou do ato que formalizou a Gen2; data, edição e signatário da CP 38/2024 no DOU; dia do protocolo de março de 2026 da Banda S; texto oficial do Despacho 10/2026.

---

Keenable SELECT · Partly correct · Claim not in sources · 10.1m · ~$0.828 · 17 searches · 25 fetches

> **Judge:** The answer gives CP 29's DOU page as 62, while the checklist says 63, so fact 18 is contradicted. The DOU page in the DATA window also shows 62, so the answer is consistent with its source. The other facts are covered, though the Gen2 price of R$ 102.677 and MA 928/2024 are not mentioned.

As três frentes não estão no mesmo estágio. Só o pedido Gen2 do processo 53500.114602/2023-73 foi deferido. As Consultas Públicas nº 9/2026 e nº 29/2026 são chamamentos para contribuição; não conferem direito de exploração nem autorizam faixa.

1. Pedido Gen2 — processo 53500.114602/2023-73 (já decidido, não está aberto)

- Pedido: requerimento SEI nº 11313487, de 26 de dezembro de 2023, da Starlink Brazil Holding Ltda., representante da Space Exploration Holdings, LLC: 7.500 satélites não geoestacionários da 2ª geração, atualização das redes associadas e adição da Banda E, 71–76 GHz (descida) e 81–86 GHz (subida). Os novos satélites também operariam nas faixas já outorgadas. Relatório SEI nº 12964217
- Consulta que instruiu o pedido, não o pedido em si: CP nº 38, de 19 de julho de 2024, processos 53500.114602/2023-73 e 53500.057247/2024-17. DOU de 22/07/2024, seção 1, edição 139, página 14. Prazo de 10 dias a contar da publicação (até 1º/08/2024). Assina Sidney Azeredo Nince, substituto. DOU
- Relatoria: distribuído a Alexandre Reis Siqueira Freire em 14 de novembro de 2024; relatório assinado eletronicamente em 02/12/2024, às 15:39. Relatório
- Decisão: Acórdão nº 91, de 8 de abril de 2025, Circuito Deliberativo nº 76. Ementa de deferimento. DOU de 09/04/2025, seção 1, página 11 (também no Boletim de Serviço Eletrônico de 09/04/2025). Relator: Alexandre Reis Siqueira Freire. Acórdão
- Não localizei, no DOU, o extrato do ato de alteração que executa esse acórdão. A imprensa descreve o resultado como até 7.500 satélites adicionais (total de cerca de 11,9 mil) e inclusão da Banda E, com vigência até 28 de março de 2027. Tele.Síntese; Mobile Time

2. Consulta Pública nº 9/2026 — aberta, não é autorização

- Ato: CP nº 9, de 23 de fevereiro de 2026. Processos 53500.003778/2026-43 e 53500.011767/2026-37. Não é o processo Gen2. DOU
- DOU: 27/02/2026, seção 1, edição 39, página 14.
- Objeto submetido a contribuições: inclusão, no direito de exploração do sistema Starlink, de subida em 12,70–13,25 GHz, 13,75–14 GHz, 14,50–14,80 GHz, 15,43–15,63 GHz, 29,10–29,50 GHz, 47,20–50,20 GHz e 50,40–51,40 GHz; descida em 17,70–17,80 GHz, 18,60–18,80 GHz, 19,30–20,20 GHz, 37,50–39,50 GHz e 40–42,50 GHz. Protocolado pela Starlink Brazil Holding Ltda. A CP não pede número novo de satélites; só registra que o sistema tem mais de mil satélites. Também pede comentários sobre condições de competição e sobre a largura necessária.
- Prazo: 10 dias a contar da publicação, portanto até 9 de março de 2026. Tele.Síntese não; TeleTime
- Assina: Vinicius Oliveira Caram Guimarães, superintendente de Outorga e Recursos à Prestação.

Essas faixas não são as já autorizadas. O Ato nº 2.174, de 7 de fevereiro de 2022 (processo 53500.030333/2021-21; DOU de 08/02/2022, seção 1, página 5; assinado por Wilson Diniz Wellisch, presidente substituto), conferiu 4.408 satélites até 28 de março de 2027 e autorizou, sem exclusividade: subida 14.000–14.500 MHz (500 MHz), 27.500–28.600 MHz (1.100 MHz) e 29.500–30.000 MHz (500 MHz); descida 10.700–12.700 MHz (2.000 MHz) e 17.800–18.600 MHz (800 MHz). Ato nº 2.174. A Banda E de 71–76 GHz (descida) e 81–86 GHz (subida) entrou depois, pelo deferimento do Gen2, não por esta CP. A CP 9 pede trechos adjacentes ou distintos (por exemplo 13,75–14 GHz, abaixo dos 14,0–14,5 GHz já outorgados; 29,10–29,50 GHz, no intervalo entre 28,6 e 29,5 GHz que o ato de 2022 não autorizou; e faixas de 37,5–51,4 GHz, que não constam do ato de 2022 nem da Banda E deferida).

3. Consulta Pública nº 29/2026 — aberta, não é autorização

- Ato: CP nº 29, de 8 de julho de 2026. Processos 53500.062879/2026-56 e 53500.020054/2026-64. DOU
- DOU: 10/07/2026, seção 1, edição 128, página 62.
- Objeto: contribuições sobre alteração do direito de exploração para avaliar autorização de um bloco de 10 + 10 MHz na porção inferior da Banda S, a ser delimitado. Também se pedem comentários sobre a alegação da interessada de largura mínima de 15 + 15 MHz, nas subfaixas de 1.980–1.995 MHz e 2.170–2.185 MHz, e sobre impactos em D2D, convivência e competição. A própria CP diz que a operação já autorizada está em subfaixas das Bandas Ku, Ka e E, e que a Banda S foi apenas solicitada. O pedido de inclusão da Banda S foi protocolado em março de 2026, segundo a imprensa; a data exata do protocolo não está no texto do DOU. Convergência Digital; Tele.Síntese
- Prazo original: 10 dias da publicação, até 21 de julho de 2026. Prorrogado em 10 dias, até 31 de julho de 2026, pelo Despacho Decisório nº 10/2026/ORER/SOR, publicado no Boletim de Serviço Eletrônico em 21 de julho de 2026. Não localizei esse despacho no DOU. Tele.Síntese
- Assina a CP: Sidney Azeredo Nince, substituto. O despacho de prorrogação é da Superintendência de Outorga e Recursos à Prestação; o nome do signatário do despacho não foi confirmado no texto oficial.

O número “até 11.908 satélites” em Ku, Ka e E aparece na cobertura da CP 29 como descrição da autorização vigente, não como objeto de nenhuma das duas consultas de 2026. Tele.Síntese

Cited: 1. sei.anatel.gov.br · 2. in.gov.br · 3. sei.anatel.gov.br · 4. telesintese.com.br · 5. mobiletime.com.br · 6. in.gov.br · 7. teletime.com.br · 8. sei.anatel.gov.br · 9. in.gov.br · 10. convergenciadigital.com.br · 11. telesintese.com.br

Grok native ✗ Wrong ✗ ✗ ✓ ✓ Incomplete list 5.8m · $1.306 · 14 searches · 9 fetches

> **Judge:** Fact 1 is contradicted: the answer does not give Relatório SEI 12964217 signed 02/12/2024 and instead describes the 8 April 2025 Acórdão signed by Baigorri. Fact 18 is contradicted: the answer says the CP 29 DOU page was not confirmed and omits edição 128, página 63. Missing: the CP 9 signatory name (it says it could not confirm Vinicius Caram Guimarães), the CP 29 signatory Sidney Nince, CP 38/2024, and the Matéria 928/2024 distribution.

Vou buscar nas fontes oficiais da Anatel e no DOU os três processos/consultas da Starlink, sem tratar consulta pública como autorização já concedida.O processo Gen2 parece já ter decisão de 2025; vou conferir o DOU e o texto oficial das duas consultas para não misturar pedido, consulta e autorização.O limite de busca foi atingido; vou abrir as páginas oficiais e o DOU já localizados para fechar datas, páginas e assinaturas.As três frentes não estão no mesmo estágio. Só a Consulta Pública nº 29 ainda tinha o mérito em julgamento em 8 de outubro de 2026, e nenhuma das duas consultas é autorização concedida. O pedido Gen2 do processo indicado já foi decidido em 2025.

1. Gen2 — processo 53500.114602/2023-73 (não está aberto)

Pedido de 26 de dezembro de 2023 (requerimento SEI nº 11313487), da Starlink Brazil Holding Ltda., representante da Space Exploration Holdings, LLC. O relatório do conselheiro Alexandre Reis Siqueira Freire descreve o objeto: mais 7.500 satélites não geoestacionários, indicados pela interessada como 2ª geração (Gen2), e inclusão da banda E — 71–76 GHz (descida) e 81–86 GHz (subida). O direito então vigente era o Ato nº 2.174, de 7 de fevereiro de 2022, para 4.408 satélites.

Não localizei consulta pública vinculada a esse processo. O ato de encerramento é o Acórdão nº 91, de 8 de abril de 2025, do Conselho Diretor, relator Alexandre Freire, publicado no DOU de 9/4/2025, Seção 1, p. 11. O Conselho deferiu, por unanimidade, a alteração do direito até 28 de março de 2027, condicionada ao preço público. O acórdão foi assinado eletronicamente por Carlos Manuel Baigorri, presidente, em 8/4/2025. A lista de prioridade correlata saiu no Ato nº 4.141, de 11 de abril de 2025 (DOU de 14/4/2025).

Fontes: relatório, acórdão, DOU de 9/4/2025, Seção 1, p. 11, nota da Anatel.

2. Consulta Pública nº 9/2026 — pedido de faixas adicionais, não autorização

- Processos citados no ato: 53500.003778/2026-43 e 53500.011767/2026-37. A data do protocolo da Starlink não consta do texto da consulta.
- Ato: Consulta Pública nº 9, de 23 de fevereiro de 2026.
- DOU: 27/2/2026, Seção 1, p. 14 (o texto começa nessa página; a página de encerramento não foi confirmada).
- O que se submete a comentários: alteração do direito estrangeiro do sistema Starlink para inclusão, não substituição, destas faixas:
  - subida: 12,70–13,25 GHz; 13,75–14 GHz; 14,50–14,80 GHz; 15,43–15,63 GHz; 29,10–29,50 GHz; 47,20–50,20 GHz; 50,40–51,40 GHz;
  - descida: 17,70–17,80 GHz; 18,60–18,80 GHz; 19,30–20,20 GHz; 37,50–39,50 GHz; 40–42,50 GHz.
- A consulta não pede novo número de satélites. Diz apenas que o sistema já é de grande porte, com mais de mil satélites. Pede também comentários sobre limites concorrenciais e sobre a largura necessária.
- Prazo: 10 dias contados da publicação no DOU (27/2/2026). Essa janela está encerrada. Não verifiquei decisão final sobre essas faixas.
- Assinatura: o ato é do Superintendente de Outorga e Recursos à Prestação. O nome não aparece no trecho da p. 14; a CP nº 8, na mesma página, é assinada por Vinicius Oliveira Caram Guimarães. Não confirmei se a CP 9 leva a mesma assinatura.

Fonte: texto no Participa Anatel e DOU, Seção 1, 27/2/2026, p. 14.

Diferença em relação ao que já está autorizado. O direito já conferido, segundo o próprio preâmbulo da CP 29 e o processo Gen2, cobre subfaixas das bandas Ku, Ka e E. A banda E autorizada no Gen2 é 71–76 GHz (descida) e 81–86 GHz (subida). A CP 9 não reedita esse bloco: pede faixas adicionais em Ku estendido, bordas de Ka, Q/V (cerca de 37,5–42,5 e 47,2–51,4 GHz) e trechos que o texto trata como inclusão (inclusive 29,10–29,50 GHz, 17,70–17,80 GHz e 19,30–20,20 GHz). Não disponho, nas páginas abertas, da lista oficial completa das subfaixas Ku/Ka do ato vigente da Starlink; a tabela do Ato nº 4.141 é de prioridade de coordenação, não o rol do direito da Starlink. A CP 9 não concede essas faixas.

3. Consulta Pública nº 29/2026 — banda S, ainda sem ato de outorga verificado

- Processos: 53500.062879/2026-56 e 53500.020054/2026-64.
- Ato: Consulta Pública nº 29, de 8 de julho de 2026, do Superintendente de Outorga e Recursos à Prestação. O nome do signatário não está no texto do Participa.
- Publicação: DOU de 10/7/2026. Página não confirmada. URL oficial indicada pela imprensa: Consulta Pública nº 29.
- O que a consulta pede ao público — e só isso: avaliar autorização de um bloco de 10+10 MHz na porção inferior da banda S, e comentar a tese técnica da interessada de largura mínima de 15+15 MHz nas subfaixas 1.980–1.995 MHz e 2.170–2.185 MHz, para direct-to-device (voz, SMS e banda larga). A consulta não fixa o bloco de 10+10 MHz em frequências absolutas e não autoriza nada.
- O pedido original de 30+30 MHz (1.980–2.010 MHz na subida e 2.170–2.200 MHz na descida), protocolado em março de 2026, aparece na imprensa, não no dispositivo da consulta. Não confirmei a data exata do protocolo.
- Prazo do ato: 10 dias da publicação no DOU. A imprensa registra término original em 21/7/2026 e prorrogação até 31/7/2026, 23h59, pelo Despacho Decisório nº 10/2026/ORER/SOR, no Boletim de Serviço Eletrônico de 21/7/2026 — não no DOU. O Participa Anatel lista o fim em 31/7/2026, 23h59. A janela de contribuição está

encerrada.
- Em 8/10/2026, o TeleTime noticiou circuito deliberativo ainda em curso, com quatro votos favoráveis a 15+15 MHz e um voto contrário apenas de forma (conselheiro Edson Holanda), e relatoria de Alexandre Freire por prevenção. Isso é relato de imprensa, não acórdão nem ato publicado. Não trate como autorização.

Fontes: Participa Anatel, CP 29, TeleTime, 10/7/2026, TeleSíntese, prorrogação, TeleTime, 8/10/2026.

O número de até 11.908 satélites em Ku, Ka e E (4.408 + 7.500) é citado pela imprensa e é compatível com a soma dos atos, mas não está no texto da CP 29, que fala só em “subfaixas das Bandas Ku, Ka e E”.

> **Judge:** The answer gives CP 29's DOU page as 62, while the checklist says 63, so fact 18 is contradicted. The DOU page in the DATA window also shows 62, so the answer is consistent with its source. The other facts are covered, though the Gen2 price of R$ 102.677 and MA 928/2024 are not mentioned.

As três frentes não estão no mesmo estágio. Só o pedido Gen2 do processo 53500.114602/2023-73 foi deferido. As Consultas Públicas nº 9/2026 e nº 29/2026 são chamamentos para contribuição; não conferem direito de exploração nem autorizam faixa.

1. Pedido Gen2 — processo 53500.114602/2023-73 (já decidido, não está aberto)

- Pedido: requerimento SEI nº 11313487, de 26 de dezembro de 2023, da Starlink Brazil Holding Ltda., representante da Space Exploration Holdings, LLC: 7.500 satélites não geoestacionários da 2ª geração, atualização das redes associadas e adição da Banda E, 71–76 GHz (descida) e 81–86 GHz (subida). Os novos satélites também operariam nas faixas já outorgadas. Relatório SEI nº 12964217
- Consulta que instruiu o pedido, não o pedido em si: CP nº 38, de 19 de julho de 2024, processos 53500.114602/2023-73 e 53500.057247/2024-17. DOU de 22/07/2024, seção 1, edição 139, página 14. Prazo de 10 dias a contar da publicação (até 1º/08/2024). Assina Sidney Azeredo Nince, substituto. DOU
- Relatoria: distribuído a Alexandre Reis Siqueira Freire em 14 de novembro de 2024; relatório assinado eletronicamente em 02/12/2024, às 15:39. Relatório
- Decisão: Acórdão nº 91, de 8 de abril de 2025, Circuito Deliberativo nº 76. Ementa de deferimento. DOU de 09/04/2025, seção 1, página 11 (também no Boletim de Serviço Eletrônico de 09/04/2025). Relator: Alexandre Reis Siqueira Freire. Acórdão
- Não localizei, no DOU, o extrato do ato de alteração que executa esse acórdão. A imprensa descreve o resultado como até 7.500 satélites adicionais (total de cerca de 11,9 mil) e inclusão da Banda E, com vigência até 28 de março de 2027. Tele.Síntese; Mobile Time

2. Consulta Pública nº 9/2026 — aberta, não é autorização

- Ato: CP nº 9, de 23 de fevereiro de 2026. Processos 53500.003778/2026-43 e 53500.011767/2026-37. Não é o processo Gen2. DOU
- DOU: 27/02/2026, seção 1, edição 39, página 14.
- Objeto submetido a contribuições: inclusão, no direito de exploração do sistema Starlink, de subida em 12,70–13,25 GHz, 13,75–14 GHz, 14,50–14,80 GHz, 15,43–15,63 GHz, 29,10–29,50 GHz, 47,20–50,20 GHz e 50,40–51,40 GHz; descida em 17,70–17,80 GHz, 18,60–18,80 GHz, 19,30–20,20 GHz, 37,50–39,50 GHz e 40–42,50 GHz. Protocolado pela Starlink Brazil Holding Ltda. A CP não pede número novo de satélites; só registra que o sistema tem mais de mil satélites. Também pede comentários sobre condições de competição e sobre a largura necessária.
- Prazo: 10 dias a contar da publicação, portanto até 9 de março de 2026. Tele.Síntese não; TeleTime
- Assina: Vinicius Oliveira Caram Guimarães, superintendente de Outorga e Recursos à Prestação.

Essas faixas não são as já autorizadas. O Ato nº 2.174, de 7 de fevereiro de 2022 (processo 53500.030333/2021-21; DOU de 08/02/2022, seção 1, página 5; assinado por Wilson Diniz Wellisch, presidente substituto), conferiu 4.408 satélites até 28 de março de 2027 e autorizou, sem exclusividade: subida 14.000–14.500 MHz (500 MHz), 27.500–28.600 MHz (1.100 MHz) e 29.500–30.000 MHz (500 MHz); descida 10.700–12.700 MHz (2.000 MHz) e 17.800–18.600 MHz (800 MHz). Ato nº 2.174. A Banda E de 71–76 GHz (descida) e 81–86 GHz (subida) entrou depois, pelo deferimento do Gen2, não por esta CP. A CP 9 pede trechos adjacentes ou distintos (por exemplo 13,75–14 GHz, abaixo dos 14,0–14,5 GHz já outorgados; 29,10–29,50 GHz, no intervalo entre 28,6 e 29,5 GHz que o ato de 2022 não autorizou; e faixas de 37,5–51,4 GHz, que não constam do ato de 2022 nem da Banda E deferida).

3. Consulta Pública nº 29/2026 — aberta, não é autorização

- Ato: CP nº 29, de 8 de julho de 2026. Processos 53500.062879/2026-56 e 53500.020054/2026-64. DOU
- DOU: 10/07/2026, seção 1, edição 128, página 62.
- Objeto: contribuições sobre alteração do direito de exploração para avaliar autorização de um bloco de 10 + 10 MHz na porção inferior da Banda S, a ser delimitado. Também se pedem comentários sobre a alegação da interessada de largura mínima de 15 + 15 MHz, nas subfaixas de 1.980–1.995 MHz e 2.170–2.185 MHz, e sobre impactos em D2D, convivência e competição. A própria CP diz que a operação já autorizada está em subfaixas das Bandas Ku, Ka e E, e que a Banda S foi apenas solicitada. O pedido de inclusão da Banda S foi protocolado em março de 2026, segundo a imprensa; a data exata do protocolo não está no texto do DOU. Convergência Digital; Tele.Síntese
- Prazo original: 10 dias da publicação, até 21 de julho de 2026. Prorrogado em 10 dias, até 31 de julho de 2026, pelo Despacho Decisório nº 10/2026/ORER/SOR, publicado no Boletim de Serviço Eletrônico em 21 de julho de 2026. Não localizei esse despacho no DOU. Tele.Síntese
- Assina a CP: Sidney Azeredo Nince, substituto. O despacho de prorrogação é da Superintendência de Outorga e Recursos à Prestação; o nome do signatário do despacho não foi confirmado no texto oficial.

O número “até 11.908 satélites” em Ku, Ka e E aparece na cobertura da CP 29 como descrição da autorização vigente, não como objeto de nenhuma das duas consultas de 2026. Tele.Síntese

PROMPT 108 · LIST-BUILDING · FACTS AS OF 2026-10-09

SpaceX Services runs two dual-band gateways on rolling special temporary authority: Hillsboro, Oregon (call sign E250202) and Atlanta, Georgia (call sign E250226). From the Space Bureau's weekly Actions Taken notices, list every STA the Bureau granted for those two call signs during 2026 up to 9 October 2026: file number, date filed, date of action, and the authorized term if the notice gives one. Flag any grant that has no term because it was made under section 1.62 to cover continuing operations. Do not confuse the Atlanta dual-band station with SpaceX's separate quad-band Atlanta STA (call sign E260426).

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Eight rows from four different Actions Taken notices. Both stations: 40 technically identical 1.85 m antennas, Starlink S3069 and S2983/S3018, 27.5-29.1, 29.5-30.0 and 81-86 GHz up; 17.8-18.6, 18.8-19.3 and 71-76 GHz down.

Hillsboro, OR (E250202):
1. SES-STA-20260306-00718, filed 2026-03-06, action 2026-03-10, term 2026-03-11 to 2026-05-09. Report SES-02843 (11 Mar 2026): https://docs.fcc.gov/public/attachments/DOC-419434A1.txt
2. SES-STA-20260428-01175, filed 2026-04-29, action 2026-05-19, term 2026-05-20 to 2026-07-18. SES-02864 (20 May 2026): https://docs.fcc.gov/public/attachments/DOC-421872A1.txt
3. SES-STA-20260620-01833, filed 2026-07-01, action 2026-09-08, no term: "granted pursuant to section 1.62 of the Commission's rules to reflect continuing operations". SES-02895 (9 Sep 2026): https://docs.fcc.gov/public/attachments/DOC-424824A1.txt
4. SES-STA-20260813-02267, filed 2026-08-21, action 2026-09-08, term 2026-09-08 to 2026-11-06 ("additional 60-day"). Same SES-02895.

Atlanta, GA (E250226):
5. SES-STA-20260306-00737, filed 2026-03-06, action 2026-03-16, term 2026-03-17 to 2026-05-15. SES-02845 (18 Mar 2026): https://docs.fcc.gov/public/attachments/DOC-419794A1.txt (the narrative there does not name the city; the May and September notices do.)
6. SES-STA-20260428-01170, filed 2026-04-29, action 2026-05-19, term 2026-05-20 to 2026-07-18. SES-02864.
7. SES-STA-20260620-01837, filed 2026-07-01, action 2026-09-08, section 1.62, no term. SES-02895.
8. SES-STA-20260813-02242, filed 2026-08-21, action 2026-09-08, term 2026-09-12 to 2026-11-10. SES-02895. Note the Atlanta term starts 12 September, not 8 September like Hillsboro.

Wrong answers: giving only the four dated STAs and omitting the two section 1.62 grants; treating 01833/01837 as 60-day STAs with invented dates; saying the stations were uncovered between 18 July and 8 September (the 1.62 grants bridge it); listing the quad-band Atlanta STAs SES-STA-20260601-01517 or SES-STA-20260815-02308 (E260426) or the Hillsboro, Texas STAs (E260356) as part of this chain. Nothing for E250202 or E250226 appears in the 7 October notices (SES-02902/02903).

Exa · Partly correct · Incomplete list · 11.3m · $4.421 · 14 searches · 75 fetches

Judge: The grant tables match the reference, and the section 1.62 grants are flagged correctly. The answer never gives the shared antenna and frequency details (fact 2), says nothing about the SES-02845 narrative lacking a city name (fact 11), and does not say the 1.62 grants bridge 18 July to 8 September (fact 16). The cited sources and DATA window are mostly unrelated fcc.report pages and do not directly support the grant details.

From the Space Bureau's weekly Satellite Communications Services Actions Taken notices through 9 October 2026, each call sign has four STA grants. The quad-band Atlanta station E260426 is not included.

Hillsboro, Oregon — E250202

File number	Date filed	Date of action	Authorized term
SES-STA-20260306-00718	2026-03-06	2026-03-10	60 days, 2026-03-11 through 2026-05-09

Parallel Correct 4.8m · $0.648 · 12 searches · 26 fetches

> **Judge:** All required facts are correct, covering eight grants, their file numbers, dates, terms, and the section 1.62 flags. Context facts 2, 11 and 15 (antenna specs, the SES-02845 narrative not naming the city, and the Atlanta term starting 12 September) are not explicitly stated, though the dates themselves are right. No trap was asserted.

Eight STAs for these two call signs were granted in Space Bureau weekly Actions Taken notices from 1 January through 9 October 2026. Two July filings were granted under section 1.62 with no term. No later grant for either call sign appears through 9 October 2026. E260426 is not included.

> **Judge:** The answer lists only six of the eight grants. It misses both Hillsboro grants from March and May (SES-STA-20260306-00718 and SES-STA-20260428-01175) and the Atlanta May grant (SES-STA-20260428-01170). It also does not state that nothing appears in the 7 October notices, and it omits the Starlink system and frequency details.

Hit its tool-call or time budget and was forced to answer.

The Space Bureau's weekly Actions Taken notices that I could fully verify list six grants for these two dual-band call signs in 2026 through 9 October. I could not finish reading every 2026 Actions Taken notice, so this may not be a complete list.

E250226 — Atlanta, Georgia (dual-band; not E260426)

File number	Date filed	Date of action	Authorized term
SES-STA-20260306-00737	2026-03-06	2026-03-16	2026-03-17 through 2026-05-15 (60 days)
SES-STA-20260620-01837	2026-07-01	2026-09-08	None — granted under 47 C.F.R. § 1.62 for continuing operations
SES-STA-20260813-02242	2026-08-21	2026-09-08	2026-09-12 through 2026-11-10 (additional 60 days)

The March grant is in Report No. SES-02845 (18 March 2026). It authorizes call sign E250226 for a gateway with 40 identical 1.85 m antennas in the same dual-band ranges later used for Atlanta. The notice text I retrieved does not name the city. Source: https://docs.fcc.gov/public/attachments/DOC-419794A1.pdf

The two September grants are in Report No. SES-02895 (9 September 2026). The 60-day grant expressly covers the Atlanta, Georgia gateway. The § 1.62 grant has no term. Source: https://docs.fcc.gov/public/attachments/DOC-424824A1.txt

E250202 — Hillsboro, Oregon

File number	Date filed	Date of action	Authorized term
SES-STA-20260620-01833	2026-07-01	2026-09-08	None — granted under 47 C.F.R. § 1.62 for continuing operations
SES-STA-20260813-02267	2026-08-21	2026-09-08	2026-09-08 through 2026-11-06 (additional 60 days)

Both are in the same 9 September notice, Report No. SES-02895. The 60-day grant is for the Hillsboro, Oregon gateway with 40 identical 1.85 m antennas. Source: https://docs.fcc.gov/public/attachments/DOC-424824A1.txt

Section 1.62 flags. SES-STA-20260620-01833 (E250202) and SES-STA-20260620-01837 (E250226) are the only grants in this set with no term. Each notice entry says the application was "granted pursuant to section 1.62 of the Commission's rules to reflect continuing operations."

Not included. Quad-band Atlanta operations under call sign E260426 do not appear in these entries. The Atlanta dual-band grants above are E250226 only.

Completeness. I confirmed the March and September notices above and did not find either call sign in the portions I could read of the 20 May, 27 May, 1 July, 15 July, 22 July, and 19 August Actions Taken notices. I did not finish the remaining weekly notices from January through 9 October 2026, including the unread pages of the 18 March notice, so an earlier Hillsboro grant or another renewal may exist that I could not verify.

> **Judge:** Only the context fact 2 (antenna and frequency details) is missing; the answer mentions 40 dual-band antennas without the specifics. It does not state that the section 1.62 grants bridge 18 July to 8 September, but it does not claim a gap either.

From the Space Bureau's weekly Satellite Communications Services "Actions Taken" notices, these are the STA grants for E250202 (Hillsboro) and E250226 (Atlanta dual-band) with a date of action from 1 January 2026 through 9 October 2026. E260426 does not appear in any of them.

E250202 — Hillsboro, Oregon

File number	Date filed	Date of action	Authorized term	Notice
SES-STA-20260306-00718	2026-03-06	2026-03-10	60 days, 2026-03-11 through 2026-05-09	SES-02843, 11 March 2026
SES-STA-20260428-01175	2026-04-29	2026-05-19	60 days, 2026-05-20 through 2026-07-18	SES-02864, 20 May 2026
SES-STA-20260620-01833	2026-07-01	2026-09-08	**None — granted under section 1.62 for continuing operations**	SES-02895, 9 September 2026
SES-STA-20260813-02267	2026-08-21	2026-09-08	Additional 60 days, 2026-09-08 through 2026-11-06	SES-02895, 9 September 2026

E250226 — Atlanta, Georgia (dual-band)

File number	Date filed	Date of action	Authorized term	Notice
SES-STA-20260306-00737	2026-03-06	2026-03-16	60 days, 2026-03-17 through 2026-05-15	SES-02845, 18 March 2026
SES-STA-20260428-01170	2026-04-29	2026-05-19	60 days, 2026-05-20 through 2026-07-18	SES-02864, 20 May 2026
SES-STA-20260620-01837	2026-07-01	2026-09-08	**None — granted under section 1.62 for continuing operations**	SES-02895, 9 September 2026
SES-STA-20260813-02242	2026-08-21	2026-09-08	Additional 60 days, 2026-09-12 through 2026-11-10	SES-02895, 9 September 2026

The two section 1.62 grants are the only ones with no term. Each notice says only: "Application granted pursuant to section 1.62 of the Commission's rules to reflect continuing operations."

The 7 October 2026 Actions Taken notice (SES-02903) has no grant for either call sign, and neither does any other weekly Actions Taken notice in this window. The March Atlanta narrative does not name the city; the call sign, applicant, and the same 40-antenna dual-band description used for the later Atlanta grants identify it as E250226.

> **Judge:** The answer lists only six of the eight grants. It misses both Hillsboro grants from March and May (SES-STA-20260306-00718 and SES-STA-20260428-01175) and the Atlanta May grant (SES-STA-20260428-01170). It also does not state that nothing appears in the 7 October notices, and it omits the Starlink system and frequency details.

Hit its tool-call or time budget and was forced to answer.

The Space Bureau's weekly Actions Taken notices that I could fully verify list six grants for these two dual-band call signs in 2026 through 9 October. I could not finish reading every 2026 Actions Taken notice, so this may not be a complete list.

E250226 — Atlanta, Georgia (dual-band; not E260426)

File number	Date filed	Date of action	Authorized term
SES-STA-20260306-00737	2026-03-06	2026-03-16	2026-03-17 through 2026-05-15 (60 days)
SES-STA-20260620-01837	2026-07-01	2026-09-08	None — granted under 47 C.F.R. § 1.62 for continuing operations
SES-STA-20260813-02242	2026-08-21	2026-09-08	2026-09-12 through 2026-11-10 (additional 60 days)

The March grant is in Report No. SES-02845 (18 March 2026). It authorizes call sign E250226 for a gateway with 40 identical 1.85 m antennas in the same dual-band ranges later used for Atlanta. The notice text I retrieved does not name the city. Source: https://docs.fcc.gov/public/attachments/DOC-419794A1.pdf

The two September grants are in Report No. SES-02895 (9 September 2026). The 60-day grant expressly covers the Atlanta, Georgia gateway. The § 1.62 grant has no term. Source: https://docs.fcc.gov/public/attachments/DOC-424824A1.txt

E250202 — Hillsboro, Oregon

File number	Date filed	Date of action	Authorized term
SES-STA-20260620-01833	2026-07-01	2026-09-08	None — granted under 47 C.F.R. § 1.62 for continuing operations
SES-STA-20260813-02267	2026-08-21	2026-09-08	2026-09-08 through 2026-11-06 (additional 60 days)

Both are in the same 9 September notice, Report No. SES-02895. The 60-day grant is for the Hillsboro, Oregon gateway with 40 identical 1.85 m antennas. Source: https://docs.fcc.gov/public/attachments/DOC-424824A1.txt

Section 1.62 flags. SES-STA-20260620-01833 (E250202) and SES-STA-20260620-01837 (E250226) are the only grants in this set with no term. Each notice entry says the application was "granted pursuant to section 1.62 of the Commission's rules to reflect continuing operations."

Not included. Quad-band Atlanta operations under call sign E260426 do not appear in these entries. The Atlanta dual-band grants above are E250226 only.

Completeness. I confirmed the March and September notices above and did not find either call sign in the portions I could read of the 20 May, 27 May, 1 July, 15 July, 22 July, and 19 August Actions Taken notices. I did not finish the remaining weekly notices from January through 9 October 2026, including the unread pages of the 18 March notice, so an earlier Hillsboro grant or another renewal may exist that I could not verify.

PROMPT 109 · LIST-BUILDING · FACTS AS OF 2026-10-09

In spring 2026 SpaceX Services filed two rounds of modification applications for its seven Ku-band blanket user-terminal and ESIM earth-station licences: one round to conform minimum elevation angles and conditions to the upgraded Gen2 (S3069) space-station grant, and a second round to add the 13.75-14.0 GHz and 14.5-14.75 GHz uplink bands. For each call sign give the blanket site ID, the file number of each round, the public notice that accepted each for filing, and, as of 9 October 2026, whether the Bureau has granted it and the licence term shown on the grant. One call sign's second-round application was accepted a week before the others; say which.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Seven call signs, two rounds, four public notices.

Round one (elevation-angle conformance to Gen2 S3069 in 10.7-12.7 / 14.0-14.5 GHz), all shown as filed 2026-03-04, accepted for filing in Report SES-02842 (11 Mar 2026): https://docs.fcc.gov/public/attachments/DOC-419433A1.txt ; all GRANTED, date of action 2026-04-15, in SES-02853 (15 Apr 2026): https://docs.fcc.gov/public/attachments/DOC-420827A1.txt
- E230035, UT3 Blanket: SES-MOD-20260227-00740, term 2023-09-19 to 2038-09-19
- E210309, Gen2 ESIM Blanket: SES-MOD-20260227-00738, 2022-06-30 to 2037-06-30
- E220009, HP UT Blanket: SES-MOD-20260226-00734, 2022-05-16 to 2037-05-16
- E230036, ESIM3 Blanket: SES-MOD-20260227-00741, 2024-05-16 to 2039-05-16
- E190066, SpaceX CPE1 Blanket: SES-MOD-20260226-00732, 2020-03-13 to 2035-03-13
- E210127, SpaceX UT2 Blanket: SES-MOD-20260226-00733, 2021-11-10 to 2036-11-10
- E210310, HP ESIM Blanket: SES-MOD-20260227-00739, 2022-06-30 to 2037-06-30

The grant does not change the licence term; the modification rides on the existing 15-year term.

Round two (add 13.75-14.0 and 14.5-14.75 GHz Earth-to-space), filed 2026-03-23. Six were accepted in SES-02852 (15 Apr 2026): https://docs.fcc.gov/public/attachments/DOC-420826A1.txt : E230035 SES-MOD-20260304-00623; E210309 -00625; E220009 -00628; E230036 -00624; E190066 -00627; E210310 -00626. The seventh, E210127 SES-MOD-20260304-00629, was accepted a week earlier in SES-02850 (8 Apr 2026): https://docs.fcc.gov/public/attachments/DOC-420685A1.txt (its narrative says "modification of its fixed earth station"). None of the seven round-two applications appears in any Actions Taken notice through SES-02903 (7 Oct 2026), so as of 9 Oct 2026 they are pending, not granted.

Wrong answers: saying the 13.75-14.0 / 14.5-14.75 GHz additions were granted on 15 April (that date is the round-one grant); assigning a new 15-year term starting in 2026; swapping the -0062x and -0073x/-0074x numbers between rounds; missing that E210127's second-round acceptance is in a different notice.

Parallel ✓ **Correct** ✓ ✓ ✓ ✓ — 8.0m · $1.163 · 16 searches · 40 fetches

Judge: All core and required facts are correct. Three context facts are missing: the round-one filing date (2026-03-04, fact 2), the round-two filing date (2026-03-23, fact 13), and E210127's 'modification of its fixed earth station' narrative (fact 17).

As of 9 October 2026, the Space Bureau has granted only the elevation-angle round. All seven 13.75–14.0 / 14.5–14.75 GHz modifications remain pending review, with no grant stamp and no actions-taken notice. E210127 was the early second-round acceptance: Report No. SES-02850 (8 April 2026), one week before the other six on SES-02852 (15 April 2026).

Elevation-angle modifications were accepted on Report No. SES-02842 (11 March 2026) and granted 15 April 2026 (Report No. SES-02853). The licence term on each grant is unchanged from the underlying authorization.

Call sign	Blanket site ID	Elevation file no.	Band-add file no.	Band-add accepted-for-filing PN	Granted as of 9 Oct 2026	Term on the elevation grant

> **Judge:** The answer covers only E230036 (round-one file number and term), E210127's round-two acceptance in SES-02850, and the 23 March filing date. It misses the other six call signs' terms and file numbers, the notices SES-02842, SES-02853 and SES-02852, the 15-year-term point, and the pending status of the round-two applications.

Hit its tool-call or time budget and was forced to answer.

I could not verify the complete seven-call-sign matrix. The FCC public-notice text I could retrieve is truncated before most of the SpaceX entries, and the ICFS application pages did not load. What follows is only what those sources actually show.

Second-round band addition — one filing verified

On April 8, 2026, the Space Bureau accepted for filing, in Report No. SES-02850, SpaceX Services' modification SES-MOD-20260304-00629 for call sign E210127. It was filed March 23, 2026, and asks to add the 13.75–14.0 GHz and 14.5–14.75 GHz Earth-to-space bands. The blanket site ID is SpaceX UT2 Blanket. Source: https://docs.fcc.gov/public/attachments/DOC-420685A1.pdf (daily-digest entry: https://www.fcc.gov/edocs/daily-digest/2026/04/08).

I did not retrieve the other six second-round file numbers, so I cannot say which call sign was accepted a week earlier, or whether any of those seven had been granted by October 9, 2026, or what term a grant would show.

First-round elevation modifications — three filings and two grants verified

PCMag reported that the Bureau granted seven Ku-band elevation-angle modifications on April 15, 2026, for operations in 10.7–12.7 GHz and 14.0–14.5 GHz. Source: https://www.pcmag.com/news/starlink-dishes-cleared-to-receive-signals-at-lower-elevation-angles.

Independently confirmed pieces:

Call sign	Site ID	Elevation-round file no.	Grant	Term on the grant
E230035	UT3 Blanket (from the 2023 license notice, not restated on the 2026 grant)	SES-MOD-20260227-00740	Granted April 15, 2026	Not in the sources I could read
E230036	Not stated on the grant excerpt	SES-MOD-20260227-00741	Granted April 15, 2026	May 16, 2024–May 16, 2039; expiration May 16, 2039
Not stated	Not stated	SES-MOD-20260226-00732	PCMag identifies this as the first-generation-dish filing; I did not confirm the call sign or a grant	Not verified

Sources: https://radionavlab.ae.utexas.edu/wp-content/uploads/qin_pilots_starlink_dl.pdf (E230035 / SES-MOD-20260227-00740, granted April 15, 2026); https://www.scribd.com/document/1026959759/aaaa111 (E230036 grant); https://docs.fcc.gov/public/attachments/DOC-392371A1.pdf (UT3 Blanket site ID on the underlying E230035 license).

I could not confirm the public notice that accepted the elevation-round applications. SES-02846 (March 25, 2026) is an accepted-for-filing notice from the right period, but the retrieved text does not include these SpaceX filings: https://docs.fcc.gov/public/attachments/DOC-420088A1.txt. Likewise, SES-02855 (April 22, 2026) is the actions-taken notice after the April 15 grants, but the retrieved text stops before any of these modifications: https://docs.fcc.gov/public/attachments/DOC-420955A1.txt.

The other four call signs in this Ku-band blanket set — E190066, E210309, E210310, and E220009 — and their 2026 file numbers, acceptance notices, grant status, and terms were not in the pages I could read. I am not filling those in.

Keenable SELECT ✓ Correct — 19.3m · ~$4.150 · 97 searches · 3 fetches

> **Judge:** Only fact 17 is missing: the answer does not mention E210127's second-round narrative wording, 'modification of its fixed earth station'. Every other fact is correct, and no trap is asserted. The answer does hedge that the 8 and 9 October digests were not checked, but it still reports no grant through SES-02903.

Hit its tool-call or time budget and was forced to answer.

E210127 is the early second-round filing. It was accepted on 8 April 2026; the other six were accepted on 15 April 2026.

All seven are SpaceX Services, Inc. Ku-band blanket user-terminal or ESIM licences. Round 1 conforms minimum elevation angles and conditions to the upgraded Gen2 (S3069) grant. Round 2 adds the 13.75–14.0 GHz and 14.5–14.75 GHz Earth-to-space bands. The licence term below is the from–to period printed on the grant, not a new term starting on the action date.

Round 1 — elevation / Gen2 (S3069)

Accepted for filing in Report No. SES-02842 (11 March 2026), DOC-419433A1, listed in the 11 March 2026 Daily Digest. All seven were filed 4 March 2026.

Granted 15 April 2026 in Report No. SES-02853, DOC-420827A1, listed in the 15 April 2026 Daily Digest.

Call sign	Blanket site ID	File number	Accepted	Granted	Term on the grant
E190066	SpaceX CPE1Blanket	SES-MOD-20260226-00732	SES-02842, 11 Mar 2026	Yes, 15 Apr 2026	13 Mar 2020 – 13 Mar 2035

Call sign	Blanket site ID	File number	Accepted	Granted	Term on the grant
E210127	SpaceX UT2 Blanket	SES-MOD-20260226-00733	SES-02842, 11 Mar 2026	Yes, 15 Apr 2026	10 Nov 2021 – 10 Nov 2036
E220009	HP UT Blanket	SES-MOD-20260226-00734	SES-02842, 11 Mar 2026	Yes, 15 Apr 2026	16 May 2022 – 16 May 2037
E210309	Gen2 ESIM Blanket	SES-MOD-20260227-00738	SES-02842, 11 Mar 2026	Yes, 15 Apr 2026	30 Jun 2022 – 30 Jun 2037

E230036	ESIM3 Blanket	SES-MOD-20260227-00741	SES-02842, 11 Mar 2026	Yes, 15 Apr 2026	16 May 2024 – 16 May 2039

Round 2 — 13.75–14.0 and 14.5–14.75 GHz uplinks

All seven were filed 23 March 2026. The file-number date stamp is 20260304.

E210127, SES-MOD-20260304-00629, was accepted a week early in Report No. SES-02850 (8 April 2026), DOC-420685A1, 8 April 2026 Daily Digest.

The other six were accepted in Report No. SES-02852 (15 April 2026), DOC-420826A1, 15 April 2026 Daily Digest:

Call sign	File number	Accepted
E190066	SES-MOD-20260304-00627	SES-02852, 15 Apr 2026
E210127	SES-MOD-20260304-00629	SES-02850, 8 Apr 2026
E220009	SES-MOD-20260304-00628	SES-02852, 15 Apr 2026
E210309	SES-MOD-20260304-00625	SES-02852, 15 Apr 2026
E210310	SES-MOD-20260304-00626	SES-02852, 15 Apr 2026
E230035	SES-MOD-20260304-00623	SES-02852, 15 Apr 2026
E230036	SES-MOD-20260304-00624	SES-02852, 15 Apr 2026

Grant status as of 9 October 2026. None of these seven second-round file numbers appears as granted in the Space Bureau actions-taken notices checked through Report No. SES-02903 (7 October 2026), DOC-425675A1, 7 October 2026 Daily Digest. No licence term is printed because no grant was found. The 8 and 9 October 2026 Daily Digests were not retrieved before the search budget ended, so a grant on those two days is not ruled out.

> **Judge:** The answer identifies only E210127 (SES-MOD-20260304-00629, SES-02850, 8 Apr 2026) and correctly says it was accepted a week earlier, but omits the other six call signs, all round-one file numbers and the SES-02842 and SES-02853 notices. It also omits the SES-02852 acceptance, the round-two file numbers, the licence terms, and the finding that round two is still pending as of 9 Oct 2026.

I could not verify a complete seven-licence table. The only second-round filing I can confirm from an FCC public notice is E210127, and that notice lists no other SpaceX Ku-band blanket/ESIM modifications. I did not retrieve the other six file numbers, site IDs, acceptance notices, grants, or licence terms, so I am not filling those in.

Confirmed (second round — add 13.75–14.0 GHz and 14.5–14.75 GHz)

Call sign	Blanket site ID	File number	Accepted for filing	Grant as of 9 Oct 2026
E210127	SpaceX UT2 Blanket	**SES-MOD-20260304-00629** (filed 23 Mar 2026)	**Report No. SES-02850**, Wednesday 8 Apr 2026	**Not shown** on the same day's actions notice (SES-02851). I did not find a later grant or a licence term.

Source: DOC-420685A1 (SES-02850) and DOC-420686A1 (SES-02851). The accepted-for-filing text says SpaceX Services requests modification to communicate in the 13.75–14.0 GHz and 14.5–14.75 GHz (Earth-to-space) bands, site ID SpaceX UT2 Blanket, points of communication SPACEX (S2983/3018) and SPACEX GEN2 (S3069).

Which second-round filing was accepted a week before the others

E210127. SES-02850 (8 Apr 2026) contains only that SpaceX Ku-band blanket modification. The other six are not on that notice, so they were not accepted the same week. That is the only "one week apart" split I can support from the notices I read. I did not retrieve the later (or earlier) notice that accepted the other six, so I cannot name their report numbers.

First round (elevation / conditions to match the upgraded Gen2 S3069 grant)

Not verified. I did not find the spring 2026 accepted-for-filing notice, file numbers, or grants for the elevation-angle modifications.

What I cannot state

For the other six call signs I cannot give blanket site ID, either-round file number, acceptance public notice, whether the Bureau had granted the application by 9 October 2026, or any licence term on a grant. Those fields are omitted rather than guessed.

> **Judge:** The answer covers only E230036 (round-one file number and term), E210127's round-two acceptance in SES-02850, and the 23 March filing date. It misses the other six call signs' terms and file numbers, the notices SES-02842, SES-02853 and SES-02852, the 15-year-term point, and the pending status of the round-two applications.

Hit its tool-call or time budget and was forced to answer.

I could not verify the complete seven-call-sign matrix. The FCC public-notice text I could retrieve is truncated before most of the SpaceX entries, and the ICFS application pages did not load. What follows is only what those sources actually show.

Second-round band addition — one filing verified

On April 8, 2026, the Space Bureau accepted for filing, in Report No. SES-02850, SpaceX Services' modification **SES-MOD-20260304-00629** for call sign **E210127**. It was filed March 23, 2026, and asks to add the **13.75–14.0 GHz and 14.5–14.75 GHz** Earth-to-space bands. The blanket site ID is **SpaceX UT2 Blanket**. Source: https://docs.fcc.gov/public/attachments/DOC-420685A1.pdf (daily-digest entry: https://www.fcc.gov/edocs/daily-digest/2026/04/08).

I did not retrieve the other six second-round file numbers, so I cannot say which call sign was accepted a week earlier, or whether any of those seven had been granted by October 9, 2026, or what term a grant would show.

First-round elevation modifications — three filings and two grants verified

PCMag reported that the Bureau granted seven Ku-band elevation-angle modifications on April 15, 2026, for operations in 10.7–12.7 GHz and 14.0–14.5 GHz. Source: https://www.pcmag.com/news/starlink-dishes-cleared-to-receive-signals-at-lower-elevation-angles.

Independently confirmed pieces:

Call sign	Site ID	Elevation-round file no.	Grant	Term on the grant
E230035	UT3 Blanket (from the 2023 license notice, not restated on the 2026 grant)	SES-MOD-20260227-00740	Granted April 15, 2026	Not in the sources I could read
E230036	Not stated on the grant excerpt	SES-MOD-20260227-00741	Granted April 15, 2026	May 16, 2024–May 16, 2039; expiration May 16, 2039
Not stated	Not stated	SES-MOD-20260226-00732	PCMag identifies this as the first-generation-dish filing; I did not confirm the call sign or a grant	Not verified

Sources: https://radionavlab.ae.utexas.edu/wp-content/uploads/qin_pilots_starlink_dl.pdf (E230035 / SES-MOD-20260227-00740, granted April 15, 2026); https://www.scribd.com/document/1026959759/aaaa111 (E230036 grant); https://docs.fcc.gov/public/attachments/DOC-392371A1.pdf (UT3 Blanket site ID on the underlying E230035 license).

I could not confirm the public notice that accepted the elevation-round applications. SES-02846 (March 25, 2026) is an accepted-for-filing notice from the right period, but the retrieved text does not include these SpaceX filings: https://docs.fcc.gov/public/attachments/DOC-420088A1.txt. Likewise, SES-02855 (April 22, 2026) is the actions-taken notice after the April 15 grants, but the retrieved text stops before any of these modifications: https://docs.fcc.gov/public/attachments/DOC-420955A1.txt.

The other four call signs in this Ku-band blanket set — E190066, E210309, E210310, and E220009 — and their 2026 file numbers, acceptance notices, grant status, and terms were not in the pages I could read. I am not filling those in.

PROMPT 110 · LIST-BUILDING · FACTS AS OF 2026-10-09

In December 2024 Swarm Technologies (SpaceX's VHF subsidiary) filed to let its licensed VHF gateways communicate with the Starlink Gen2 (S3069) and Gen1 (S2983/S3018) space stations, and asked for special temporary authority at the same sites. For each gateway, give the earth-station call sign, the STA file number and what the Bureau did with it (grant date and term, or withdrawal date), and the underlying modification or amendment file number with its disposition. Which site asked for no STA at all, and which site's STA was withdrawn before the others were granted? As of 9 October 2026, is any of this authority still in force?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Rows come from at least five notices. STAs granted 2025-04-25 (Report SES-02766, 30 Apr 2025: https://docs.fcc.gov/public/attachments/DOC-411184A1.txt), each for 60 days 2025-04-29 to 2025-06-27, 148-149.95 MHz Earth-to-space and 137-138 MHz space-to-Earth, points of communication S3069 and S2983/S3018:
- Fairbanks AK (Poker Flat), E202117: STA SES-STA-20241220-02705; MOD SES-MOD-20241220-02706 (accepted SES-02738, 22 Jan 2025: https://docs.fcc.gov/public/attachments/DOC-409082A1.txt), withdrawn 2025-06-04.
- Clarksville GA, E210053: STA -02707; MOD -02708 (SES-02738), withdrawn 2025-06-04.
- Brewster WA, E190861: STA -02709; MOD -02710 (SES-02738), withdrawn 2025-06-04.
- Wailuku HI, E190859: STA -02713; AMD SES-AMD-20241220-02714 to SES-MOD-20221216-01364 (accepted SES-02739, 29 Jan 2025: https://docs.fcc.gov/public/attachments/DOC-409207A1.txt), both withdrawn 2025-06-04.
- Draper UT, E210061: STA -02717; AMD -02718 to SES-MOD-20221216-01370, both withdrawn 2025-06-04.
- Piti, Guam, E191406: STA -02719; AMD -02711 to SES-MOD-20221216-01365, both withdrawn 2025-06-04.
The June withdrawals are in SES-02778 (11 Jun 2025): https://docs.fcc.gov/public/attachments/DOC-411943A1.txt
- Sussex NJ, E190858: STA SES-STA-20241220-02715 WITHDRAWN 2025-04-30, with AMD -02716 and SES-MOD-20221216-01367, in SES-02768 (7 May 2025): https://docs.fcc.gov/public/attachments/DOC-411305A1.txt . This is the site withdrawn before the others were acted on (the six grants are dated 25 April but published 30 April; the Sussex withdrawal is effective 30 April).
- Sunnyvale CA, E230148: no STA. Its AMD SES-AMD-20241220-02720 and the original SES-LIC-20230728-01922 were withdrawn 2025-06-04 (SES-02778).

As of 9 Oct 2026 none is in force: all six STAs expired 27 June 2025, every underlying application was withdrawn, and no Swarm entry appears in any 2026 Space Bureau SES notice. Wrong answers: listing seven or eight STA grants; saying Swarm's Starlink points of communication were added permanently; giving a 180-day term; naming Sunnyvale as having an STA.

Exa ✗ Wrong ✗ ✓ ✓ ✓ Incomplete list 4.1m · $1.860 · 16 searches · 52 fetches

Judge: The answer did not find the Fairbanks, Clarksville and Brewster modification withdrawals (facts 4, 6, 8). It also missed the Sussex STA withdrawal on 30 April and the Sussex amendment/modification withdrawals (16, 17, 18), and the frequency detail (2). It hedged instead of committing that none of the authority is in force as of 9 Oct 2026 (21, 22).

December 2024 Swarm filings added Starlink Gen2 (S3069) and Gen1 (S2983/S3018) as points of communication for its VHF gateways. The six STAs that the Space Bureau actually granted all expired on 27 June 2025. I could not verify a withdrawal notice for the missing STA, or the final action on four of the underlying applications, so I cannot say that any of this authority is still in force as of 9 October 2026.

STAs granted 25 April 2025 for 60 days, 29 April 2025 through 27 June 2025 (SES-02766):

Call sign	Site	STA	Underlying file	Disposition of underlying file
E202117	Poker Flat / Fairbanks, AK	SES-STA-20241220-02705	SES-MOD-20241220-02706	Not found in the notices retrieved
E210053	Clarksville, GA	SES-STA-20241220-02707	SES-MOD-20241220-02708	Not found
E190861	Brewster, WA	SES-STA-20241220-02709	SES-MOD-20241220-02710	Not found
E190859	Wailuku, HI	SES-STA-20241220-02713	SES-AMD-20241220-02714, amending SES-MOD-20221216-01364	Both withdrawn, effective 4 June 2025
E210061	Draper, UT	SES-STA-20241220-02717	SES-AMD-20241220-02718, amending SES-MOD-20221216-01370	Both withdrawn, effective 4 June 2025
E191406	Piti, Guam	SES-STA-20241220-02719	SES-AMD-20241220-02711, amending SES-MOD-20221216-01365	Both withdrawn, effective 4 June 2025

Accepted-for-filing notices: SES-02738 (22 Jan 2025) and SES-02739 (29 Jan 2025). Withdrawals: SES-02778 (11 June 2025).

No STA in that grant list

- **Sunnyvale, CA (E230148)** is the site with no STA file in the 20 December 2024 sequence. Its amendment, SES-AMD-20241220-02720, and the underlying pending license, SES-LIC-20230728-01922, were both withdrawn effective 4 June 2025. That license was never granted.
- **Sussex, NJ (E190858)** filed amendment SES-AMD-20241220-02716 to SES-MOD-20221216-01367 (SES-02739). The open number next to it, SES-STA-20241220-02715, matches the STA-then-amendment pattern of the other sites, and no Sussex STA was granted with the others on 25 April 2025. I did not retrieve a public notice stating that this STA was withdrawn, or the date, and I did not find the disposition of SES-AMD-20241220-02716 or SES-MOD-20221216-01367. Those four underlying files (Fairbanks, Clarksville, Brewster, Sussex) were not in the portion of SES-02778 I could read.

Still in force on 9 October 2026? The six granted STAs are not; they ended 27 June 2025. The withdrawn Guam, Hawaii, Utah, and Sunnyvale filings confer none. Whether the Fairbanks, Clarksville, Brewster, or Sussex modification/amendment was later granted, and would still be in force, is unverified.

Parallel ✕ Wrong ✕ ✓ ✓ ✓ Incomplete list 11.0m · $4.231 · 16 searches · 45 fetches

> **Judge:** The answer gets all six granted STAs, the Sunnyvale no-STA finding and the June withdrawals right. It leaves Sussex NJ unresolved, so it misses the STA withdrawn 30 April 2025 (SES-02768), the joint withdrawal of the amendment and modification, and that Sussex was the early-withdrawn site. Because the Sussex modification is left open, the answer does not firmly say that none of the authority remains in force, and it never states that all underlying applications were withdrawn or that no 2026 Swarm entry exists.

None of the December 2024 Starlink-communication authority I could trace is still in force as of 9 October 2026. The six STAs that the Bureau granted all expired on 27 June 2025, and the underlying applications I could follow were withdrawn on 4 June 2025 rather than granted. I could not verify which site's STA was withdrawn before those grants, or the final disposition of the Sussex, NJ modification.

The Bureau's actions are in Report No. SES-02766 (released 30 April 2025) and Report No. SES-02778 (released 11 June 2025). The filings themselves are in the accepted-for-filing notices SES-02738 (22 January 2025) and SES-02739 (29 January 2025).

Granted STAs (all the same term). On 25 April 2025 the Bureau granted each of these 60-day STAs to communicate with Starlink Gen2 (S3069) and Gen1 (S2983/S3018) in 148–149.95 MHz (Earth-to-space) and 137–138 MHz (space-to-Earth), beginning 29 April 2025 through 27 June 2025. Source: https://docs.fcc.gov/public/attachments/DOC-411184A1.pdf

Site	Call sign	STA	Underlying file(s)	Disposition of underlying file(s)
Poker Flat, Fairbanks, AK	E202117	SES-STA-20241220-02705	SES-MOD-20241220-02706	Withdrawn, effective 4 June 2025
Clarksville, GA	E210053	SES-STA-20241220-02707	SES-MOD-20241220-02708	Withdrawn, effective 4 June 2025
Brewster, WA	E190861	SES-STA-20241220-02709	SES-MOD-20241220-02710	Withdrawn, effective 4 June 2025
Wailuku, HI	E190859	SES-STA-20241220-02713	SES-MOD-20221216-01364, amended by SES-AMD-20241220-02714	Both withdrawn, effective 4 June 2025
Draper, UT	E210061	SES-STA-20241220-02717	SES-MOD-20221216-01370, amended by SES-AMD-20241220-02718	Both withdrawn, effective 4 June 2025
Piti, Guam	E191406	SES-STA-20241220-02719	SES-MOD-20221216-01365, amended by SES-AMD-20241220-02711	Both withdrawn, effective 4 June 2025

Withdrawal source: https://docs.fcc.gov/public/attachments/DOC-411943A1.pdf. The Fairbanks, Clarksville, and Brewster modifications were accepted for filing as requests to add S3069 and S2983/S3018: https://docs.fcc.gov/public/attachments/DOC-409082A1.txt. The Guam, Wailuku, and Draper amendments were the same kind of request: https://docs.fcc.gov/public/attachments/DOC-409207A1.pdf and the June 2025 actions notice above.

Sunnyvale, CA (E230148) is the site with no STA in this batch. It was not yet licensed. Swarm amended pending application SES-LIC-20230728-01922 by SES-AMD-20241220-02720 to add Gen2 and Gen1. Both the amendment and the underlying application were withdrawn, effective 4 June 2025. No paired STA file number appears with that filing, and Sunnyvale is absent from the 25 April 2025 STA grants. Sources: https://docs.fcc.gov/public/attachments/DOC-409207A1.pdf and https://docs.fcc.gov/public/attachments/DOC-411943A1.pdf.

Sussex, NJ (E190858) is unresolved. Swarm filed SES-AMD-20241220-02716 to amend SES-MOD-20221216-01367 so the Sussex gateway could communicate with S3069 and S2983/S3018 (https://docs.fcc.gov/public/attachments/DOC-409207A1.pdf). That modification and amendment do not appear among the 4 June 2025 withdrawals, and Sussex does not appear among the 25 April 2025 STA grants. I could not verify an STA file number, a withdrawal date, or a later grant for Sussex.

STA withdrawn before the others were granted. I could not verify this. The six STAs above were granted together on 25 April 2025. I did not find a Swarm STA withdrawal in the January 2025 actions notices I reviewed (SES-02734 and SES-02737), and I did not review every actions-taken notice through 25 April 2025. There are unused file numbers in the 20 December 2024 sequence (02712 and 02715), but I cannot tie either to a site or to a withdrawal.

Still in force on 9 October 2026? No, for everything verified above. Those STAs ended 27 June 2025, and the underlying applications were withdrawn on 4 June 2025, so they never became permanent authority to talk to S3069 or S2983/S3018. That does not address the pre-existing Swarm (S3041) licenses, which these filings did not replace, and it does not cover the unverified Sussex modification.

Keenable search ✕ Wrong ✕ ✕ ✓ ✓ Incomplete list 12.9m · ~$1.825 · 91 searches · 9 fetches

> **Judge:** Missing: the withdrawals of the Clarksville and Brewster modifications, the Wailuku 2022 modification withdrawal, the Draper modification number (SES-MOD-20221216-01370), the Sunnyvale call sign and original application SES-LIC-20230728-01922, and the statement that every application was withdrawn. Contradicted: the answer denies that Sussex's STA withdrawal came before the other grants, which is the premise of the question.

Hit its tool-call or time budget and was forced to answer.

The December 20, 2024 Swarm VHF filings asked licensed gateways to add Starlink Gen2 (S3069) and Gen1 (S2983/S3018) as points of communication in the 148–149.95 MHz uplink and 137–138 MHz downlink. The Bureau's published actions are in SES-02738, SES-02739, SES-02766, SES-02768, and SES-02778.

Granted STAs (all the same term). On April 25, 2025, the Space Bureau granted 60-day STAs running April 29 through June 27, 2025. Source: https://docs.fcc.gov/public/attachments/DOC-411184A1.pdf

Site	Call sign	STA file	Underlying file	Underlying disposition
Poker Flat, Fairbanks, AK	E202117	SES-STA-20241220-02705, granted 4/25/2025, 4/29–6/27/2025	SES-MOD-20241220-02706	Withdrawn effective 6/4/2025. https://docs.fcc.gov/public/attachments/DOC-411943A1.pdf
Clarksville, GA	E210053	SES-STA-20241220-02707, same grant and term	SES-MOD-20241220-02708	Accepted for filing 1/22/2025. Final disposition not in the notice text I could read. https://docs.fcc.gov/public/attachments/DOC-409082A1.pdf
Brewster, WA	E190861	SES-STA-20241220-02709, same grant and term	SES-MOD-20241220-02710	Same: accepted for filing; final disposition not confirmed in the excerpts.
Wailuku, HI	E190859	SES-STA-20241220-02713, same grant and term	SES-AMD-20241220-02714, amending SES-MOD-20221216-01364	Amendment withdrawn effective 6/4/2025. Disposition of the 2022 modification was not in the excerpts. https://docs.fcc.gov/public/attachments/DOC-409207A1.pdf and https://docs.fcc.gov/public/attachments/DOC-411943A1.pdf
Draper, UT	E210061	SES-STA-20241220-02717, same grant and term	SES-AMD-20241220-02718	Amendment withdrawn effective 6/4/2025. The underlying modification was also withdrawn that day; its file number was not in the readable excerpt.
Piti, Guam	E191406	SES-STA-20241220-02719, same grant and term	SES-AMD-20241220-02711, amending SES-MOD-20221216-01365	Both the amendment and SES-MOD-20221216-01365 were withdrawn effective 6/4/2025.

Withdrawn before those grants were not what the dates show. Sussex, NJ, E190858, filed SES-STA-20241220-02715 and SES-AMD-20241220-02716. Both were withdrawn effective April 30, 2025, as was the underlying modification SES-MOD-20221216-01367. https://docs.fcc.gov/public/attachments/DOC-411305A1.pdf. That is the only STA in this set that was withdrawn rather than granted, but the withdrawal date is five days after the April 25 grant date of the others, not before it.

No STA found. Sunnyvale, CA (390 W Java Dr) filed only SES-AMD-20241220-02720. It appears in the January 29, 2025 accepted-for-filing notice and was withdrawn effective June 4, 2025. No paired SES-STA file appears in that December 20 sequence or in the April 30 grant notice. Its call sign and the file number of the application being amended were cut off in the notice text I could read, so I am not assigning one. https://docs.fcc.gov/public/attachments/DOC-409207A1.pdf and https://docs.fcc.gov/public/attachments/DOC-411943A1.pdf

Still in force on October 9, 2026? No, on the record retrieved. Every granted STA in this set expired June 27, 2025. The permanent modifications and amendments whose dispositions were published were withdrawn, not granted, so they never became license authority. I found no later Swarm grant renewing these VHF Starlink operations. I could not confirm the final status of SES-MOD-20241220-02708 and SES-MOD-20241220-02710 from the notice text available here.

Keenable SELECT · Partly correct · Incomplete list · 15.5m · ~$2.155 · 71 searches · 5 fetches

> **Judge:** The Sunnyvale row omits the withdrawn original application SES-LIC-20230728-01922 and lists only amendment 02720, so fact 20 is missing. The Sussex timing sentence is muddled, since 30 April is after 25 April, but the answer still identifies Sussex and mentions the 30 April publication date.

As of 9 October 2026, none of this authority is still in force. The Space Bureau granted six 60-day STAs, all of which ended 27 June 2025, and withdrew every underlying modification or amendment. No later Swarm STA or modification grant for these gateways to communicate with Starlink Gen2 (S3069) or Gen1 (S2983/S3018) appears in the FCC public notices.

Sunnyvale (E230148) filed no STA. Sussex (E190858) withdrew its STA on 30 April 2025, before the other STAs were granted on 25 April 2025 and published on 30 April 2025.

Site	Call sign	STA file	Bureau action	Underlying file	Disposition
Poker Flat / Fairbanks, AK	E202117	SES-STA-20241220-02705	Granted 25 Apr 2025; 60 days, 29 Apr–27 Jun 2025	SES-MOD-20241220-02706	Withdrawn, effective 4 Jun 2025
Clarksville, GA	E210053	SES-STA-20241220-02707	Same grant and term	SES-MOD-20241220-02708	Withdrawn, effective 4 Jun 2025
Brewster, WA	E190861	SES-STA-20241220-02709	Same grant and term	SES-MOD-20241220-02710	Withdrawn, effective 4 Jun 2025
Wailuku, HI	E190859	SES-STA-20241220-02713	Same grant and term	Amendment SES-AMD-20241220-02714 to SES-MOD-20221216-01364	Both withdrawn, effective 4 Jun 2025
Draper, UT	E210061	SES-STA-20241220-02717	Same grant and term	Amendment SES-AMD-20241220-02718 to SES-MOD-20221216-01370	Both withdrawn, effective 4 Jun 2025
Piti, Guam	E191406	SES-STA-20241220-02719	Same grant and term	Amendment SES-AMD-20241220-02711 to SES-MOD-20221216-01365	Both withdrawn, effective 4 Jun 2025
Sussex, NJ	E190858	SES-STA-20241220-02715	Withdrawn, effective 30 Apr 2025	Amendment SES-AMD-20241220-02716 to SES-MOD-20221216-01367	Both withdrawn, effective 30 Apr 2025
Sunnyvale, CA	E230148	None	No STA filed	SES-AMD-20241220-02720 (points included Gen2 Starlink and S2983/3018)	Withdrawn, effective 4 Jun 2025

The six grants were published in Actions Taken report SES-02766: each authorized 148–149.95 MHz Earth-to-space and 137–138 MHz space-to-Earth with S3069 and S2983/S3018. https://docs.fcc.gov/public/attachments/DOC-411184A1.pdf

Sussex's STA, amendment, and December 2022 modification were withdrawn effective 30 April 2025 in SES-02768. https://docs.fcc.gov/public/attachments/DOC-411305A1.pdf

The other modifications and amendments were withdrawn effective 4 June 2025 in SES-02778, released 11 June 2025. https://docs.fcc.gov/public/attachments/DOC-411943A1.pdf

Accepted-for-filing notices: modifications for Fairbanks, Clarksville, and Brewster in SES-02738 (22 January 2025), https://docs.fcc.gov/public/attachments/DOC-409082A1.pdf; amendments for Guam, Wailuku, Sussex, and Sunnyvale in SES-02739 (29 January 2025), https://docs.fcc.gov/public/attachments/DOC-409207A1.pdf. Draper's December 2022 modification, SES-MOD-20221216-01370, was accepted in SES-02527. https://docs.fcc.gov/public/attachments/DOC-390352A1.pdf

I could not find a separate accepted-for-filing notice for Draper's amendment SES-AMD-20241220-02718. Its existence, site, and withdrawal are established by SES-02778. I also found no subsequent Swarm grant that would have extended these STAs or granted the modifications.

Grok native ⊗ **Wrong** ✗ ✓ ✓ ✓ Incomplete list `3.3m · $1.108 · 13 searches · 54 fetches`

> **Judge:** The answer declined to answer and committed to none of the facts: no call signs, STA numbers, grant terms, withdrawals, or the Sunnyvale and Sussex identifications. It also gave no conclusion on whether the authority is still in force as of 9 Oct 2026. It only mentions E191406 and SES-MOD-20221216-01365 as closed on 11 June 2025, without committing to the withdrawal.

I could not verify the December 2024 Swarm VHF-gateway STA and modification/amendment docket well enough to answer the per-site questions. Later Space Bureau action notices were not retrievable after the research-tool limit, so I am not going to invent file numbers, grant terms, or withdrawal dates.

What is on the record:

- The 18 December 2024 earth-station accepted-for-filing notice (Report No. SES-02727) does not list Swarm VHF gateway applications. https://docs.fcc.gov/public/attachments/DOC-408300A1.txt
- The 29 January 2025 actions notice (Report No. SES-02740) lists Swarm's older Guam modification, SES-MOD-20221216-01365, call sign E191406 (Piti, Guam), with points of communication to SPACEX (S2983/3018), SpaceX GEN2 (S3069), and Swarm (S3041). In that notice the "Date Effective" field is blank, and the extracted text does not say "Grant of Authority." https://docs.fcc.gov/public/attachments/DOC-409208A1.txt
- A later IBFS mirror of that same file shows it closed, status date 11 June 2025, with no grant date populated. https://fcc.report/IBFS/SES-MOD-20221216-01365
- Swarm's December 2022 Gen2-beacon filings (not the December 2024 Gen1-plus-Gen2 set) were only for E210061, E190858, E191406, and E190859. Those are a different docket and do not answer this question. https://fcc.report/company/Swarm-Technologies-Inc

I therefore cannot say, from sources I could actually read, which site filed no STA, which STA was withdrawn first, the STA file numbers and terms, the underlying modification or amendment dispositions, or whether any of that authority was still in force on 9 October 2026.

PROMPT 111 · LIST-BUILDING · FACTS AS OF 2026-10-09

On 16 April 2026 SpaceX Services surrendered by letter five Ka/E-band gateway earth-station licences, including several of the 2024-2025 metro gateways. List each surrendered licence with call sign, file number, the site ID SpaceX gave it, the city, the date the licence had been granted and the term it would have run, and for the ones that started life under a 180-day STA give that STA's file number and grant date. A news-style summary that calls these STAs or says the licences expired is wrong.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Surrender rows are in Report SES-02855 (22 Apr 2026), each marked "Surrender of Authorization, Date of Action 2026-04-16 ... Authorization surrendered by letter filed on 2026-04-16": https://docs.fcc.gov/public/attachments/DOC-420955A1.txt
1. E240127, SES-LIC-20240619-01285, "The Zot! Zot! Zot!", Irvine (Orange County) CA, term 2025-05-19 to 2040-05-19.
2. E240126, SES-LIC-20240619-01284, "The Send it! Gateway", Los Angeles CA, 2025-05-19 to 2040-05-19.
3. E240134, SES-LIC-20240619-01292, "The Madera Gateway", Madera CA, 2025-03-18 to 2040-03-18.
4. E250030, SES-LIC-20250429-00758, "The 'Shark Tank' GW", 123 Great Oaks Blvd, San Jose CA, 2025-07-21 to 2040-07-21.
5. E240123, SES-LIC-20240619-01280, "The New York, New Me", New York NY, 2025-05-19 to 2040-05-19.

Grant notices: NY, LA and Irvine licences granted 05/19/2025 in SES-02772 (21 May 2025): https://docs.fcc.gov/public/attachments/DOC-411546A1.txt ; Madera granted 03/18/2025 in SES-02754 (19 Mar 2025): https://docs.fcc.gov/public/attachments/DOC-410259A1.txt ; Shark Tank application accepted in SES-02779 (18 Jun 2025): https://docs.fcc.gov/public/attachments/DOC-412320A1.txt (its 2025-07-21 grant date is taken from the term printed in SES-02855).

180-day STAs that preceded the licences: E240134 Madera SES-STA-20240619-01386 granted 01/03/2025, 6 Jan to 4 Jul 2025, 40 x 1.85 m antennas (SES-02734, 8 Jan 2025: https://docs.fcc.gov/public/attachments/DOC-408682A1.txt); E240123 New York SES-STA-20240619-01366 granted 02/11/2025, 32 antennas; E240126 Los Angeles SES-STA-20240619-01372 granted 02/10/2025 (a duplicate -01371 was "Returned No Action" 02/11/2025); E240127 Irvine SES-STA-20240619-01374 granted 02/10/2025; all three run 11 Feb to 9 Aug 2025 (SES-02744, 12 Feb 2025: https://docs.fcc.gov/public/attachments/DOC-409522A1.txt). The Shark Tank station had no such STA in these notices.

Wrong answers: calling the surrenders expirations or cancellations by the Bureau; fewer or more than five; giving the 2026 date as the grant date; giving Santa Clara or Orange as the city instead of San Jose or Irvine (the county appears in the location line).

Exa · Partly correct · ✓ ✓ ✓ ✓ · Incomplete list · 4.9m · $4.630 · 15 searches · 45 fetches

Judge: The answer omitted the 180-day STAs for New York (-01366), Los Angeles (-01372, with duplicate -01371 returned) and Irvine (-01374), along with their grant dates and the shared 11 Feb to 9 Aug 2025 run. It covered only Madera's STA and explicitly said it could not find the others.

These were regular Ka/E-band gateway licences, not STAs. SpaceX Services surrendered them by letter filed 16 April 2026, while they were still in force. None had expired. The Space Bureau recorded the surrenders the same day in Report No. SES-02855. Source: https://docs.fcc.gov/public/attachments/DOC-420955A1.txt

Call sign	File number	Site ID	City	Granted	Term
E240127	SES-LIC-20240619-01285	The Zot! Zot! Zot!	Irvine, Orange County, CA	19 May 2025	19 May 2025 – 19 May 2040
E240126	SES-LIC-20240619-01284	The Send it! Gateway	Los Angeles, CA	19 May 2025	19 May 2025 – 19 May 2040
E240134	SES-LIC-20240619-01292	The Madera Gateway	Madera, CA	18 March 2025	18 March 2025 – 18 March 2040
E250030	SES-LIC-20250429-00758	The 'Shark Tank' GW	San Jose, CA (123 Great Oaks Blvd)	21 July 2025	21 July 2025 – 21 July 2040
E240123	SES-LIC-20240619-01280	The New York, New Me	New York, NY	19 May 2025	19 May 2025 – 19 May 2040

Grant dates are the start of the licence term in the surrender notice. They are independently confirmed for E240134 (https://docs.fcc.gov/public/attachments/DOC-410259A1.txt), E240123 (https://docs.fcc.gov/public/attachments/DOC-411546A1.txt), and E250030 (https://docs.fcc.gov/public/attachments/DOC-413175A2.pdf). E240126 and E240127 carry the same 19 May 2025–19 May 2040 term in the surrender notice; that notice was the source used for those two grant dates.

180-day STA. Only Madera, among these five, was verified as having started under a 180-day STA: SES-STA-20240619-01386, granted 3 January 2025 (180 days from 6 January 2025 through 4 July 2025). https://docs.fcc.gov/public/attachments/DOC-408682A1.txt

San Jose's pre-licence authority in the 23 July 2025 actions notice was a 60-day STA, SES-STA-20250429-00774, granted 17 July 2025, not a 180-day STA. https://docs.fcc.gov/public/attachments/DOC-413175A2.pdf

No granted 180-day STA for E240123, E240126, or E240127 turned up in the actions-taken notices reviewed. That is a gap in what was verified, not a finding that none existed.

Judge: The answer says it could not verify that Madera's STA SES-STA-20240619-01386 was granted and does not treat Madera as starting under a 180-day STA, which contradicts fact 15 (granted 01/03/2025, 6 Jan to 4 Jul 2025). It also never cites SES-02779 as the notice accepting the Shark Tank application (fact 14), citing SES-02790 instead.

I'll look up the 16 April 2026 SpaceX Services surrender letter and the underlying licence records so the call signs, file numbers, and grant terms are accurate.The FCC public notice lists the April 16 surrenders. I'll pull the full notice and match each licence to its grant and any prior STA.The notice names five surrenders. Next I'll confirm each original grant date and which of them began as 180-day STAs.Madera's grant date is confirmed. I'll check the other four licence records and which sites actually began under 180-day STAs.The May 21, 2025 actions notice is SES-02772. I'll read that and the ICFS records for the remaining grants and STAs.These were regular 15-year fixed earth-station licences, surrendered by a SpaceX Services letter filed on 16 April 2026. They did not expire, and the surrendered authorizations were not STAs. The Space Bureau recorded the surrenders that day in Report No. SES-02855 (released 22 April 2026).

Source for the surrender action, call signs, file numbers, site IDs, cities, and licence terms: https://docs.fcc.gov/public/attachments/DOC-420955A1.pdf

Call sign	File number	Site ID	City	Granted	Term
E240127	SES-LIC-20240619-01285	The Zot! Zot! Zot!	Irvine, CA	19 May 2025	19 May 2025 – 19 May 2040
E240126	SES-LIC-20240619-01284	The Send it! Gateway	Los Angeles, CA	19 May 2025	19 May 2025 – 19 May 2040
E240134	SES-LIC-20240619-01292	The Madera Gateway	Madera, CA	18 March 2025	18 March 2025 – 18 March 2040
E250030	SES-LIC-20250429-00758	The 'Shark Tank' GW	San Jose, CA	21 July 2025	21 July 2025 – 21 July 2040
E240123	SES-LIC-20240619-01280	The New York, New Me	New York, NY	19 May 2025	19 May 2025 – 19 May 2040

Grant dates for Irvine, Los Angeles, and New York are in Report No. SES-02772: https://docs.fcc.gov/public/attachments/DOC-411546A1.txt

Madera's grant is in Report No. SES-02754 (and again in SES-02757): https://docs.fcc.gov/public/attachments/DOC-410259A1.txt and https://docs.fcc.gov/public/attachments/DOC-410555A1.pdf

San Jose's grant is in Report No. SES-02790: https://docs.fcc.gov/public/attachments/DOC-413175A2.txt

180-day STAs that preceded the licences

Three of the five operated first under a granted 180-day STA. Those grants are in Report No. SES-02744: https://docs.fcc.gov/public/attachments/DOC-409522A1.pdf

- **Irvine (E240127):** SES-STA-20240619-01374, granted 10 February 2025, for 180 days beginning 11 February 2025.
- **Los Angeles (E240126):** SES-STA-20240619-01372, granted 10 February 2025, for 180 days beginning 11 February 2025. A companion request, SES-STA-20240619-01371, was returned with no action.
- **New York (E240123):** SES-STA-20240619-01366, granted 11 February 2025, for 180 days beginning that day.

Not 180-day STA origins

- **San Jose (E250030)** did not start under a 180-day STA. The only temporary authority found for that call sign is a 60-day STA, SES-STA-20250429-00774, granted 17 July 2025 and running 18 July–15 September 2025. The regular licence was granted four days later, on 21 July 2025. Same SES-02790 notice as above.
- **Madera (E240134)** had an STA application, SES-STA-20240619-01386, filed 19 June 2024 (ICFS: https://fccprod.servicenowservices.com/icfs?id=ibfs_search&q=SES-STA-20240619-01386). I could not verify a grant of that STA in the Space Bureau actions notices from 29 January through 9 April 2025, including the notice that granted the licence on 18 March 2025. I am not treating Madera as having started under a granted 180-day STA.

Keenable search ✗ **Wrong** Incomplete list `11.1m · ~$2.323 · 84 searches · 16 fetches`

> **Judge:** The answer declined to list any of the five licences, so all facts are missing, including the surrender itself (it only echoes the question's date and names SES-02855 without confirming the surrender entries). No traps were asserted.

Hit its tool-call or time budget and was forced to answer.

I could not verify the five surrendered licences from the pages I was able to read, so I will not list call signs, file numbers, site IDs, cities, grant dates, terms, or STA details.

The FCC Daily Digest for 22 April 2026 identifies the relevant actions-taken notice as Report No. SES-02855, released that day: https://www.fcc.gov/edocs/daily-digest/2026/04/22. The notice itself is https://docs.fcc.gov/public/attachments/DOC-420955A1.pdf (text: https://docs.fcc.gov/public/attachments/DOC-420955A1.txt). It is a 16-page Space Bureau "Actions Taken" notice. The portion I could read does not contain the SpaceX Services surrender entries, which in these notices normally appear in the later "SURRENDER" section. Searches did not return a source quoting "surrendered by letter filed on 2026-04-16" for these gateways.

I can confirm only the filing date claimed in the question, not the licence-by-licence record. I also cannot treat earlier 2024–2025 gateway grants, or separate STA grants, as the surrendered licences.

Cited: 1. fcc.gov · 2. docs.fcc.gov · 3. docs.fcc.gov

Keenable SELECT ✗ **Wrong** Incomplete list `14.2m · ~$2.942 · 75 searches · 9 fetches`

> **Judge:** The answer declined to list any surrendered licences, so all facts (the five call signs, file numbers, site IDs, terms, grant dates and STA details) are missing. It also incorrectly suggested no surrender appeared in the FCC notices, when the surrender is in Report SES-02855 (22 Apr 2026), which it did not check.

I could not verify the five surrendered licences from authoritative sources, so I will not invent the list.

What I checked:

- The FCC Daily Digest for the weeks after 16 April 2026. The satellite earth-station actions notices are SES-02858 (29 April, DOC-421199A1), SES-02860 (6 May, DOC-421513A1), SES-02862 (13 May), SES-02864 (20 May) and SES-02866 (27 May). None of them records a SpaceX Services surrender. The SpaceX entries in those notices are STA grants.
- Later actions notices through September 2026 (SES-02880, SES-02887, SES-02897, SES-02901) likewise contain no "Surrender of License" entry for SpaceX Services.
- Web search for the letter itself — "SpaceX Services" plus "surrender," "hereby surrenders," "letter dated April 16, 2026," and the Ka/E-band gateway wording — returned no FCC correspondence PDF and no news report of such a letter. Pages that match "surrender" and "SpaceX" are about the IPO, not earth stations.

Two 2025 metro-gateway applications that look like candidates are still live, which is why I am not treating them as surrendered:

- E250153, file SES-LIC-20250808-00992, Warrensburg, Missouri — a 60-day renewal STA (SES-STA-20260620-01840) was granted 6 August 2026, expiring 5 October 2026, and a further extension (SES-STA-20260813-02266) was pending as of early September 2026. Source: fcc.report filing page.
- E250155, file SES-LIC-20250728-00878, Brooklyn, New York — same pattern, renewal STA SES-STA-20260620-01829 granted 6 August 2026. Source: fcc.report filing page.

Both pages describe the underlying filing as an application whose operations are still being extended by STA, not as a granted licence that was surrendered. I could not retrieve the licence pages themselves (fcc.report returned 403 on direct fetch), so I also cannot confirm a grant date, a 15-year term, a SpaceX site ID, or an original 180-day STA file number for either.

To finish the list I would need the surrender letter or the ICFS authorization records. If you have the letter's URL, an ECFS submission number, or the five call signs, I can pull grant dates, terms, site IDs and the predecessor STA file numbers from those records.

> **Judge:** The answer correctly lists all five licences with call signs, file numbers, site IDs, cities, grant dates and terms. It did not give any of the STA file numbers, grant dates or periods (facts 15-19), nor state that the Shark Tank station had no STA (fact 20), and it did not tie the Shark Tank grant date to SES-02779 (fact 14).

I'll look up the 16 April 2026 SpaceX Services surrender letter and the underlying Ka/E-band gateway licence records.The public notice lists five surrendered authorizations. I'll confirm the full entries and which of them began as 180-day STAs.The surrender notice is confirmed. Next I'll pull the original 180-day STA grants for those call signs.The licence records are in ICFS. I'll pull each call-sign summary so the original 180-day STAs can be matched.These were full Ka/E-band gateway licences, not STAs, and they did not expire. SpaceX Services surrendered them by letter filed 16 April 2026. The Space Bureau recorded that surrender the same day in Actions Taken public notice SES-02855 (released 22 April 2026). Each licence still had most of a 15-year term left.

Source: SES-02855, DOC-420955A1. The E240127 grant date is also on the ICFS application summary.

Call sign	File number	Site ID	City	Granted	Term
E240123	SES-LIC-20240619-01280	The New York, New Me	New York, NY	19 May 2025	19 May 2025 – 19 May 2040
E240126	SES-LIC-20240619-01284	The Send it! Gateway	Los Angeles, CA	19 May 2025	19 May 2025 – 19 May 2040
E240127	SES-LIC-20240619-01285	The Zot! Zot! Zot!	Irvine, CA	19 May 2025	19 May 2025 – 19 May 2040
E240134	SES-LIC-20240619-01292	The Madera Gateway	Madera, CA	18 March 2025	18 March 2025 – 18 March 2040
E250030	SES-LIC-20250429-00758	The 'Shark Tank' GW	San Jose, CA (123 Great Oaks Blvd)	21 July 2025	21 July 2025 – 21 July 2040

All five are fixed earth stations in the fixed-satellite service, using 1.85 m SpaceX antennas in Ka-band (17.8–18.6, 18.8–19.3, 27.5–29.1 and 29.5–30.0 GHz) and E-band (71–76 and 81–86 GHz), pointed at Starlink Gen1 (S2983/S3018) and Gen2 (S3069).

I could not verify, from the records retrieved, which of these five began under a 180-day STA, or those STAs' file numbers and grant dates. The surrendered authorizations themselves are SES-LIC grants, not STAs.

PROMPT 112 · LIST-BUILDING · FACTS AS OF 2026-10-09

Build a status table, as of 9 October 2026, of SpaceX's space-station filings that the Space Bureau placed on public notice or acted on during 2026: the orbital data center application, the first-generation minimum-elevation STA request, the Gen2 modification for new downlink bands, the 100,000-satellite application, and the direct-to-device constellation. For each give the ICFS file number, the call sign where one is assigned, what was requested in one line, the public notice or order (report number or DA number and date) and its status. Be careful to distinguish accepted-for-filing from granted, and say which parts of the one granted item were deferred.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Five rows from five different documents.
1. SAT-LOA-20260108-00016, no call sign in the notice: up to one million satellites, "SpaceX Orbital Data Center system", 500-2,000 km, 18.3-19.3 GHz down and 28.6-29.1 GHz up on a non-interference unprotected basis, with waivers of 25.156(d)/25.157, 25.164, 25.165 and 25.114(a)(1). Accepted for filing by DA 26-113 (4 Feb 2026), comments/petitions due 6 Mar, oppositions 16 Mar, replies 23 Mar 2026: https://docs.fcc.gov/public/attachments/DA-26-113A1.txt . Status: accepted for filing only; no grant, denial or dismissal appears in any 2026 Space Bureau notice through 7 Oct 2026.
2. SAT-STA-20260319-00133, S2983: additional 180 days to run Gen1 satellites at minimum elevation of 10 degrees in Ku-band above 53 degrees latitude; placed on notice in Report SAT-01988 (3 Apr 2026): https://docs.fcc.gov/public/attachments/DOC-420588A1.txt . Status: on notice as a request; the earlier identical request was SAT-STA-20250310-00065 (SAT-01903, 21 Mar 2025: https://docs.fcc.gov/public/attachments/DOC-410311A1.txt). A grant is not shown in the 2026 notices examined.
3. SAT-MOD-20260703-00275, S3069/S2992 (Gen2): filed 2026-07-06, global downlink in 12.7-13.25 GHz and 42.0-42.5 GHz, waivers of 2.106 and 25.114(a)(1). Accepted in SAT-02034 (4 Sep 2026): https://docs.fcc.gov/public/attachments/DOC-424723A1.txt . Pending.
4. SAT-LOA-20260630-00264, call sign S00887: filed 2026-07-07, 100,000 satellites in shells at 323-327.5 km and 473-477.5 km, inclinations 26 to 96.9 degrees, bands from 10.7-13.4 GHz up to 122.25-164.0 GHz. Accepted in SAT-02038 (18 Sep 2026): https://docs.fcc.gov/public/attachments/DOC-425160A1.txt . Pending.
5. SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339, call sign S00735, "SpaceX D2D Constellation", 15,000 satellites: GRANTED-IN-PART, DEFERRED-IN-PART with conditions by DA 26-1078, adopted and released 6 Oct 2026 (Acting Chief Space Bureau and Chief WTB): https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt . Deferred: MSS use of 2020-2025 MHz (Earth-to-space) in the United States, and the U.S. Table waiver for 20.2-21.2 GHz down / 30.0-31.0 GHz up outside the U.S.; Viasat's petition to deny was denied-in-part and deferred-in-part. Operational authority in the EchoStar bands is conditioned on step two of the DA 26-471 transaction.

Wrong answers: calling the one-million or 100,000-satellite applications granted; attaching S00887 or S00735 to the wrong row; saying DA 26-1078 granted 15,000 satellites without the deferrals; dating the D2D grant to May 2026 (that is the EchoStar assignment order).

Exa ✕ Wrong ✕ ✕ ✕ ✓ Claim not in sources 8.1m · $2.592 · 18 searches · 80 fetches

Judge: The answer says the Gen1 minimum-elevation STA was granted in full on 12 May 2026, which contradicts the on-notice status (fact 10), and nothing in the DATA supports that grant. It also omits several facts: the Gen2 report number SAT-02034 and its date, the 100,000-satellite report SAT-02038, the Row 3 waivers, the Row 4 inclinations, the Viasat ruling, the EchoStar condition, and the filing dates and pleading cycle. For fact 1 the judge marked the file number correct, because the DA 26-113 text shows call sign S00798 despite the checklist saying none appears in the notice.

As of 9 October 2026, four of these SpaceX space-station matters were only accepted for filing or, in one case, fully granted. The direct-to-device order is the partial grant; its deferred pieces are listed under that row. The first-generation elevation STA was also granted, in full, with nothing deferred.

Filing	ICFS file no.	Call sign	What was requested	Public notice / order	Status as of 9 Oct 2026
Orbital data center	SAT-LOA-20260108-00016	S00798	Launch and operate up to 1 million NGSO satellites (500–2,000 km) as an orbital data-center system, using optical links and non-interference TT&C in 18.3–19.3 GHz (space-to-Earth) and 28.6–29.1 GHz (Earth-to-space).	DA-26-113, released 4 Feb 2026. FCC notice; PDF	Accepted for filing only. No grant was identified.
Gen1 minimum-elevation STA	SAT-STA-20260319-00133	S2983/3018	180-day extension to cut the minimum elevation angle from 25° to 10° for Ku-band links (10.7–12.7 GHz space-to-Earth; 14.0–14.5 GHz Earth-to-space) with U.S. earth stations above 53° N.	Accepted for filing in Report No. SAT-01988 (3 Apr 2026). Stamp grant 12 May 2026; no DA number on the grant. Grant PDF	Granted in full, with conditions. Nothing deferred.
Gen2 new downlink bands	SAT-MOD-20260703-00275	S3069/S2992	Modify Gen2 to add global downlinks in 12.70–13.25 GHz and U.S. downlinks in 42.0–42.5 GHz (the latter already authorized outside the U.S.). Narrative	Listed as accepted for filing in DOC-425160 is Gen3; Gen2 is DOC-424723A1. Report number and release date were not extracted from that notice.	Accepted for filing, not granted. Report number/date not verified here.
100,000-satellite (Gen3) system	SAT-LOA-20260630-00264	S00887	Launch and operate 100,000 VLEO satellites (shells near 323–327.5 km and 473–477.5 km) for multi-gigabit service, using Ku/Ka/V/E-band plus W/D-band backhaul from 92–275 GHz. Filing summary	File number appears in DOC-425160A1. Secondary reports date the acceptance to 18 Sept 2026 (Advanced Television; The Sky). Report number was not extracted from the FCC PDF.	Accepted for filing, not granted. Do not treat acceptance as a license.
Direct-to-device constellation	SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339	S00735	15,000 NGSO satellites for U.S. MSS/SCS, MSS and direct-to-cell outside the U.S., and related FSS backhaul and TT&C. Acceptance public notice was earlier: DA-25-1018 (5 Dec 2025).	DA-26-1078, Authorization and Order, adopted and released 6 Oct 2026. Order; FCC page	Granted in part and deferred in part, with conditions. Not a full grant.

Deferred in DA-26-1078, not granted:

- U.S. MSS uplink in 2020–2025 MHz (Earth-to-space).
- Outside-the-U.S. use of 20.2–21.2 GHz (space-to-Earth) and 30.0–31.0 GHz (Earth-to-space), deferred because of heavy federal use.

- The residual request for MSS direct-to-cell outside the United States across the whole 1429–2690 MHz range, except the specific bands the order authorizes.

Separate from those deferrals, DA-26-398 (23 Apr 2026) had already dismissed with prejudice the requests for outside-U.S. operations in 1610–1626.5 / 2483.5–2500 MHz and in 1525–1559 / 1626.5–1660.5 MHz. Those bands were not left pending in the 6 October grant.

Parallel ⊗ Wrong ✗ ✗ ✗ ✓ Claim not in sources 14.3m · $3.103 · 20 searches · 71 fetches

> **Judge:** The answer gives the orbital data center row a call sign (S00798) although the notice lists none. It also states that the Gen1 elevation STA was granted (SAT-02000 / DA 26-488), which the sources and DATA do not show and the checklist says is not shown. It omits the row 1 pleading cycle, the earlier STA SAT-STA-20250310-00065, the filing dates for rows 3 and 4, and the EchoStar step-two condition.

As of 9 October 2026, four of these five SpaceX space-station matters were only accepted for filing. Two were later acted on by grant: the first-generation elevation STA (granted with conditions; the actions notice does not defer any part) and the direct-to-device constellation (the grant that deferred parts).

Filing	ICFS file no.	Call sign	Request (one line)	Public notice / order	Status as of 9 Oct 2026
Orbital data center	SAT-LOA-20260108-00016	S00798	Up to 1 million NGSO satellites (500–2,000 km) as an orbital data-center system, using optical links and non-interference Ka-band TT&C (18.3–19.3 GHz down / 28.6–29.1 GHz up), plus processing-round, milestone, bond, and Schedule S waivers	DA 26-113, 4 Feb 2026 (accepted for filing)	Accepted for filing only — not granted. DA-26-113
Gen1 minimum-elevation STA	SAT-STA-20260319-00133	S2983/S3018 (acceptance notice listed S2983)	Another 180 days to operate first-generation satellites at minimum elevation angles of no less than 10° in authorized Ku-band above 53° latitude	Accepted: Report No. SAT-01988, 3 Apr 2026. Grant: Report No. SAT-02000 / DA 26-488, released 15 May 2026 (action date 12 May 2026)	Granted, with conditions. The actions notice does not defer any part. SAT-01988; DA-26-488
Gen2 new downlink bands	SAT-MOD-20260703-00275	S3069/S2992	Modify the Gen2 Starlink license for global downlink in 12.7–13.25 GHz and 42.0–42.5 GHz, with waivers of 47 CFR §§ 2.106 and 25.114(a)(1)	Report No. SAT-02034, 4 Sept 2026 (accepted for filing)	Accepted for filing only — not granted. SAT-02034
100,000-satellite (Gen3) application	SAT-LOA-20260630-00264	S00887	Launch and operate 100,000 NGSO satellites in shells at 323–327.5 km and 473–477.5 km (inclinations 26°–96.9°), in Ku through sub-THz bands, with U.S. Table, Schedule S, EPFD, processing-round, and § 25.159(b) waivers	Report No. SAT-02038, 18 Sept 2026 (accepted for filing)	Accepted for filing only — not granted. SAT-02038
Direct-to-device constellation	SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339	S00735	Deploy and operate 15,000 NGSO satellites for U.S. SCS/MSS, MSS and direct-to-cell outside the U.S., and related FSS backhaul and TT&C	DA 26-1078, adopted and released 6 Oct 2026 (Space Bureau and Wireless Telecommunications Bureau). The 2025 acceptance notice was DA 25-1018, not a 2026 action	Granted in part and deferred in part, with conditions. DA-26-1078

Deferred parts of the D2D grant (DA 26-1078). The order is explicit that these requests were not granted:

- MSS in the 2020–2025 MHz (Earth-to-space) band in the United States.
- The U.S. Table waiver for 20.2–21.2 GHz (space-to-Earth) and 30.0–31.0 GHz (Earth-to-space) outside the United States, deferred because of extensive federal use.
- The broader request for MSS direct-to-cell outside the United States across the full 1429–2690 MHz range, except the specific bands authorized in the grant (and except bands already dismissed in the April 2026 MSS clarification order, DA 26-398).

Viasat's petition to deny was denied in part and deferred in part to the same extent. Requests in 1610–1626.5 / 2483.5–2500 MHz and 1525–1559 / 1626.5–1660.5 MHz outside the United States were not deferred in this order; they had already been dismissed in DA 26-398.

No later grant of the orbital-data-center, Gen2-downlink, or 100,000-satellite applications appears in Space Bureau satellite public notices through 2 October 2026 or in the 6 October D2D order.

> **Judge:** Row 1 is given an unsupported call sign S00798, where the notice shows none. Row 2 is called granted by DA 26-488 / SAT-02000, contradicting the on-notice-only status in Report SAT-01988 of 3 Apr 2026. Row 4's upper frequency of 275 GHz conflicts with the 122.25-164.0 GHz limit. The answer also omits the row 1 frequency bands and waivers and several context facts.

Status as of 9 October 2026. "Accepted for filing" is not a grant. Only the direct-to-device item has been acted on, and that action is a partial grant.

Filing	ICFS file no.	Call sign	What was requested	Public notice / order	Status
Orbital data center	SAT-LOA-20260108-00016	S00798	Authority for a new NGSO “Orbital Data Center” system of up to 1 million satellites, 500–2,000 km, using optical inter-satellite links and Ka-band TT&C, plus processing-round, milestone, bond, and Schedule S waivers	DA 26-113, released 4 February 2026 (Space Bureau accepts for filing and seeks comment)	Accepted for filing only. Comment cycle closed in March 2026. No grant found as of 9 October 2026. https://docs.fcc.gov/public/attachments/DA-26-113A1.pdf
First-generation minimum-elevation STA	SAT-STA-20260319-00133	S2983/3018	180-day extension of existing STA so first-generation satellites can serve U.S. earth stations in polar regions at reduced elevation (the underlying STA series lowers the minimum from 25° to 10° above 53° latitude in 10.7–12.7 and 14.0–14.5 GHz)	Actions Taken, DA 26-488 / Report No. SAT-02000, released 15 May 2026; date of action 12 May 2026	Granted, with conditions. This is an STA extension, not a permanent license modification. https://docs.fcc.gov/public/attachments/DA-26-488A1.pdf
Gen2 modification for new downlink bands	SAT-MOD-20260703-00275	S3069/2992	Modification of the Gen2 Starlink license to add global downlink operations in 12.7–13.25 GHz and 42.0–42.5 GHz, with waivers of 47 CFR §§ 2.106 and 25.114(a)(1)	Report No. SAT-02034, released 4 September 2026 (Applications Accepted for Filing)	Accepted for filing only; still pending. Not granted. https://docs.fcc.gov/public/attachments/DOC-424723A1.pdf
100,000-satellite application	SAT-LOA-20260630-00264	S00887	Launch and operating authority for 100,000 NGSO satellites in shells at 323–327.5 km and 473–477.5 km, inclinations 26°–96.9°, with Ku- through D-band frequencies (about 10.7 GHz to 275 GHz)	Report No. SAT-02038, released 18 September 2026 (Applications Accepted for Filing)	Accepted for filing on initial review only. The notice reserves the right to return the application. Not granted. https://docs.fcc.gov/public/attachments/DOC-425160A1.pdf
Direct-to-device constellation	SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339	S00735	A new 15,000-satellite NGSO system at 326–335 km for SCS and MSS in the U.S., MSS/direct-to-cell outside the U.S., and FSS backhaul and TT&C	Authorization and Order DA 26-1078, adopted and released 6 October 2026 (Space Bureau and Wireless Telecommunications Bureau). Earlier acceptance for filing was DA 25-1018 (2025), outside this table’s 2026 action window	Granted-in-part and deferred-in-part, with conditions. Not a full grant. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Deferred parts of the one granted item (DA 26-1078). The order authorizes the 15,000-satellite deployment and specified SCS, MSS, and FSS frequencies, but defers:

- MSS in the 2020–2025 MHz (Earth-to-space) band in the United States.
- The broader request for MSS direct-to-cell outside the United States across the full 1429–2690 MHz range, except the specific bands authorized in this grant or already dismissed.
- Any action on 20.2–21.2 GHz and 30.0–31.0 GHz, citing extensive federal use; any reopening would be coordinated with NTIA.

Separately, and not merely deferred: the MSS Clarification Order, DA 26-398, had already dismissed with prejudice the requests for 1610–1626.5 MHz, 2483.5–2500 MHz, 1525–1559 MHz, and 1626.5–1660.5 MHz outside the United States. U.S. operations in the EchoStar-related AWS-3, AWS-H, and 2 GHz MSS/AWS-4 bands are also conditioned on consummation of Step Two of the SpaceX–EchoStar transaction (DA 26-471).

Two caveats: the May 15 actions-taken notice records the Gen1 STA as “Granted, with conditions” but does not restate the elevation parameters; those parameters are carried from the prior grants in the same STA series (most recently the 24 April 2025 grant, DA 25-366). The fcc.report snapshot for SAT-MOD-20260703-00275 still showed “Pending Review” as of 30 July 2026, before the 4 September acceptance notice; I found no later grant.

Keenable SELECT ✗ Wrong ✗ ✗ ✓ ✓ Used the wrong source 17.0m · ~$0.606 · 22 searches · 2 fetches

> **Judge:** Row 2 is stated as granted (SAT-02000, DA 26-488, 15 May 2026), which contradicts the checklist's on-notice status. The answer also omits the SAT-01988 notice of 3 Apr 2026. Row 1 altitudes, bands and waivers, the pleading cycle, the earlier STA, the filing dates and the EchoStar condition are missing. The answer gives call sign S00798 for row 1, where the checklist says none, but the DA 26-113 footnote in the data supports it.

Status as of 9 October 2026. Four of the five items were only accepted for filing or granted as a routine STA. The one partial grant is the direct-to-device order, DA 26-1078 (6 October 2026). “Accepted for filing” is not a grant.

Filing	ICFS file number	Call sign	What was requested	Public notice / order	Status
Orbital data center	SAT-LOA-20260108-00016	S00798	Authority to launch and operate up to one million NGSO satellites as the “SpaceX Orbital Data Center system.”	DA 26-113, released 4 February 2026	**Accepted for filing** and put out for comment. Not granted. DA 26-113
First-generation minimum-elevation STA	SAT-STA-20260319-00133	S2983/3018	180-day further extension of the existing Gen1 polar STA (application title: “Gen1 Polar STA Further Extension Request”), continuing the series that lets first-generation satellites talk to U.S. earth stations at latitudes above 53° at elevations down to 10° instead of 25°, in 10.7–12.7 GHz (space-to-Earth) and 14.0–14.5 GHz (Earth-to-space).	Actions-taken notice, Report No. SAT-02000, DA 26-488, released 15 May 2026; date of action 12 May 2026	**Granted, with conditions.** Not accepted-for-filing. The notice itself does not restate the elevation numbers; those come from the application description and the prior grant in the same series. SAT-02000; filing record; prior grant, DA 25-366

Filing	ICFS file number	Call sign	What was requested	Public notice / order	Status
Gen2 modification, new downlink bands	SAT-MOD-20260703-00275	S3069/2992	Modification of the Gen2 Starlink license to permit global downlink operations in 12.7–13.25 GHz and 42.0–42.5 GHz.	Report No. SAT-02034, Friday 4 September 2026	**Accepted for filing** on initial review. Not granted. SAT-02034
100,000-satellite application	SAT-LOA-20260630-00264	S00887	Authority to deploy and operate 100,000 NGSO satellites in two bands of shells, nominal altitudes 323–327.5 km and 473–477.5 km, inclinations 26° to 96.9° in sun-synchronous orbits.	Report No. SAT-02038, Friday 18 September 2026	**Accepted for filing** on initial review. Not granted. SAT-02038
Direct-to-device constellation	SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339	S00735	A new NGSO system for SCS and MSS in the United States, MSS and direct-to-cell outside the United States, plus FSS backhaul and TT&C, using EchoStar-assigned spectrum and additional spectrum.	DA 26-1078, Space Bureau and Wireless Telecommunications Bureau, adopted and released 6 October 2026	**Granted in part and deferred in part.** This is the only partial grant. DA 26-1078

What DA 26-1078 actually granted. Authority for 15,000 NGSO satellites in nine shells from 335 km at 26° inclination down to 326 km at 96.87° inclination, for SCS and MSS in the United States, MSS and direct-to-cell outside the United States, and FSS backhaul and TT&C.

What that order deferred, not denied:
- MSS use of 2020–2025 MHz (Earth-to-space) in the United States.
- The broader request for MSS direct-to-cell outside the United States across the full 1429–2690 MHz range, except the portion authorized in this grant or already dismissed in the MSS Clarification Order.
- A waiver of the U.S. Table for 20.2–21.2 GHz (space-to-Earth) and 30.0–31.0 GHz (Earth-to-space) outside the United States, because of heavy federal use.

Viasat's petition to deny was denied in part and deferred in part. Do not treat the January 2026 Gen2 order, DA 26-36, as this item: that was a different grant-in-part/deferral, on the Gen2 upgrade applications, and it is not the 2026 new-downlink-band modification above.

Grok native ✗ Wrong ✗ ✗ ✓ ✓ Incomplete list `2.7m · $5.171 · 17 searches · 52 fetches`

> **Judge:** Row 2 (Gen1 min-elevation STA SAT-STA-20260319-00133, S2983, SAT-01988) was not found, and row 3's accepted-for-filing report SAT-02034 and requested bands 12.7-13.25 GHz were missing; the 42 GHz-only description is partial. Row 4's report SAT-02038 was not given. Row 1 listed call sign S00798, which the checklist says is absent from the notice, though the DA text does show S00798, so this is a likely checklist/answer mismatch.

As of 9 October 2026, only the direct-to-device application has been granted, and only in part. The others below that reached public notice are accepted for filing, not granted. Two items could not be tied to a 2026 report or DA number from the sources retrieved.

Filing	ICFS file number	Call sign	What was requested	2026 notice or order	Status as of 9 Oct 2026
Orbital data centers	SAT-LOA-20260108-00016	S00798	Launch and operate up to 1 million NGSO satellites as an orbital data-center system (optical links; TT&C in 18.3–19.3 GHz downlink and 28.6–29.1 GHz uplink, unprotected), with processing-round, milestone, bond, and Schedule S waivers.	DA 26-113, released 4 Feb 2026 (accept for filing; comments were due 6 Mar 2026).	Accepted for filing only. No grant found. https://docs.fcc.gov/public/attachments/DA-26-113A1.txt
First-generation minimum-elevation STA	Not verified	Not verified	A 2026 space-station STA to lower the Gen1 minimum elevation angle was not located in the sources retrieved. A 2025 analog (SAT-STA-20250310-00065, on Report No. SAT-01903, 21 Mar 2025) is a different proceeding.	Not verified for 2026.	Cannot confirm accepted-for-filing or grant.
Gen2 modification, new downlink bands	SAT-MOD-20260703-00275 (filed 6 July 2026)	S2992/S3069	Modify the Gen2 authorization to add U.S. NGSO FSS downlink in 42.0–42.5 GHz (already authorized outside the U.S. only). SpaceX calls this the Gen2 Ku/V modification; the full band list was not independently retrieved.	No 2026 report or DA number verified. As of SpaceX's 31 Aug 2026 STA narrative, the Bureau was still processing it.	Not granted on the record retrieved. Do not treat it as accepted for filing without the public notice. https://www.teslaoracle.com/wp-content/uploads/2026/09/SpaceX-FCC-Gen2-42-GHz-STA-Request-8-31-26.pdf
100,000-satellite (Gen3) application	SAT-LOA-20260630-00264	S00887	Authority for up to 100,000 Gen3 satellites in very low shells near 323–327.5 km and 473–477.5 km, for multi-gigabit / AI-scale connectivity, including higher-frequency backhaul.	Licensing Division public notice of 18 Sept 2026 accepting the application for filing. Report number not stated in the trade report. The notice said consideration may depend on earlier applications in the queue.	Accepted for filing only. Not a grant. https://www.advanced-television.com/2026/09/21/fcc-accepts-starlink-100000-satellite-plan-for-filing/ ; call sign from the July 2026 ICFS snapshot at https://fcc.report/IBFS/SAT-LOA-20260630-00264
Direct-to-device constellation	SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339	S00735 (GN Docket 25-340)	Launch and operate 15,000 NGSO satellites for U.S. SCS and MSS, MSS and direct-to-cell outside the U.S., and FSS backhaul and TT&C.	The accept-for-filing notice was DA 25-1018 (5 Dec 2025), not a 2026 notice. The 2026 action is DA 26-1078, adopted and released 6 Oct 2026.	Granted-in-part and deferred-in-part, with conditions. This is the only grant among the five. https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

Deferred parts of DA 26-1078 (not granted):

- U.S. MSS in 2020–2025 MHz (Earth-to-space).
- Direct-to-cell MSS outside the United States across the full 1429–2690 MHz range, except the specific segments the order authorizes.
- Waiver to use 20.2–21.2 GHz (space-to-Earth) and 30.0–31.0 GHz (Earth-to-space) outside the United States, deferred because of heavy federal use.

Requests for 1610–1626.5 MHz and 2483.5–2500 MHz, and for 1525–1559 MHz and 1626.5–1660.5 MHz, outside the United States were dismissed earlier in DA 26-398 (23 Apr 2026). Those are dismissals, not deferrals in DA 26-1078.

Accepted for filing is not a grant. No later grant of the orbital data-center or 100,000-satellite applications was found through 9 October 2026.

Keenable router → SELECT ✗ Wrong ✗ ✗ ✓ ✓ Used the wrong source 17.0m · ~$0.606 · 22 searches · 2 fetches

> **Judge:** Row 2 is stated as granted (SAT-02000, DA 26-488, 15 May 2026), which contradicts the checklist's on-notice status. The answer also omits the SAT-01988 notice of 3 Apr 2026. Row 1 altitudes, bands and waivers, the pleading cycle, the earlier STA, the filing dates and the EchoStar condition are missing. The answer gives call sign S00798 for row 1, where the checklist says none, but the DA 26-113 footnote in the data supports it.

Status as of 9 October 2026. Four of the five items were only accepted for filing or granted as a routine STA. The one partial grant is the direct-to-device order, DA 26-1078 (6 October 2026). "Accepted for filing" is not a grant.

Filing	ICFS file number	Call sign	What was requested	Public notice / order	Status
Orbital data center	SAT-LOA-20260108-00016	S00798	Authority to launch and operate up to one million NGSO satellites as the "SpaceX Orbital Data Center system."	DA 26-113, released 4 February 2026	**Accepted for filing** and put out for comment. Not granted. DA 26-113
First-generation minimum-elevation STA	SAT-STA-20260319-00133	S2983/3018	180-day further extension of the existing Gen1 polar STA (application title: "Gen1 Polar STA Further Extension Request"), continuing the series that lets first-generation satellites talk to U.S. earth stations at latitudes above 53° at elevations down to 10° instead of 25°, in 10.7–12.7 GHz (space-to-Earth) and 14.0–14.5 GHz (Earth-to-space).	Actions-taken notice, Report No. SAT-02000, DA 26-488, released 15 May 2026; date of action 12 May 2026	**Granted, with conditions.** Not accepted-for-filing. The notice itself does not restate the elevation numbers; those come from the application description and the prior grant in the same series. SAT-02000; filing record; prior grant, DA 25-366
Gen2 modification, new downlink bands	SAT-MOD-20260703-00275	S3069/2992	Modification of the Gen2 Starlink license to permit global downlink operations in 12.7–13.25 GHz and 42.0–42.5 GHz.	Report No. SAT-02034, Friday 4 September 2026	**Accepted for filing** on initial review. Not granted. SAT-02034
100,000-satellite application	SAT-LOA-20260630-00264	S00887	Authority to deploy and operate 100,000 NGSO satellites in two bands of shells, nominal altitudes 323–327.5 km and 473–477.5 km, inclinations 26° to 96.9° in sun-synchronous orbits.	Report No. SAT-02038, Friday 18 September 2026	**Accepted for filing** on initial review. Not granted. SAT-02038
Direct-to-device constellation	SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339	S00735	A new NGSO system for SCS and MSS in the United States, MSS and direct-to-cell outside the United States, plus FSS backhaul and TT&C, using EchoStar-assigned spectrum and additional spectrum.	DA 26-1078, Space Bureau and Wireless Telecommunications Bureau, adopted and released 6 October 2026	**Granted in part and deferred in part.** This is the only partial grant. DA 26-1078

What DA 26-1078 actually granted. Authority for 15,000 NGSO satellites in nine shells from 335 km at 26° inclination down to 326 km at 96.87° inclination, for SCS and MSS in the United States, MSS and direct-to-cell outside the United States, and FSS backhaul and TT&C.

What that order deferred, not denied:
- MSS use of 2020–2025 MHz (Earth-to-space) in the United States.
- The broader request for MSS direct-to-cell outside the United States across the full 1429–2690 MHz range, except the portion authorized in this grant or already dismissed in the MSS Clarification Order.
- A waiver of the U.S. Table for 20.2–21.2 GHz (space-to-Earth) and 30.0–31.0 GHz (Earth-to-space) outside the United States, because of heavy federal use.

Viasat's petition to deny was denied in part and deferred in part. Do not treat the January 2026 Gen2 order, DA 26-36, as this item: that was a different grant-in-part/deferral, on the Gen2 upgrade applications, and it is not the 2026 new-downlink-band modification above.

PROMPT 113 · LIST-BUILDING · FACTS AS OF 2026-10-09

SpaceX Services' quad-band Gen1/Gen2 gateways in Roma, Harlingen, Hidalgo, Falfurrias and Dallas, Texas have been running on 60-day STAs since July 2026 while the permanent licence applications work through ICFS. For each of the five sites give the call sign; every STA granted in 2026 with file number, date of action and term; the permanent licence application file number and the site ID in it; and the date the Bureau accepted that application for filing. One site missed the September re-grant that the others received, and the acceptance notice carries a ruling on an Iridium request; state both.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Rows span five notices. Quad-band STAs: 40 x 1.99 m antennas, Gen1 S2983/3018 and Gen2 S2992/3069, 27.5-30.0, 47.2-50.2, 50.4-52.4, 81.0-86.0, 92.0-94.0, 94.1-100.0, 102.0-109.5, 111.8-114.25 GHz up; 17.3-20.2, 37.5-42.0, 71.0-76.0 GHz down.

First wave, action 2026-07-09, term 2026-07-10 to 2026-09-07, Report SES-02880 (15 Jul 2026): https://docs.fcc.gov/public/attachments/DOC-423076A1.txt : Roma E260350 SES-STA-20260511-01295; Harlingen E260352 -01298; Hidalgo E260424 SES-STA-20260601-01518; Dallas E260420 SES-STA-20260601-01510.
Falfurrias E260348: SES-STA-20260511-01294, action 2026-07-30, term 2026-07-31 to 2026-09-28, quad-band 20 x 1.99 m plus dual-band 20 x 1.85 m, in SES-02886 (5 Aug 2026): https://docs.fcc.gov/public/attachments/DOC-424063A1.txt
Re-grants, action 2026-09-22, term 2026-09-23 to 2026-11-21, SES-02899 (23 Sep 2026): https://docs.fcc.gov/public/attachments/DOC-425290A1.txt : Roma SES-STA-20260815-02300; Harlingen -02302; Hidalgo -02307; Dallas -02305. Falfurrias is NOT in this notice; its quad-band STA lapsed 28 Sep 2026.
42.0-42.5 GHz-only STAs (Gen2 only), filed 2026-09-01, action 2026-09-28, term 2026-09-25 to 2026-11-23, SES-02901 (30 Sep 2026): https://docs.fcc.gov/public/attachments/DOC-425486A1.txt : Falfurrias SES-STA-20260831-02457; Dallas -02458. Roma, Harlingen and Hidalgo have none.

Licence applications accepted for filing in SES-02900 (30 Sep 2026): https://docs.fcc.gov/public/attachments/DOC-425484A1.txt : Roma SES-LIC-20260429-01218, The "And She Dances on the Sand" Gateway, 26 N Conquistador; Harlingen SES-LIC-20260501-01231, The "Six-Shooter Junction" Gateway, 2625 TX-25 Spur; Hidalgo SES-LIC-20260601-01512, The "GG" Gateway, 1711 E Ramon Ayala Drive; Falfurrias SES-LIC-20260429-01217, The "League of Its Own" Gateway, 7132 W FM 1418; Dallas SES-LIC-20260601-01507, The "Da Pop" Gateway, 1950 N Stemmons Fwy. Each entry states the Bureau "decline[s] Iridium's request to dismiss the instant application as facially deficient", because Iridium's point goes to 47 CFR 25.203(k) burdens, not completeness, and acceptance is no determination on grant.

Wrong answers: saying the licences were granted (they are accepted for filing, pending); giving Falfurrias a 23 Sep to 21 Nov term; treating the 42 GHz STAs as renewals of the quad-band STAs; the Eloy, AZ STA SES-STA-20260511-01297 is not a Texas site.

Exa ✗ Wrong — Incomplete list — 15.2m · $4.628 · 15 searches · 101 fetches

Judge: The answer got the call signs, the STA file numbers and dates, the re-grants, and Falfurrias missing the re-grant right. It missed the site IDs and names, the SES-02900 acceptance notice and its 30 Sep date, and the Iridium ruling and its reasoning, and it did not report the 42 GHz STA grant (SES-02901) or the Dallas 42 GHz STA file number.

I'll look up the FCC records for those five SpaceX Services Texas gateway sites and their 2026 STAs and permanent applications.The first pass found Roma, Falfurrias, and Hidalgo. I'll pull the remaining sites and the grant and acceptance dates.The index is stale past mid-September, so I'm checking the August renewal STA batch and FCC public notices directly.The September 22 re-grant is in SES-02899. Next I'll pull the July grants, site IDs, and the acceptance notice.Falfurrias missed the 22 September 2026 re-grant. Site IDs, accepted-for-filing dates, and any Iridium ruling on an acceptance notice could not be verified.

Call signs and underlying licence applications

Site	Call sign	Permanent application
Roma	E260350	SES-LIC-20260429-01218
Harlingen	E260352	SES-LIC-20260501-01231
Hidalgo	E260424	SES-LIC-20260601-01512
Falfurrias	E260348	SES-LIC-20260429-01217
Dallas	E260420	SES-LIC-20260601-01507

Sources: Roma STA, Harlingen STA, Hidalgo STA, Falfurrias STA, Dallas STA.

STAs granted in 2026
Roma — E260350
- SES-STA-20260511-01295. Action 9 July 2026. ICFS expiration 7 September 2026. Term start was not on a stamp I opened; the Dallas stamp in the same 9 July batch runs 10 July–7 September 2026. ICFS record
- SES-STA-20260815-02300. Action 22 September 2026. Term 23 September–21 November 2026. Report No. SES-02899

Harlingen — E260352
- SES-STA-20260511-01298. Action 9 July 2026. Expiration 7 September 2026. Same term-start caveat as Roma. ICFS record
- SES-STA-20260815-02302. Action 22 September 2026. Term 23 September–21 November 2026. SES-02899

Hidalgo — E260424
- SES-STA-20260601-01518. Action 9 July 2026. Expiration 7 September 2026. Same term-start caveat. ICFS record
- SES-STA-20260815-02307. Action 22 September 2026. Term 23 September–21 November 2026. SES-02899

Dallas — E260420
- SES-STA-20260601-01510. Action 9 July 2026. Term 10 July–7 September 2026. Grant stamp
- SES-STA-20260815-02305. Action 22 September 2026. Term 23 September–21 November 2026. SES-02899

Falfurrias — E260348

- SES-STA-20260511-01294. Action 30 July 2026. Term 31 July–28 September 2026. Grant stamp
- No second 2026 grant found. It is not in the 22 September re-grant in SES-02899. Its July STA ran to 28 September, so it was not in the batch that expired 7 September.

What was not verified
- Site ID in each permanent application. Schedule B and the accepted-for-filing notices were not retrieved.
- Date the Bureau accepted each application for filing.
- An Iridium ruling on an acceptance notice. The Iridium ruling that was verified is on the STA grants, not on an acceptance notice. On the Dallas and Falfurrias stamps, condition 4 says that, for the STA operations only, Iridium's petition is denied, and that no determination is made as the petition relates to any associated licence application. Dallas stamp; Falfurrias stamp.

A separate Falfurrias request, SES-STA-20260831-02457 (42.0–42.5 GHz only), was still pending as of the 20 September ICFS snapshot and was not in SES-02899. Record.

Parallel ✗ Wrong ✗ ✓ ✗ ✓ Incomplete list `10.4m · $3.712 · 17 searches · 51 fetches`

> **Judge:** The answer contains only process narration (searching and reading notices) and no actual call signs, file numbers, dates, terms, application numbers, acceptance notice, or Iridium ruling. Every fact is missing; the one hint that Falfurrias is missing from SES-02899 is a narrated step, not a committed answer with details.

I'll look up the SpaceX Services Texas gateway STA and permanent-license filings and pull the call signs, file numbers, and dates from the sources.The July grants are in SES-02880. Next I'll pull the September re-grants, the Falfurrias STA, and the permanent license filings.September 9 has the SES action notices. I'll read those and the surrounding accepted-for-filing reports.The September 22 re-grants are in SES-02899; Falfurrias is the one missing. I'll now match the permanent applications and the Falfurrias grant notice.

Keenable search Partly correct ✓ ✗ ✓ ✓ Incomplete list `11.0m · ~$1.289 · 61 searches · 9 fetches`

> **Judge:** The answer missed the 22 Sep 2026 re-grants (term 23 Sep to 21 Nov, SES-02899) for Roma, Harlingen, Hidalgo and Dallas, and said they were not found granted, which contradicts fact 9. It also omitted the Gen1/Gen2 antenna counts and frequency bands, the Falfurrias dual-band antennas, and the point that Roma, Harlingen and Hidalgo have no 42 GHz STAs. It tied the Iridium ruling only to Roma, though it said the paragraph is repeated across the notice.

The five gateways are quad-band Starlink Gen1 (S2983/S3018) and Gen2 (S2992/S3069) earth stations. I could not verify a September quad-band re-grant for any of them. The August 21 renewal filings for four sites were still pending on the ICFS mirror, and they do not appear in the Space Bureau actions notices through September 30, 2026. Falfurrias is the site off that cycle.

Roma — E260350. Site ID in SES-LIC-20260429-01218: The "And She Dances on the Sand" Gateway, 26 N Conquistador, Roma. The only 2026 STA I can confirm as granted is SES-STA-20260511-01295: action July 9, 2026; 60 days, July 10 through September 7, 2026. The renewal, SES-STA-20260815-02300, was filed August 21, 2026, for 60 days from September 7; I found no grant. Accepted for filing September 30, 2026, in Report No. SES-02900. That entry carries the Iridium ruling below. Sources: DOC-423076A1, DOC-425484A1, SES-STA-20260815-02300.

Harlingen — E260352. Site ID in SES-LIC-20260501-01231: The "Six-Shooter Junction" Gateway, 2625 TX-25 Spur, Harlingen. Coordinates match the STA (26° 11′ 29.9″ N, 97° 43′ 26″ W). Granted STA: SES-STA-20260511-01298, action July 9, 2026; July 10 through September 7, 2026. Renewal SES-STA-20260815-02302, filed August 21, 2026, was not found granted. Accepted for filing September 30, 2026, SES-02900. Sources: DOC-423076A1, DOC-425484A1, SES-STA-20260511-01298.

Hidalgo — E260424. Site ID in SES-LIC-20260601-01512: The "GG" Gateway, 1711 E Ramon Ayala Drive, Hidalgo. The waiver attachment is titled "Hidalgo, TX - Narrative and Waivers - GG." Granted STA: SES-STA-20260601-01518, action July 9, 2026; July 10 through September 7, 2026. Renewal SES-STA-20260815-02307, filed August 21, 2026, was not found granted. Accepted for filing September 30, 2026, SES-02900. Sources: DOC-423076A1, DOC-425484A1, SES-STA-20260601-01518.

Dallas — E260420. Site ID in SES-LIC-20260601-01507: The "Da Pop" Gateway, 1950 N Stemmons Freeway, Suite 1034, Dallas. The waiver attachment is titled "Dallas, TX - Narrative and Waiver Requests - Da Pop." Quad-band STA: SES-STA-20260601-01510, action July 9, 2026; July 10 through September 7, 2026. Renewal SES-STA-20260815-02305, filed August 21, 2026, was not found granted. A separate 42.0–42.5 GHz receive STA, SES-STA-20260831-02458, was granted with action September 28, 2026, for September 25 through November 23, 2026, with Gen2 only. That is not the quad-band renewal. The licence was accepted for filing September 30, 2026, SES-02900. Sources: DOC-423076A1, DOC-425486A1, DOC-425484A1.

Falfurrias — E260348. This is the site that missed the September cycle. Site ID in SES-LIC-20260429-01217: The "League of Its Own" Gateway, 7132 W FM 1418, Falfurrias. Its quad-band STA, SES-STA-20260511-01294, was granted July 30, 2026, and expired September 28, 2026, not on the July 9 / September 7 schedule of the other four. I could not find the grant text in an FCC actions notice; those dates are from the ICFS mirror. There is no Falfurrias quad-band renewal in the August 21 batch. A separate 42.0–42.5 GHz STA, SES-STA-20260831-02457, was granted with action September 28, 2026, for September 25 through November 23, 2026. The licence was accepted for filing September 30, 2026, SES-02900. Sources: SES-STA-20260511-01294, DOC-425486A1, DOC-425484A1.

Iridium ruling. In SES-02900, released September 30, 2026, the Bureau declined Iridium's request to dismiss the Roma application, SES-LIC-20260429-01218, as facially deficient. It said the dispute is whether the applicant met its burden under 47 CFR 25.203(k), not whether the application has the information needed for public review, so the application is complete for accepted-for-filing purposes. The Bureau expressly made no grant-or-denial finding. The same paragraph is repeated for other SpaceX applications in that notice; the indexed text ties it to the Roma file among these five. Source: DOC-425484A1.

Keenable SELECT Partly correct ✓ ✓ ✓ ✓ Incomplete list `24.2m · ~$2.390 · 56 searches · 1 fetches`

> **Judge:** The answer omits Dallas's 42 GHz-only STA SES-STA-20260831-02458, even though the prompt asked for every 2026 STA. It also does not state that Roma, Harlingen and Hidalgo have no 42 GHz-only STAs, and it leaves out the context details on antenna counts and bands (facts 1 and 8).

All five permanent applications were accepted on the same September 30 notice, and the Iridium ruling is repeated on each entry. The September STA re-grant covered four sites; Falfurrias was not among them.

Roma — E260350. Site ID: The "And She Dances on the Sand" Gateway.
- STA SES-STA-20260511-01295, granted July 9, 2026, 60 days (July 10–September 7, 2026). SES-02880
- STA SES-STA-20260815-02300, granted September 22, 2026, 60 days (September 23–November 21, 2026). SES-02899
- Permanent application SES-LIC-20260429-01218, accepted for filing September 30, 2026. SES-02900

Harlingen — E260352. Site ID: The "Six-Shooter Junction" Gateway.
- STA SES-STA-20260511-01298, granted July 9, 2026, 60 days (July 10–September 7, 2026). SES-02880
- STA SES-STA-20260815-02302, granted September 22, 2026, 60 days (September 23–November 21, 2026). SES-02899
- Permanent application SES-LIC-20260501-01231, accepted for filing September 30, 2026. SES-02900

Hidalgo — E260424. Site ID: The "GG" Gateway.
- STA SES-STA-20260601-01518, granted July 9, 2026, 60 days (July 10–September 7, 2026). SES-02880
- STA SES-STA-20260815-02307, granted September 22, 2026, 60 days (September 23–November 21, 2026). SES-02899
- Permanent application SES-LIC-20260601-01512, accepted for filing September 30, 2026. SES-02900

Dallas — E260420. Site ID: The "Da Pop" Gateway.
- STA SES-STA-20260601-01510, granted July 9, 2026, 60 days (July 10–September 7, 2026). SES-02880
- STA SES-STA-20260815-02305, granted September 22, 2026, 60 days (September 23–November 21, 2026). SES-02899
- Permanent application SES-LIC-20260601-01507, accepted for filing September 30, 2026. SES-02900

Falfurrias — E260348. Site ID: The "League of Its Own" Gateway. This is the site that missed the September 22 re-grant.
- STA SES-STA-20260511-01294, granted July 30, 2026, 60 days (July 31–September 28, 2026). SES-02886
- No second 2026 grant of the quad-band STA. The only later 2026 grant for this call sign, SES-STA-20260831-02457 (action September 28, 2026; September 25–November 23, 2026), authorizes only 42.0–42.5 GHz reception, not the quad-band operation. SES-02901
- Permanent application SES-LIC-20260429-01217, accepted for filing September 30, 2026. SES-02900

The Bureau accepted all five license applications for filing on September 30, 2026, in Report No. SES-02900. On each of the five entries it declined Iridium's request to dismiss the application as facially deficient, holding that whether the applicant met its burden under 47 CFR 25.203(k) is not a question of whether the application contains the information needed for public review, and that each application was complete for accepted-for-filing purposes. SES-02900

> **Judge:** The answer missed the 22 Sep 2026 re-grants (term 23 Sep to 21 Nov, SES-02899) for Roma, Harlingen, Hidalgo and Dallas, and said they were not found granted, which contradicts fact 9. It also omitted the Gen1/Gen2 antenna counts and frequency bands, the Falfurrias dual-band antennas, and the point that Roma, Harlingen and Hidalgo have no 42 GHz STAs. It tied the Iridium ruling only to Roma, though it said the paragraph is repeated across the notice.

The five gateways are quad-band Starlink Gen1 (S2983/S3018) and Gen2 (S2992/S3069) earth stations. I could not verify a September quad-band re-grant for any of them. The August 21 renewal filings for four sites were still pending on the ICFS mirror, and they do not appear in the Space Bureau actions notices through September 30, 2026. Falfurrias is the site off that cycle.

Roma — E260350. Site ID in SES-LIC-20260429-01218: The “And She Dances on the Sand” Gateway, 26 N Conquistador, Roma. The only 2026 STA I can confirm as granted is SES-STA-20260511-01295: action July 9, 2026; 60 days, July 10 through September 7, 2026. The renewal, SES-STA-20260815-02300, was filed August 21, 2026, for 60 days from September 7; I found no grant. Accepted for filing September 30, 2026, in Report No. SES-02900. That entry carries the Iridium ruling below. Sources: DOC-423076A1, DOC-425484A1, SES-STA-20260815-02300.

Harlingen — E260352. Site ID in SES-LIC-20260501-01231: The “Six-Shooter Junction” Gateway, 2625 TX-25 Spur, Harlingen. Coordinates match the STA (26° 11′ 29.9″ N, 97° 43′ 26″ W). Granted STA: SES-STA-20260511-01298, action July 9, 2026; July 10 through September 7, 2026. Renewal SES-STA-20260815-02302, filed August 21, 2026, was not found granted. Accepted for filing September 30, 2026, SES-02900. Sources: DOC-423076A1, DOC-425484A1, SES-STA-20260511-01298.

Hidalgo — E260424. Site ID in SES-LIC-20260601-01512: The “GG” Gateway, 1711 E Ramon Ayala Drive, Hidalgo. The waiver attachment is titled “Hidalgo, TX - Narrative and Waivers - GG.” Granted STA: SES-STA-20260601-01518, action July 9, 2026; July 10 through September 7, 2026. Renewal SES-STA-20260815-02307, filed August 21, 2026, was not found granted. Accepted for filing September 30, 2026, SES-02900. Sources: DOC-423076A1, DOC-425484A1, SES-STA-20260601-01518.

Dallas — E260420. Site ID in SES-LIC-20260601-01507: The “Da Pop” Gateway, 1950 N Stemmons Freeway, Suite 1034, Dallas. The waiver attachment is titled “Dallas, TX - Narrative and Waiver Requests - Da Pop.” Quad-band STA: SES-STA-20260601-01510, action July 9, 2026; July 10 through September 7, 2026. Renewal SES-STA-20260815-02305, filed August 21, 2026, was not found granted. A separate 42.0–42.5 GHz receive STA, SES-STA-20260831-02458, was granted with action September 28, 2026, for September 25 through November 23, 2026, with Gen2 only. That is not the quad-band renewal. The licence was accepted for filing September 30, 2026, SES-02900. Sources: DOC-423076A1, DOC-425486A1, DOC-425484A1.

Falfurrias — E260348. This is the site that missed the September cycle. Site ID in SES-LIC-20260429-01217: The “League of Its Own” Gateway, 7132 W FM 1418, Falfurrias. Its quad-band STA, SES-STA-20260511-01294, was granted July 30, 2026, and expired September 28, 2026, not on the July 9 / September 7 schedule of the other four. I could not find the grant text in an FCC actions notice; those dates are from the ICFS mirror. There is no Falfurrias quad-band renewal in the August 21 batch. A separate 42.0–42.5 GHz STA, SES-STA-20260831-02457, was granted with action September 28, 2026, for September 25 through November 23, 2026. The licence was accepted for filing September 30, 2026, SES-02900. Sources: SES-STA-20260511-01294, DOC-425486A1, DOC-425484A1.

Iridium ruling. In SES-02900, released September 30, 2026, the Bureau declined Iridium’s request to dismiss the Roma application, SES-LIC-20260429-01218, as facially deficient. It said the dispute is whether the applicant met its burden under 47 CFR 25.203(k), not whether the application has the information needed for

public review, so the application is complete for accepted-for-filing purposes. The Bureau expressly made no grant-or-denial finding. The same paragraph is repeated for other SpaceX applications in that notice; the indexed text ties it to the Roma file among these five. Source: DOC-425484A1.

PROMPT 114 · LIST-BUILDING · FACTS AS OF 2026-10-09

SpaceX Services holds call sign E240163 for a single-antenna V-band gateway in Redmond, Washington that talks only to Starlink Gen2 (S3069). List every action the Space Bureau took on STA requests for E240163 during 2026 through 9 October 2026: file number, date filed, date of action, term if any, and the bands authorized. Three of the actions were taken on the same day; explain what distinguishes them. Do not assume every STA grant carries a 60-day term.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Five actions in three notices; the station is one 1.85 m antenna, Gen2 S3069 only, 47.2-50.2 and 50.4-51.4 GHz Earth-to-space, 37.5-42.5 GHz space-to-Earth.
Report SES-02843 (11 Mar 2026): https://docs.fcc.gov/public/attachments/DOC-419434A1.txt
1. SES-STA-20251118-00806, filed 2025-11-18, action 2026-03-10, no term: "granted pursuant to section 1.62 of the Commission's rules to reflect continuing operations".
2. SES-STA-20260112-00798, filed 2026-01-12, action 2026-03-10, section 1.62, no term.
3. SES-STA-20260306-00754, filed 2026-03-06, action 2026-03-10, 60-day term 2026-03-11 to 2026-05-09.
So on 10 March the Bureau closed out two pending continuation requests under 1.62 and issued one fresh dated STA.
Report SES-02864 (20 May 2026): https://docs.fcc.gov/public/attachments/DOC-421872A1.txt
4. SES-STA-20260428-01160, filed 2026-04-29, action 2026-05-19, term 2026-05-20 to 2026-07-18.
Report SES-02895 (9 Sep 2026): https://docs.fcc.gov/public/attachments/DOC-424824A1.txt
5. SES-STA-20260620-01841, filed 2026-07-01, action 2026-09-08, term 2026-09-08 to 2026-11-06 ("additional 60-day").
No further E240163 action appears through SES-02903 (7 Oct 2026). Wrong answers: only three rows; inventing 60-day terms for 00806 and 00798; describing the station as Ka-band or multi-antenna; listing the Redmond experimental ELS request (Ka-band parabolic antennas, Woodinville) as part of this chain.

Exa ✗ Wrong — Incomplete list — 6.7m · $6.704 · 13 searches · 82 fetches

Judge: The answer reports four actions instead of five, which contradicts fact 1. It omits SES-STA-20260428-01160 (filed 2026-04-29, acted 2026-05-19, term 2026-05-20 to 2026-07-18) and the Report SES-02864 (20 May) notice that carried it, so facts 9 and 10 are missing.

The Space Bureau's verified 2026 actions on STA requests for E240163, through 9 October 2026, are four grants. Three were taken on 10 March 2026.

10 March 2026 (Report No. SES-02843, released 11 March 2026)
Source: https://docs.fcc.gov/public/attachments/DOC-419434A1.txt

File number	Date filed	Date of action	Term	Bands in the action notice
SES-STA-20251118-00806	18 Nov 2025	10 Mar 2026	None stated	None stated
SES-STA-20260112-00798	12 Jan 2026	10 Mar 2026	None stated	None stated
SES-STA-20260306-00754	6 Mar 2026	10 Mar 2026	11 Mar 2026–9 May 2026 (60 days)	47.2–50.2 and 50.4–51.4 GHz Earth-to-space; 37.5–42.5 GHz space-to-Earth

What distinguishes the three same-day actions: SES-STA-20260306-00754 is a new 60-day operating grant for the single 1.85 m Redmond antenna with Starlink Gen2 (S3069) only, and it is the only one of the three that states a term and the V-band frequencies above. The other two are grants under 47 CFR § 1.62 "to reflect continuing operations" on earlier pending STA requests. The notice does not give them a new term or list bands.

8 September 2026 (Report No. SES-02895, released 9 September 2026)
Sources: https://docs.fcc.gov/public/attachments/DOC-424824A1.txt and the grant stamp at https://fcc.report/IBFS/SES-STA-20260620-01841/c967df842fdfc310c7a543ca6fa4e309.pdf?raw=1

File number	Date filed	Date of action	Term	Bands authorized
SES-STA-20260620-01841	1 Jul 2026	8 Sep 2026	8 Sep 2026–6 Nov 2026 (60 days)	47.2–50.2 and 50.4–51.4 GHz Earth-to-space; 37.5–42.5 GHz space-to-Earth

That grant is also for one 1.85 m antenna in Redmond talking only to Starlink Gen2 (S3069). Condition 10 says operations between expiration of the previous STA and the start of this STA were authorized as continuing operations under 47 CFR § 1.62. That is a condition of this grant, not a separate file action in the notice.

I did not find another E240163 STA action in the complete Actions Taken notices of 28 January, 6 May, 13 May, 3 June, 1 July, 5 August, and 7 October 2026. The 7 October notice is the last SES Actions Taken notice before 9 October; the 8 October Daily Digest has no SES actions notice. I could not open the 7 January and 14 January Actions Taken attachments, and the 20 May and 9 September notices were truncated before their last pages, so those tails are unverified.

Parallel ✓ Correct — 4.1m · $0.710 · 15 searches · 26 fetches

Judge: The answer never states that the station is a single 1.85 m antenna (fact 2); it only mentions Gen2 S3069. It does not give the report numbers SES-02864 and SES-02895, but the 20 May and 9 September notices it cites match. Every required fact and the five-action count are correct, and no trap was asserted.

The Space Bureau took five actions on STA requests for E240163 from 1 January 2026 through 9 October 2026. All five were grants. ICFS lists no other STA file for this call sign, and none of these files has a later action date. Sources: the 11 March, 20 May, and 9 September 2026 Actions Taken public notices, plus the ICFS call-sign record retrieved 9 October 2026.

10 March 2026 — three grants, reported in SES-02843

1. **SES-STA-20251118-00806.** Filed 18 November 2025. Action 10 March 2026: Grant of Authority under 47 CFR § 1.62 "to reflect continuing operations." No term. No bands stated.
https://docs.fcc.gov/public/attachments/DOC-419434A1.txt

2. **SES-STA-20260112-00798.** Filed 12 January 2026. Action 10 March 2026: the same § 1.62 continuing-operations grant. No term. No bands stated.
https://docs.fcc.gov/public/attachments/DOC-419434A1.txt

3. **SES-STA-20260306-00754.** Filed 6 March 2026. Action 10 March 2026: a 60-day STA from 11 March 2026 through 9 May 2026. Bands: 47.2–50.2 GHz and 50.4–51.4 GHz (Earth-to-space) and 37.5–42.5 GHz (space-to-Earth), with Starlink Gen2 (S3069).
https://docs.fcc.gov/public/attachments/DOC-419434A1.txt
https://api-prod.fcc.gov/icfs-attachment/exp/api/v1/25a9c2ed47277650418b674c926d43c8

What distinguishes the three same-day actions: the first two only close pending renewal requests by recognizing operations that had already continued under § 1.62. They do not set a new term or list frequencies. They differ from each other only by which request they dispose of (filed 18 November 2025 versus 12 January 2026). The third is a new 60-day operating STA with a stated term and the V-band frequencies above.

Later grants

4. **SES-STA-20260428-01160.** Filed 29 April 2026. Action 19 May 2026: 60-day STA from 20 May 2026 through 18 July 2026. Same bands: 47.2–50.2 GHz and 50.4–51.4 GHz (Earth-to-space) and 37.5–42.5 GHz (space-to-Earth).
https://docs.fcc.gov/public/attachments/DOC-421872A1.txt

5. **SES-STA-20260620-01841.** Filed 1 July 2026. Action 8 September 2026: additional 60-day STA from 8 September 2026 through 6 November 2026 (the term starts on the action date, not the next day). Same three bands.
https://docs.fcc.gov/public/attachments/DOC-424824A1.pdf

---

Keenable search ✗ Wrong — Incomplete list — 9.0m · ~$2.110 · 98 searches · 2 fetches

> **Judge:** The answer found no 2026 STA actions, so it misses the five actions, their file numbers, dates and terms, and the explanation of the three same-day actions (facts 1, 4-13). It does correctly give the 1.85 m antenna, the S3069 link and the bands, though those came from a 2024 notice.

Hit its tool-call or time budget and was forced to answer.

I could not verify any 2026 Space Bureau actions on STA requests for call sign E240163 through 9 October 2026, so I cannot list file numbers, filing dates, action dates, terms, or authorized bands without guessing.

What is verifiable is the underlying station, not a 2026 STA action. In the FCC's 18 September 2024 accepted-for-filing public notice, E240163 is tied to SES-LIC-20240904-01889 for SpaceX Services, Inc.'s "Redmond VBand Gatewa" in King County, Redmond, Washington (47° 41' 46.60" N, 122° 2' 7.10" W), pointing only to SpaceX GEN2 (S3069). The listed emissions are 37.5–42.5 GHz, 47.2–50.2 GHz, and 50.4–51.4 GHz on a 1.85 m antenna. That notice is an acceptance for filing, not a 2026 STA grant. https://docs.fcc.gov/public/attachments/DOC-405591A1.pdf

Searches of 2026 Space Bureau SES "Actions Taken" notices and secondary filing indexes did not produce a matching E240163 STA entry. I therefore cannot identify the three same-day actions or what distinguishes them.

Cited: 1. docs.fcc.gov

Keenable SELECT ✓ Correct — 16.7m · ~$3.163 · 89 searches · 8 fetches

> **Judge:** All checklist facts are correctly stated and no traps asserted. The cited FCC public notices are plausible support, though the DATA window shows only tangential material.

The Space Bureau took five actions on STA requests for E240163 from 1 January through 9 October 2026. All five were grants. Four are in the weekly "Actions Taken" notices; the same-day trio is in Report No. SES-02843.

10 March 2026 — three grants, one notice. Report No. SES-02843 (released 11 March 2026) lists three SpaceX Services, Inc. STA grants for E240163, each with date of action 10 March 2026. They are different file numbers, not three copies of one grant:

File number	Date filed	Action	Term	Bands
SES-STA-20251118-00806	18 November 2025	Grant of Authority	None stated. "Application granted pursuant to section 1.62 of the Commission's rules to reflect continuing operations."	Not stated in the action
SES-STA-20260112-00798	12 January 2026	Grant of Authority	None stated. Same § 1.62 continuing-operations language.	Not stated in the action
SES-STA-20260306-00754	6 March 2026	Grant of Authority	60 days, 11 March 2026 through 9 May 2026	47.2–50.2 GHz and 50.4–51.4 GHz (Earth-to-space); 37.5–42.5 GHz (space-to-Earth)

The narrative on SES-STA-20260306-00754 is the only one of the three that authorizes a new term and names the bands. It covers the Redmond, WA gateway, one 1.85 m antenna, communicating with Starlink Gen2 (S3069). The other two are § 1.62 grants "to reflect continuing operations," with no term and no bands in the action text. That is the distinction: one prospective 60-day operating grant, and two administrative grants of earlier-filed STAs so the record shows operations that had continued under § 1.62.

19 May 2026. Report No. SES-02864 (released 20 May 2026): SES-STA-20260428-01160, filed 29 April 2026, Grant of Authority. Term: 60 days, 20 May 2026 through 18 July 2026. Bands: 47.2–50.2 GHz and 50.4–51.4 GHz (Earth-to-space) and 37.5–42.5 GHz (space-to-Earth). Same station description: one 1.85 m antenna in Redmond,

WA, to Starlink Gen2 (S3069).

8 September 2026. Report No. SES-02895 (released 9 September 2026): SES-STA-20260620-01841, filed 1 July 2026, Grant of Authority. Term: an additional 60 days, 8 September 2026 through 6 November 2026. Same bands and the same one-antenna Redmond gateway to S3069.

I did not find a Space Bureau dismissal, denial, or other non-grant action on an E240163 STA in this window. The weekly Actions Taken notices from SES-02825 (7 January 2026) through SES-02903 (7 October 2026) were checked; E240163 appears only in SES-02843, SES-02864, and SES-02895. SES-02854 has no public Daily Digest entry. Accepted-for-filing notices in the same series do not list E240163, so these five grants are the actions, not acceptances.

Keenable router → SELECT ✓ **Correct** ✓ ✓ ✓ ✓ `16.8m · ~$3.163 · 89 searches · 8 fetches`

> **Judge:** All checklist facts are correctly stated and no traps asserted. The cited FCC public notices are plausible support, though the DATA window shows only tangential material.

The Space Bureau took five actions on STA requests for E240163 from 1 January through 9 October 2026. All five were grants. Four are in the weekly "Actions Taken" notices; the same-day trio is in Report No. SES-02843.

10 March 2026 — three grants, one notice. Report No. SES-02843 (released 11 March 2026) lists three SpaceX Services, Inc. STA grants for E240163, each with date of action 10 March 2026. They are different file numbers, not three copies of one grant:

File number	Date filed	Action	Term	Bands
SES-STA-20251118-00806	18 November 2025	Grant of Authority	None stated. "Application granted pursuant to section 1.62 of the Commission's rules to reflect continuing operations."	Not stated in the action
SES-STA-20260112-00798	12 January 2026	Grant of Authority	None stated. Same § 1.62 continuing-operations language.	Not stated in the action
SES-STA-20260306-00754	6 March 2026	Grant of Authority	60 days, 11 March 2026 through 9 May 2026	47.2–50.2 GHz and 50.4–51.4 GHz (Earth-to-space); 37.5–42.5 GHz (space-to-Earth)

The narrative on SES-STA-20260306-00754 is the only one of the three that authorizes a new term and names the bands. It covers the Redmond, WA gateway, one 1.85 m antenna, communicating with Starlink Gen2 (S3069). The other two are § 1.62 grants "to reflect continuing operations," with no term and no bands in the action text. That is the distinction: one prospective 60-day operating grant, and two administrative grants of earlier-filed STAs so the record shows operations that had continued under § 1.62.

19 May 2026. Report No. SES-02864 (released 20 May 2026): SES-STA-20260428-01160, filed 29 April 2026, Grant of Authority. Term: 60 days, 20 May 2026 through 18 July 2026. Bands: 47.2–50.2 GHz and 50.4–51.4 GHz (Earth-to-space) and 37.5–42.5 GHz (space-to-Earth). Same station description: one 1.85 m antenna in Redmond, WA, to Starlink Gen2 (S3069).

8 September 2026. Report No. SES-02895 (released 9 September 2026): SES-STA-20260620-01841, filed 1 July 2026, Grant of Authority. Term: an additional 60 days, 8 September 2026 through 6 November 2026. Same bands and the same one-antenna Redmond gateway to S3069.

I did not find a Space Bureau dismissal, denial, or other non-grant action on an E240163 STA in this window. The weekly Actions Taken notices from SES-02825 (7 January 2026) through SES-02903 (7 October 2026) were checked; E240163 appears only in SES-02843, SES-02864, and SES-02895. SES-02854 has no public Daily Digest entry. Accepted-for-filing notices in the same series do not list E240163, so these five grants are the actions, not acceptances.

PROMPT 115 · LIST-BUILDING · FACTS AS OF 2026-10-09

Using the FCC Experimental Licensing System records as filed, build a table of SpaceX's 2026 STA applications for Starship vehicle communications from Starbase, Texas: Test Flight 13, the Orbital Return Demo, and Test Flight 14. For each application give the call sign on the form (or note it is blank), the requested operating period, the prior ELS grant the form says it builds on, and what the request adds, including the specific frequencies where the form lists them. Note which forms are for ground uplink antennas at South Padre Island and the Starbase office rather than the vehicle.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Eight ELS records; each is a separate STA_Print page at https://apps.fcc.gov/oetcf/els/reports/STA_Print.cfm?mode=current&application_seq=NNN. The form shows the request as filed, not the grant.

Test Flight 13:
- seq 150221, WB9XCZ, 05/29/2026 to 11/29/2026, "uses information from previous grant 2010-EX-ST-2025", launch vehicle comms for Test Flight 13; vehicle frequencies 2230, 2236, 2364.5, 2370.5, 2376.5, 2382.5 MHz (4 W / 25 W peak, 4M88G1D) and 2056/2062 MHz fixed uplink (0.6 W, 4M05G1D).
- seq 150224, WB9XCP, 05/29 to 11/29/2026, uses grant 2203-EX-ST-2025: high-power static-beam uplink at 2056 and 2062 MHz from the South Padre Island and Starbase Office antennas (ground, not vehicle).
- seq 150226, WB9XCQ, 05/29 to 11/29/2026, uses grant 2201-EX-ST-2025: additional power level at 2056/2062 MHz for the tracking beam (ground).
- seq 151871, WV9XYG, 07/08/2026 to 01/08/2027: additional 2200-2290 MHz frequencies for the Flight 13 sub-orbital booster: 2206, 2224, 2242, 2248 MHz.
Orbital Return Demo:
- seq 151989, WA8XDI, 07/29/2026 to 12/28/2026, uses grant 0681-EX-ST-2026; same vehicle/uplink frequency set as WB9XCZ; booster and ship return to the launch site. (Third-party mirrors label this 1174-EX-ST-2026; not verified on fcc.gov.)
- seq 151990, WA8XFQ, 07/29 to 12/28/2026, uses grant 0682-EX-ST-2026: static-beam uplink 2056/2062 MHz from South Padre Island and Starbase Office (ground).
Test Flight 14:
- seq 153554, WA8XHK, 09/25/2026 to 02/28/2027: additional 2200-2290 MHz frequencies for the Flight 14 booster: 2206, 2224, 2242, 2248 MHz.
- seq 153852, call sign blank on the form, 09/15/2026 to 03/15/2027: backup ship frequencies 2228.5 and 2234.5 MHz for Flight 14.
All give Boca Chica, TX (orbital pad 25 59 48 N, 97 09 18 W; uplink site 26 04 59 N, 97 09 38 W) and say launch licensing is with FAA/AST.

Wrong answers: presenting Falcon, Dragon, payload-processing or mass-simulator STAs (WA9XDN) as Starship vehicle STAs; stating grant dates the forms do not show; mixing the 2056/2062 MHz ground uplink forms with the vehicle forms; omitting the blank-call-sign Flight 14 record.

Exa ✗ Wrong ✗ ✗ ✗ ✓ Used the wrong source 4.5m · $1.283 · 13 searches · 109 fetches

Judge: The answer used initial STA prints and claimed the call-sign field is blank on all forms, so the call signs on the form for seq 150221, 150224, 150226, 151871, 151989, 151990 and 153554 (WB9XCZ, WB9XCP, WB9XCQ, WV9XYG, WA8XDI, WA8XFQ, WA8XHK) are contradicted. It also gave seq 153554 a period of 08/28/2026 to 02/28/2027 instead of 09/25/2026 to 02/28/2027. It never states the FAA/AST licensing note or the Boca Chica coordinates.

As filed in the FCC Experimental Licensing System (initial STA prints; call-sign fields are blank on every form below), SpaceX's Starbase Starship communications STAs for these three missions are as follows. Later-assigned call signs are noted only for identification. I could not complete an ELS name search, so a further unindexed Flight 14 package is possible; the Flight 15 form (1679-EX-ST-2026) builds directly on the Orbital Return Demo grants, not on a Flight 14 trio.

Mission	File no.	Call sign on form	Requested period	Prior ELS grant cited	What the form adds (frequencies as listed)	Ground uplink at South Padre Island and Starbase office?
Test Flight 13	0681-EX-ST-2026	Blank (later WB9XCZ)	05/29/2026–11/29/2026	2010-EX-ST-2025	Vehicle communications for a sub-orbital booster and orbital second stage. Frequency table: ship MO 2230 and 2236 MHz; booster MO 2364.5, 2370.5, 2376.5, and 2382.5 MHz; pad FX uplinks 2056 and 2062 MHz at 0.6 W / 3 W ERP. Initial print	No. Vehicle/pad, not those sites.
Test Flight 13	0682-EX-ST-2026	Blank (later WB9XCP)	05/29/2026–11/29/2026	2203-EX-ST-2025	High-power uplink static beam for booster and ship. Narrative lists 2056 MHz and 2062 MHz; table is 100 W / 1 kW ERP, 4M05G1D. Initial print	Yes. Form says South Padre Island and Starbase Office.
Test Flight 13	0683-EX-ST-2026	Blank (later WB9XCQ)	05/29/2026–11/29/2026	2201-EX-ST-2025	Additional uplink power for a tracking beam. Narrative lists 2056 MHz and 2062 MHz; table is 100 W / 1 kW ERP. Initial print	Ground FX only, not the vehicle. Same two Boca Chica coordinates as 0682, but the narrative does not name South Padre Island or the Starbase office.
Test Flight 13	1143-EX-ST-2026	Blank (later WV9XYG)	07/08/2026–01/08/2027	None cited	Extra 2200–2290 MHz booster frequencies. Table lists 2206, 2224, 2242, and 2248 MHz. Initial print	No. Booster at the orbital pad.
Orbital Return Demo	1174-EX-ST-2026	Blank (later WA8XDI)	07/29/2026–12/28/2026	0681-EX-ST-2026	Same vehicle-communications set as 0681: MO 2230, 2236, 2364.5, 2370.5, 2376.5, 2382.5 MHz and pad FX 2056/2062 MHz at 0.6 W / 3 W. As filed, either stage may return to the pad or water-land. Initial print	No.
Orbital Return Demo	1175-EX-ST-2026	Blank (later WA8XFQ)	07/29/2026–12/28/2026	0682-EX-ST-2026	Static-beam uplink at 2056 and 2062 MHz, 100 W / 1 kW. Initial print	Yes. Form says South Padre Island and Starbase Office.

Mission	File no.	Call sign on form	Requested period	Prior ELS grant cited	What the form adds (frequencies as listed)	Ground uplink at South Padre Island and Starbase office?
Orbital Return Demo	1176-EX-ST-2026	Blank (later WA8XFR)	07/29/2026–12/28/2026	0683-EX-ST-2026	Tracking-beam uplink at 2056 and 2062 MHz, 100 W / 1 kW. Initial print	Ground FX only. Same site pair as 1175; narrative does not name those two locations.
Test Flight 14	1597-EX-ST-2026	Blank (later WA8XHK)	08/28/2026–02/28/2027	None cited	Additional 2200–2290 MHz frequencies for the sub-orbital booster: 2206, 2224, 2242, and 2248 MHz. As filed, the booster returns to the launch site. Initial print	No.
Test Flight 14	1688-EX-ST-2026	Blank (still blank; denied/dismissed 08/28/2026)	09/15/2026–03/15/2027	None cited	Backup ship frequencies 2228.5 and 2234.5 MHz for an orbital second stage. Initial print	No.

The only forms that explicitly say the antennas are at South Padre Island and the Starbase office, rather than on the vehicle, are 0682-EX-ST-2026 and 1175-EX-ST-2026.

Parallel ⊗ **Wrong** ✗ ✓ ✗ ✓ Incomplete list `5.1m · $0.693 · 13 searches · 49 fetches`

> **Judge:** The answer only states an intent to look up the filings and delivers no table or findings. Every fact is missing, including the call signs, periods, prior grants and frequencies for all eight records.

I'll look up the FCC Experimental Licensing System filings for SpaceX's 2026 Starship STAs covering Test Flight 13, the Orbital Return Demo, and Test Flight 14.The granted prints include assigned call signs. I'll pull the as-filed ELS forms so blank call signs, prior grants, and the ground-uplink filings are recorded as submitted.

(no answer)

No sources cited.

Keenable SELECT ⊗ **Wrong** ✗ ✗ ✗ ✓ Incomplete list `28.7m · ~$3.458 · 66 searches · 22 fetches`

> **Judge:** The answer gives seq 150221 a blank call sign (should be WB9XCZ) and WA8XHK a start date of 08/28/2026 (should be 09/25/2026). It omits the ground forms 150224, 150226 and 151990 for 2026 and treats 2203/2201-EX-ST-2025 as Test Flight 12 forms. It also lacks the vehicle frequency lists and the 2056/2062 MHz uplinks.

The filings are SpaceX experimental STAs in the FCC Experimental Licensing System. Dates below are the requested operating periods on the forms, not launch dates. Where a public HTML copy leaves the frequency-table MHz cells blank, I use only frequencies the form's explanation actually names, and I say so.

Mission	File no.	Call sign on the form	Requested period	Prior ELS grant the form cites	What the request adds	Vehicle or ground
Test Flight 13, vehicle	Not printed on the pasted form; FCC print sequence 150221	Blank. The pasted form shows an empty Callsign line, class FX MO	05/29/2026–11/29/2026	2010-EX-ST-2025	Vehicle communications from Starbase for a suborbital booster and an orbital second stage. Purpose: both stages "will either return to the launch site or perform a water landing." Specific MHz are not in the pasted explanation	Vehicle, Starbase, TX
Test Flight 13, booster add-on	1143-EX-ST-2026	WV9XYG	07/08/2026–01/08/2027	None named. It does not say it uses a prior grant	Additional frequencies in the 2200–2290 MHz band for the Flight 13 suborbital booster. Station class MO; site "Orbital Pad, Booster, Boca Chica," 25°59′48″N, 97°9′18″W. The HTML frequency table's MHz cells are blank; 4 W / 25 W ERP, emission 4M88G1D, 7.0 Mbps	Vehicle booster, not a ground uplink
Orbital Return Demo, vehicle	1174-EX-ST-2026	WA8XDI	07/29/2026–12/28/2026	0681-EX-ST-2026	Vehicle communications from Starbase for a suborbital booster and an orbital second stage. Filed purpose said both stages would return or splash; the current purpose says both "will return to the launch site." Class FX MO. Specific MHz are not named in the explanation; the HTML table's MHz cells are blank	Vehicle

Mission	File no.	Call sign on the form	Requested period	Prior ELS grant the form cites	What the request adds	Vehicle or ground
Orbital Return Demo, companion uplinks	1175-EX-ST-2026 and 1176-EX-ST-2026	WA8XFQ and WA8XFR	Not on the FCC detail page. Both were received 06/15/2026 and granted 07/29/2026, the same day as 1174	Not verified from these two forms	These are the other two grants in the 1174/1175/1176 set. Their purpose text is not in the sources I could read, so I cannot confirm from the forms that they are the South Padre Island and Starbase Office uplinks. See the note under the table	Ground-uplink role not verified from the forms
Test Flight 14, booster	1597-EX-ST-2026	WA8XHK	08/28/2026–02/28/2027	None named	Additional frequencies in the 2200–2290 MHz band for the Flight 14 suborbital booster. Initial purpose said the booster “will return to the launch site”; the current purpose drops that sentence. Class MO; same Boca Chica orbital-pad coordinates. HTML MHz cells are blank; 4 W / 25 W ERP, 4M88G1D	Vehicle booster
Test Flight 14, ship backup	1688-EX-ST-2026	Blank. No call sign was assigned	09/15/2026–03/15/2027	None named	Backup ship frequencies 2228.5 and 2234.5 MHz for an orbital second stage from Starbase. Class MO. Withdrawn; dismissed without prejudice on 08/28/2026	Vehicle ship, not a ground uplink
Test Flight 14, both stages return	FCC print sequence 151989, which is the exhibit sequence on 1174-EX-ST-2026	WA8XDI on that file number	Same file as the Orbital Return Demo row	0681-EX-ST-2026	Commenters identify this printout as the Flight 14 filing in which both stages return to the launch site. That is the current purpose text on 1174-EX-ST-2026. I could not read a separate Flight 14 file number on that printout	Vehicle

Ground uplinks, stated only where a form says it:

- I could not retrieve the purpose text of 1175-EX-ST-2026 (WA8XFQ) or 1176-EX-ST-2026 (WA8XFR). They are SpaceX STAs, received with 1174 on 06/15/2026 and granted with it on 07/29/2026. A later Flight 15 vehicle filing, 1679-EX-ST-2026, says it “uses information from grants 1174-EX-ST-2026, 1175-EX-ST-2026 and 1176-EX-ST-2026” and separately asks for more power on uplink frequencies 2056 and 2062 MHz for static-beam and tracking-beam use. That later form does not say 1175 or 1176 are the South Padre Island or Starbase Office antennas.
- The forms that do name those sites are earlier, for Test Flight 12, not 2026 missions: 2203-EX-ST-2025 says it is for a “high power uplink static beam at the South Padre Island and Starbase Office antenna locations,” on 2056 and 2062 MHz, using 1800-EX-ST-2025. 2201-EX-ST-2025 is the tracking-beam counterpart on the same two frequencies. Those are ground antennas, not the vehicle.
- None of the 2026 forms I could read for Flights 13 or 14, or for the Orbital Return Demo, names South Padre Island or the Starbase office. 1143, 1597, and 1688 are vehicle (MO) filings.

Grok native ⊗ Wrong × × × ✓ Incomplete list 4.9m · $3.527 · 15 searches · 42 fetches

> **Judge:** The Orbital Return Demo records (seq 151989 and 151990) are missing entirely: call signs, periods, prior grants and uplink details. For Flight 14 seq 153554 the answer gives a start date of 08/28/2026 instead of 09/25/2026. The booster frequencies for seq 151871 and 153554 (2206, 2224, 2242 and 2248 MHz) are not listed.

Call signs below are those shown on the current ELS application print. I could not pull a pre-grant snapshot, so a field that was blank when filed may now show the assigned call sign. Forms I could not reopen are marked.

Test Flight 13 (Starbase) — read from the ELS prints

Form	Call sign on print	Requested period	Prior grant the form cites	What it adds (frequencies as listed)	Ground SPI / Starbase office?
STA print, application_seq=150221, signed 2026-04-03	**WB9XCZ** (FX/MO)	05/29/2026–11/29/2026	**2010-EX-ST-2025**	Vehicle communications for Test Flight 13: sub-orbital booster and **orbital** second stage. Ship (MO): **2230** and **2236 MHz**, 4 W / 25 W ERP, 4M88G1D, 7.0 Mbps. Booster (MO): **2364.5, 2370.5, 2376.5, 2382.5 MHz**, same power/emission. Pad FX uplinks: **2056** and **2062 MHz**, 0.6 W / 3 W ERP, 4M05G1D, 3.0 Mbps.	No. Vehicle plus low-power pad uplinks, not the SPI/office sites.
STA print, application_seq=150224, signed 2026-04-03	**WB9XCP** (FX)	05/29/2026–11/29/2026	**2203-EX-ST-2025**	High-power **static-beam** uplink for booster and ship. Form lists **2056 MHz** and **2062 MHz**, 100 W / 1 kW ERP, 4M05G1D, 3.0 Mbps, at 26°4′59″N 97°9′38″W (4 km) and 25°59′20″N 97°11′2″W (1 km).	**Yes.** Narrative says this is the high-power uplink static beam at **South Padre Island and the Starbase Office**, not the vehicle.
STA print, application_seq=150226, signed 2026-04-04	**WB9XCQ** (FX)	05/29/2026–11/29/2026	**2201-EX-ST-2025**	**Additional power** for a **tracking beam** on the same uplinks: **2056** and **2062 MHz**, 100 W / 1 kW ERP, 4M05G1D, 3.0 Mbps. Sites include 26°4′59″N 97°9′38″W and 25°59′20″N 97°11′3″W.	Ground FX, not the vehicle. The narrative does **not** name South Padre Island or the Starbase office (that wording is only on WB9XCP). Coordinates match that pair.

A later Flight 13 filing, 1143-EX-ST-2026 (call sign WV9XYG on the index; filed 2026-06-23; period 07/08/2026–01/08/2027), asks for additional 2200–2290 MHz frequencies for the sub-orbital booster. The indexed explanation does not cite a prior grant, and the index did not list the center frequencies. I could not reopen the ELS print.

Orbital Return Demo — form not retrieved

I could not open the ELS application. Secondary write-ups describe a window of 29 July–28 December 2026, uplink 2056 and 2062 MHz, about 100 W / 1 kW ERP, emission 4M05G1D, and a tracking beam using M2 FGFD-1-SC-2-N (ShiftDelete). Call sign, the prior grant the form cites, and whether it names South Padre Island and the Starbase office are not verified from the form.

Test Flight 14 — ELS text as indexed, not re-read from apps.fcc.gov

Filing	Call sign	Requested period	Prior grant the form cites	What it adds	Ground SPI / office?
1597-EX-ST-2026, filed 2026-08-10, granted	**WA8XHK** (MO)	**08/28/2026–02/28/2027**	Indexed explanation does **not** cite one. It “requests additional frequencies.”	Additional frequencies in **2200–2290 MHz** for the Flight 14 **sub-orbital booster**. An earlier purpose line said the booster will return to the launch site. Center frequencies were blank in the index table (MO, 4 W / 25 W, 4M88G1D, 7.0 Mbps).	No. Booster / vehicle, Boca Chica orbital pad.
1688-EX-ST-2026, filed 2026-08-21, denied/dismissed 2026-08-28	**Not shown** (treat as blank on the public index)	**09/15/2026–03/15/2027**	Not cited in the indexed explanation	Backup ship frequencies **2228.5** and **2234.5 MHz**; application “includes an **orbital** second stage.”	No. Ship vehicle communications.

A later Flight 15 filing says it uses grants 1174-EX-ST-2026, 1175-EX-ST-2026, and 1176-EX-ST-2026 (1679-EX-ST-2026). Those three may be the Flight 14 set that “builds on” earlier grants, but I could not open them, so call signs, periods, and listed frequencies are unverified.

PROMPT 116 · LIST-BUILDING · FACTS AS OF 2026-10-09

On 28 September 2026 the Space Bureau granted SpaceX Services a batch of 60-day STAs limited to the 42.0-42.5 GHz downlink with Starlink Gen2 at eight gateway sites. For each site give the call sign and the 42 GHz STA file number, and then state which other SpaceX Services STA for the same call sign was in force on 9 October 2026 (file number, date of action, term) or that none was. Two of the eight sites had no other STA in force on that date; identify them and say what else is pending for them. Do not mix in the separately licensed dual-band Atlanta station or the second Phoenix call sign.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

All eight 42 GHz STAs: filed 2026-09-01, date of action 2026-09-28 (narratives say "On September 25, 2026 ... was granted"), term 2026-09-25 to 2026-11-23, Gen2 S2992/3069 only, 42.0-42.5 GHz space-to-Earth. Report SES-02901 (30 Sep 2026): https://docs.fcc.gov/public/attachments/DOC-425486A1.txt
1. Wills Point, TX, E260472, SES-STA-20260831-02461. No other STA. Pending: licence application SES-LIC-20260624-01908, The "Bluebird" Gateway, accepted for filing in SES-02900 (30 Sep 2026): https://docs.fcc.gov/public/attachments/DOC-425484A1.txt
2. Phoenix, AZ, E260416, -02453. Other: SES-STA-20260815-02312, action 2026-09-22, 2026-09-23 to 2026-11-21 (SES-02899, 23 Sep 2026: https://docs.fcc.gov/public/attachments/DOC-425290A1.txt). The second Phoenix call sign E260360 (SES-STA-20260815-02299) got no 42 GHz STA.
3. Bastrop, TX, E260314, SES-STA-20260827-02406. Other: SES-STA-20260612-01761, action 2026-08-06, 2026-09-08 to 2026-11-06 (SES-02887, 12 Aug 2026: https://docs.fcc.gov/public/attachments/DOC-424142A1.txt). Bastrop is not in the 22 September batch.
4. Atlanta, GA, E260426, -02454. Other: SES-STA-20260815-02308, 2026-09-23 to 2026-11-21 (SES-02899). Not the dual-band Atlanta E250226.
5. Falfurrias, TX, E260348, -02457. No other STA in force: SES-STA-20260511-01294 ran 2026-07-31 to 2026-09-28 (SES-02886: https://docs.fcc.gov/public/attachments/DOC-424063A1.txt) and was not re-granted. Pending: SES-LIC-20260429-01217, The "League of Its Own" Gateway (SES-02900).
6. Dallas, TX, E260420, -02458. Other: SES-STA-20260815-02305, 2026-09-23 to 2026-11-21 (SES-02899). Also pending SES-LIC-20260601-01507.
7. North Miami Beach, FL, E260447, -02459. Other: SES-STA-20260612-01760, action 2026-09-09, 2026-09-10 to 2026-11-08, quad-band 40 x 1.99 m (SES-02897, 16 Sep 2026: https://docs.fcc.gov/public/attachments/DOC-425100A1.txt).
8. Hillsboro, TX, E260356, -02460. Other: SES-STA-20260815-02298, 2026-09-23 to 2026-11-21 (SES-02899). Not Hillsboro, OR (E250202).

Wrong answers: seven or nine sites; giving the 42 GHz STAs the full quad-band frequency list; saying Falfurrias or Wills Point had a quad-band STA in force on 9 October; using 2026-09-25 as the date of action without noting the notice's 2026-09-28 action date.

Judge: All core and required facts are correct. Only context facts are missing: the answer does not mention the second Phoenix call sign E260360 (10), that Bastrop is not in the 22 September batch (13), that Atlanta is not E250226 (16), Dallas's pending licence application (22), or that Hillsboro is not Hillsboro, OR (27). The 2026-09-01 filing date (fact 2) is not stated either, but its key content is covered.

The Space Bureau's 28 September 2026 actions (Report No. SES-02901) were eight 60-day 42.0–42.5 GHz (space-to-Earth) Starlink Gen2 STAs, each running 25 September 2026 through 23 November 2026. Source: https://docs.fcc.gov/public/attachments/DOC-425486A1.pdf

The six "other" grants are the quad-band gateway STAs (Ka/Q/V/E/W), not the 42 GHz-only grants. Grant stamps and ICFS records: Phoenix https://fccprod.servicenowservices.com/icfs?id=ibfs_application_summary&number=SES-STA-20260815-02312 and https://api-prod.fcc.gov/icfs-attachment/exp/api/v1/9eecb7eccf638710ade47d642f851c4e; Atlanta https://fccprod.servicenowservices.com/icfs?id=ibfs_application_summary&number=SES-STA-20260815-02308; Dallas https://fccprod.servicenowservices.com/icfs?id=ibfs_application_summary&number=SES-STA-20260815-02305; Hillsboro https://fccprod.servicenowservices.com/icfs?id=ibfs_application_summary&number=SES-STA-20260815-02298; Bastrop https://fccprod.servicenowservices.com/icfs?id=ibfs_application_summary&number=SES-STA-20260612-01761 and https://api-prod.fcc.gov/icfs-attachment/exp/api/v1/05507569cfe2039058a3fe052f851cfb; North Miami Beach https://fccprod.servicenowservices.com/icfs?id=ibfs_application_summary&number=SES-STA-20260612-01760 and https://api-prod.fcc.gov/icfs-attachment/exp/api/v1/43295460cf53871041c97f152f851c53.

The two with no other STA in force on 9 October 2026 were Wills Point and Falfurrias.

- Wills Point: the only other STA on that call sign, initial quad-band SES-STA-20260624-01909, was still pending review, so it was not in force. Also pending is the underlying license SES-LIC-20260624-01908 (accepted for filing 30 September 2026, Report SES-02900). https://fccprod.servicenowservices.com/icfs?id=ibfs_callsign_summary&number=E260472 and https://fccprod.servicenowservices.com/icfs?id=ibfs_application_summary&number=SES-LIC-20260624-01908

- Falfurrias: the earlier quad-band STA SES-STA-20260511-01294 (action 30 July 2026; term 31 July–28 September 2026) had already ended. No renewal STA is on file. Still pending is the underlying license SES-LIC-20260429-01217 (accepted for filing 30 September 2026, Report SES-02900). https://fccprod.servicenowservices.com/icfs?id=ibfs_application_summary&number=SES-STA-20260511-01294 and https://fccprod.servicenowservices.com/icfs?id=ibfs_application_summary&number=SES-LIC-20260429-01217

> **Judge:** All core and required facts are correct. Two context facts are missing: Dallas's pending licence application SES-LIC-20260601-01507 (fact 22) and the Hillsboro, OR (E250202) disambiguation (fact 27). The answer also admits that two of the other-STA terms were inferred rather than read from the sources.

Hit its tool-call or time budget and was forced to answer.

On 28 September 2026 the Space Bureau granted eight SpaceX Services 60-day STAs, each limited to 42.0–42.5 GHz downlink with Starlink Gen2 (S2992/3069), running 25 September–23 November 2026. They were published in Report No. SES-02901. https://docs.fcc.gov/public/attachments/DOC-425486A1.pdf

Site	Call sign	42 GHz STA	Other SpaceX Services STA for the same call sign in force on 9 October 2026
Wills Point, TX	E260472	SES-STA-20260831-02461	None
Phoenix, AZ	E260416	SES-STA-20260831-02453	SES-STA-20260815-02312; action 22 September 2026; 60 days, 23 September–21 November 2026
Bastrop, TX	E260314	SES-STA-20260827-02406	SES-STA-20260612-01761; action 6 August 2026; 60 days, 8 September–6 November 2026
Atlanta, GA	E260426	SES-STA-20260831-02454	SES-STA-20260815-02308; action 22 September 2026; 60 days, 23 September–21 November 2026
Falfurrias, TX	E260348	SES-STA-20260831-02457	None
Dallas, TX	E260420	SES-STA-20260831-02458	SES-STA-20260815-02305; action 22 September 2026; 60 days, 23 September–21 November 2026
North Miami Beach, FL	E260447	SES-STA-20260831-02459	SES-STA-20260612-01760; action 9 September 2026; 60 days, 10 September–8 November 2026
Hillsboro, TX	E260356	SES-STA-20260831-02460	SES-STA-20260815-02298; action 22 September 2026; 60 days, 23 September–21 November 2026

The two sites with no other STA in force on 9 October 2026 were Wills Point (E260472) and Falfurrias (E260348). For both, the underlying earth-station license was still pending: SES-LIC-20260624-01908 for Wills Point and SES-LIC-20260429-01217 for Falfurrias. https://docs.fcc.gov/public/attachments/DOC-425484A1.pdf https://fcc.report/IBFS/SES-STA-20260831-02457

The other six were quad-band gateway STAs covering Ka/Q/V/E/W bands, not the 42 GHz grants. Phoenix, Atlanta, Dallas, and Hillsboro were granted together in Report No. SES-02899. https://docs.fcc.gov/public/attachments/DOC-425290A1.pdf Bastrop is in Report No. SES-02887. https://docs.fcc.gov/public/attachments/DOC-424142A1.pdf North Miami Beach is in Report No. SES-02897. https://docs.fcc.gov/public/attachments/DOC-425100A1.pdf

This excludes the separately licensed dual-band Atlanta station (E250226) and any second Phoenix call sign. The narrative text for SES-STA-20260815-02305 and SES-STA-20260815-02308 is not separately excerpted in the sources above; those two terms are taken from the same public-notice grant block as the Phoenix and Hillsboro entries, which use identical dates.

Bastrop, TX	E260314	SES-STA-20260827-02406	SES-STA-20260612-01761, action 6 August 2026, 8 September–6 November 2026
Atlanta, GA	E260426	SES-STA-20260831-02454	None
Falfurrias, TX	E260348	SES-STA-20260831-02457	None
Dallas, TX	E260420	SES-STA-20260831-02458	None
North Miami Beach, FL	E260447	SES-STA-20260831-02459	SES-STA-20260612-01760, action 9 September 2026, 10 September–8 November 2026
Hillsboro, TX	E260356	SES-STA-20260831-02460	None

The two sites with no other STA in force are Atlanta (E260426) and Hillsboro (E260356).

- Atlanta's prior STA, SES-STA-20260601-01517, was granted 9 July 2026 for 10 July–7 September 2026 and had expired. Still pending: renewal STA SES-STA-20260815-02308 (filed 21 August 2026, 60 days from a requested 7 September start) and the underlying license SES-LIC-20260601-01513, which that STA says is still pending. https://docs.fcc.gov/public/attachments/DOC-423076A1.pdf · https://fcc.report/IBFS/SES-STA-20260815-02308
- Hillsboro's prior STA, SES-STA-20260511-01300, was likewise granted 9 July 2026 for 10 July–7 September 2026. Still pending: renewal STA SES-STA-20260815-02298

and underlying license SES-LIC-20260429-01215. https://docs.fcc.gov/public/attachments/DOC-423076A1.pdf · https://fcc.report/IBFS/SES-STA-20260815-02298

The same pattern, not counted above, also applies to Phoenix (expired SES-STA-20260601-01511; pending SES-STA-20260815-02312 and SES-LIC-20260601-01505) and Dallas (expired SES-STA-20260601-01510; pending SES-STA-20260815-02305 and SES-LIC-20260601-01507). Falfurrias's SES-STA-20260511-01294 ended 28 September 2026. Wills Point has no other STA on E260472; its license SES-LIC-20260624-01908 was still in pending review. https://fcc.report/IBFS/SES-LIC-20260624-01908

PROMPT 117 · MULTI-HOP · FACTS AS OF 2026-10-09

DIRECTV sought reconsideration of FCC 26-26, the April 2026 order in SB Docket 25-157 that replaced the EPFD limits with performance-based GSO protection criteria for NGSO systems such as Starlink. When did DIRECTV file, which public notice listed the petition and under what report number, on what date was that notice published in the Federal Register, and what were the resulting opposition and reply deadlines? Which two parties filed oppositions on the opposition deadline? Finally, as of 9 October 2026, has the Space Bureau begun reviewing compatibility showings under the new section 25.146(a)(3), and why or why not? Do not assume every rule in the order took effect on the order's Federal Register effective date.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Chain: FCC 26-26 -> FR final rule -> Petitions-for-Reconsideration public notice -> FR notice of that PN -> ECFS oppositions -> DA 26-973. Hop 1: FCC 26-26 (Modernizing Spectrum Sharing for Satellite Broadband) was adopted 30 April 2026 and published in the Federal Register on 13 May 2026 at 91 FR 26928 (FR Doc. 2026-09565); rules effective 13 July 2026 EXCEPT the amendments to 25.146(a)(3) and 25.289(a)(2), which are 'indefinitely delayed' pending Paperwork Reduction Act approval (https://www.federalregister.gov/documents/2026/05/13/2026-09565/modernizing-spectrum-sharing-for-satellite-broadband). Hop 2: Public Notice Report No. 3234, released 23 June 2026 (https://docs.fcc.gov/public/attachments/DOC-422509A1.txt), lists one petition: 'Brenna Sparks on behalf of DIRECTV, LLC (Filed 6/12/2026)'. Oppositions are due 15 days after FR publication of the PN, replies 10 days later. Hop 3: the PN was published in the Federal Register on 6 July 2026, 91 FR 40964 (FR Doc. 2026-13611), which states oppositions due on or before 21 July 2026 and replies on or before 31 July 2026 (https://www.federalregister.gov/documents/2026/07/06/2026-13611/petition-for-reconsideration-of-action-in-rulemaking-proceeding). Hop 4: ECFS docket 25-157 shows 'Opposition to Petition for Reconsideration' by Space Exploration Holdings, LLC filed 21 July 2026 (filing 26110039599, document 'SpaceX Opposition to DIRECTV Recon Petition.pdf') and an 'Opposition' by Kuiper Systems LLC filed 21 July 2026 (26110038689); DIRECTV's reply was filed 31 July 2026 (26110069196). Hop 5: DA 26-973, released 11 September 2026 (https://docs.fcc.gov/public/attachments/DA-26-973A1.txt), states: 'the compatibility-showing requirement in section 25.146(a)(3) requires approval under the Paperwork Reduction Act, and its effective date is delayed indefinitely pending that approval. Accordingly, the Bureau has not yet begun reviewing or approving compatibility showings under the new rules.' Wrong answers: computing the opposition deadline from the 23 June release date (8 July); naming Viasat, SES or EchoStar as the petitioner; saying the entire order is in force since 13 July 2026; saying compatibility showings are being processed. Partial credit if the agent gets DIRECTV/12 June and 21/31 July but misses the delayed 25.146(a)(3) point.

Judge: Facts 10-12 are context and not fully stated: the answer gives the 13 May publication and 13 July effective date for certain rules, but omits the 30 April adoption date, the 25.289(a)(2) delay, and DIRECTV's 31 July reply. All core and required facts are correct and no traps are asserted.

I'll look up the DIRECTV reconsideration petition, the related public notice, and the status of the new section 25.146(a)(3) review.DIRECTV, LLC (Brenna Sparks) filed its petition for clarification or reconsideration on June 12, 2026, in SB Docket No. 25-157. The Commission listed that petition in Public Notice Report No. 3234, released June 23, 2026. The notice was published in the Federal Register on July 6, 2026 (91 FR 40964; FR Doc. 2026-13611). Oppositions were due July 21, 2026, and replies to oppositions were due July 31, 2026.

On the July 21 opposition deadline, the two opposition filings were from Space Exploration Holdings, LLC (SpaceX) and Kuiper Systems LLC (Amazon Leo).

As of the latest Space Bureau statement verified here, the Bureau had not begun reviewing or approving compatibility showings under new section 25.146(a)(3). In DA 26-973 (released September 11, 2026), the Bureau said the Order was published May 13, 2026 (91 FR 26928), with a July 13, 2026 effective date for certain rules, but that the compatibility-showing requirement in section 25.146(a)(3) needs Paperwork Reduction Act approval and its effective date is delayed indefinitely pending that approval. No later Bureau notice that review had started was found.

Keenable search ✓ Correct ✓ ✓ ✓ ✓ — 1.7m · ~$0.356 · 21 searches · 5 fetches

Judge: Fact 12 (DIRECTV reply filed 31 July 2026) is not stated. The answer gives the PRA reason in substance (delay pending PRA approval) but cites a 10 Sept PRA comment notice rather than DA 26-973; that is acceptable. The PRA notice details (OMB control number, 9 Nov comment date) are not in the DATA window, so they are unverified.

DIRECTV filed on June 12, 2026. The petition (Brenna Sparks for DIRECTV, LLC) was listed in the FCC public notice Report No. 3234, released June 23, 2026, in SB Docket No. 25-157. That notice was published in the Federal Register on July 6, 2026 (91 FR 40964). Oppositions were due July 21, 2026; replies were due July 31, 2026.

The two oppositions filed on July 21, 2026 were from Space Exploration Holdings, LLC and Kuiper Systems LLC.

No. As of October 9, 2026, the Space Bureau had not begun reviewing compatibility showings under new § 25.146(a)(3). In the May 13, 2026 Federal Register publication of FCC 26-26, the amendments to §§ 25.146(a)(3) and 25.289(a)(2) were indefinitely delayed; the rest of the rules took effect July 13, 2026. Those two sections are modified information collections (OMB Control No. 3060-0678). On September 10, 2026, the FCC only sought PRA comments through November 9, 2026. No Federal Register notice announcing an effective date for § 25.146(a)(3) had been published by October 9, 2026, so the Bureau could not review showings under that section.

Sources: Report No. 3234; 91 FR 40964; SpaceX opposition; Kuiper opposition; FCC 26-26, 91 FR 26928; PRA notice, 91 FR 57594.

Keenable SELECT ✓ Correct 8.5m · ~$0.564 · 20 searches · 9 fetches

> **Judge:** All twelve facts are stated correctly and no trap is asserted. The DATA window supports the filing date, Report No. 3234, the FR date and the deadlines. The SpaceX and Kuiper oppositions and DA 26-973 are cited but fall outside the truncated DATA window.

DIRECTV filed on June 12, 2026. The petition was listed in the public notice released June 23, 2026, Report No. 3234. That notice was published in the Federal Register on July 6, 2026. Oppositions were due July 21, 2026, and replies July 31, 2026. Space Exploration Holdings, LLC and Kuiper Systems LLC both filed oppositions on July 21. As of October 9, 2026, the Space Bureau had not begun reviewing compatibility showings under section 25.146(a)(3), because that requirement still needed Paperwork Reduction Act approval and its effective date was delayed indefinitely.

DIRECTV, LLC, through Brenna Sparks, filed the petition for reconsideration on June 12, 2026, in SB Docket No. 25-157. The petition challenges FCC 26-26, the April 30, 2026 order that replaced EPFD limits with performance-based GSO protection criteria. The Space Bureau's public notice, "Petitions for Reconsideration of Action in Proceeding," Report No. 3234, released June 23, 2026, listed that filing. https://docs.fcc.gov/public/attachments/DOC-422509A1.pdf

The Federal Register published the summary of Report No. 3234 on July 6, 2026 (91 FR 40964; document 2026-13611). Oppositions were due on or before July 21, 2026, and replies on or before July 31, 2026. https://www.federalregister.gov/documents/2026/07/06/2026-13611/petition-for-reconsideration-of-action-in-rulemaking-proceeding

ECFS shows two oppositions received on the July 21 deadline, both in SB 25-157 and both opposing the DIRECTV petition:

- Space Exploration Holdings, LLC, "2026-07-21 SpaceX Opposition to DIRECTV Recon Petition," received July 21, 2026 (posted July 22). https://www.fcc.gov/ecfs/search/search-filings/filing/26110039599
- Kuiper Systems LLC, "Amazon Leo Opposition to DirecTV Petition for Reconsideration (07.21.26)," received July 21, 2026. https://www.fcc.gov/ecfs/search/search-filings/filing/26110038689

DIRECTV's reply was received July 31, 2026, which matches the reply deadline. https://www.fcc.gov/ecfs/search/search-filings/submission/26110069196

The order itself was published in the Federal Register on May 13, 2026, with a July 13, 2026 effective date for certain rules (91 FR 26928). Section 25.146(a)(3) was not among them. In DA 26-973, released September 11, 2026, the Space Bureau stated that the compatibility-showing requirement needs Paperwork Reduction Act approval, that its effective date is delayed indefinitely pending that approval, and that the Bureau had therefore not begun reviewing or approving compatibility showings. https://docs.fcc.gov/public/attachments/DA-26-973A1.pdf

I found no later FCC or OMB document, through October 9, 2026, announcing PRA approval or the start of that review. The latest official statement remains the September 11 notice.

Oppositions were due on or before July 21, 2026, and replies on or before July 31, 2026. https://www.federalregister.gov/documents/2026/07/06/2026-13611/petition-for-reconsideration-of-action-in-rulemaking-proceeding

ECFS shows two oppositions received on the July 21 deadline, both in SB 25-157 and both opposing the DIRECTV petition:

- Space Exploration Holdings, LLC, "2026-07-21 SpaceX Opposition to DIRECTV Recon Petition," received July 21, 2026 (posted July 22). https://www.fcc.gov/ecfs/search/search-filings/filing/26110039599
- Kuiper Systems LLC, "Amazon Leo Opposition to DirecTV Petition for Reconsideration (07.21.26)," received July 21, 2026. https://www.fcc.gov/ecfs/search/search-filings/filing/26110038689

DIRECTV's reply was received July 31, 2026, which matches the reply deadline. https://www.fcc.gov/ecfs/search/search-filings/submission/26110069196

The order itself was published in the Federal Register on May 13, 2026, with a July 13, 2026 effective date for certain rules (91 FR 26928). Section 25.146(a)(3) was not among them. In DA 26-973, released September 11, 2026, the Space Bureau stated that the compatibility-showing requirement needs Paperwork Reduction Act approval, that its effective date is delayed indefinitely pending that approval, and that the Bureau had therefore not begun reviewing or approving compatibility showings. https://docs.fcc.gov/public/attachments/DA-26-973A1.pdf

I found no later FCC or OMB document, through October 9, 2026, announcing PRA approval or the start of that review. The latest official statement remains the September 11 notice.

PROMPT 118 · MULTI-HOP · FACTS AS OF 2026-10-09

In April 2026 the Space Bureau dismissed Satelio IoT Services USA's (Sateliot's) second petition for US market access in the 2 GHz MSS band, in the same order that dealt with SpaceX's Gen2 MSS requests. Give that order's DA number and the ICFS file number it dismissed, and identify the earlier Bureau order that had disposed of Sateliot's first 2 GHz petition (DA number, date, and the ground). Then trace what happened next: did Sateliot seek Commission review, on what date, and which two companies filed oppositions and when? Also note the erratum the Bureau issued four days after the April order and which two ordering paragraphs it rewrote. Do not confuse Sateliot's 2 GHz request with Kepler's Big LEO request dismissed in the same order.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Chain: DA 26-398 -> DA 25-20 (cited precedent) -> erratum -> ECFS application for review and oppositions. Hop 1: DA 26-398, released 23 April 2026 (https://docs.fcc.gov/public/attachments/DA-26-398A1.txt), ordering para 36: 'Satelio IoT Services USA, Inc.'s request for U.S. market access to provide service in the 2000-2010 MHz and 2190-2200 MHz bands in ICFS File No. SAT-PDR-20250428-00108 is DISMISSED with prejudice' (call sign S3230). The order notes Sateliot's application 'has not been placed on public notice as accepted for filing' and that a similar 2023 petition 'was dismissed as unacceptable for filing based on the same grounds'. Hop 2: that earlier order is DA 25-20, adopted and released 8 January 2025 (https://docs.fcc.gov/public/attachments/DA-25-20A1.txt), dismissing as unacceptable for filing ICFS File Nos. SAT-PDR-20230415-00089 and SAT-APL-20240403-00074 (call sign S3171) because the AWS-4 Report and Order (27 FCC Rcd 16102, n.468) and DA 24-300 established that the 2 GHz bands are not available for additional MSS applications; it also dismissed SpaceX's and EchoStar's requests to dismiss as moot. Hop 3: Erratum released 27 April 2026 (https://docs.fcc.gov/public/attachments/DOC-421067A1.txt) corrected paragraph 37 (AST & Science's request for 2000-2020/2180-2200 MHz in SAT-MOD-20260105-00005 DISMISSED with prejudice) and paragraph 41 (request of Globalstar, Omnispace and EchoStar Satellite Services to dismiss Kepler's 1610-1617.775/2483.5-2500 MHz request DISMISSED as moot). Hop 4: ECFS (dockets 23-135, 25-340, 25-173, RM-11975) shows Sateliot's 'Application for Review' filed 26 May 2026 (filing 10526544806932); 'Opposition' filings on 10 June 2026 by Space Exploration Technologies Corp. (106102944823561, 'SpaceX Opposition to Sateliot 2 GHz AFR') and Globalstar, Inc. (10610297854008); Sateliot's reply 23 June 2026 (26109884507). No Commission ruling on the AFR was located as of 9 October 2026; an answer asserting a decision should cite it. Wrong answers: saying Sateliot's petition was 'denied' after public notice (it was never accepted for filing); naming EchoStar or Iridium as an opposer; giving Kepler's file number SAT-PDR-20211224-00204 as Sateliot's; placing the erratum in May.

Exa ✓ Correct ✓ ✓ ✓ ✓ — 1.1m · $0.290 · 13 searches · 10 fetches

Judge: All core and required facts are correct. Only context facts are missing: the 'not placed on public notice' observation (3), Sateliot's 23 June reply (15), and the absence of a Commission ruling (16).

DA 26-398 (Space Bureau, adopted and released April 23, 2026) dismissed Satelio IoT Services USA, Inc.'s second 2 GHz MSS market-access petition **with prejudice** in **ICFS File No. SAT-PDR-20250428-00108** (ordering paragraph 36). That is the 2000–2010 MHz / 2190–2200 MHz request, not Kepler's Big LEO petition (SAT-PDR-20211224-00204), which the same order dismissed in paragraph 35. The order also disposed of portions of SpaceX's Gen2 MSS requests. Source: https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

Earlier order. Sateliot's first 2 GHz petition was disposed of by **DA 25-20**, adopted and released **January 8, 2025**. The Bureau dismissed it **as unacceptable for filing** under 47 CFR § 25.112 because the requests did not substantially comply with the Commission's AWS-4 determination that the 2 GHz MSS bands are not available for additional MSS applicants. (The order also found the showing would not qualify for small-satellite processing, and dismissed as moot SpaceX's and EchoStar's requests to dismiss.) Files: SAT-PDR-20230415-00089 and SAT-APL-20240403-00074. DA 26-398 describes that dismissal as resting on the same unavailability grounds. Source: https://docs.fcc.gov/public/attachments/DA-25-20A1.pdf

What happened next. Sateliot sought Commission review by an **Application for Review filed May 26, 2026** (GN Docket No. 23-135). Source: https://spacequotes.org/tidbits/satelio-iot-services-usa-inc-23-135/ (links the filing at https://www.fcc.gov/ecfs/document/10526544806932/1). **SpaceX and Globalstar** filed oppositions; contemporaneous reporting dates Globalstar's opposition to **June 10, 2026**, and both companies' oppositions to that same week, with ECFS document IDs dated June 10 (https://www.fcc.gov/ecfs/document/106102944823561/1 and https://www.fcc.gov/ecfs/document/10610297854008/1). Sources: https://broadbandbreakfast.com/spacex-globalstar-to-fcc-dont-reconsider-satellite-spectrum-exclusivity/ and https://communicationsdaily.com/news/2026/06/17/Sateliot-and-Orbits-IQ-Challenge-FCCs-2-GHz-MSS-Decision-2606160009. The underlying ECFS PDFs did not return text here, so the June 10 date for both rests on those reports and the document-ID dates rather than on the opposition texts themselves.

Erratum. Four days later, on **April 27, 2026**, the Deputy Chief, Satellite Programs and Policy Division, issued an erratum to DA 26-398 that rewrote **ordering paragraphs 37 and 41** (AST's 2 GHz dismissal, and the Globalstar/Omnispace/EchoStar request to dismiss Kepler's Big LEO request). Source: https://docs.fcc.gov/public/attachments/DOC-421067A1.pdf

Judge: Only context facts 3, 8, 15 and 16 are missing (the 'not placed on public notice' language, DA 25-20's mooting of the SpaceX/EchoStar requests, Sateliot's 23 June reply, and the absence of a Commission ruling). All core and required facts are correct and no traps were asserted.

April 2026 order. Space Bureau Order **DA 26-398** (adopted and released April 23, 2026) dismissed with prejudice Satelio IoT Services USA, Inc.'s second 2 GHz U.S. market-access petition, **ICFS File No. SAT-PDR-20250428-00108** (call sign S3230), in the same order that disposed of SpaceX's Gen2 MSS requests and Kepler's Big LEO request (SAT-PDR-20211224-00204). Ordering paragraph 36 dismisses Sateliot's request for 2000–2010 MHz and 2190–2200 MHz. Source: https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

First petition. The earlier order is **DA 25-20**, adopted and released **January 8, 2025**. It dismissed Sateliot's first petition (SAT-PDR-20230415-00089, as amended by SAT-APL-20240403-00074) **as unacceptable for filing** under 47 CFR § 25.112, on the ground that the 2 GHz MSS bands are not available for additional MSS applications under the 2012 AWS-4 framework, so the petition did not substantially comply with Commission requirements. DA 26-398 footnote 19 says that dismissal was on the same grounds. Source: https://docs.fcc.gov/public/attachments/DA-25-20A1.pdf

Commission review. Yes. Sateliot filed an **Application for Review** on **May 26, 2026** (ECFS received and posted that day; filing 10526544806932). **Space Exploration Technologies Corp.** and **Globalstar, Inc.** each filed an opposition on **June 10, 2026**. ECFS docket listing: https://www.fcc.gov/ecfs/search/search-filings/results?q=proceedings.name:(%2225-173%22)

Erratum. Four days later, on **April 27, 2026**, the Bureau released an erratum (DOC-421067) correcting **ordering paragraphs 37 and 41** of DA 26-398 (AST's 2 GHz dismissal, and the Globalstar/Omnispace/EchoStar request to dismiss Kepler's Big LEO request). Source: https://docs.fcc.gov/public/attachments/DOC-421067A1.pdf

Keenable search **Partly correct** Incomplete list `1.4m · ~$0.283 · 15 searches · 9 fetches`

> **Judge:** Missing: the 'not placed on public notice' detail, the AWS-4 R&O/DA 24-300 citation as the ground (the answer gave only a generic ground), the mooted SpaceX/EchoStar dismissal requests in DA 25-20, Sateliot's June 23 reply, and the status as of October 2026. The core and required facts are otherwise correct and no traps were asserted.

DA 26-398 (adopted and released **April 23, 2026**) dismissed Sateliot's second 2 GHz petition, **ICFS File No. SAT-PDR-20250428-00108** (call sign S3230), **with prejudice**. That is the 2000–2010 MHz / 2190–2200 MHz market-access request, not Kepler's Big LEO petition (SAT-PDR-20211224-00204), which the same order also dismissed. Source: https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

The earlier order is **DA 25-20**, adopted and released **January 8, 2025**. It dismissed Sateliot's first petition (SAT-PDR-20230415-00089, as amended by SAT-APL-20240403-00074) **as unacceptable for filing**, because the 2 GHz MSS bands are not available for additional MSS applications and the request did not substantially comply with Commission requirements. DA 26-398, n.19, says that first petition was dismissed on the same grounds. Sources: https://docs.fcc.gov/public/attachments/DA-25-20A1.pdf and https://www.fcc.gov/document/space-bureau-dismisses-sateliots-petition-use-2-ghz-mss-band

Sateliot then filed an **Application for Review** with the Commission on **May 26, 2026** (GN Docket 23-135). Sources: https://www.fcc.gov/ecfs/document/10526544806932/1 and https://consumerelectronicsdaily.com/fcc-spectrum/fcc-filings-digest-may-26-2026

Globalstar, Inc. and **Space Exploration Technologies Corp.** each filed an opposition on **June 10, 2026**, in the same docket. Sources: https://consumerelectronicsdaily.com/fcc-spectrum/fcc-filings-digest-june-10-2026, https://www.fcc.gov/ecfs/document/106102944823561/1, and https://www.fcc.gov/ecfs/filing/10610297854008

Four days after the April order, the Bureau released an **erratum on April 27, 2026** (DOC-421067). It rewrote **ordering paragraphs 37 and 41** of DA 26-398—not the Sateliot dismissal in paragraph 36. As corrected, paragraph 37 dismisses AST's SAT-MOD-20260105-00005 request in 2000–2020 / 2180–2200 MHz with prejudice, and paragraph 41 dismisses as moot the Globalstar/Omnispace/EchoStar request to dismiss Kepler's 1610–1617.775 / 2483.5–2500 MHz request. Source: https://docs.fcc.gov/public/attachments/DOC-421067A1.pdf

Keenable SELECT **Correct** `12.4m · ~$0.382 · 25 searches · 4 fetches`

> **Judge:** All core and required facts are correct. Only context facts are missing: the 'not placed on public notice' remark (3), DA 25-20's mootness dismissal of SpaceX/EchoStar requests (8), Sateliot's June 23 reply (15), and the absence of a Commission ruling as of October 2026 (16).

April 2026 order. Space Bureau order **DA 26-398**, adopted and released **April 23, 2026**, dismissed with prejudice Satelio IoT Services USA, Inc.'s second 2 GHz U.S. market-access request, **ICFS File No. SAT-PDR-20250428-00108** (call sign S3230), for the 2000–2010 MHz and 2190–2200 MHz bands (ordering paragraph 36). The same order also disposed of SpaceX's Gen2 MSS requests. Kepler's Big LEO request, dismissed in paragraph 35, is a different file: SAT-PDR-20211224-00204. https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

First petition. The Bureau had already disposed of Sateliot's 2023 petition in **DA 25-20**, adopted and released **January 8, 2025** (40 FCC Rcd 136). It dismissed ICFS File Nos. SAT-PDR-20230415-00089 and SAT-APL-20240403-00074 **as unacceptable for filing** under 47 CFR § 25.112(a)(2), because the 2012 AWS-4 Order left the 2 GHz MSS bands unavailable to additional applicants absent a new rulemaking. DA 26-398 footnote 19 says that first petition was dismissed on the same grounds.
https://docs.fcc.gov/public/attachments/DA-25-20A1.txt
https://www.fcc.gov/edocs/daily-digest/2025/01/08

What happened next. Sateliot sought Commission review. Satelio IoT Services USA, Inc. filed an application for review on **May 26, 2026** (ECFS filing 10526544806932, in SB Docket No. 25-173 and related dockets).
https://www.fcc.gov/ecfs/document/10526544806932/1

Two oppositions were filed on **June 10, 2026**:
- **Space Exploration Technologies Corp.** (SpaceX), "SpaceX Opposition to Sateliot 2 GHz AFR (6-10-26)" — https://www.fcc.gov/ecfs/document/106102944823561/1
- **Globalstar** — https://www.fcc.gov/ecfs/document/10610297854008/1

Erratum. Four days later, on **April 27, 2026**, the Deputy Chief, Satellite Programs and Policy Division, issued an erratum to DA 26-398 (Daily Digest attachment **DOC-421067A1**; the erratum itself does not carry a separate DA number). It rewrote **ordering paragraphs 37 and 41** — the AST dismissal (SAT-MOD-20260105-00005) and the Globalstar/Omnispace/EchoStar request to dismiss Kepler, which was dismissed as moot. It did not rewrite the Sateliot paragraph.
https://docs.fcc.gov/public/attachments/DOC-421067A1.txt
https://www.fcc.gov/edocs/daily-digest/2026/04/28

Cited: 1. docs.fcc.gov · 2. docs.fcc.gov · 3. fcc.gov · 4. fcc.gov · 5. fcc.gov · 6. fcc.gov · 7. docs.fcc.gov · 8. fcc.gov

---

Grok native **Partly correct** Incomplete list `1.3m · $0.707 · 14 searches · 13 fetches`

> **Judge:** The answer did not give SpaceX's opposition date, only 'same week' as Globalstar, so fact 13 is missing. It also omitted the 'not placed on public notice' point (3), DA 25-20's mooting of SpaceX/EchoStar requests (8), Sateliot's June 23 reply (15), and the absence of a Commission ruling (16).

The **April 23, 2026** Space Bureau order is **DA 26-398**. In ordering paragraph 36 it dismissed, **with prejudice**, Satelio IoT Services USA, Inc.'s second 2 GHz market-access petition, **ICFS File No. SAT-PDR-20250428-00108** (2000–2010 MHz and 2190–2200 MHz). That is not Kepler's Big LEO request, which the same order dismissed in paragraph 35 (SAT-PDR-20211224-00204).

Earlier order. Sateliot's first 2 GHz petition was disposed of by **DA 25-20**, adopted and released **January 8, 2025**. The Bureau dismissed the petition, as amended (SAT-PDR-20230415-00089 and SAT-APL-20240403-00074), **as unacceptable for filing** under 47 CFR § 25.112(a)(2). The ground was that the 2012 AWS-4 framework makes the 2 GHz MSS bands unavailable to additional MSS applicants, so the request did not substantially comply with Commission requirements. DA 26-398 says

the second petition was dismissed on those same grounds.

What happened next. Sateliot sought Commission review. It filed an **Application for Review on May 26, 2026** (GN Docket 23-135). **SpaceX and Globalstar** filed oppositions. Globalstar's opposition is a **June 10, 2026** filing. A June 17, 2026 trade report places SpaceX's opposition in the same week (the week of June 8–12); the exact SpaceX ECFS date could not be retrieved independently because the FCC filing site blocked access.

Erratum. Four days later, on **April 27, 2026**, the Bureau released an erratum (DOC-421067A1) correcting DA 26-398. It rewrote **ordering paragraphs 37 and 41** (AST's 2 GHz request, and the Globalstar/Omnispace/EchoStar request to dismiss Kepler), not the Sateliot paragraph.

`12.4m · ~$0.382 · 25 searches · 4 fetches`

> **Judge:** All core and required facts are correct. Only context facts are missing: the 'not placed on public notice' remark (3), DA 25-20's mootness dismissal of SpaceX/EchoStar requests (8), Sateliot's June 23 reply (15), and the absence of a Commission ruling as of October 2026 (16).

April 2026 order. Space Bureau order **DA 26-398**, adopted and released **April 23, 2026**, dismissed with prejudice Satelio IoT Services USA, Inc.'s second 2 GHz U.S. market-access request, **ICFS File No. SAT-PDR-20250428-00108** (call sign S3230), for the 2000–2010 MHz and 2190–2200 MHz bands (ordering paragraph 36). The same order also disposed of SpaceX's Gen2 MSS requests. Kepler's Big LEO request, dismissed in paragraph 35, is a different file: SAT-PDR-20211224-00204.
https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

First petition. The Bureau had already disposed of Sateliot's 2023 petition in **DA 25-20**, adopted and released **January 8, 2025** (40 FCC Rcd 136). It dismissed ICFS File Nos. SAT-PDR-20230415-00089 and SAT-APL-20240403-00074 **as unacceptable for filing** under 47 CFR § 25.112(a)(2), because the 2012 AWS-4 Order left the 2 GHz MSS bands unavailable to additional applicants absent a new rulemaking. DA 26-398 footnote 19 says that first petition was dismissed on the same grounds.
https://docs.fcc.gov/public/attachments/DA-25-20A1.txt
https://www.fcc.gov/edocs/daily-digest/2025/01/08

What happened next. Sateliot sought Commission review. Satelio IoT Services USA, Inc. filed an application for review on **May 26, 2026** (ECFS filing 10526544806932, in SB Docket No. 25-173 and related dockets).
https://www.fcc.gov/ecfs/document/10526544806932/1

Two oppositions were filed on **June 10, 2026**:
- **Space Exploration Technologies Corp.** (SpaceX), "SpaceX Opposition to Sateliot 2 GHz AFR (6-10-26)" — https://www.fcc.gov/ecfs/document/106102944823561/1
- **Globalstar** — https://www.fcc.gov/ecfs/document/10610297854008/1

Erratum. Four days later, on **April 27, 2026**, the Deputy Chief, Satellite Programs and Policy Division, issued an erratum to DA 26-398 (Daily Digest attachment DOC-421067A1; the erratum itself does not carry a separate DA number). It rewrote **ordering paragraphs 37 and 41** — the AST dismissal (SAT-MOD-20260105-00005) and the Globalstar/Omnispace/EchoStar request to dismiss Kepler, which was dismissed as moot. It did not rewrite the Sateliot paragraph.
https://docs.fcc.gov/public/attachments/DOC-421067A1.txt

Cited: 1. docs.fcc.gov · 2. docs.fcc.gov · 3. fcc.gov · 4. fcc.gov · 5. fcc.gov · 6. fcc.gov · 7. docs.fcc.gov · 8. fcc.gov

PROMPT 119 · MULTI-HOP · FACTS AS OF 2026-10-09

SpaceX's petition for rulemaking to revise the 1.6/2.4 GHz 'Big LEO' MSS sharing plan was put out for comment in March 2024. Give the RM number, the public notice's DA number, the comment and reply dates, and say what the Kuiper letter cited in that notice actually objected to. Then find the 2026 order that disposed of the petition: which rule section did the Bureau rely on, what did it do with Iridium's parallel petition and had that one ever been put on public notice, and what happened to the oppositions that Globalstar and others had filed against SpaceX's petition? A news story saying the Commission 'rejected' the petition on the merits is not precise enough; state the procedural disposition.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Chain: DA 24-298 (2024 request for comment) -> DA 26-398 (2026 disposition) -> its ordering clauses. Hop 1: DA 24-298, released 26 March 2024 (https://docs.fcc.gov/public/attachments/DA-24-298A1.txt): RM-11975; SpaceX petition filed 21 February 2024; comments due 25 April 2024, reply comments due 10 May 2024; issued under 47 CFR 1.403 by the Office of Managing Director, Reference Information Center. The notice says Kuiper's letter of 8 March 2024 opposed 'SpaceX's related requests to implement a freeze on new mobile-satellite service applications, without taking any position on the substance of SpaceX's proposal'; SpaceX responded 12 March 2024. Hop 2: DA 26-398, released 23 April 2026 (https://docs.fcc.gov/public/attachments/DA-26-398A1.txt), para 15: 'We dismiss, pursuant to section 1.401(e), SpaceX's and Iridium's petitions for rulemaking'; para 17: 'Neither has presented a sufficient basis to disturb the longstanding certainty and stability of the spectrum plan for Big LEO systems'. Iridium's petition ('to Optimize Mobile Satellite Service in the 1.6 GHz Band') addressed only the 1.6 GHz portion and 'was not placed on public notice' (APA 553(e) does not require notice and comment on petitions). Ordering clause 42: RM-11975 'is DISMISSED'; clause 43: the petitions and comments in opposition filed by Globalstar, Omnispace, Public Knowledge, Open Technology Institute at New America, and the Mobile Satellite Services Association 'are DISMISSED as moot'; clause 44: Iridium's petition DISMISSED. The same order (para 14, clause 33) dismissed with prejudice SpaceX's Gen2 requests for 1610-1626.5 MHz and 2483.5-2500 MHz inside and outside the US, including SAT-MOD-20240111-00224 and SAT-MOD-20250611-00144, because the 1.6/2.4 GHz modification 'has not been accepted for filing'. Wrong answers: 'denied' instead of dismissed under 1.401(e); saying Iridium's petition was placed on public notice; comment dates from the 2 GHz petition (DA 24-299 has the same dates, so accept them, but RM-11976 is the wrong RM number); crediting the Wireless Telecommunications Bureau with the order (it is the Space Bureau).

Exa ✓ Correct ✓ ✓ ✓ ✓ 35.7s · $0.194 · 8 searches · 2 fetches

Judge: All required and core facts are correct. Only context facts 3 (petition filed 21 Feb 2024), 6 (issued under 1.403 by OMD) and 16 (the Gen2 requests dismissed with prejudice in the same order) are missing.

RM-11975; public notice DA 24-298 (released March 26, 2024). Comments were due **April 25, 2024**, and reply comments **May 10, 2024**. Do not confuse that notice with DA 24-300, which the same day dismissed SpaceX's related Gen2 MSS modification as unacceptable for filing. Source: DA 24-298; FCC docket page: fcc.gov document page.

The Kuiper letter cited in that notice (Michael Carlson, Kuiper Systems LLC, to Julie M. Kearney, Chief, Space Bureau, filed March 8, 2024) **opposed SpaceX's related request for a freeze on new MSS applications.** The notice states Kuiper **took no position on the substance** of SpaceX's proposal to open the 1.6/2.4 GHz bands to new users. SpaceX replied on March 12, 2024. Source: DA 24-298.

2026 disposition: Space Bureau Order DA 26-398 (adopted and released April 23, 2026). The Bureau **dismissed** RM-11975 **under 47 CFR § 1.401(e)** (petitions that plainly do not warrant consideration may be denied or dismissed). That is a refusal to open a rulemaking, not a denial after a notice-and-comment rulemaking on the merits. The ordering clause also cites § 1.407. The Bureau said neither petition gave a sufficient basis to disturb the 2007 Big LEO plan. Sources: DA 26-398 text; PDF; rule text: 47 CFR § 1.401(e).

Iridium's parallel petition ("Petition for Rulemaking of Iridium Communications Inc. to Optimize Mobile Satellite Service in the 1.6 GHz Band," limited to 1.6 GHz and seeking a larger share of Globalstar's spectrum) **was also dismissed under § 1.401(e). It was never placed on public notice.** The order notes that APA § 553(e) gives a right to petition but does not require notice and comment on the petition. Source: DA 26-398, paras. 9, 15, and ordering clauses 42 and 44.

Oppositions to SpaceX's petition filed by **Globalstar, Omnispace, Public Knowledge, Open Technology Institute at New America, and the Mobile Satellite Services Association were dismissed as moot**, not decided on their own merits. Source: DA 26-398, ordering clause 43.

Parallel ✓ Correct ✓ ✓ ✓ ✓ 39.6s · $0.220 · 7 searches · 3 fetches

Judge: All required and core facts are correct and no trap is asserted. Only context facts are missing: the 21 Feb 2024 filing date (3), the para 17 'longstanding certainty and stability' rationale (11), and the dismissal of the Gen2 1.6/2.4 GHz requests (16). The answer gives a generic 'does not warrant further consideration' ground instead of the para 17 rationale.

Public notice (March 2024). SpaceX's petition is **RM-11975.** The Office of Managing Director's Reference Information Center put it out for comment in **DA 24-298** (released March 26, 2024). Comments were due **April 25, 2024**; reply comments were due **May 10, 2024.** Source: DA 24-298.

What the Kuiper letter objected to. Footnote 3 of that notice says Kuiper Systems LLC's March 8, 2024 letter (Michael Carlson to Julie M. Kearney) opposed SpaceX's related request for a **freeze on new MSS applications.** It **took no position** on the substance of SpaceX's proposal to open the 1.6/2.4 GHz bands to new users. SpaceX replied on March 12, 2024. Same source: DA 24-298.

2026 disposition. The Space Bureau disposed of the petition in **DA 26-398** (Order, adopted and released April 23, 2026). Procedural disposition, not a merits denial of a proposed rule: the Bureau **dismissed** RM-11975 **under 47 CFR § 1.401(e)** — the rule that lets the Commission deny or dismiss, without prejudice, a petition that is moot, premature, repetitive, frivolous, or that "plainly do[es] not warrant consideration." The order's stated ground is that the petition does not warrant further consideration. Ordering clause 42 simply says the petition "is DISMISSED." (The ordering-clause citation has a typo, "1.1401(e)"; the body and the CFR cite are § 1.401(e).) Rule text: 47 CFR § 1.401(e). Order: DA 26-398.

Iridium. Iridium's parallel petition to revise the 1.6 GHz Big LEO plan **was also dismissed under § 1.401(e)** (ordering clause 44). **It had never been placed on public notice.** The Bureau noted that APA § 553(e) gives a right to petition but does not require notice and comment on such petitions (¶ 9 and n.23). Same order: DA 26-398.

Oppositions to SpaceX's petition. Ordering clause 43 **dismissed as moot** the petitions and comments in opposition filed by **Globalstar, Omnispace, Public Knowledge, Open Technology Institute at New America, and the Mobile Satellite Services Association.**

> **Judge:** Context facts 3 (filing date 21 Feb 2024), 6 (issued under 1.403 by OMD Reference Information Center) and 11 (para 17 'longstanding certainty and stability') were not stated. The answer does not state that APA 553(e) does not require notice and comment, but it does state the Iridium petition was not placed on public notice, which suffices.

RM-11975, put out for comment by public notice DA 24-298 (released March 26, 2024). Comments were due April 25, 2024; replies May 10, 2024.

The Kuiper letter cited in that notice (Michael Carlson, Kuiper Systems LLC, to Julie M. Kearney, March 8, 2024) opposed only SpaceX's related request for a **freeze on new MSS applications.** It took **no position** on the substance of opening the 1.6/2.4 GHz bands to new users. SpaceX replied on March 12, 2024.

Source: https://docs.fcc.gov/public/attachments/DA-24-298A1_Rcd.pdf and https://www.fcc.gov/document/comment-sought-spacex-1624-ghz-mss-petition-rulemaking

2026 disposition: Space Bureau order **DA 26-398** (adopted and released April 23, 2026). The Bureau dismissed SpaceX's RM-11975 petition **under 47 CFR § 1.401(e)** — the rule that lets the Commission dismiss a petition for rulemaking that is moot, premature, repetitive, frivolous, or that **plainly does not warrant consideration** — after finding the petitions "do not warrant further consideration." That is a procedural dismissal of the petition, not a merits denial after a rulemaking. (The same order separately dismissed, **with prejudice**, portions of SpaceX's license/modification applications; news accounts that say the Commission "rejected" the petition on the merits mix those actions.)

Iridium's parallel petition (to revisit the Big LEO plan so Iridium could take more of Globalstar's 1610–1617.775 MHz spectrum) was **also dismissed under § 1.401(e).** The order states that petition **was never placed on public notice.**

Oppositions and comments in opposition to SpaceX's RM-11975 petition filed by **Globalstar, Omnispace, Public Knowledge, Open Technology Institute at New America, and the Mobile Satellite Services Association** were **dismissed as moot.**

> **Judge:** Only context facts were missing: the petition filing date (21 Feb 2024) and the Gen2 request dismissal with prejudice (clause 33). The required and core facts are correct, and no trap was asserted.

RM-11975; public notice DA 24-298 (released March 26, 2024). Comments were due April 25, 2024, and reply comments May 10, 2024. The notice was issued under 47 CFR § 1.403. Source: DA 24-298; FCC document page: fcc.gov.

The Kuiper letter cited in that notice did not oppose the substance of SpaceX's proposal to open the bands to new users. Kuiper Systems LLC (Michael Carlson, March 8, 2024) opposed only SpaceX's related request to freeze new MSS applications, and took no position on the sharing-plan proposal itself. SpaceX replied on March 12, 2024. Same DA 24-298 source.

2026 disposition: Space Bureau order DA 26-398 (adopted and released April 23, 2026), by the Chief, Space Bureau. PDF.

- The Bureau dismissed both petitions **pursuant to 47 CFR § 1.401(e)** (¶15; ordering clauses also cite §§ 0.51, 0.261, 25.112, 25.117, 25.137(c), 1.401(e), 1.407, and 47 U.S.C. § 303(r)). Ordering clause 42: SpaceX's RM-11975 petition "is DISMISSED." The order does not say "with prejudice" for the rulemaking petition (that phrase is used for the license/market-access requests). The stated reasons (¶¶17–18) are that the petitions were unconvincing, gave no sufficient basis to disturb the Big LEO plan, and did not warrant further consideration. Procedurally, that is a **dismissal under § 1.401(e)**, not a denial of a rulemaking on the merits after an NPRM.
- Iridium's parallel petition (to optimize MSS in the 1.6 GHz band / increase its dedicated share vis-à-vis Globalstar) was **dismissed on the same basis** (ordering clause 44). It **had never been placed on public notice.** The order notes that APA § 553(e) gives a right to petition but does not require notice and comment on such petitions (¶9 n.23).
- Oppositions and comments against SpaceX's petition by **Globalstar, Omnispace, Public Knowledge, Open Technology Institute at New America, and the Mobile Satellite Services Association were dismissed as moot** (ordering clause 43).

> **Judge:** All required and core facts are correct. Missing only context facts: the petition's 21 Feb 2024 filing date, the 47 CFR 1.403 and OMD/RIC issuance detail, and the Gen2 dismissal with prejudice in the same order.

Public notice (March 2024). SpaceX's petition is **RM-11975.** The Space Bureau/OMD public notice seeking comment is **DA 24-298**, released March 26, 2024. Comments were due **April 25, 2024**; reply comments were due **May 10, 2024.** Source: DA 24-298 text; FCC document page: fcc.gov.

The notice cites a **March 8, 2024 letter from Michael Carlson (Kuiper Systems LLC) to Space Bureau Chief Julie M. Kearney.** That letter **opposed SpaceX's related request for a freeze on new MSS applications.** It **did not take a position on the substance** of SpaceX's proposal to open the 1.6/2.4 GHz bands to new users. (SpaceX replied on March 12, 2024.) Same source: DA 24-298.

2026 disposition. The Space Bureau disposed of the petition in **DA 26-398** (news accounts date the action to April 23, 2026). It relied on **47 CFR § 1.401(e)** (petitions that plainly do not warrant consideration may be dismissed). The ordering clause **dismisses** RM-11975; it is not a denial on the merits after a rulemaking. The Bureau also said both petitions were unconvincing and did not justify disturbing the Big LEO plan, but the procedural act is a **§ 1.401(e) dismissal.** Sources: DA 26-398 PDF; text.

Iridium. Iridium's parallel petition ("Petition for Rulemaking of Iridium Communications Inc. to Optimize Mobile Satellite Service in the 1.6 GHz Band," limited to 1.6 GHz and more of Globalstar's spectrum) was **also dismissed** under § 1.401(e). The Bureau states it **was never placed on public notice**, noting that APA § 553(e) does not require notice and comment on rulemaking petitions. Same order.

Oppositions. The petitions and comments in opposition to SpaceX's RM-11975 filed by **Globalstar, Omnispace, Public Knowledge, Open Technology Institute at New America, and the Mobile Satellite Services Association were dismissed as moot.** Same ordering clauses in DA 26-398.

PROMPT 120 · MULTI-HOP · FACTS AS OF 2026-10-09

In DA-26-36 (9 January 2026) Kuiper and Telesat asked the Space Bureau to remove a condition on SpaceX's Gen2 licence that automatically halts deployment once failed satellites exceed a certain number of 'object years'. What is the numeric threshold, what two reasons did the Bureau give for leaving the condition in place, and whose petition for reconsideration, filed against which order and on what date, keeps the condition before the full Commission? Then go to that original order and state what the threshold roughly corresponds to in failed satellites and what SpaceX must obtain before deploying again if it is triggered. Does the condition apply to the 7,500 satellites authorised in January 2026, and did SpaceX itself ask for it to be removed?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Chain: DA 26-36 footnote -> FCC 22-91 (Gen2 First Partial Grant) condition -> LeoLabs reconsideration petition. Hop 1: DA 26-36 (https://docs.fcc.gov/public/attachments/DA-26-36A1.txt), para 22 and n.96: Kuiper (Comments at 3) and Telesat (Reply at 3-4) requested removal of the condition that requires SpaceX to cease deploying when failed satellites at operational orbits exceed 100 object years. 'SpaceX did not request removal of this condition, and in fact has supported adding it to other NGSO authorizations' (SpaceX letter of 17 January 2023 in IB Docket 18-313). The Bureau declined for two reasons: first, 'the object years condition is the subject of petitions for reconsideration before the full Commission' - Petition for Reconsideration of LeoLabs, Inc., ICFS File Nos. SAT-LOA-20200526-00055 and SAT-AMD-20210818-00105, filed 30 December 2022 (and Viasat's Petition for Clarification filed 3 January 2023); second, SpaceX's disposal failure rate 'is so low, it is far below the 100 object years', so the condition does not impede operations (in 2023 SpaceX screened 20 Gen2 satellites from further deployment versus 2 disposal failures). Condition 13(e) of DA 26-36 restates the rule for the newly authorised satellites: 'In the event of satellite failures resulting in more than 100 post-failure object years, SpaceX may not deploy any additional satellites until the Commission has approved a license modification that includes an updated orbital debris mitigation plan'. Hop 2: the original order is FCC 22-91, released 1 December 2022, 37 FCC Rcd 14882 (https://docs.fcc.gov/public/attachments/FCC-22-91A1.txt), para 85: the 100 object-year metric was proposed by LeoLabs (SpaceX called it 'new and untested'); it 'roughly corresponds to the failure of twenty or more satellites in the orbital shells around 500 kilometers'; SpaceX must file a semiannual report on launches and disposal failures with projected remaining orbital lifetime; condition (z) requires an approved license modification with an updated orbital debris mitigation plan before further deployment. Wrong answers: threshold of 100 satellites; saying the condition was removed or waived in 2026; saying SpaceX petitioned for its removal; attributing the pending petition to Viasat alone or to Kuiper; citing the 2024 or 2025 Gen2 orders as the source of the condition.

Judge: All required facts are correct and no traps are asserted. Only context facts 6 (2023 screening figures), 14 (LeoLabs proposed the metric) and 17 (semiannual report) are not stated.

100 object years. In DA-26-36 (9 January 2026), Kuiper and Telesat asked the Space Bureau to drop the Gen2 condition that automatically stops further deployment once failed satellites at operational orbits exceed **100 object years**—the sum, across all failed satellites, of the years each remains in orbit. The Bureau left it in place. Source: DA-26-36A1 (n.96 and accompanying text).

Why the Bureau kept it. Two reasons, in that order:

1. The condition is already the subject of petitions before the full Commission.
2. SpaceX's disposal-failure rate is so low that the cumulative total is far below 100 object years, so the condition is not close to stopping deployment while the Commission considers it.

Source: DA-26-36A1 (n.96).

What keeps it before the full Commission. The Bureau cites the **Petition for Reconsideration of LeoLabs, Inc.**, filed **30 December 2022** against the **SpaceX Gen2 First Partial Grant** (Order and Authorization, FCC 22-91, 37 FCC Rcd 14882 (2022); IBFS/ICFS File Nos. SAT-LOA-20200526-00055 and SAT-AMD-20210818-00105). It also cites Viasat's **Petition for Clarification** in the same files, filed **3 January 2023**. Source: DA-26-36A1 (n.96).

Original order (FCC 22-91, released 1 December 2022). Paragraph 85 says the 100-object-year metric **roughly corresponds to the failure of twenty or more satellites** in the orbital shells around **500 km** covered by that grant. If the cumulative post-failure object years exceed 100, SpaceX must stop deploying until the Commission has **approved a license modification that includes an updated orbital debris mitigation plan** addressing a lower failure rate or mitigation of the risk of failures (ordering clause 135.z; the narrative also describes a pause while failure sources are reviewed for adequate, reliable mitigation). Source: FCC-22-91A1 (¶85 and condition 135.z).

January 2026 grant and SpaceX's position. Yes, the same condition is on the January 2026 authorization, including the additional 7,500 Gen2 satellites (grant condition 13.e: no further deployment after more than 100 post-failure object years until that Commission-approved modification). SpaceX did not ask for removal; the Bureau notes it has supported imposing the metric on other NGSO authorizations (ex parte, 17 January 2023). Source: DA-26-36A1 (condition 13.e and n.96).

Judge: The answer did not give the Bureau's two reasons (pending reconsideration petitions; SpaceX's very low disposal failure rate) and denied that Kuiper and Telesat asked to remove the object-years condition, contradicting fact 2. It also did not state that SpaceX never asked for removal, and omitted the 2023 screening figures, the Viasat petition and the semiannual

> report.

I have enough of the primary documents to answer the verifiable parts, and I'll flag the two Bureau reasons if the extracted text does not state them in those words. **100 post-failure object years.** In DA-26-36 (adopted and released 9 January 2026), the Space Bureau kept the Gen2 condition: if satellite failures produce more than 100 post-failure object years, SpaceX may not deploy any additional satellites until the Commission has approved a licence modification with an updated orbital-debris mitigation plan that addresses a lower failure rate or mitigation of failure risk. The same condition is restated as a grant condition on this authorisation, which covers both the previously authorised 7,500 satellites and the additional 7,500 authorised that day (authorised Gen2 total 15,000). Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf

Who asked, and what the Bureau said. I could not verify, from the extracted text of DA-26-36, a passage in which Kuiper and Telesat asked the Bureau to remove that object-years condition, or two stated reasons for leaving it in place. The Kuiper/Telesat "supporting SpaceX's request to remove the condition" language in that order is about a different condition (the one-beam / NCo condition), not the object-years halt. I also could not verify a statement that SpaceX itself asked for the object-years condition to be removed. Those points should not be treated as established from the pages I could read.

What keeps it before the full Commission. The condition was adopted by the full Commission in the Gen2 first partial grant, FCC 22-91, *Space Exploration Holdings, LLC*, Order and Authorization, 37 FCC Rcd 14882 (adopted 29 November 2022, released 1 December 2022). LeoLabs, Inc. filed a petition for reconsideration of that order on 30 December 2022 (ICFS File Nos. SAT-LOA-20200526-00055 and SAT-AMD-20210818-00105). DA-26-36 still describes that grant as having "petitions for reconsideration pending," which is what leaves the condition before the full Commission rather than something the Bureau can rewrite on its own. Sources: https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf; https://docs.fcc.gov/public/attachments/DA-24-222A1.pdf (citing the 30 December 2022 LeoLabs petition); https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf

What the original order says if the threshold is hit. FCC 22-91 adopted the 100-object-year figure from a LeoLabs proposal. If it is exceeded, deployment of additional satellites pauses while failures are reviewed and until there is an approved updated orbital-debris plan. Contemporary reporting of that order says the Commission treated 100 object years as roughly the failure of 20 satellites at operational altitude, on the basis of the five-year post-mission disposal rule (a failed satellite that cannot manoeuvre contributes about five object years). I could not extract the Commission's own "roughly 20" sentence from the PDF text of FCC 22-91; that equivalence is reported, not independently confirmed from the order text. Sources: https://docs.fcc.gov/public/attachments/FCC-22-91A1.pdf; https://spacenews.com/fcc-grants-partial-approval-for-starlink-second-generation-constellation/; https://www.teslarati.com/spacex-starlink-gen2-constellation-fcc-license-partial-grant/; https://gizmodo.com/fcc-spacex-partial-approval-starlink-gen2-1849847371

Does it cover the January 2026 7,500? Yes, as carried forward. DA-26-36 authorises the second tranche of 7,500 and restates the halt as applying before "any additional" Gen2 deployments once the constellation's cumulative failed-satellite object years exceed 100. It does not say the new 7,500 are exempt. Source: https://docs.fcc.gov/public/attachments/DA-26-36A1.pdf

Keenable SELECT ✓ Correct ✓ ✓ ✓ ✓ 3.6m · ~$0.072 · 4 searches · 0 fetches

> **Judge:** All required facts are correct. Only context facts are missing: the 2023 screening figures (20 vs 2), the Viasat petition, the FCC 22-91 release date and para 85, LeoLabs as originator of the metric, and the semiannual report.

100 post-failure object years.

In DA-26-36 (9 January 2026), Kuiper and Telesat asked the Space Bureau to drop the condition that automatically stops further deployment if failed satellites at operational orbits exceed **100 object years** (years each failed satellite remains in orbit, summed across all failed satellites). The Bureau left it in place for two reasons:

1. The condition is already the subject of petitions for reconsideration before the full Commission.
2. SpaceX's disposal failure rate is so low that it is far below 100 object years and nowhere near triggering a halt, so the condition does not impede operations while the Commission considers it.

The petition that keeps the issue before the full Commission is **LeoLabs, Inc.'s petition for reconsideration**, filed **30 December 2022** against the **SpaceX Gen2 First Partial Grant** (*Space Exploration Holdings, LLC*, Order and Authorization, 37 FCC Rcd 14882 (2022); ICFS File Nos. SAT-LOA-20200526-00055 and SAT-AMD-20210818-00105).

That original order's 100-object-year cap is widely reported as roughly **20 failed satellites** at operational altitude, on the assumption that a satellite that fails in orbit counts about **five object years** (the five-year post-mission disposal rule). If the cap is hit, SpaceX **may not deploy any more satellites until the Commission has approved a license modification** that includes an updated orbital debris mitigation plan addressing a lower failure rate or mitigation of failure risk. (Secondary accounts also describe a pause while the FCC reviews failure causes and whether mitigation is adequate; the operative text in DA-26-36 is the license-modification approval.)

Yes, the condition applies to the 7,500 Gen2 satellites authorized in January 2026 — DA-26-36 restates it as a condition of that grant. **No, SpaceX did not ask for it to be removed**; the Bureau notes that SpaceX did not request removal and has supported adding the same condition to other NGSO authorizations.

> **Judge:** All required facts are correct. Only context facts 6 (2023 screening vs disposal failures), 14 (LeoLabs proposed, SpaceX called it untested) and 17 (semiannual report) are not stated.

100 post-failure object years. In DA-26-36 (9 January 2026), the Space Bureau declined Kuiper's and Telesat's request to drop the condition that stops further Gen2 deployment once failed satellites exceed 100 object years (years each failed satellite remains in orbit, summed across all failed satellites).

The Bureau gave two reasons for leaving it in place: (1) the condition is already the subject of petitions before the full Commission, and (2) SpaceX's disposal-failure rate is so low that cumulative object years are far below 100, so the condition does not impede deployment while the Commission considers it. SpaceX did not ask for removal; it has supported applying the same metric to other NGSO authorizations.

What keeps the condition before the full Commission is **LeoLabs, Inc.'s petition for reconsideration**, filed **30 December 2022** against the **SpaceX Gen2 First Partial Grant** (Order and Authorization, FCC 22-91, 37 FCC Rcd 14882 (2022); IBFS File Nos. SAT-LOA-20200526-00055 and SAT-AMD-20210818-00105, released 1 December 2022). The Bureau also cites Viasat's petition for clarification in the same files, filed 3 January 2023.

In that 2022 order, the Commission said the 100-object-year metric **roughly corresponds to the failure of twenty or more satellites** in the ~500 km shells covered by that grant. If it is triggered, SpaceX **may not deploy any additional satellites until the Commission has approved a license modification** that includes an updated orbital debris mitigation plan addressing a lower failure rate or mitigation of the risk of failures (condition z; see also para. 85).

Yes, the condition applies to the 7,500 satellites authorized in January 2026. DA-26-36 restates it as grant condition 13.e on the authorization that both modifies the first tranche and authorizes the second tranche of 7,500. **No, SpaceX did not ask for it to be removed.**

Sources: DA-26-36 (para. 22 n.96; grant condition 13.e); FCC 22-91 (paras. 84–85; condition 135.z).

PROMPT 121 · MULTI-HOP · FACTS AS OF 2026-10-09

FCC-26-47 replaced Part 25 with Part 100 but left the Part 100 effective date to be set later. As of 9 October 2026, has the Space Bureau set that date? Find the Bureau's October 2026 guidance on moving milestone and surety-bond obligations to Part 100 and report: the three eligibility conditions an operator must meet, how long after the effective date it has to notify the Bureau and how, the new de-escalating bond formula, and which category of licensees keeps its existing six- and nine-year milestones without doing anything. Also identify the September 2026 erratum to the order and the two table-of-contents paragraph numbers it corrected. Reports that Part 100 'took effect' with the July vote are wrong; grade on the order, the erratum and the public notice.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Chain: FCC 26-47 paras 320/326-327 -> erratum DOC-425059 -> DA 26-1080 guidance. Hop 1: FCC 26-47, adopted 22 July 2026, released 23 July 2026 (https://docs.fcc.gov/public/attachments/FCC-26-47A1.txt), para 320 designates the date on which part 100 becomes effective as the 'Part 100 Effective Date'; para 326 directs the Space Bureau to release a public notice with transition procedures; para 327: operators not authorised under the 25.157 processing round and in compliance are 'generally relieved of the bond obligation on the Part 100 Effective Date', and new rules 'do not apply retroactively'. No Federal Register final rule for SB Docket 25-306 was found as of 9 October 2026. Hop 2: Erratum released 15 September 2026 (https://docs.fcc.gov/public/attachments/DOC-425059A1.txt): in the table of contents, '124' for '6. Earth Stations' replaced with '299', and '129' for 'E. Benefits and Costs' replaced with '316'; it also fixes 'Variable Trajectory Space Station System' wording, the NGSO definition in 100.3, and several Appendix A rule cross-references. Hop 3: DA 26-1080, released 7 October 2026, 'Guidance on Transition of Part 25 Milestone and Surety Bond Rules and Requirements to Part 100' (https://docs.fcc.gov/public/attachments/DA-26-1080A1.txt): the part 100 rules 'are not yet effective' and the Bureau 'will announce the date ... via public notice'; until then Part 25 controls. Eligibility: (1) in compliance with all current milestone and surety bond terms; (2) no pending request for a milestone waiver; (3) has not received a waiver of the milestone rules. Notification: a letter in the ICFS file for each system within one year of the Effective Date, with name, file numbers/call signs, two certifications and an updated milestone schedule (or bond calculation); if no letter within the window, the original requirements stay for the licence term. Bond formula: B = $10,000,000 - $10,000,000 x (D/(0.9A)), rounded to the nearest $10,000, D = NGSO satellites deployed, A = satellites authorised excluding replacements; only processing-round NGSO/multi-orbit systems still need a bond. Processing-round licensees 'need not take action' because 100.146(d)(1) retains the six- and nine-year benchmarks. New non-processing-round NGSO milestones: one satellite operating 90 days within 7 years, 10% by 9, 50% by 12, 100% by 14 years. Operators may request relief from the 25.165 bond before the Effective Date, but processing-round licensees must wait to reduce bond amounts. Wrong answers: effective 23 July 2026 or 30 days after FR publication; only two eligibility conditions; an escalating formula; saying Starlink's or Kuiper's processing-round milestones change automatically.

Exa ✓ Correct ✓ ✓ × ✓ 1.3m · $0.447 · 16 searches · 10 fetches

Judge: All required facts are correct. The core and required items are right, but the DA 26-1080 and DOC-425059 details are not in the visible DATA window or the cited-source list (DA-26-1080 is not cited), so the support is thin. Several context facts were not stated, including the adoption dates, paras 320/326/327, the Federal Register status, and the new non-processing-round milestones.

I'll look up FCC-26-47, the September 2026 erratum, and the Space Bureau's October 2026 guidance on Part 100 milestones and surety bonds.No. As of 9 October 2026 the Space Bureau has not set the Part 100 effective date. DA 26-1080 (7 October 2026) says the rules, including §§ 100.146 and 100.147, become effective only on a date the Bureau will announce in a future public notice, and that Part 25 still controls until then. The 8 and 9 October daily digests contain no such announcement.

Guidance: DA 26-1080, *Guidance on Transition of Part 25 Milestone and Surety Bond Rules and Requirements to Part 100*, SB Docket 25-306, released 7 October 2026.

Three eligibility conditions to modify an authorization to the Part 100 milestone and bond rules (§§ 100.146 and 100.147):
1. The operator is in compliance with all current milestone and surety-bond terms in the authorization and with the Commission's rules.
2. It has no pending milestone-waiver request.
3. It has not received a waiver of the milestone rules under section 25.146.

(The same notice's required letter certification cites section 25.164, not 25.146, for pending or previously granted milestone waivers. That inconsistency is in the public notice itself.)

Notice: Eligible operators have **one year after the Effective Date** to notify the Bureau by a **letter filed in the ICFS file** for the relevant system (a consolidated letter may cover multiple systems, but it must still be filed in each ICFS file). A courtesy copy to Brandon Padgett is encouraged, not required. If no notice is filed in that window, the milestone and bond terms as originally authorized stay in force for the rest of the license term.

De-escalating bond (§ 100.147(b)), rounded to the nearest $10,000:

B = $10,000,000 − $10,000,000 × (D / (0.9A))

where B is the bond amount, D is the number of NGSO satellites deployed, and A is the number of NGSO satellites authorized, excluding replacements.

No action required for milestones: Licensees and market access grantees **authorized in a Part 25 processing round** (section 25.157) keep the existing six- and nine-year milestones. Section 100.146(d)(1) retains those interim and final benchmarks for processing-round systems, so they need not file.

Erratum: DOC-425059, released 15 September 2026 (Acting Chief, Space Bureau), correcting FCC 26-47. In the table of contents it replaced paragraph 124 for "6. Earth Stations" with 299, and paragraph 129 for "E. Benefits and Costs" with 316.

Judge: All required and core facts are correct. Only context facts were missing (para 326, para 327 detail, no Federal Register rule, erratum extra fixes, letter contents, bond scope, new

> milestones, pre-effective relief); no traps asserted.

No. As of 9 October 2026 the Space Bureau has not set the Part 100 effective date. FCC 26-47 left that date for a later Bureau public notice, and the Bureau's 7 October 2026 guidance still says the rules are not effective and that the date will be announced later. Reports that Part 100 took effect with the July vote are wrong.

Order. *Space Modernization for the 21st Century*, FCC 26-47 (adopted 22 July 2026, released 23 July 2026), replaces Part 25 with Part 100 but states that Part 100 becomes effective only on a date the Space Bureau designates in a future public notice (Order ¶ 320). Milestone and surety-bond obligations continue under Part 25 until that date. https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf

Erratum. On 15 September 2026 the Acting Chief, Space Bureau, released an erratum to FCC 26-47 (DOC-425059). In the table of contents it replaced paragraph 124 for "6. Earth Stations" with 299, and paragraph 129 for "E. Benefits and Costs" with 316. https://docs.fcc.gov/public/attachments/DOC-425059A1.txt

October 2026 guidance. DA 26-1080, *Guidance on Transition of Part 25 Milestone and Surety Bond Rules and Requirements to Part 100* (released 7 October 2026), confirms the Effective Date is still unset. https://docs.fcc.gov/public/attachments/DA-26-1080A1.txt

- **Three eligibility conditions** to elect the Part 100 milestone and bond rules (§§ 100.146 and 100.147): (1) the operator is in compliance with all current milestone and surety-bond terms in the system authorization and with the Commission's rules; (2) it has no pending milestone-waiver request; and (3) it has not received a waiver of the milestone rules under § 25.146.
- **Notice: within one year of the Effective Date**, by a **letter filed in the ICFS file** for the relevant system (a courtesy copy to Brandon Padgett is encouraged). Operators who would be relieved of the bond under § 100.147(a) must still file that letter. If no notice is filed in the one-year window, the originally authorized milestone and bond terms remain for the rest of the license term.
- **De-escalating bond formula** (§ 100.147(b)): **B = $10,000,000 − $10,000,000 × (D / (0.9A))**, rounded to the nearest $10,000, where B is the bond amount, D is the number of NGSO satellites deployed, and A is the number of NGSO satellites authorized, excluding replacements.
- **No action required for milestones:** licensees and market-access grantees **authorized in a Part 25 processing round** (§ 25.157). Section 100.146(d)(1) keeps their existing six- and nine-year interim and final benchmarks.

Keenable search ✓ Correct ✓ ✓ ✓ ✓ 1.8m · ~$0.269 · 15 searches · 7 fetches

> **Judge:** All required and core facts are correct. Context facts missing: the para 326/327 details, the lack of a Federal Register rule, the erratum's other fixes, the letter contents, the new milestones and the pre-Effective-Date relief. Para 320 is cited but without the 'Part 100 Effective Date' designation.

No. As of 9 October 2026 the Space Bureau has not set the Part 100 effective date. DA 26-1080 (7 October 2026) says the Bureau will announce that date in a future public notice, and that until then Part 25 controls except as that notice specifies. The 8 October Daily Digest has no such announcement, and there is no 9 October digest yet. https://docs.fcc.gov/public/attachments/DA-26-1080A1.pdf

That notice is the October guidance: *Guidance on Transition of Part 25 Milestone and Surety Bond Rules and Requirements to Part 100*, DA 26-1080, SB Docket 25-306, released 7 October 2026. https://docs.fcc.gov/public/attachments/DA-26-1080A1.pdf

Three eligibility conditions to modify a current authorization to align with §§ 100.146 and 100.147. The operator must:
1. be in compliance with all current milestone and surety-bond terms in the system authorization and with the Commission's rules;
2. not have a pending request for a milestone waiver; and
3. not have received a waiver of the milestone rules under § 25.146.

Notice. Eligible licensees and market-access grantees have **one year after the Effective Date** to notify the Bureau, by a **letter filed in the ICFS file** for the relevant system. The same one-year ICFS-letter window applies to both milestone switches and bond modifications. Operators who would be relieved of the bond under § 100.147(a) must still file that letter. If they do not notify within the year, the milestone and bond terms as initially authorized stay in force for the rest of the license term.

De-escalating bond formula (the formula the Order adopted in § 100.147(b), which the notice restates):

B = $10,000,000 − $10,000,000 × (D / (0.9A))

rounded to the nearest $10,000, where B is the bond amount, D is the number of NGSO satellites deployed, and A is the number of NGSO satellites authorized, excluding replacements. Only NGSO and multi-orbit systems authorized under the processing-round procedures remain subject to a bond.

Who keeps the six- and nine-year milestones without doing anything. Licensees and market-access grantees **authorized as part of a processing round under Part 25** need not take action. Section 100.146(d)(1) retains the six-year interim and nine-year final benchmarks for operators authorized under the processing-round procedures of § 100.140.

Erratum. The September 2026 erratum is DOC-425059, released **15 September 2026**, by the Acting Chief, Space Bureau, correcting FCC 26-47 (released 23 July 2026). https://docs.fcc.gov/public/attachments/DOC-425059A1.pdf In the Table of Contents it replaced paragraph 124 (listed for "6. Earth Stations") with 299, and paragraph 129 (listed for "E. Benefits and Costs") with 316.

FCC 26-47 itself left the effective date to a later Space Bureau public notice (the October notice cites paragraph 320). Adoption on 22 July 2026 is not the effective date.

No. As of 9 October 2026 the Space Bureau has not set the Part 100 effective date. DA 26-1080 (7 October 2026) says the Bureau will announce that date in a future public notice, and that until then Part 25 controls except as the notice specifies. DA 26-1080

October 2026 guidance (DA 26-1080)

Released 7 October 2026, SB Docket 25-306, “Guidance on Transition of Part 25 Milestone and Surety Bond Rules and Requirements to Part 100.”

Three eligibility conditions to modify a current authorization to align with §§ 100.146 and 100.147. The operator:
1. must be in compliance with all current milestone and surety-bond terms in the system authorization and the Commission’s rules;
2. must not have a pending request for a milestone waiver; and
3. must not have received a waiver of the milestone rules under section 25.146.

Notice. Eligible licensees and market access grantees have **one year after the Effective Date** to notify the Bureau, by a **letter filed in the ICFS file** for the relevant system (same method for milestone switches and bond modifications). The notice lists what the letter must contain.

De-escalating bond formula (Order, § 100.147(b); the notice points operators to that section). Where **B** is the bond amount, **A** is the number of authorized satellites, and **D** is the number deployed:

B = $10,000,000 − $10,000,000 × (D / (0.9A))

rounded to the nearest $10,000. That is a flat $10 million at grant, declining to **$0 at 90% deployment.** Only NGSO and multi-orbit systems authorized in a processing round remain subject to a bond. FCC 26-47

Who keeps the six- and nine-year milestones with no action. Licensees and market access grantees **authorized as part of a processing round under Part 25** (section 25.157). Section 100.146(d)(1) keeps the six-year interim and nine-year final benchmarks for operators authorized under the processing-round procedures of § 100.140, so they need not notify the Bureau.

September 2026 erratum
Erratum, released 15 September 2026, by the Acting Chief, Space Bureau (Jennifer Gilsenan), correcting FCC 26-47 (released 23 July 2026), SB Docket 25-306. Daily Digest entry and text: DOC-425059A1; docket page: fcc.gov erratum page.

Table-of-contents paragraph numbers it corrected: 124, listed for “6. Earth Stations,” replaced with **299**; and **129**, listed for “E. Benefits and Costs,” replaced with **316.**

> **Judge:** All required facts are correct and no trap is asserted. Only context facts are missing: para 326, para 327 bond relief, no Federal Register final rule, the erratum's other fixes, the non-processing-round milestone schedule, and pre-Effective-Date bond relief.

I'll look up FCC-26-47, the September 2026 erratum, and the Space Bureau's October 2026 guidance on Part 100 milestones and surety bonds.The October 7 public notice exists; I'll pull the FCC document and the September erratum directly.No. As of 9 October 2026, the Space Bureau has not set the Part 100 effective date. FCC 26-47 left that date to a later Bureau public notice, and the Bureau’s 7 October 2026 guidance still says the Part 100 rules, including the milestone and surety-bond rules, are not yet effective. Claims that Part 100 took effect with the July vote are inconsistent with the order, the September erratum, and that public notice.

Effective date. FCC 26-47 (adopted 22 July 2026, released 23 July 2026) directs the Space Bureau to announce the Part 100 effective date by public notice. https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf (para. 320, as cited in the October notice). DA 26-1080, released 7 October 2026, repeats that the Bureau will designate that date in a future public notice and that, until then, Part 25 controls except as the notice itself allows. https://docs.fcc.gov/public/attachments/DA-26-1080A1.txt

October 2026 guidance. DA 26-1080, *Guidance on Transition of Part 25 Milestone and Surety Bond Rules and Requirements to Part 100* (SB Docket 25-306). https://docs.fcc.gov/public/attachments/DA-26-1080A1.txt; document page: https://www.fcc.gov/document/part-100-bond-and-milestone-transition-public-notice

Three eligibility conditions. To modify a current authorization to align with §§ 100.146 and 100.147, an operator must:

1. be in compliance with all current milestone and surety-bond terms in the authorization and with the Commission’s rules;
2. not have a pending request for a milestone waiver; and
3. not have received a waiver of the milestone rules under section 25.146.

The same notice’s letter instructions are stricter and slightly different: the certified statement must say there are no pending or previously granted milestone-waiver requests under § 25.164, not § 25.146. That cross-reference conflict is in the public notice itself.

Notice window and method. Eligible operators have **one year after the Effective Date** to notify the Bureau. Notice is a **letter filed in the ICFS file** for the relevant system (a consolidated letter may cover multiple systems, but it must still be filed in each ICFS file). The letter must include the operator’s name, file number(s) and call sign(s), the two certifications above, and either an updated milestone schedule under § 100.146(b)(1)(i) or, if applicable, a recalculated bond amount under § 100.147(b). If no notice is filed in that year, the originally authorized milestone and bond terms remain for the rest of the license term.

De-escalating bond formula (§ 100.147(b)):

B = $10,000,000 − $10,000,000 × (D / (0.9A)), rounded to the nearest $10,000,

where **B** is the bond amount, **D** is the number of NGSO satellites deployed, and **A** is the number of NGSO satellites authorized, excluding replacements. Only NGSO and multi-orbit systems authorized under the processing-round procedures remain subject to a bond. Processing-round licensees may not file the updated bond until Part 100 is effective and the transition request is announced as approved; they then have 30 days from that approval notice.

Who keeps the six- and nine-year milestones with no action. Licensees and market access grantees **authorized as part of a processing round under Part 25** (§ 25.157) need not act. Section 100.146(d)(1) keeps the six-year and nine-year interim and final benchmarks for operators authorized under the processing-round procedures in § 100.140.

September 2026 erratum. DOC-425059A1, released 15 September 2026, by the Acting Chief, Space Bureau (Jennifer Gilsenan). https://docs.fcc.gov/public/attachments/DOC-425059A1.txt; document page: https://www.fcc.gov/document/erratum-space-modernization-21st-century. In the

table of contents it corrected two paragraph numbers: **“6. Earth Stations” from 124 to 299**, and **“E. Benefits and Costs” from 129 to 316**. The erratum does not set a Part 100 effective date.

PROMPT 122 · MULTI-HOP · FACTS AS OF 2026-10-09

Environmental groups sued the FAA in 2023 over the Starship/Super Heavy programmatic environmental assessment at Boca Chica, and SpaceX intervened. Identify the court, docket number and judge; say what the September 2025 ruling actually decided, naming by ECF number which motions were granted and which denied; and then trace the procedural steps by which the case reached a final, appealable judgment, including the date of the final order, what it dismissed and on what basis, and the earlier minute order that had held two theories of relief in abeyance and why. News reports that the judge 'dismissed the lawsuit' in September 2025 are imprecise; explain why.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Chain: Sept 2025 opinion and order -> plaintiffs' clarifying memorandum -> Dec 2025 final order (all on the RECAP docket). Court: U.S. District Court for the District of Columbia, Center for Biological Diversity et al. v. FAA et al., Civil Action No. 1:23-cv-01204 (CJN), Judge Carl J. Nichols; SpaceX is defendant-intervenor. Hop 1: Memorandum Opinion, ECF 70, 15 September 2025 (https://storage.courtlistener.com/recap/gov.uscourts.dcd.254763/gov.uscourts.dcd.254763.70.0.pdf): the 2022 PEA and mitigated FONSI 'were not arbitrary or capricious' (applying Seven County Infrastructure Coalition v. Eagle County, 145 S. Ct. 1497 (2025)); the court rejected the unlawful-delegation theory and the claim that an EIS was required. Order, ECF 71 (same date, .71.0.pdf): Plaintiffs' Motion for Partial Summary Judgment, ECF 45, DENIED; government's Cross-Motion, ECF 48, GRANTED; SpaceX's Cross-Motion, ECF 49, GRANTED. This was partial summary judgment on the 'first theory for relief' only. Hop 2: Plaintiffs' Memorandum Clarifying Their Request Regarding Final Judgment, ECF 73, 19 November 2025 (.73.0.pdf), filed per a 18 November 2025 Minute Order: it recounts that a Joint Status Report of 15 November 2024 (ECF 44) led to a 21 November 2024 Minute Order holding the 'second and third theories for relief' of the First Amended Complaint (ECF 36) in abeyance pending the FAA's new NEPA analysis of the increased launch cadence; a 5 June 2025 status report (ECF 61) said plaintiffs would drop those theories; a 14 July 2025 motion for leave to file a Second Amended and Supplemental Complaint (ECF 64) was withdrawn by motion of 1 October 2025 (ECF 72). Hop 3: Order, ECF 76, 10 December 2025 (.76.0.pdf): because plaintiffs abandoned the second and third theories, they are 'DISMISSED WITH PREJUDICE'; the order 'disposes of all the claims and all the parties' and states 'This is a final and appealable Order.' So the September ruling resolved one theory by summary judgment; final judgment came on 10 December 2025. No notice of appeal appears in the RECAP docket as of 9 October 2026; an answer asserting a D.C. Circuit appeal must cite a docket number. Wrong answers: calling the September ruling a dismissal of the whole case; Judge other than Nichols; saying the second and third theories were decided on the merits; saying SpaceX was a defendant rather than intervenor; confusing this with the 2022 Texas state-court Sierra Club/Carrizo-Comecrudo suit.

Exa · Partly correct · Incomplete list · 2.2m · $0.235 · 6 searches · 7 fetches

Judge: The answer omits the Seven County Infrastructure Coalition v. Eagle County standard (fact 8). It does not say the court rejected the unlawful-delegation theory and the EIS-required claim (fact 9), and it does not mention that no notice of appeal appears on the docket (fact 22). Every other fact is correct and no trap is asserted.

Court, docket, judge. *Center for Biological Diversity et al. v. Federal Aviation Administration et al.*, No. **1:23-cv-01204 (CJN)** (D.D.C.), filed May 1, 2023, assigned to **Judge Carl J. Nichols**. SpaceX intervened as a defendant (motion ECF 13, granted July 5, 2023 under Rule 24(a)(2) or, alternatively, 24(b)(1)(B)). Docket: https://www.courtlistener.com/docket/67303601/center-for-biological-diversity-v-federal-aviation-administration/

What the September 15, 2025 ruling decided. It was **partial** summary judgment on only the first of three theories in the single claim in the First Amended Complaint (ECF 36)—the challenge to the FAA's 2022 Starship/Super Heavy Programmatic Environmental Assessment and mitigated finding of no significant impact at Boca Chica. The court held that the PEA and mitigated FONSI were not arbitrary or capricious under NEPA. Memorandum Opinion, ECF 70: https://storage.courtlistener.com/recap/gov.uscourts.dcd.254763/gov.uscourts.dcd.254763.70.0.pdf

The contemporaneous order, **ECF 71**, disposed of the motions by number:
- **Denied** Plaintiffs' Motion for Partial Summary Judgment, **ECF 45**
- **Granted** the government's Cross-Motion for Partial Summary Judgment, **ECF 48**
- **Granted** SpaceX's Cross-Motion for Partial Summary Judgment, **ECF 49**

Order: https://storage.courtlistener.com/recap/gov.uscourts.dcd.254763/gov.uscourts.dcd.254763.71.0.pdf

It did not dismiss the case, enter judgment on the whole claim, or address the second and third theories.

How the case became a final, appealable judgment.

1. The First Amended Complaint (ECF 36, Aug. 19, 2024) pleaded one claim with three theories. The second and third concerned post-PEA conduct (no supplemental NEPA analysis after the first launch, and Migratory Bird Treaty Act impacts). SpaceX moved to dismiss (ECF 38).

2. After the FAA said it would do a new NEPA analysis for a higher launch cadence (joint status report, ECF 44, Nov. 15, 2024), the **November 21, 2024 minute order** set partial-summary-judgment briefing on the "first theory for relief" only and **held in abeyance** the "second and third theories for relief" **and** the ECF 38 motion to dismiss "until the parties inform the Court about the effects of the government's planned new National Environmental Policy Act analysis on those theories." Text is on the docket entry for Nov. 21, 2024: https://www.courtlistener.com/docket/67303601/center-for-biological-diversity-v-federal-aviation-administration/

3. On June 5, 2025 (ECF 61), plaintiffs said they would no longer pursue those two theories as pleaded and asked that they be dismissed without prejudice, intending to replace them via a second amended complaint. They moved for leave to file that complaint (ECF 64, July 14, 2025). On July 22, 2025, the court dismissed ECF 38 as moot in light of ECF 61. The court never granted ECF 64. Plaintiffs withdrew it on October 1, 2025 (ECF 72) and said they would not pursue the supplemental claims.

4. A **November 18, 2025 minute order** (full text not retrieved here) prompted plaintiffs to clarify how the court could enter final judgment. Their November 19 memorandum (ECF 73) argued that no Rule 54(b) certification was needed because only the first theory remained live, and asked that the second and third theories be treated as voluntarily dismissed if necessary. https://storage.courtlistener.com/recap/gov.uscourts.dcd.254763/gov.uscourts.dcd.254763.73.0.pdf

5. **Final order: December 10, 2025, ECF 76.** Because plaintiffs had abandoned the second and third theories, the court **dismissed those theories with prejudice** (citing *Yoder v. Architect of the Capitol* and *Johnson v. District of Columbia* for dismissal of abandoned claims), so the order "disposes of all the claims and all the parties." It states: "This is a final and appealable Order." (The order misspells "prejudice" as "PREJDUICE.") https://storage.courtlistener.com/recap/gov.uscourts.dcd.254763/gov.uscourts.dcd.254763.76.0.pdf
The docket also lists an ECF 77 order the same day; its text was not available in the sources retrieved, so its contents are not verified here.

Why "dismissed the lawsuit" in September 2025 is imprecise. The September 15 orders granted and denied cross-motions for **partial** summary judgment on one theory. They did not dismiss any claim or the action, and they left the second and third theories unresolved (they had been held in abeyance since November 21, 2024). Under the standard the court later applied (*In re Domestic Airline Travel Antitrust Litigation*, 3 F.4th 457 (D.C. Cir. 2021)), the case was not fully disposed of—and the court did not call any order final and appealable—until the December 10, 2025 dismissal of the remaining theories with prejudice. News accounts such as the Texas Tribune's September 17, 2025 report ("Judge dismisses environmental lawsuit...") describe the merits loss on the PEA challenge, not the judgment that actually ended the case. https://www.texastribune.org/2025/09/17/texas-spacex-boca-chica-faa-environmental-lawsuit/

> **Judge:** Two context facts are missing: the answer never names Seven County Infrastructure Coalition v. Eagle County as the governing standard (fact 8), and it never says whether a notice of appeal has been filed (fact 22). All core and required facts are correct and no trap is asserted.

Court, docket, judge. *Center for Biological Diversity v. Federal Aviation Administration*, No. 1:23-cv-01204 (CJN), U.S. District Court for the District of Columbia, assigned to Judge Carl J. Nichols. Filed May 1, 2023. Plaintiffs are the Center for Biological Diversity, American Bird Conservancy, Surfrider Foundation, Save RGV, and the Carrizo/Comecrudo Nation of Texas, Inc. Defendants are the FAA and the FAA official sued in an official capacity. SpaceX moved to intervene on May 19, 2023 (ECF 13); the court granted intervention on July 5, 2023. Docket: https://www.courtlistener.com/docket/67303601/center-for-biological-diversity-v-federal-aviation-administration/

What the September 15, 2025 ruling actually did. It was a partial summary-judgment decision on only the first of three theories in the First Amended Complaint (ECF 36), not a dismissal of the case. Memorandum Opinion, ECF 70, and Order, ECF 71 (both Sept. 15, 2025):

- **Denied** plaintiffs' motion for partial summary judgment, ECF 45.
- **Granted** the government's cross-motion for partial summary judgment, ECF 48.
- **Granted** SpaceX's cross-motion for partial summary judgment, ECF 49.

On the merits, the court held that the 2022 programmatic environmental assessment and mitigated finding of no significant impact for the Boca Chica Starship/Super Heavy license satisfied NEPA. It rejected unlawful-delegation and "other agencies required an EIS" arguments, and it rejected the "hard look" challenges on lighting, noise, anomalies, and access closures. It did not reach SpaceX's argument that the Commercial Space Launch Act excused NEPA review. Opinion: https://law.justia.com/cases/federal/district-courts/district-of-columbia/dcdce/1:2023cv01204/254763/70/ ; order: https://storage.courtlistener.com/recap/gov.uscourts.dcd.254763/gov.uscourts.dcd.254763.71.0.pdf

How the case became final. The First Amended Complaint pleaded one APA/NEPA claim with three theories: (1) failure to prepare an EIS before approving the launch program; (2) failure to do new or supplemental NEPA review before a second license after the April 20, 2023 launch; and (3) failure to supplement after new information about Migratory Bird Treaty Act harm from the June 2023 launch. ECF 44: https://storage.courtlistener.com/recap/gov.uscourts.dcd.254763/gov.uscourts.dcd.254763.44.0.pdf

On **November 21, 2024**, a minute order (following the ECF 44 joint status report) set partial-summary-judgment briefing on the first theory only and **held the second and third theories, and SpaceX's ECF 38 motion to dismiss those theories, in abeyance** until the parties reported the effect of the FAA's planned new NEPA analysis for a higher launch cadence. Plaintiffs and the FAA had asked for that pause because the new analysis might moot or narrow the supplemental-NEPA theories. https://www.courtlistener.com/docket/67303601/center-for-biological-diversity-v-federal-aviation-administration/

Later steps:

- June 5, 2025 status report (ECF 61): plaintiffs said they would drop the original second and third theories and seek leave to plead new claims about the cadence review, and asked that those theories be dismissed without prejudice.
- July 14, 2025: motion for leave to file a second amended and supplemental complaint (ECF 64).
- July 22, 2025 minute order: ECF 38 dismissed as moot.
- Sept. 15, 2025: partial summary judgment on theory one only (ECF 70–71).
- Oct. 1, 2025: plaintiffs withdrew the motion for leave (ECF 72) and said they would not pursue the supplemental claims.
- Nov. 18, 2025 minute order prompted plaintiffs to clarify whether final judgment could be entered; their Nov. 19 memorandum (ECF 73) asked the court to treat the remaining theories as voluntarily dismissed and to enter judgment without a Rule 54(b) certification. https://storage.courtlistener.com/recap/gov.uscourts.dcd.254763/gov.uscourts.dcd.254763.73.0.pdf

Final order: December 10, 2025, ECF 76. The court dismissed the second and third theories **with prejudice** because plaintiffs had abandoned them, citing authority that a court may dismiss claims a party explicitly concedes or abandons. It did so with prejudice so the proceedings would be complete and not produce piecemeal appeals. The order states that it "disposes of all the claims and all the parties" and that "[t]his is a final and appealable Order." https://storage.courtlistener.com/recap/gov.uscourts.dcd.254763/gov.uscourts.dcd.254763.76.0.pdf A separate order, ECF 77, was entered the same day; its text was not available in the public RECAP copy, so I am not characterizing it.

Why "dismissed the lawsuit" in September 2025 is imprecise. Reports such as the Texas Tribune's Sept. 17, 2025 story ("Judge dismisses environmental lawsuit...") describe the Sept. 15 ruling as ending the case. https://www.texastribune.org/2025/09/17/texas-spacex-boca-chica-faa-environmental-lawsuit/ That order granted and denied **partial** summary-judgment motions on one theory only. The other two theories were still in the case (they had been held in abeyance, and the court had not yet dismissed them). No Rule 54(b) certification accompanied ECF 71, and the court later treated that order as not disposing of the whole action. The case was not closed, and there was no final appealable judgment, until the Dec. 10, 2025 order dismissed the abandoned theories with prejudice. Plaintiffs had asked that those theories be treated as dismissed without prejudice; the court dismissed them with prejudice.

> **Judge:** The answer never states that the court rejected the unlawful-delegation theory (fact 9), and it omits the 19 Nov 2025 filing date of ECF 73 and the 18 Nov 2025 Minute Order behind it (fact 14). It also omits the Seven County citation (fact 8) and the status of any appeal (fact 22); the last two are context-only.

Court, docket, and judge. *Center for Biological Diversity et al. v. Federal Aviation Administration et al.*, No. 1:23-cv-01204 (CJN) (D.D.C.). Judge Carl J. Nichols. SpaceX was granted intervention as a defendant-intervenor on July 5, 2023. Docket: https://www.courtlistener.com/docket/67303601/center-for-biological-diversity-v-federal-aviation-administration/

What the September 15, 2025 ruling decided. It was **partial** summary judgment on only the first of three theories supporting a single NEPA/APA claim in the First Amended Complaint (ECF 36): the challenge to the FAA's 2022 Programmatic Environmental Assessment and mitigated finding of no significant impact for the Boca Chica Starship/Super Heavy license. The court held that the PEA and mitigated FONSI were not arbitrary or capricious. By ECF 71 (order accompanying memorandum opinion ECF 70):

- **Denied:** Plaintiffs' motion for partial summary judgment, ECF 45
- **Granted:** the government's cross-motion for partial summary judgment, ECF 48
- **Granted:** SpaceX's cross-motion for partial summary judgment, ECF 49

Order text: https://www.courtlistener.com/docket/67303601/71/center-for-biological-diversity-v-federal-aviation-administration/
Opinion: https://www.courtlistener.com/docket/67303601/70/center-for-biological-diversity-v-federal-aviation-administration/

How the case reached a final, appealable judgment.

1. The First Amended Complaint (ECF 36, Aug. 19, 2024) pleaded one claim with three theories: (1) failure to prepare an EIS for the 2022 PEA/license; (2) failure to do new or supplemental NEPA analysis before a second license after the April 20, 2023 launch; (3) failure to do new or supplemental analysis of new information about harm to migratory-bird nests and eggs from debris of the June 2023 launch. SpaceX's motion to dismiss (ECF 38) targeted only theories 2 and 3.
2. **November 21, 2024 minute order** (on the parties' joint status report, ECF 44): summary-judgment briefing was limited to the "first theory for relief." The **second and third theories**, and SpaceX's ECF 38 motion to dismiss, were **held in abeyance** until the parties reported how the FAA's planned new NEPA analysis (increased launch cadence) affected those theories. https://www.courtlistener.com/docket/67303601/center-for-biological-diversity-v-federal-aviation-administration/?order_by=desc
3. After the FAA's April 24, 2025 tiered EA and mitigated FONSI/ROD, plaintiffs said in a June 5, 2025 status report (ECF 61) that they would drop theories 2 and 3 as pleaded and seek leave to replace them with claims about the new analysis. They moved for leave (ECF 64, July 14, 2025). On July 22, 2025, the court dismissed ECF 38 as moot.
4. Plaintiffs later **withdrew** the motion for leave (ECF 72) and confirmed they were no longer pursuing theories 2 and 3 (ECF 73).
5. **December 10, 2025, ECF 76** (Judge Nichols): because plaintiffs had abandoned the second and third theories, those theories were **dismissed with prejudice** (citing authority that courts may dismiss claims a party explicitly abandons). The order states that it "disposes of all the claims and all the parties" and is "a final and appealable Order." https://www.courtlistener.com/docket/67303601/76/center-for-biological-diversity-v-federal-aviation-administration/

Why "dismissed the lawsuit" in September 2025 is imprecise. ECF 71 did not dismiss the case. It granted and denied cross-motions for **partial** summary judgment and resolved only theory 1. Theories 2 and 3 were still in abeyance, plaintiffs were still litigating whether to amend, and no order disposing of all claims and parties—and labeled final and appealable—issued until **December 10, 2025 (ECF 76)**. September closed the PEA challenge on the merits; December closed the rest of the case by dismissal with prejudice for abandonment, not by a September merits dismissal of the whole suit.

> **Judge:** The answer never mentions the court's rejection of the unlawful-delegation theory (fact 9). It also omits the 18 November 2025 Minute Order that prompted ECF 73 and gives only 'Nov. 18/19' for the filing date (fact 14), and it does not say that no notice of appeal appears on the docket (fact 22).

Center for Biological Diversity v. Federal Aviation Administration, No. 1:23-cv-01204 (CJN) (D.D.C.), Judge Carl J. Nichols. SpaceX intervened as a defendant. The September 15, 2025 ruling was partial summary judgment, not a dismissal of the case. Final, appealable judgment came on December 10, 2025, when the remaining theories were dismissed with prejudice as abandoned.

September 15, 2025: partial summary judgment only

ECF 70 (memorandum opinion) and ECF 71 (order), both signed September 15, 2025, decided only the first of three theories under a single APA/NEPA claim in the First Amended Complaint (ECF 36). Justia, Document 70; CourtListener opinion.

ECF 71:

- **Denied** plaintiffs' motion for partial summary judgment, ECF 45.
- **Granted** the FAA's cross-motion for partial summary judgment, ECF 48.
- **Granted** SpaceX's cross-motion for partial summary judgment, ECF 49.

Docket, ECF 71.

The first theory was that the FAA should have prepared an EIS, rather than the 2022 Programmatic Environmental Assessment and mitigated FONSI, before licensing the Starship/Super Heavy program at Boca Chica. Nichols held the PEA and mitigated FONSI were not arbitrary or capricious under 5 U.S.C. § 706(2), applying *Seven County Infrastructure Coalition v. Eagle County*. He did not reach SpaceX's argument that the Commercial Space Launch Act barred an environmental denial of the license. The second and third theories were not before the court. Opinion.

Why "dismissed the lawsuit" is wrong for September

ECF 71 granted and denied cross-motions for **partial** summary judgment on one theory of one claim. It entered no judgment dismissing the action, and the docket stayed open. The other two theories, and SpaceX's motion to dismiss them, had been parked. Headlines such as the Houston Press's "SpaceX FAA Starship Launch Lawsuit Dismissed" (Sept. 19, 2025) collapse a merits ruling on part of the claim into a case-ending dismissal. Houston Press.

How the case became final

The amended complaint's three theories, as the parties described them in the November 15, 2024 joint status report (ECF 44), were:

1. No EIS when the FAA approved the launch program (FAC ¶¶ 115–20).
2. No new or supplemental NEPA analysis before a second launch license after the April 20, 2023 launch (¶¶ 121–22).
3. No new or supplemental analysis of new information about harm to nests and eggs of Migratory Bird Treaty Act-protected birds from debris of the June 2023 launch (¶¶ 123–24).

ECF 44.

November 21, 2024 minute order. On the ECF 44 joint status report, Nichols set partial-summary-judgment briefing on the first theory only and ordered that the second and third theories, and SpaceX's ECF 38 motion to dismiss (or for a more definite statement), "shall be held in abeyance until the parties inform the Court about the effects of the government's planned new National Environmental Policy Act analysis on those theories." The FAA expected a new draft NEPA analysis of a higher launch cadence that might moot or reshape those supplemental-NEPA theories. Docket minute order.

Then:

- **July 22, 2025:** minute order dismissing ECF 38 as moot, after the ECF 61 status report. In that report (at 4), plaintiffs said they would no longer pursue the second and third theories as pleaded and intended to seek leave to replace them.
- **ECF 64:** plaintiffs moved for leave to file a second amended complaint adding two new theories. **ECF 72 (Oct. 1, 2025):** they withdrew that motion.
- **ECF 73 (Nov. 18/19, 2025), at 3:** plaintiffs clarified they were no longer pursuing the second and third theories.

December 10, 2025, ECF 76. Because those theories had been abandoned, Nichols dismissed them with prejudice, citing *Yoder v. Architect of the Capitol* (courts may dismiss claims litigants explicitly concede or abandon) and *Blue v. D.C. Public Schools* (dismissal with prejudice so the proceedings are complete and do not produce piecemeal appeals). The order says it "disposes of all the claims and all the parties," citing *In re Domestic Airline Travel Antitrust Litigation*, 3 F.4th 457, 459 (D.C. Cir. 2021), and states: "This is a final and appealable Order." The operative line dismisses the second and third theories "WITH PREJDUICE" — the court's spelling. ECF 76; PDF.

So the appealable judgment is the combination of ECF 71 (first theory lost on the merits) and ECF 76 (remaining theories dismissed with prejudice as abandoned), with finality attaching on December 10, 2025 — not on the September opinion the news reports treated as the end of the case.

> **Judge:** Fact 9 is missing because the answer never says the court rejected the unlawful-delegation theory. Fact 22 is missing because the answer says nothing about the absence of a notice of appeal in the docket.

Court, docket, and judge. *Center for Biological Diversity et al. v. Federal Aviation Administration et al.*, with Space Exploration Technologies Corp. as defendant-intervenor, is in the U.S. District Court for the District of Columbia, No. **1:23-cv-01204 (CJN)**, before Judge **Carl J. Nichols**. (PacerMonitor docket; ECF 70)

What the September 15, 2025 ruling decided. It was **partial** summary judgment on only the first of three theories supporting a single claim in the First Amended Complaint (ECF 36): the challenge to the FAA's 2022 Programmatic Environmental Assessment and mitigated finding of no significant impact for Starship/Super Heavy at Boca Chica, and the decision not to prepare an EIS. The court held that the PEA and mitigated FONSI were not arbitrary or capricious under NEPA/the APA, applying *Seven County Infrastructure Coalition v. Eagle County*. (ECF 70)

The contemporaneous order, **ECF 71**, ruled:

- **Denied:** Plaintiffs' motion for partial summary judgment, **ECF 45**
- **Granted:** the government's cross-motion for partial summary judgment, **ECF 48**
- **Granted:** SpaceX's cross-motion for partial summary judgment, **ECF 49**

(ECF 71)

It did not enter final judgment or dispose of the other two theories.

How the case became final and appealable.

1. The First Amended Complaint (ECF 36, filed Aug. 19, 2024) pleaded one NEPA/APA claim with three theories: (1) no EIS for the 2022 launch-program approval; (2) no supplemental NEPA review before a later license after the April 20, 2023 launch; (3) no supplemental review of new information about harm to Migratory Bird Treaty Act nests and eggs from the June 2023 launch. (ECF 61)

2. After a Nov. 15, 2024 joint status report (ECF 44), the **Nov. 21, 2024 minute order** set partial-summary-judgment briefing on the first theory only and **held the second and third theories, and SpaceX's motion to dismiss (ECF 38), in abeyance** until the parties reported how the FAA's planned new NEPA analysis of an increased launch cadence affected those theories. (CourtListener docket entry; ECF 61)

3. On June 5, 2025 (ECF 61), after the FAA's April 24, 2025 tiered EA, plaintiffs said they would drop the second and third theories as pleaded, asked that they be dismissed **without prejudice**, and said they would seek leave to add new increased-cadence claims. They moved for leave on July 14, 2025 (**ECF 64**). The court never granted that motion. On Oct. 1, 2025 (**ECF 72**), plaintiffs withdrew it and said they would not pursue the supplemental claims. (ECF 73; ECF 76)

4. **A Nov. 18, 2025 minute order** prompted plaintiffs to clarify their request for final judgment. On Nov. 19, 2025 (ECF 73), they argued no Rule 54(b) certification was needed because only the first theory remained live, and asked that the other two be treated as voluntarily dismissed. (ECF 73)

5. **On December 10, 2025, ECF 76** dismissed the **second and third theories with prejudice** because plaintiffs had **abandoned** them (citing *Yoder* and *Johnson*), not merely as a without-prejudice voluntary dismissal. The order states that it "disposes of all the claims and all the parties" and is "a final and appealable Order." The same day, **ECF 77** entered final judgment and directed the clerk to terminate the case. (ECF 76; PacerMonitor)

Why "dismissed the lawsuit" in September 2025 is imprecise. Reports such as the Texas Tribune (Sept. 17, 2025) treated the Sept. 15 opinion as ending the case. It

did not. ECF 71 granted **partial** summary judgment for the defendants on the merits of one theory; it was not a dismissal of the action. The second and third theories were still held in abeyance under the Nov. 21, 2024 minute order. There was no order disposing of all claims and parties, and no final appealable judgment, until **December 10, 2025** (ECF 76 and ECF 77).

> **Judge:** The answer never mentions the court's rejection of the unlawful-delegation theory (fact 9). It also omits the 18 November 2025 Minute Order that prompted ECF 73 and gives only 'Nov. 18/19' for the filing date (fact 14), and it does not say that no notice of appeal appears on the docket (fact 22).

Center for Biological Diversity v. Federal Aviation Administration, No. 1:23-cv-01204 (CJN) (D.D.C.), Judge Carl J. Nichols. SpaceX intervened as a defendant. The September 15, 2025 ruling was partial summary judgment, not a dismissal of the case. Final, appealable judgment came on December 10, 2025, when the remaining theories were dismissed with prejudice as abandoned.

September 15, 2025: partial summary judgment only

ECF 70 (memorandum opinion) and ECF 71 (order), both signed September 15, 2025, decided only the first of three theories under a single APA/NEPA claim in the First Amended Complaint (ECF 36). Justia, Document 70; CourtListener opinion.

ECF 71:

- **Denied** plaintiffs' motion for partial summary judgment, ECF 45.
- **Granted** the FAA's cross-motion for partial summary judgment, ECF 48.
- **Granted** SpaceX's cross-motion for partial summary judgment, ECF 49.

Docket, ECF 71.

The first theory was that the FAA should have prepared an EIS, rather than the 2022 Programmatic Environmental Assessment and mitigated FONSI, before licensing the Starship/Super Heavy program at Boca Chica. Nichols held the PEA and mitigated FONSI were not arbitrary or capricious under 5 U.S.C. § 706(2), applying *Seven County Infrastructure Coalition v. Eagle County*. He did not reach SpaceX's argument that the Commercial Space Launch Act barred an environmental denial of the license. The second and third theories were not before the court. Opinion.

Why "dismissed the lawsuit" is wrong for September

ECF 71 granted and denied cross-motions for **partial** summary judgment on one theory of one claim. It entered no judgment dismissing the action, and the docket stayed open. The other two theories, and SpaceX's motion to dismiss them, had been parked. Headlines such as the Houston Press's "SpaceX FAA Starship Launch Lawsuit Dismissed" (Sept. 19, 2025) collapse a merits ruling on part of the claim into a case-ending dismissal. Houston Press.

How the case became final

The amended complaint's three theories, as the parties described them in the November 15, 2024 joint status report (ECF 44), were:

1. No EIS when the FAA approved the launch program (FAC ¶¶ 115–20).
2. No new or supplemental NEPA analysis before a second launch license after the April 20, 2023 launch (¶¶ 121–22).
3. No new or supplemental analysis of new information about harm to nests and eggs of Migratory Bird Treaty Act-protected birds from debris of the June 2023 launch (¶¶ 123–24).

ECF 44.

November 21, 2024 minute order. On the ECF 44 joint status report, Nichols set partial-summary-judgment briefing on the first theory only and ordered that the second and third theories, and SpaceX's ECF 38 motion to dismiss (or for a more definite statement), "shall be held in abeyance until the parties inform the Court about the effects of the government's planned new National Environmental Policy Act analysis on those theories." The FAA expected a new draft NEPA analysis of a higher launch cadence that might moot or reshape those supplemental-NEPA theories. Docket minute order.

Then:

- **July 22, 2025:** minute order dismissing ECF 38 as moot, after the ECF 61 status report. In that report (at 4), plaintiffs said they would no longer pursue the second and third theories as pleaded and intended to seek leave to replace them.
- **ECF 64:** plaintiffs moved for leave to file a second amended complaint adding two new theories. **ECF 72 (Oct. 1, 2025):** they withdrew that motion.
- **ECF 73 (Nov. 18/19, 2025), at 3:** plaintiffs clarified they were no longer pursuing the second and third theories.

December 10, 2025, ECF 76. Because those theories had been abandoned, Nichols dismissed them with prejudice, citing *Yoder v. Architect of the Capitol* (courts may dismiss claims litigants explicitly concede or abandon) and *Blue v. D.C. Public Schools* (dismissal with prejudice so the proceedings are complete and do not produce piecemeal appeals). The order says it "disposes of all the claims and all the parties," citing *In re Domestic Airline Travel Antitrust Litigation*, 3 F.4th 457, 459 (D.C. Cir. 2021), and states: "This is a final and appealable Order." The operative line dismisses the second and third theories "WITH PREJDUICE" — the court's spelling. ECF 76; PDF.

So the appealable judgment is the combination of ECF 71 (first theory lost on the merits) and ECF 76 (remaining theories dismissed with prejudice as abandoned), with finality attaching on December 10, 2025 — not on the September opinion the news reports treated as the end of the case.

PROMPT 123 · MULTI-HOP · FACTS AS OF 2026-10-09

FCC 26-26 adopted an initial dataset of GSO reference links that NGSO systems such as Starlink must protect in their compatibility showings. How many links were in the initial set and from what sources were they drawn? Trace the follow-on: the Space Bureau's May 2026 public notice seeking comment on the dataset (DA number and Federal Register citation), and then the September 2026 public notice that revised it. For the September notice, state which GSO operators' new links were added, what class of legacy links was removed and why, what unavailability C/N upper bound was set for non-ACM user-terminal links and who had proposed it, and when the notice takes effect. Do not confuse this track with the DIRECTV reconsideration petition in the same docket.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Chain: FCC 26-26 para 67 -> DA 26-467 and its FR notice -> DA 26-973. Hop 1: FCC 26-26 (https://docs.fcc.gov/public/attachments/FCC-26-26A1.txt), para 67: 'the GSO reference links we adopt include 328 links provided in the record and drawn from both ITU data and the Commission's licensing databases and filtered according to a filtering methodology' (citing SpaceX Reply, Appx. 1); para 69 delegated authority to the Bureau to remove, revise or add links by public notice. Hop 2: DA 26-467, 'Space Bureau Seeks Comment on GSO Reference Links', released 12 May 2026, erratum DOC-421870 released 20 May 2026; published in the Federal Register 28 May 2026 at 91 FR 31697 (FR Doc. 2026-10617, https://www.federalregister.gov/documents/2026/05/28/2026-10617/space-bureau-seeks-comment-on-gso-reference-links), comments 30 days and replies 45 days after publication; nine comments and seven replies were filed. Hop 3: DA 26-973, released 11 September 2026 (https://docs.fcc.gov/public/attachments/DA-26-973A1.txt): adds up-to-date links submitted by DIRECTV, SES, Eutelsat, Hispasat, Astranis and Viasat (but not Astranis's prospective 121 deg W.L. links) and accepts Amazon's proposed Ka-band replacement links drawn from ICFS; removes legacy links that reflect non-US operations, have no current operator, or came from networks that never operated or ceased over a decade ago, many drawn from the 1999 ITU Circular Letter CR/116, because an NGSO operator would have nobody to coordinate with; adopts a 9.5 dB unavailability C/N threshold for non-ACM user terminal links, proposed by SpaceX and supported by DIRECTV, rejecting SES's 12.6 dB links as outliers (ACM links stay at 0 dB); corrects Hispasat parameters; streamlines dataset columns; declines broader changes, keeping the 25-degree minimum elevation criterion and not adding ESIM links. It is 'effective 30 days after publication in the Federal Register'. The notice also records that FCC 26-26 was published 13 May 2026 (91 FR 26928) with a 13 July 2026 effective date, except 25.146(a)(3), which is delayed pending PRA approval, so no compatibility showings have been reviewed yet. Wrong answers: 328 'GSO satellites' or 'networks'; adopting 12.6 dB; saying the Bureau changed the selection criteria; saying links from Astranis's planned 121 deg W.L. satellite were added; effective on release.

Exa ✓ Correct ✓ ✓ ✓ ✓ 32.0s · $0.204 · 11 searches · 1 fetches

Judge: All core and required facts are correct and no traps were asserted. Three context facts are missing: the comment and reply deadlines (7), the nine comments and seven replies (8), and the FCC 26-26 effective date and delayed 25.146(a)(3) detail (20). The answer also omits that ACM links stay at 0 dB (part of 16).

FCC 26-26 (adopted April 30, 2026; released May 1, 2026; SB Docket No. 25-157) adopted an **initial set of 328 GSO reference links**, drawn from **ITU data and the Commission's licensing databases** and filtered under a selection methodology. They are in Appendix B and are the links NGSO operators use in compatibility showings. (FCC 26-26; 91 FR 26928)

May 2026 comment notice. The Space Bureau opened the follow-on with **DA 26-467** (released May 12, 2026; erratum DOC-421870, May 20, 2026), published as **91 FR 31697 (May 28, 2026)** (FR Doc. 2026-10617). It sought comment on adding, revising, or removing links and on the selection criteria. (DA 26-973; 91 FR 31697)

September 2026 revision. **DA 26-973**, *Space Bureau Updates Initial Set of GSO Reference Links*, was released **September 11, 2026.** It takes effect **30 days after Federal Register publication.** A later FR citation was not verified here. (DA 26-973)

- **Added (GSO operators):** new links from **DIRECTV, SES, Eutelsat, Hispasat, Astranis, and Viasat** that matched the original selection criteria and were traceable in ICFS. Astranis links for *prospective* operations at 121° W.L. were **not** included. The Bureau also added **Amazon (Kuiper)** replacement Ka-band links drawn from the licensing database for authorized GSO operators in 17.3–18.6 GHz and 19.7–20.2 GHz; Amazon is an NGSO filer, not a GSO operator.
- **Removed: legacy** links that reflected **operations outside the United States**, were **not tied to any current operator or U.S.-serving operations**, or were filed for networks that **never began service or ceased operations more than a decade earlier** (many from ITU Circular Letter CR/116, circulated before commercial Ka-band satellites). Also removed were links that were **redundant or superseded** by operators' updated filings. The Bureau said there was no need to keep outdated or non-U.S. links once current operators had supplied up-to-date links, and that a link with no affiliated operator cannot support coordination.
- **Non-ACM user-terminal unavailability C/N cap: 9.5 dB**, adopted as a reasonable upper bound for modern, widespread, typical non-ACM user-terminal links. **SpaceX proposed it; DIRECTV supported it** for BSS user links as consistent with its network design. Some original entries had C/N values up to 18 dB, which DIRECTV said were not reflective of non-ACM operations. SES had argued for 12.6 dB on some media-distribution links; the Bureau treated higher values as outliers on older networks.
- Hispasat parameters were also corrected, and dataset columns were streamlined. Broader changes to the selection criteria were declined.

This is the delegated reference-link update under paragraph 69 of FCC 26-26, not the separate **DIRECTV petition for reconsideration** of the Order (public notice Report No. 3234, 91 FR 40964, July 6, 2026).

Judge: All core and required facts are correct. Only context facts are missing: the delegation of authority in para 69, the nine comments and seven replies, the Hispasat corrections, the 25-degree elevation and ESIM decisions, and the FCC 26-26 FR publication and effective date.

FCC 26-26 (adopted April 30, 2026; released May 1, 2026) adopted an **initial set of 328 GSO reference links**, drawn from **ITU data and the Commission's licensing databases** and filtered to the Order's selection criteria. NGSO applicants use those links in compatibility showings when they have not coordinated with a co-frequency GSO network. (FCC-26-26A1.pdf; DA-26-973A1.pdf; 91 FR 31697)

May 2026 comment notice. On May 12, 2026, the Space Bureau opened a follow-on on that dataset: **DA 26-467**, *Space Bureau Seeks Comment on GSO Reference Links*, SB Docket No. 25-157. It was published at **91 FR 31697 (May 28, 2026)** (FR Doc. 2026-10617). Comments were due 30 days after publication; replies 45 days. An erratum (DOC-421870) was released May 20, 2026. (DA-26-467A1.pdf; 91 FR 31697)

September 2026 revision. **DA 26-973**, *Space Bureau Updates Initial Set of GSO Reference Links*, released **September 11, 2026**, revises the dataset. (DA-26-

973A1.pdf)

- GSO operators whose new links were added: DIRECTV, SES, Eutelsat, Hispasat, Astranis, and Viasat (traceable in ICFS). Astranis links for *proposed* operations at 121° W.L. were not included. The Bureau also incorporated Ka-band replacement links identified by Amazon (an NGSO operator) from the Commission's licensing database; those are not GSO-operator submissions.
- Legacy links removed: links that reflect operations outside the United States, are unassociated with any current operator or U.S.-serving operations, or were filed for networks that never began service or ceased operations more than a decade ago—many from ITU Circular Letter CR/116 (circulated before commercial Ka-band satellites, and based on planned rather than operational Ka-band networks). Redundant or superseded links for operators that filed updated links were also dropped. The Bureau's reasons: contemporary operators did not claim those legacy links as current operations; without an affiliated operator there is no one to coordinate with; and the new operator filings made the outdated and non-U.S. entries unnecessary. It did not create a standing future-removal mechanism.
- Non-ACM user-terminal unavailability C/N cap: 9.5 dB, proposed by SpaceX and supported by DIRECTV for broadcasting-satellite service user links as consistent with its network design. The Bureau treated higher values (up to 18 dB in the initial set; SES cited 12.6 dB) as outliers, often on satellites past design life.
- Effective date: 30 days after publication in the Federal Register. I could not verify a Federal Register citation or calendar effective date for DA 26-973.

This track is the delegated reference-link update under FCC 26-26, not DIRECTV's petition for reconsideration of the Order (Report No. 3234, released June 23, 2026; noticed at 91 FR 40964, July 6, 2026).

Keenable search · Partly correct · Incomplete list · 1.0m · ~$0.195 · 15 searches · 3 fetches

> Judge: The answer omits the explicit exclusion of Astranis's prospective 121 deg W.L. links and the rationale that an NGSO operator would have nobody to coordinate with. It also omits several context items (delegated authority, 9 comments/7 replies, Amazon Ka-band replacement links, 25-degree and ESIM, FCC 26-26 effective date). It does not contradict any fact or assert any trap.

Initial set (FCC 26-26). The April 30, 2026 Report and Order adopted 328 GSO reference links, drawn from ITU data and the Commission's licensing databases and filtered to the Order's selection criteria. Those links are the benchmark for NGSO compatibility showings (including Starlink-class systems) in the 10.7–12.7, 17.3–18.6, and 19.7–20.2 GHz bands when coordination is incomplete. (91 FR 26928; restated in DA 26-973.)

May 2026 comment notice. The Space Bureau opened the refinement proceeding with DA 26-467 (released May 12, 2026; erratum DOC-421870, May 20, 2026), published as 91 FR 31697 (May 28, 2026) (FR Doc. 2026-10617), SB Docket No. 25-157. Comments were due 30 days after publication and replies 45 days after. (Federal Register.)

September 2026 revision. DA 26-973, "Space Bureau Updates Initial Set of GSO Reference Links," released September 11, 2026 (same docket). (FCC document page; PDF.)

- Links added. New links from DIRECTV, SES, Eutelsat, Hispasat, Astranis, and Viasat (DA 26-973 n.22). The Bureau also corrected some existing parameters (including Hispasat) and declined broader changes to the selection criteria.
- Legacy links removed. Links that reflect operations outside the United States, are unassociated with any current operator or U.S.-serving operations, or were submitted for networks that never began operations or ceased operations more than a decade ago—removed as inconsistent with the original selection criteria once updated operator links were available.
- Non-ACM unavailability C/N cap. 9.5 dB, proposed by SpaceX and supported by DIRECTV as consistent with its BSS user-terminal design. The Bureau adopted it as a reasonable upper bound for modern, widespread, typical non-ACM user-terminal links. (SES had argued for 12.6 dB on some media-distribution links; the Bureau treated higher values as outliers on older networks.)
- Effective date. The notice states it is effective 30 days after Federal Register publication. I did not find a Federal Register citation for DA 26-973 itself, so a calendar effective date is not verified.

This is the reference-link dataset track in SB Docket No. 25-157, not the separate DIRECTV reconsideration petition on the Order.

Keenable SELECT · Partly correct · Incomplete list · 6.8m · ~$0.302 · 20 searches · 1 fetches

> Judge: Missing the stated reason for removing the legacy links (no one for an NGSO operator to coordinate with). Also missing the SES 12.6 dB outlier rejection with ACM links at 0 dB, the kept 25-degree elevation criterion and no ESIM links, and the explicit para 69 delegation of authority.

FCC 26-26 adopted an initial set of 328 GSO reference links, drawn from International Telecommunication Union data and the Commission's licensing databases and filtered against selection criteria. NGSO applicants use those links in compatibility showings as an alternative to EPFD limits in the 10.7–12.7, 17.3–18.6, and 19.7–20.2 GHz bands. The order is *Modernizing Spectrum Sharing for Satellite Broadband*, SB Docket No. 25-157, adopted April 30, 2026. Sources: DA 26-973; DA 26-467.

May 2026 comment notice. The Space Bureau opened the delegated refinement proceeding with DA 26-467, released May 12, 2026 (*Space Bureau Seeks Comment on GSO Reference Links*), with an erratum, DOC-421870, released May 20, 2026. It was published at 91 FR 31697 (May 28, 2026) (FR Doc. 2026-10617; FR ID 347964). Comments were due 30 days after publication and reply comments 45 days after. Sources: DA 26-973; 91 FR 31697.

September 2026 revision. DA 26-973, *Space Bureau Updates Initial Set of GSO Reference Links*, was released September 11, 2026, in the same docket. On the record (nine comments, seven replies, and ex partes):

- Added: new links submitted by DIRECTV, SES, Eutelsat, Hispasat, Astranis, and Viasat, traceable through ICFS. Astranis links for proposed operations at 121° W.L. were not added, because prospective operations are excluded. Amazon, an NGSO operator, also filed proposed replacement links drawn from the licensing database.
- Removed: outdated legacy links, especially those drawn from the 1999 ITU Circular Letter CR/116, which circulated before any commercial Ka-band satellites were deployed. The Bureau dropped links reflecting operations outside the United States, links unassociated with a current operator or with operations serving the United States, and links for GSO networks that never began operations or ceased operations more than a decade ago. It also dropped links that were redundant or superseded by up-to-date links filed in the record. No GSO operator claimed the legacy links reflect current operations, and the Bureau declined to treat them as entitled to deference. It did not create a standing mechanism for future removals.
- C/N bound: a 9.5 dB upper bound on unavailability C/N for non-ACM user-terminal links. SpaceX proposed it; DIRECTV supported it for broadcasting-satellite service user links as consistent with its operations and network design. The Bureau adopted it as a reasonable bound for modern, widespread, typical non-ACM

user-terminal links, treating higher values as outliers on older networks. It also corrected certain Hispasat parameters and streamlined dataset columns.
- **Effective date:** 30 days after Federal Register publication. The notice itself does not state a calendar effective date, and I could not find a Federal Register publication of DA 26-973, so that date is not yet verifiable. The notice also notes that the compatibility-showing rule in section 25.146(a)(3) is delayed indefinitely pending Paperwork Reduction Act approval, so the Bureau is not yet reviewing compatibility showings.

Source for the September notice: DA 26-973.

This track is separate from DIRECTV's petition for reconsideration of the underlying order. That petition, filed by Brenna Sparks for DIRECTV, LLC, was noticed in Report No. 3234 (released June 23, 2026) and published at 91 FR 40964 (July 6, 2026), also in SB Docket No. 25-157. Source: Federal Register.

> **Judge:** All core and required facts are correct and no traps were asserted. Only context facts were missing: the 30/45-day comment deadlines (7), the nine comments and seven replies (8), SES's 12.6 dB links rejected as outliers with ACM links staying at 0 dB (16), the unchanged 25-degree elevation criterion and no ESIM links (18), and the FCC 26-26 effective-date detail (20).

Initial set (FCC 26-26). The Order (adopted April 30, 2026; released May 1, 2026; SB Docket No. 25-157) adopted an initial set of **328 GSO reference links**, drawn from **ITU data and the Commission's licensing databases** and filtered under a selection methodology. Those links are what NGSO operators use in compatibility showings. The Order delegated the Space Bureau to refine the set after comment.
Sources: 91 FR 26928 (May 13, 2026); DA 26-973A1.

May 2026 comment notice. The Bureau opened that proceeding in DA 26-467 (released May 12, 2026; erratum DOC-421870, May 20, 2026), published as **91 FR 31697 (May 28, 2026), FR Doc. 2026-10617**. It sought comment on adding, removing, or revising links and on the selection criteria.
Sources: 91 FR 31697; DA 26-973A1.

September 2026 revision — DA 26-973 (released September 11, 2026), "Space Bureau Updates Initial Set of GSO Reference Links."

- **GSO operators whose new links were added:** DIRECTV, SES, Eutelsat, Hispasat, Astranis, and Viasat (traceable in ICFS and consistent with the original selection criteria). Astranis links for **prospective** operations at 121° W.L. were **not** included. The Bureau also added a replacement Ka-band set proposed by NGSO operator Amazon (Kuiper), covering authorized GSO operators in 17.3–18.6 GHz and 19.7–20.2 GHz.
- **Legacy links removed:** links that reflect operations **outside the United States**, are **unassociated with any current operator or U.S.-serving operations**, or were filed for networks that **never began or ceased operations more than a decade ago**. Many came from **ITU Circular Letter CR/116** (1999), before commercial Ka-band deployment, and reflected **planned, not operational**, networks. Redundant or superseded links for operators that filed current links were also dropped. The Bureau rejected SES's argument that those legacy links deserved deference: no contemporary GSO operator claimed they reflect current operations, and without an affiliated operator an NGSO system would have no one to coordinate with.
- **Non-ACM user-terminal unavailability C/N cap: 9.5 dB**, proposed by **SpaceX** and supported by DIRECTV as consistent with BSS user-link design. The Bureau called it a reasonable upper bound for modern, widespread, typical non-ACM user terminals. Some initial links had C/N values up to 18 dB; SES had argued for 12.6 dB on certain high-availability media links. Certain Hispasat parameters were also corrected.
- **Effective date: 30 days after publication in the Federal Register.** The released notice does not state a calendar date, and a Federal Register publication of DA 26-973 was not found.

This track is separate from DIRECTV's petition for reconsideration of the Order itself (published at 91 FR 40964, July 6, 2026, Report No. 3234).

PROMPT 124 · MULTI-HOP · FACTS AS OF 2026-10-09

In May 2025 the Space Bureau opened a docket on whether EchoStar was actually using the 2 GHz MSS band. Give that public notice's DA number, docket number and comment dates, and the two EchoStar subsidiaries and their satellites' call signs that it named. What did SpaceX argue in its comments and on what date did it file them? Then find the 2026 order that terminated the inquiry: what reason did it give, and did it accept SpaceX's suggestion that the band be opened to new applicants? Finally, in DA-26-471, were the DBSD and Gamma 2 GHz MSS market-access grants among the authorisations that needed prior Commission consent, and what notification rule applies to them instead? Chairman Carr's September 2025 letter is not the document that closed the docket.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Chain: DA 25-405 (inquiry) -> DA 26-398 para 24 (termination, summarising SpaceX's comments) -> DA 26-471 para 11 (treatment of the MSS grants). Hop 1: DA 25-405, released 12 May 2025 (https://docs.fcc.gov/public/attachments/DA-25-405A1_Rcd.pdf; text at DA-25-405A1.txt), SB Docket No. 25-173; comments due 27 May 2025, replies 6 June 2025. It names Gamma Acquisition L.L.C. (formerly TerreStar), operating TerreStar T-1 at 111 deg W.L., call sign S2633, with earth stations E070098, E060430 (renewal pending, SES-RWL-20241213-02647) and E090061; and DBSD Corporation (formerly ICO), operating DBSD G-1 at 92.85 deg W.L., call sign S2651, with earth stations E080035, E070291, E070290 and E070272. Gamma's blanket licence allows up to 2,000,000 terminals and DBSD's 1,000,000. The notice also cites SpaceX's 14 April 2025 letter and its opposition to Gamma's renewal. Hop 2: DA 26-398, released 23 April 2026 (https://docs.fcc.gov/public/attachments/DA-26-398A1.txt), para 24: 'We also terminate the Bureau's inquiry'; it cites Comments of Space Exploration Holdings, LLC filed 27 May 2025, arguing that 'EchoStar's failure to use the band as required has left the band ripe for new competitive entry from U.S.-licensed satellite systems'. Reason: EchoStar entered an agreement to assign the spectrum to SpaceX and SpaceX filed its D2C application, so 'it is no longer relevant to inquire about EchoStar's use'. As to opening the band: 'To the extent certain commenters in the proceeding, including SpaceX, suggest that the Commission open the band to new applications, we do not intend to do so' - MSS in the band is limited to the incumbent or its assignee or transferee. Hop 3: DA 26-471 (https://docs.fcc.gov/public/attachments/DA-26-471A1.txt), para 11: DBSD's and Gamma's US market access grants for 2 GHz MSS from non-US-licensed satellites at 93 deg W.L. and 111 deg W.L. 'will also be assigned by EchoStar but are not part of these applications because no prior Commission consent is required for such assignments'; under 47 CFR 25.137(g) the applicants will notify the Commission within 30 days after consummation of the assignment to the Trust and then to SpaceX. Wrong answers: saying Carr's 8 September 2025 letter closed the docket; saying the FCC opened the band or accepted Sateliot/AST; saying the MSS grants required consent in DA 26-471; wrong comment dates (27 May / 6 June); mislabelling S2633/S2651.

Exa ✓ Correct

6.5m · $0.240 · 8 searches · 4 fetches

Judge: All core and required facts are correct and no traps are asserted. Only the context facts are missing: the earth-station call signs, the terminal counts, and the SpaceX 14 April 2025 letter.

The May 12, 2025 Space Bureau public notice is **DA 25-405**, **SB Docket No. 25-173**. Comments were due **May 27, 2025**, and reply comments **June 6, 2025**. It named **Gamma Acquisition L.L.C.** (TerreStar T-1, call sign S2633) and **DBSD Corporation** (DBSD G-1, call sign S2651).

Source: https://docs.fcc.gov/public/attachments/DA-25-405A1.txt

Space Exploration Holdings, LLC filed comments on **May 27, 2025**. As later described by the Bureau, SpaceX argued that EchoStar's failure to use the band as required left it ripe for new competitive entry by U.S.-licensed satellite systems, and that the Commission should open the band to new applications.

Source: https://docs.fcc.gov/public/attachments/DA-26-398A1.txt

The inquiry was terminated in **DA 26-398** (adopted and released April 23, 2026). The Bureau said there was no reason to continue it because EchoStar had agreed to assign its 2 GHz MSS rights to SpaceX, so EchoStar's use was no longer relevant. It expressly declined SpaceX's suggestion to open the band to new applicants, citing the Commission's earlier statement that MSS systems in the band would be limited to an incumbent or its assignee or transferee. Ordering clause 45 terminates SB Docket No. 25-173.

Source: https://docs.fcc.gov/public/attachments/DA-26-398A1.txt

In **DA 26-471**, the DBSD and Gamma 2 GHz MSS U.S. market-access grants (non-U.S.-licensed satellites at 93° W.L. and 111° W.L.) were **not** among the authorizations requiring prior Commission consent. They were to be assigned outside those applications. **47 CFR § 25.137(g)** applies instead: notice to the Commission within 30 days after consummation of the assignment to the Trust and then to SpaceX.

11.4m · $0.823 · 14 searches · 9 fetches

Judge: All core and required facts are correct. Only the context facts (6-9: earth station lists, terminal limits, SpaceX's 14 April letter) were not stated, and none of the traps were asserted.

Public notice. On May 12, 2025, the Space Bureau released **DA 25-405**, opening **SB Docket No. 25-173** on EchoStar's use of the 2000–2020 MHz and 2180–2200 MHz MSS bands. Comments were due **May 27, 2025**; reply comments **June 6, 2025**. It named EchoStar subsidiaries **Gamma Acquisition L.L.C.** (TerreStar T-1 at 111° W.L., call sign S2633) and **DBSD Corporation** (DBSD G-1 at 92.85° W.L., call sign S2651). Source: https://docs.fcc.gov/public/attachments/DA-25-405A1.pdf

SpaceX comments. Space Exploration Holdings, LLC filed comments on **May 27, 2025**. As later characterized by the Bureau, SpaceX argued that EchoStar's failure to use the band as required left it ripe for new competitive entry by U.S.-licensed satellite systems, and that the Commission should open the band to new applications. Filing: https://www.fcc.gov/ecfs/document/1052841943789/1 (ECFS id 1052841943789; received just after midnight UTC on May 28). Bureau summary: https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf (paras. 24 and n.69, n.71).

Order terminating the inquiry. **DA 26-398** (adopted and released April 23, 2026) terminated **SB Docket No. 25-173** because EchoStar had agreed to assign the 2 GHz rights to SpaceX, so there was no reason to keep inquiring into EchoStar's operations. It did **not** accept the suggestion to open the band to new applicants. It said it did not intend to do so: under the 2012 AWS-4 framework, MSS in the band is limited to the incumbent or its assignee or transferee. Source: https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf (para. 24 and n.71; ordering clause 45).

DA 26-471. No. In the May 12, 2026 SpaceX–EchoStar assignment order, the DBSD and Gamma 2 GHz MSS market-access grants (non-U.S.-licensed satellites at 93° W.L. and 111° W.L.) were not among the authorizations requiring prior Commission consent and were not part of those applications. Instead, 47 C.F.R. § 25.137(g) applies: the applicants said they would notify the Commission within 30 days after consummation of the assignment of those grants to the Trust and then to SpaceX. Source: https://docs.fcc.gov/public/attachments/DA-26-471A1.txt (para. 11 and n. on the market-access grants).

> **Judge:** All core and required facts are correct. Only context facts 6-9 and 15 (earth station lists, terminal limits, SpaceX's April letter, incumbent-only MSS limit) were not stated.

Public notice. On May 12, 2025, the Space Bureau released DA 25-405, opening SB Docket No. 25-173 ("Space Bureau Opens New Docket to Explore EchoStar Corporation's Use of 2 GHz MSS Spectrum"). Comments were due May 27, 2025; reply comments June 6, 2025. It asked whether EchoStar was using 2000–2020 MHz and 2180–2200 MHz for MSS consistent with its authorizations and the expectation of robust MSS, and what steps might produce more intensive use, including new MSS entrants. Source: https://docs.fcc.gov/public/attachments/DA-25-405A1.pdf

Subsidiaries and call signs named in that notice. Footnote 1 names:
- **Gamma Acquisition L.L.C.** (formerly Terrestar), operating **Terrestar T-1** at 111° W.L., **call sign S2633**
- **DBSD Corporation** (formerly ICO), operating **DBSD G-1** at 92.85° W.L., **call sign S2651**

SpaceX comments. The Space Bureau's later order records **Comments of Space Exploration Holdings, LLC, filed May 27, 2025**, and characterizes them as arguing that EchoStar's failure to use the band as required left it ripe for new competitive entry by U.S.-licensed satellite systems. Source: https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf (n.69). A secondary summary of those comments adds that SpaceX said EchoStar had never provided 2 GHz MSS in the United States and was warehousing the spectrum; that the market-access grants had terminated under 47 C.F.R. § 25.161(c) and expired under § 25.121(a)(1); and that the Commission should process pending applications from new operators for D2D service. That fuller account is not in the FCC order itself: https://docketrocket.substack.com/p/docket-rocket-vol-4-inquiry-into

2026 order that closed the inquiry. DA 26-398 (adopted and released **April 23, 2026**) terminated SB Docket No. 25-173. The stated reason was that EchoStar had agreed to assign its rights in the spectrum to SpaceX, so there was no reason to continue the inquiry into EchoStar's 2 GHz MSS operations (¶ 24). It did **not** accept the suggestion to open the band to new applicants: "To the extent certain commenters in the proceeding, including SpaceX, suggest that the Commission open the band to new applications, we do not intend to do so" (n.71). Same PDF as above. This is the document that terminated the docket, not Chairman Carr's September 2025 letter.

DA 26-471 (May 12, 2026). The DBSD and Gamma 2 GHz MSS U.S. market-access grants (non-U.S.-licensed satellites at 93° W.L. and 111° W.L.) were **not** among the authorizations that needed prior Commission consent and were not part of the assignment applications for that reason. Instead, 47 C.F.R. § 25.137(g) applies: the applicants said they would **notify the Commission within 30 days after consummation** of the assignment of those grants to the Trust and to SpaceX. Source: https://docs.fcc.gov/public/attachments/DA-26-471A1.pdf

> **Judge:** All core and required facts are correct. Only the context facts 6-9 (earth stations, terminal counts, SpaceX's 14 April letter) are missing. Fact 10 is graded correct on substance because the answer does not give the exact 'ripe for new competitive entry' wording.

Public notice. On May 12, 2025, the Space Bureau released DA 25-405, opening SB Docket No. 25-173 to examine EchoStar's use of the 2000–2020 MHz and 2180–2200 MHz MSS bands. Comments were due May 27, 2025; reply comments June 6, 2025. It named two EchoStar subsidiaries: **Gamma Acquisition L.L.C.** (TerreStar T-1 at 111° W.L., **call sign S2633**) and **DBSD Corporation** (DBSD G-1 at 92.85° W.L., **call sign S2651**). The notice also asked about steps to intensify use, including new MSS entrants. Source: https://docs.fcc.gov/public/attachments/DA-25-405A1.pdf

SpaceX comments. Space Exploration Holdings, LLC filed **"SpaceX Comments on EchoStar 2 GHz Use"** in SB 25-173; ECFS shows it **received May 27, 2025** (posted May 28). https://www.fcc.gov/ecfs/search/search-filings/results?q=(proceedings.name:(%2225-173%22))

In those comments SpaceX argued that EchoStar had never provided 2 GHz MSS in the United States and was warehousing the spectrum; that the market-access grants had terminated under 47 C.F.R. § 25.161(c) (non-use) and expired under the 15-year term in § 25.121(a)(1); and that EchoStar's financials valued the two GSO satellites at zero, the satellites were past their operational lives, and EchoStar was years from commercial MSS. It asked the Commission to reject any perpetual right to the band and to process pending applications from new operators for next-generation D2D. Secondary summary: https://docketrocket.substack.com/p/docket-rocket-vol-4-inquiry-into (the ECFS PDF itself would not load).

2026 termination. DA 26-398 (adopted and released **April 23, 2026**) terminated the inquiry. Paragraph 24 says EchoStar had agreed to assign its 2 GHz rights to SpaceX, "so there is no reason to continue the inquiry," and ordering clause 45 terminates SB Docket No. 25-173. Footnote 71 **rejects** SpaceX's suggestion that the band be opened to new applicants: MSS in the band "would be limited to an incumbent operator or its assignee or transferee," and SpaceX had instead applied to operate on the spectrum it would acquire from EchoStar. https://docs.fcc.gov/public/attachments/DA-26-398A1.pdf

DA 26-471. No. In the May 12, 2026 assignment order, the Bureau states that DBSD's and Gamma's U.S. market-access grants for 2 GHz MSS from non-U.S.-licensed satellites (93° W.L. and 111° W.L.) "are not part of these applications because **no prior Commission consent is required.**" Under 47 C.F.R. § 25.137(g), the applicants must **notify the Commission within 30 days after consummation** of the assignment of those grants to the Trust and to SpaceX. https://docs.fcc.gov/public/attachments/DA-26-471A1.pdf

> **Judge:** All core and required facts are correct and no traps asserted. Only the context facts (earth station lists, terminal counts, SpaceX's 14 April 2025 letter) are missing.

Public notice. On May 12, 2025, the Space Bureau released DA 25-405, opening SB Docket No. 25-173. Comments were due May 27, 2025, and reply comments June 6, 2025. It named EchoStar subsidiaries **Gamma Acquisition L.L.C.** (TerreStar T-1 at 111° W.L., call sign S2633) and **DBSD Corporation** (DBSD G-1 at 92.85° W.L., call sign S2651). Source: https://docs.fcc.gov/public/attachments/DA-25-405A1.txt (docket page: https://www.fcc.gov/document/sb-opens-docket-explore-echostars-use-2-ghz-mss-spectrum).

SpaceX comments. Space Exploration Holdings, LLC filed comments on **May 27, 2025.** In DA 26-398, the Bureau summarized them as arguing that EchoStar's failure to use the band as required left it ripe for new competitive entry by U.S.-licensed satellite systems. A secondary summary of the ECFS filing (https://www.fcc.gov/ecfs/document/1052841943789/1; the PDF itself returned 403) says SpaceX also argued EchoStar had never provided U.S. 2 GHz MSS, was warehousing the spectrum, and that the market-access grants had terminated under 47 C.F.R. §§ 25.161(c) and 25.121(a)(1), and urged the Commission to process new applicants' pending applications. That fuller account is from https://docketrocket.substack.com/p/docket-rocket-vol-4-inquiry-into, not the order itself.

Order that closed the inquiry. DA 26-398 (adopted and released April 23, 2026) terminated SB Docket No. 25-173. The reason was that EchoStar had agreed to assign the 2 GHz rights to SpaceX, so there was no reason to keep inquiring into EchoStar's use, and that use was no longer relevant. The Bureau **did not** accept SpaceX's suggestion to open the band to new applicants: it said it did not intend to do so, because MSS in the band was limited to an incumbent or its assignee or transferee. Ordering clause 45 terminates the docket. Sources: https://docs.fcc.gov/public/attachments/DA-26-398A1.txt and https://www.fcc.gov/document/fcc-reaffirms-licensees-exclusive-rights-certain-mss-spectrum.

DA 26-471. No. In the May 12, 2026 Memorandum Opinion and Order (GN Docket No. 25-302), the DBSD and Gamma U.S. market-access grants for 2 GHz MSS from non-U.S.-licensed satellites (at 93° W.L. and 111° W.L.) were **not** among the authorizations that needed prior Commission consent and were not part of the assignment applications for that reason. **47 C.F.R. § 25.137(g)** applies instead: notice to the Commission within 30 days after consummation of each assignment (to the trust and then to SpaceX). Source: https://docs.fcc.gov/public/attachments/DA-26-471A1.pdf (document page: https://www.fcc.gov/document/order-granting-spacex-echostar-applications).

PROMPT 125 · MULTI-HOP · FACTS AS OF 2026-10-09

The chair and ranking member of the House Science, Space, and Technology Committee wrote to the FCC twice in 2026 about the Space Modernization (Part 100) proceeding. Give the dates of both letters and what the July letter asked the Commission to do before its 22 July vote. Then find Chairman Carr's reply: its date, what he said changed in the draft Order after the February letter, and the four categories of Communications Act authority he said the Part 100 licensing authority rests on, including which one he described as ancillary and the 2004 order he cited for it. Does the reply say that applications satisfying Part 100 are presumed to serve the public interest, and did the Commission postpone the vote as asked?

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Chain: House committee letters -> Carr's reply (FCC document) -> FCC 26-47 adoption. Hop 1: Chairman Brian Babin and Ranking Member Zoe Lofgren wrote on 25 February 2026 (asking the FCC to suspend the NPRM or narrow it to radiocommunications licensing; press release at https://science.house.gov/2026/2/sst-committee-leaders-urge-fcc-to-narrow-space-modernization-proposal) and again on 21 July 2026, urging the Commission to postpone its consideration of the Report and Order and FNPRM and to confine its rules to the authority Congress granted over radiofrequency licensing, noting the February letter had gone unanswered (https://science.house.gov/2026/7/chairman-babin-ranking-member-lofgren-urge-fcc-to-postpone-vote-on-space-modernization-rules). Hop 2: Carr's replies to Babin and to Lofgren are dated 31 July 2026, DOC-424156 (https://docs.fcc.gov/public/attachments/DOC-424156A1.txt). Key statements: 'Following your February 2026 letter, the draft Order was revised to address more fully the FCC's statutory authority. In particular, the Order as revised now delineates the statutory limits of the Commission's public interest review under its new Part 100 rules. This represents a marked change from the original draft.' The four categories: 'harmful spectrum interference, spectrum efficiency, foreign ownership, and orbital debris'; orbital debris rules may be adopted 'if ancillary to our spectrum management authorities', citing Mitigation of Orbital Debris, Second Report and Order, 19 FCC Rcd 11567, para 14 (2004) and 47 U.S.C. 303(g); foreign ownership under section 310; spectrum management under 301, 302, 303(r); public interest determination under 307 and 309. Also: 'applications that satisfy the requirements of Part 100 are presumed to serve the public interest.' Hop 3: the vote was not postponed - FCC 26-47 was adopted 22 July 2026 and released 23 July 2026 (https://docs.fcc.gov/public/attachments/FCC-26-47A1.txt). Wrong answers: dating the reply before the vote; listing 'space safety' or 'orbital debris as independent authority' among the four categories; saying the Commission delayed the vote; attributing the letters to the Energy and Commerce Committee; saying Carr replied only to Babin.

Exa ✓ Correct

2.6m · $0.231 · 10 searches · 3 fetches

> **Judge:** All core and required facts are correct and no trap is asserted. Only the context facts are missing: the answer does not give Carr's statutory section mappings (310 for foreign ownership, 301/302/303(r) for spectrum management, 307/309 for the public interest determination).

Letters: February 25, 2026, and July 21, 2026, from Chairman Brian Babin and Ranking Member Zoe Lofgren.

July ask: The July 21 letter urged the FCC to postpone consideration of the “Space Modernization for the 21st Century” Report and Order and Further Notice of Proposed Rulemaking, then scheduled for July 22, 2026, and to confine the rules to the radiofrequency communications licensing authority Congress has given the FCC for private space systems. The members said their February concerns were unanswered and still stood.

Carr’s reply (July 31, 2026): He wrote that, after the February letter, the draft Order was revised to address the FCC’s statutory authority more fully. The revised Order “delineates the statutory limits of the Commission’s public interest review under its new Part 100 rules,” which he called “a marked change from the original draft.”

He said Part 100 licensing authority rests on four Communications Act categories: harmful spectrum interference, spectrum efficiency, foreign ownership, and orbital debris. He described orbital debris as ancillary to spectrum-management authority, citing the Commission’s 2004 *Mitigation of Orbital Debris* Second Report and Order, 19 FCC Rcd 11567, 11575, para. 14 (2004) (citing 47 U.S.C. § 303(g)), which found the Commission may adopt orbital debris rules, if ancillary to spectrum management, by protecting communications facilities in space.

Presumption and the vote: Yes. The reply says the Order uses a rules-based framework under which applications that satisfy Part 100 “are presumed to serve the public interest.” The Commission did not postpone the vote; it adopted the item on July 22, 2026 (released July 23). Carr’s letters are dated July 31 and were posted later.

Parallel ✓ Correct

2.0m · $0.132 · 8 searches · 4 fetches

> **Judge:** All core and required facts are correct, and no trap is asserted. Only the context facts are missing: the statutory section ties for foreign ownership (310), spectrum management (301/302/303(r)) and the public interest determination (307/309), and the 23 July release date of FCC 26-47.

The House Science, Space, and Technology Committee’s chair (Brian Babin) and ranking member (Zoe Lofgren) wrote the FCC on **February 25, 2026**, and again on **July 21, 2026.**

The July 21 letter asked the Commission to **postpone** consideration of the *Space Modernization for the 21st Century* Report and Order and Further Notice of Proposed Rulemaking, then scheduled for the **July 22, 2026** open meeting, so the rules would be confined to the radiofrequency communications licensing authority Congress has granted the FCC for private space systems. The letter also said the February concerns remained unanswered.

Chairman Brendan Carr’s reply is dated July 31, 2026 (FCC release/issue date August 18, 2026). He wrote that, after the February letter, the draft Order was revised to address the FCC’s statutory authority more fully and, in particular, now **delineates the statutory limits of the Commission’s public-interest review under the new Part 100 rules**—a marked change from the original draft.

He said Part 100 licensing authority rests on four Communications Act categories: **harmful spectrum interference, spectrum efficiency, foreign ownership, and orbital debris.** He described **orbital debris** as **ancillary** to spectrum-management authority (protecting communications facilities in space), citing the

Commission's 2004 *Mitigation of Orbital Debris* Second Report and Order, 19 FCC Rcd 11567, 11575, para. 14 (citing 47 U.S.C. § 303(g)).

Yes. The reply says the Order uses a rules-based framework under which applications that satisfy Part 100 are presumed to serve the public interest.

No. The Commission did not postpone the vote. On July 22, 2026, it adopted the item as FCC 26-47.

Sources: February 25, 2026 letter; July 21, 2026 letter; Carr reply (July 31, 2026); FCC document page; July 22 adoption release.

Keenable search · Partly correct · Incomplete list · 33.8s · ~$0.105 · 5 searches · 3 fetches

> **Judge:** The answer gives the 25 Feb date but not what the February letter asked (suspend or narrow the NPRM), so fact 1 is missing. It also omits the context facts: the unanswered February letter, the section 310/301/302/303(r)/307/309 ties, and the 23 July release date.

February 25, 2026, and July 21, 2026. Chairman Brian Babin and Ranking Member Zoe Lofgren wrote both letters. The July 21 letter asked the FCC to postpone consideration of the "Space Modernization for the 21st Century" Report and Order and FNPRM (then set for July 22) and to confine the rules to radiofrequency communications licensing authority Congress has given the FCC. (February letter PDF; July 21 committee release; July 21 letter PDF)

Chairman Carr's reply is dated July 31, 2026 (identical letters to Babin and Lofgren, FCC DOC-424156A1). He said that after the February letter the draft Order was revised to address the FCC's statutory authority more fully, and that the revised Order delineates the statutory limits of the Commission's public-interest review under Part 100—a "marked change from the original draft." (Carr letters PDF)

He said Part 100 licensing authority rests on four Communications Act categories: (1) harmful spectrum interference, (2) spectrum efficiency, (3) foreign ownership, and (4) orbital debris. He described orbital debris as ancillary to spectrum-management authority (protecting communications facilities in space), citing the Commission's 2004 *Mitigation of Orbital Debris* Second Report and Order, 19 FCC Rcd 11567, 11575, para. 14 (2004) (citing 47 U.S.C. § 303(g)).

Yes. The reply says the Order uses a rules-based framework under which applications that satisfy Part 100 are presumed to serve the public interest.

No, the vote was not postponed. The Commission adopted the item on July 22, 2026; Carr's July 31 letters refer to the "newly adopted" Part 100 rules. (Aerospace America; Broadband Breakfast / Bytes Europe summary of the reply)

> **Judge:** All required and core facts are correct. Only context facts are missing: the July letter noting the February letter went unanswered, the section mappings (310, 301/302/303(r), 307/309), and the 23 July release date of FCC 26-47.

The February letter is dated February 25, 2026, and the July letter July 21, 2026. Chairman Carr's reply is dated July 31, 2026.

The two letters. House Science, Space, and Technology Committee Chairman Brian Babin and Ranking Member Zoe Lofgren wrote to FCC Chairman Brendan Carr on February 25, 2026, asking the Commission to rescind the "Space Modernization for the 21st Century" NPRM or issue a further notice limited to radiofrequency licensing. They wrote again on July 21, 2026.

What the July letter asked before the July 22 vote. It asked the Commission to postpone consideration of the Report and Order and Further Notice of Proposed Rulemaking, and to confine the rules to the radiofrequency communications licensing authority Congress has given the FCC. Sources: committee release, February release.

Carr's reply (July 31, 2026). He said that after the February letter the draft Order was revised to address the FCC's statutory authority more fully, and that the revised Order delineates the statutory limits of the Commission's public interest review under the new Part 100 rules, which he called a marked change from the original draft. Source: DOC-424156A1.

Four categories of Communications Act authority. He said Part 100 licensing authority rests on:
1. harmful spectrum interference
2. spectrum efficiency
3. foreign ownership
4. orbital debris

He described the orbital debris category as ancillary to the Commission's spectrum management authorities (protecting communications facilities in space), citing the Mitigation of Orbital Debris, Second Report and Order, 19 FCC Rcd 11567, 11575, para. 14 (2004) (citing 47 U.S.C. § 303(g)).

Public-interest presumption. Yes. The reply states that the Order uses a rules-based framework under which applications that satisfy the requirements of Part 100 are presumed to serve the public interest.

Was the vote postponed? No. The Commission voted unanimously on July 22, 2026, to adopt the licensing overhaul. Sources: Aerospace America, Bytes Europe.

> **Judge:** The answer never retrieved Carr's reply, so it missed what changed in the draft Order, the four authority categories, the ancillary orbital debris category and 2004 citation, and whether the reply states the presumption of public interest. It also omitted that the July letter noted the February letter went unanswered, and the section-level details.

Committee letters. Chairman Brian Babin and Ranking Member Zoe Lofgren wrote on February 25, 2026 and July 21, 2026.

The February 25 letter asked the FCC to rescind the Space Modernization NPRM or issue a further notice limited to radiofrequency communications licensing. A House Science Democrats download page is titled February 24, 2026; the letter PDF itself and the committee's February 25 press release use February 25. https://republicans-science.house.gov/_cache/files/a/6/a668ae60-5b49-4c53-b8b7-

6a1bdfd8ac34/742991E8C328C631D7315F22A966B3E5D88D5C804B3550CB284A72671EA5BD2A.house-science-committee---letter-to-fcc-chairman-carr.pdf
https://science.house.gov/2026/2/sst-committee-leaders-urge-fcc-to-narrow-space-modernization-proposal

The July 21 letter asked the Commission, before the July 22 open-meeting vote, to **postpone consideration** of the Space Modernization Report and Order and Further Notice and to **confine the rules to the radiofrequency communications licensing authority Congress has granted the FCC** for private space systems.
https://republicans-science.house.gov/_cache/files/3/7/37b4a947-3211-42c3-9509-b3a18a771744/75076DB415753884F909D6FD7780868E901E19197714061BEF28B6FAE9BA3080.house-science-space-and-technology-committee---july-21-2026-letter-to-fcc-chairman-carr.pdf
https://science.house.gov/2026/7/chairman-babin-ranking-member-lofgren-urge-fcc-to-postpone-vote-on-space-modernization-rules

Carr's reply. The FCC's Letters to Congress page lists **Chairman Carr's Response to Reps. Babin and Lofgren Regarding Space Modernization for the 21st Century** as **July 31, 2026.**
https://www.fcc.gov/letters-to-congress

The reply PDF itself could not be retrieved, so these points in the letter are **not verified**: what he said changed in the draft Order after the February letter; the four Communications Act categories he said Part 100 licensing authority rests on; which of those he called ancillary; and the 2004 order he cited. Whether the reply says applications that satisfy Part 100 are presumed to serve the public interest is also **not verified** from the reply. The adopted order does use a bright-line, presumed-public-interest framework, but that is the order, not the reply.
https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf

The vote was not postponed. The Commission adopted the Report and Order and Further Notice on **July 22, 2026** (released July 23, 2026). Contemporary reporting said the vote went ahead despite the July 21 request.
https://docs.fcc.gov/public/attachments/FCC-26-47A1.pdf

Keenable router → Search **Partly correct** Incomplete list `34.1s · ~$0.105 · 5 searches · 3 fetches`

> **Judge:** The answer gives the 25 Feb date but not what the February letter asked (suspend or narrow the NPRM), so fact 1 is missing. It also omits the context facts: the unanswered February letter, the section 310/301/302/303(r)/307/309 ties, and the 23 July release date.

February 25, 2026, and July 21, 2026. Chairman Brian Babin and Ranking Member Zoe Lofgren wrote both letters. The July 21 letter asked the FCC to **postpone consideration** of the "Space Modernization for the 21st Century" Report and Order and FNPRM (then set for July 22) and to **confine the rules to radiofrequency communications licensing** authority Congress has given the FCC. (February letter PDF; July 21 committee release; July 21 letter PDF)

Chairman Carr's reply is dated July 31, 2026 (identical letters to Babin and Lofgren, FCC DOC-424156A1). He said that after the February letter the draft Order was revised to address the FCC's statutory authority more fully, and that the revised Order **delineates the statutory limits of the Commission's public-interest review under Part 100**—a "marked change from the original draft." (Carr letters PDF)

He said Part 100 licensing authority rests on **four Communications Act categories**: (1) harmful spectrum interference, (2) spectrum efficiency, (3) foreign ownership, and (4) orbital debris. He described **orbital debris as ancillary** to spectrum-management authority (protecting communications facilities in space), citing the Commission's 2004 *Mitigation of Orbital Debris* Second Report and Order, 19 FCC Rcd 11567, 11575, para. 14 (2004) (citing 47 U.S.C. § 303(g)).

Yes. The reply says the Order uses a rules-based framework under which **applications that satisfy Part 100 are presumed to serve the public interest.**

No, the vote was not postponed. The Commission adopted the item on July 22, 2026; Carr's July 31 letters refer to the "newly adopted" Part 100 rules. (Aerospace America; Broadband Breakfast / Bytes Europe summary of the reply)

PROMPT 126 · MULTI-HOP · FACTS AS OF 2026-10-09

On 22 July 2025 Ofcom published a joint application from Inmarsat Global Limited and Space Norway for a UK NGSO network licence for the GX10 system. From the annex to that application, give the ITU filing names under which GX10 operates, the Ofcom licence number the annex records for Starlink Internet Services Limited, and the four operators with which Space Norway says it had executed ITU coordination agreements covering those filings. Then find Ofcom's decision: what did it decide, on what date, how many consultation responses did it receive, and which Ka-band frequency ranges does the licence cover? One of the four coordination partners is named differently in the decision than in the annex; explain why that is not a discrepancy.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Hop 1: Ofcom page 'Inmarsat Global Limited and Space Norway's joint application for a non-geostationary earth station network licence' (https://www.ofcom.org.uk/spectrum/space-and-satellites/inmarsat-global-limited-and-space-norways-joint-application-for-a-non-geostationary-earth-station-network-licence): published 22 July 2025, consultation closed 2 September 2025, application reference IGL/SN-NET-1. Hop 2: Annex to application (https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-2-6-weeks/inmarsat-and-space-norway/main-docs/annex-to-application.pdf). It states the GX10 NGSO system comprises the ITU filings SLEIPNER-1 and SLEIPNER-1A, made on behalf of Space Norway; lists the existing UK NGSO licensees with licence numbers, including 'Starlink Internet Services Limited (license number 1239247)' (others: Network Access Associates Ltd 1102679, Telesat LEO Inc 1297041, Mangata Edge Ltd 1309175, Rivada 1347891, NSLComm 1364328, Amazon Kuiper Service Europe SARL 1377636/1); and says Space Norway 'has executed ITU coordination agreements covering the GX10 filings with the following operators: Network Access Associates Ltd, Telesat LEO Inc, Starlink Internet Services Limited and Amazon Kuiper Services Europe SARL'. GX10 operates 29.5-30 GHz uplink and 19.7-20.2 GHz downlink and the annex asserts full compliance with Article 22 EPFD limits. Hop 3: Ofcom decision 'Decision on joint application submitted by Inmarsat Global Limited and Space Norway Heosat AS for an NGSO network licence', published 15 October 2025 (https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-2-6-weeks/inmarsat-and-space-norway/main-docs/decision-on-joint-application-submitted-by-inmarsat-global-limited-and-space-norway-heosat-as-for-an-ngso-network-licence.pdf). Ofcom decided to grant a joint NGSO network licence to IGL and Space Norway; 'We did not receive any responses to the July consultation' (zero responses, so nothing from SpaceX); licence covers Ka-band 27.5-27.9405 GHz, 28.4545-28.9485 GHz and 29.5-30 GHz (uplink), downlink planned in 19.7-20.2 GHz. Paragraph 2.15 names the four coordination partners as 'Kuiper, Telesat, Starlink and Eutelsat OneWeb'; footnote 9 explains Network Access Associates Ltd is a subsidiary of Eutelsat OneWeb, so the annex's 'Network Access Associates Ltd' and the decision's 'Eutelsat OneWeb' are the same licensee. Wrong answers: USASAT or NORSAT filing names; claiming Starlink objected; a decision date of 2 September; saying the licence is Ku-band. Bonus context: ComReg 25/79 (Ireland, 4 Nov 2025) quoted this annex to rebut Viasat.

Exa ✓ Correct ✓ ✓ ✓ ✓ — 53.7s · $0.122 · 3 searches · 3 fetches

Judge: All required and core facts are correct. Only context facts are missing (application reference, other licensees, frequencies of GX10, EPFD compliance, decision title, ComReg reference), and no traps were asserted.

From the annex (published 22 July 2025)

- **ITU filing names:** GX10 operates under **SLEIPNER-1** and **SLEIPNER-1A**.
- **Starlink licence number recorded in the annex:** **1239247** (Starlink Internet Services Limited).
- **Four operators with executed ITU coordination agreements covering those filings:** Network Access Associates Ltd, Telesat LEO Inc, Starlink Internet Services Limited, and Amazon Kuiper Services Europe SARL.

Source: Annex to joint application (PDF)

Ofcom's decision

- **Decision:** Grant a joint NGSO network licence to Inmarsat Global Limited and Space Norway Heosat AS (subject to payment of the licence fee).
- **Date:** 15 October 2025.
- **Consultation responses:** None (zero). The consultation closed on 2 September 2025.
- **Ka-band ranges covered:** 27.5–27.9405 GHz, 28.4545–28.9485 GHz, and 29.5–30 GHz.

Source: Decision (PDF, 15 October 2025); publication page: Ofcom statement page

Why the name difference is not a discrepancy

The annex names the coordination partner as **Network Access Associates Ltd.** The decision lists the same four agreements as with **Kuiper, Telesat, Starlink and Eutelsat OneWeb.** Ofcom's decision (footnote 9) identifies **Network Access Associates Ltd as a subsidiary of Eutelsat OneWeb.** Those are the same UK NGSO licensee under its corporate licence name and its parent/brand name, not two different operators.

Judge: All required and core facts are correct. Only context facts (application reference, other licensees, frequencies, ComReg) were not stated, and no traps were asserted.

From the annex (published 22 July 2025)

- **ITU filings:** GX10 operates under **SLEIPNER-1** and **SLEIPNER-1A**.
- **Starlink licence number recorded in the annex:** **1239247** (Starlink Internet Services Limited).
- **Four operators with executed ITU coordination agreements covering those filings:** Network Access Associates Ltd, Telesat LEO Inc, Starlink Internet Services Limited, and Amazon Kuiper Services Europe SARL.

Source: Annex to joint application (PDF)

Ofcom's decision

- **Decision:** Grant a joint NGSO network licence to Inmarsat Global Limited and Space Norway Heosat AS, subject to payment of the licence fee.
- **Date:** Statement published 15 October 2025 (consultation ran 22 July–2 September 2025).
- **Consultation responses:** None (zero).
- **Ka-band ranges the licence covers:** 27.5–27.9405 GHz, 28.4545–28.9485 GHz, and 29.5–30 GHz.

Sources: Decision statement (PDF); Ofcom page

Why the name difference is not a discrepancy

The annex names **Network Access Associates Ltd** as one of the four coordination partners. The decision lists the same four as Kuiper, Telesat, Starlink and **Eutelsat OneWeb**. In the decision (footnote 9), Ofcom identifies Network Access Associates Ltd as a subsidiary of Eutelsat OneWeb, so the two names refer to the same licensee, not a different operator.

Cited: 1. ofcom.org.uk · 2. ofcom.org.uk · 3. mobileeurope.co.uk · 4. ofcom.org.uk · 5. ofcom.org.uk · 6. ofcom.org.uk · 7. ofcom.org.uk · 8. satnews.com · 9. ofcom.org.uk · 10. ofcom.org.uk · 11. ofcom.org.uk · 12. ofcom.org.uk

Keenable search · Partly correct · Incomplete list · 9.5m · ~$2.162 · 93 searches · 7 fetches

> **Judge:** The answer never gave the 15 October 2025 decision date or the zero consultation responses, and it did not list the licence's Ka-band uplink ranges (27.5-27.9405 and 28.4545-28.9485 GHz were absent). It hedged on the annex's Starlink number, so that fact is marked missing. It also wrongly explained the naming difference as Amazon's Kuiper-to-Leo rebrand, when the real reason is that Network Access Associates is a subsidiary of Eutelsat OneWeb (footnote 9).

Hit its tool-call or time budget and was forced to answer.

I could not open the application annex or Ofcom's decision PDF (both returned access errors), so the points below are only what other Ofcom pages and the 22 July 2025 consultation actually state. I am not treating the consultation's proposal as the decision.

From the application, as Ofcom summarises it (the consultation says these details are in the applicants' NGSO application, reference IGL/SN-NET-1, including its annex):

- **ITU filing names:** GX10 operates under **SLEIPNER-1** and **SLEIPNER-1A**. Source: Ofcom consultation PDF.
- **Four operators with executed ITU coordination agreements covering those filings: Kuiper, Telesat, Starlink, and Eutelsat OneWeb** (OneWeb then using only Ku band in the UK). Same consultation PDF: "ITU coordination agreements covering the GX10 satellite filings have been agreed between Space Norway and four existing NGSO licensees: Kuiper, Telesat and Starlink (as well as Eutelsat OneWeb...)."
- **Starlink licence number in the annex:** I could not read the annex, so I cannot confirm the figure it prints. Ofcom's own NGSO register lists **Starlink Internet Services Limited as licence 1239247** (first issued 16 November 2020): Ofcom NGSO licences page. A separate Kuiper gateway annex uses that same number, but that is not the GX10 annex.

Decision

Ofcom's licence register shows the application was **granted**: network licence **1400179** to **Inmarsat Global Ltd and Space Norway Heosat AS**, first issued **17 November 2025**. Same licences page as above. I could not retrieve the statement, so **I cannot verify how many consultation responses Ofcom received**, or quote the licence schedule.

The consultation (not the decision) proposed user-terminal operation at **29.5–30 GHz**, with downlink planned at **19.7–20.2 GHz** (footnote 6 of the consultation PDF). Those are the Ka-band ranges described for GX10; I have not verified that the issued licence uses exactly those ranges.

Why a different partner name is not a discrepancy

The July 2025 annex/application uses **Kuiper**. In **November 2025** — the same month as the grant — Amazon rebranded that system **Amazon Leo** (formerly Project Kuiper). It is the same operator and constellation, not a different coordination partner. Source: Amazon Leo (Wikipedia).

Cited: 1. ofcom.org.uk · 2. ofcom.org.uk · 3. en.wikipedia.org

Keenable SELECT · Partly correct · Incomplete list · 15.4m · ~$3.531 · 92 searches · 8 fetches

> **Judge:** The answer never states the decision date (15 October 2025) or the zero consultation responses, and it does not cite footnote 9 of the decision. It also hedges on the Starlink licence number, saying only that a different Kuiper annex records 1239247 rather than committing it from the GX10 annex. The coordination partners are named correctly, but via the consultation document rather than the annex, and the Eutelsat OneWeb/Network Access Associates explanation is inferred from the consultation, not from the decision.

Hit its tool-call or time budget and was forced to answer.

I could not open the GX10 application annex or Ofcom's decision statement. What follows is only what those related Ofcom documents actually state.

From the 22 July 2025 consultation, which summarises the application rather than reproducing the annex

- The ITU filings named for GX10 are **SLEIPNER-1** and **SLEIPNER-1A**.
  https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-2-6-weeks/inmarsat-and-space-norway/main-docs/consultation-document-inmarsat-global-limited-and-space-norways-joint-application-for-a-non-geostationary-earth-station-network-licence.pdf?v=400779

- Ofcom says the applicants reported executed ITU coordination agreements covering those filings with four existing NGSO licensees: **Kuiper, Telesat, Starlink, and Eutelsat OneWeb**. The same PDF's Table 1 gives the UK licensee names as Amazon Kuiper Services Europe SARL, Telesat LEO Inc, Starlink Internet Services Limited, and Network Access Associates Ltd (a subsidiary of Eutelsat OneWeb).
  Same URL.

- That consultation PDF's Table 1 does not record a Starlink licence number. I could not retrieve the annex, so I cannot confirm the number it prints. Ofcom's published Starlink earth-station network licence is 1239247/3, first issued 16 November 2020, and a separate July 2025 Kuiper annex records Starlink Internet Services Limited as 1239247. That is not a reading of the GX10 annex.
  https://www.ofcom.org.uk/siteassets/resources/documents/manage-your-licence/satellite-earth-stations/ngso/existing-licences/network/starlink-internet-services-limited2.pdf?v=374050
  https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-3-4-weeks/amazon-kuiper-uk-limited-ngso-app-july-2025/application-

documents/annex-1-kuiper-ngso-gateway-licence-additional-information.pdf?v=399412

Decision

I could not find the decision statement, so I cannot verify the consultation-response count or quote the decision's frequency wording. The issued licence shows the application was granted: licence **1400179/1**, first issued **17 November 2025**, to Inmarsat Global Limited and Space Norway Heosat AS, for the Global Express (GX) 10 network (GX10A and GX10B, non-geostationary, Ka band).
https://www.ofcom.org.uk/siteassets/resources/documents/manage-your-licence/satellite-earth-stations/ngso/existing-licences/network/inmarsat-global-ltd-and-space-norway-heosat-as.pdf?v=408139

The consultation had proposed operation in **29.5–30 GHz**, with downlink planned in **19.7–20.2 GHz**. The licence itself authorises transmit, not that downlink. Its Ka-band transmit ranges are:

- Land and offshore, non-geostationary: **27.5–27.9405 GHz, 28.4545–28.9485 GHz, 29.5–30 GHz**
- Maritime, non-geostationary: **27.5–27.8185 GHz, 28.4545–28.8265 GHz, 29.5–30 GHz**
- Aeronautical, non-geostationary: no Ka-band range is listed; only **14.0–14.47 GHz**
- Geostationary terminals are also authorised in Ka-band segments ending at **29.4625–30 GHz**, plus Ku-band

Same licence URL. The consultation's proposed ranges are in the PDF linked above.

Why a different partner name would not be a discrepancy

I could not check the decision's exact wording. In the consultation, the coordination counterparty is **Eutelsat OneWeb**, while the UK NGSO licensee is **Network Access Associates Ltd, a subsidiary of Eutelsat OneWeb**. Those are the group or operator name and the UK licensee for the same system, not two partners. The same document already pairs Kuiper, Telesat and Starlink with Amazon Kuiper Services Europe SARL, Telesat LEO Inc and Starlink Internet Services Limited.

Cited: 1. ofcom.org.uk · 2. ofcom.org.uk · 3. ofcom.org.uk · 4. ofcom.org.uk

---

Grok native · Correct · 4.8m · $1.339 · 18 searches · 9 fetches

> **Judge:** All required and core facts are covered. The answer hedges that the SLEIPNER filing names and the Starlink licence number were not read directly from the annex, but it still states both values. The context facts on the consultation close date, the application reference, the other licensees, the frequencies and EPFD compliance are not stated.

Annex (22 July 2025 application documents). The annex PDF could not be text-extracted here. What is directly quoted from it is in ComReg 25/79, which cites the annex and records that Space Norway had executed ITU coordination agreements covering the GX10 filings with Network Access Associates Ltd, Telesat LEO Inc, Starlink Internet Services Limited and Amazon Kuiper Services Europe SARL.

Ofcom's decision, summarising the application, states that GX10 user terminals connect under Space Norway's ITU filings **SLEIPNER-1** and **SLEIPNER-1A**. That filing pair is not in the ComReg quotation of the annex, so it is taken from Ofcom's decision rather than a direct annex extract.

The Starlink licence number printed in the annex was not independently readable from the annex. Ofcom's current NGSO licence register lists **Starlink Internet Services Limited** as licence **1239247** (first issued 16 November 2020). That is the public Ofcom number, not a confirmed annex quotation.

Decision. On 15 October 2025 Ofcom decided to grant Inmarsat Global Limited and Space Norway Heosat AS a joint UK NGSO network licence. It received no consultation responses (zero) and granted the licence on the July assessment. The licence covers Ka-band 27.5–27.9405 GHz, 28.4545–28.9485 GHz and 29.5–30 GHz, subject to the fee.

Naming. The annex uses the licensee's legal name, Network Access Associates Ltd. The decision lists the same coordination partner as Eutelsat OneWeb. Footnote 9 of the decision says Network Access Associates Ltd is a subsidiary of Eutelsat OneWeb, so the two names refer to the same UK NGSO licensee, not two different operators. The other three are the same parties under shortened names (Kuiper, Telesat, Starlink).

> **Judge:** The answer never states the decision date (15 October 2025) or the zero consultation responses, and it does not cite footnote 9 of the decision. It also hedges on the Starlink licence number, saying only that a different Kuiper annex records 1239247 rather than committing it from the GX10 annex. The coordination partners are named correctly, but via the consultation document rather than the annex, and the Eutelsat OneWeb/Network Access Associates explanation is inferred from the consultation, not from the decision.

Hit its tool-call or time budget and was forced to answer.

I could not open the GX10 application annex or Ofcom's decision statement. What follows is only what those related Ofcom documents actually state.

From the 22 July 2025 consultation, which summarises the application rather than reproducing the annex

- The ITU filings named for GX10 are **SLEIPNER-1** and **SLEIPNER-1A**.
  https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-2-6-weeks/inmarsat-and-space-norway/main-docs/consultation-document-inmarsat-global-limited-and-space-norways-joint-application-for-a-non-geostationary-earth-station-network-licence.pdf?v=400779

- Ofcom says the applicants reported executed ITU coordination agreements covering those filings with four existing NGSO licensees: **Kuiper, Telesat, Starlink, and Eutelsat OneWeb**. The same PDF's Table 1 gives the UK licensee names as Amazon Kuiper Services Europe SARL, Telesat LEO Inc, Starlink Internet Services Limited, and Network Access Associates Ltd (a subsidiary of Eutelsat OneWeb).
  Same URL.

- That consultation PDF's Table 1 does not record a Starlink licence number. I could not retrieve the annex, so I cannot confirm the number it prints. Ofcom's published Starlink earth-station network licence is 1239247/3, first issued 16 November 2020, and a separate July 2025 Kuiper annex records Starlink Internet Services Limited as 1239247. That is not a reading of the GX10 annex.

https://www.ofcom.org.uk/siteassets/resources/documents/manage-your-licence/satellite-earth-stations/ngso/existing-licences/network/starlink-internet-services-limited2.pdf?v=374050
https://www.ofcom.org.uk/siteassets/resources/documents/consultations/category-3-4-weeks/amazon-kuiper-uk-limited-ngso-app-july-2025/application-documents/annex-1-kuiper-ngso-gateway-licence-additional-information.pdf?v=399412

Decision

I could not find the decision statement, so I cannot verify the consultation-response count or quote the decision's frequency wording. The issued licence shows the application was granted: licence **1400179/1**, first issued **17 November 2025**, to Inmarsat Global Limited and Space Norway Heosat AS, for the Global Express (GX) 10 network (GX10A and GX10B, non-geostationary, Ka band).
https://www.ofcom.org.uk/siteassets/resources/documents/manage-your-licence/satellite-earth-stations/ngso/existing-licences/network/inmarsat-global-ltd-and-space-norway-heosat-as.pdf?v=408139

The consultation had proposed operation in **29.5–30 GHz**, with downlink planned in **19.7–20.2 GHz**. The licence itself authorises transmit, not that downlink. Its Ka-band transmit ranges are:

- Land and offshore, non-geostationary: **27.5–27.9405 GHz, 28.4545–28.9485 GHz, 29.5–30 GHz**
- Maritime, non-geostationary: **27.5–27.8185 GHz, 28.4545–28.8265 GHz, 29.5–30 GHz**
- Aeronautical, non-geostationary: no Ka-band range is listed; only 14.0–14.47 GHz
- Geostationary terminals are also authorised in Ka-band segments ending at **29.4625–30 GHz**, plus Ku-band

Same licence URL. The consultation's proposed ranges are in the PDF linked above.

Why a different partner name would not be a discrepancy

I could not check the decision's exact wording. In the consultation, the coordination counterparty is **Eutelsat OneWeb**, while the UK NGSO licensee is **Network Access Associates Ltd, a subsidiary of Eutelsat OneWeb**. Those are the group or operator name and the UK licensee for the same system, not two partners. The same document already pairs Kuiper, Telesat and Starlink with Amazon Kuiper Services Europe SARL, Telesat LEO Inc and Starlink Internet Services Limited.

PROMPT 127 · MULTI-HOP · FACTS AS OF 2026-10-09

La Commission européenne a adopté le 27 mai 2026 une proposition de règlement sur l'autorisation des systèmes mobiles par satellite dans la bande 2 GHz. Donnez le numéro COM et la référence de procédure interinstitutionnelle, puis, à partir du texte : quelle décision de 2009 a sélectionné les deux titulaires actuels, jusqu'à quel mois et quelle année courent leurs droits, quels sont les deux titulaires nommément cités à l'article 20, de combien d'années cet article prolonge leurs droits et à quelle condition portant sur le transfert, la location ou la sous-location ? La définition d'« incumbent » à l'article 2 couvre-t-elle une entreprise qui a légalement acquis le contrôle d'un titulaire, ce qui importe pour SpaceX et EchoStar ? Enfin, combien de blocs appariés de 5 MHz l'article 4 met en jeu, combien sont réservés en priorité au système MSS/hybride sécurisé, et quelle durée l'article 16 fixe aux nouveaux droits ? Ne présentez pas ce texte comme un règlement adopté : c'est une proposition.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Hop 1: Commission press/library page (https://digital-strategy.ec.europa.eu/en/library/proposal-eu-level-authorisation-systems-providing-mobile-satellite-services-mss) leads to the text; Council register copy ST 9777 2026 INIT (https://data.consilium.europa.eu/doc/document/ST-9777-2026-INIT/en/pdf). Identifiers: COM(2026) 311 final; 2026/0134 (COD); title 'Proposal for a Regulation ... on the procedure for authorisation of systems providing mobile satellite services using the harmonised 2 GHz frequency band and repealing Decision No 626/2008/EC'. Hop 2 (inside the text): recital (3) says that under Decision No 626/2008/EC two undertakings were selected in 2009 by Commission Decision 2009/449/EC (footnote: Commission Decision of 13 May 2009) and authorised to use each a paired block of 15 MHz 'in all Member States until May 2027'. Article 20(1) (Transitory provisions): 'The duration of the existing rights of use granted in accordance with Decision 2009/449/EC to the incumbents, Viasat and Echostar, are extended, upon request, for a period of two years, under the authorisation conditions applicable at the date of entry into force of this Regulation'; 'during this extension period the rights shall not be transferred, nor leased or sub-leased'; Commission Decision 2011/667 continues to apply; Art 20(2) lets the Commission impose sharing conditions for testing/experimental use. Article 2(16): 'incumbent' means an undertaking assigned rights under Decision 626/2008/EC and Decision 2009/449/EC 'and any undertaking that has lawfully acquired control over it' - so yes, an acquirer of control is covered. Article 4(1): six paired blocks of 5 MHz; (a) two contiguous paired blocks of 5 MHz (a paired 10 MHz) primarily for the secure MSS/hybrid system; (b) blocks for a Union new entrant; (c) blocks open to Member State or third-country applicants. Article 16(1): duration 20 years; 16(3) renewable once for a similar duration on request. Wrong answers: calling it an adopted regulation or decision; naming Inmarsat and Solaris as the Article 20 incumbents (those were the 2009 selectees; the proposal names their successors Viasat and Echostar); a one-year or five-year extension; saying extended rights may be transferred to SpaceX; 'one third reserved' phrasing without the block arithmetic (a paired 10 MHz of a paired 30 MHz is one third, acceptable if stated correctly); 15-year duration. Press pieces that say the Commission 'adopted new rules' should be penalised.

Exa Correct

1.8m · $1.023 · 13 searches · 13 fetches

Judge: All core and required facts are correct and no trap is asserted. Only context facts 3, 4, 10, 11, 16 and 17 are missing: the full title, the Council register copy, Decision 2011/667, Article 20(2), and the Article 4(1)(b) and (c) block allocations.

Il s'agit d'une **proposition de règlement**, adoptée par la Commission le 27 mai 2026, et non d'un règlement adopté. Références : **COM(2026) 311 final**, procédure **2026/0134 (COD)**. Texte : EUR-Lex, CELEX 52026PC0311 ; transmission au Conseil : Sénat, e20780.

Décision de 2009 et échéance. Le considérant 3 indique que les deux entreprises ont été sélectionnées en 2009 par la **décision 2009/449/CE** de la Commission (13 mai 2009, sélection des opérateurs de systèmes paneuropéens fournissant des MSS ; ELI). Chacune a été autorisée à utiliser un bloc apparié de 15 MHz dans tous les États membres **jusqu'en mai 2027**. L'exposé des motifs le confirme : ces droits expirent en mai 2027.

Article 20. L'exposé des motifs (titre IV) dit que cet article accorde aux opérateurs historiques une **prolongation de deux ans**, sous condition de **non-transférabilité**. Le considérant 41 précise que, pendant cette prolongation, les droits d'utilisation **ne doivent être ni transférés, ni loués, ni sous-loués**, et que la prolongation ne bénéficie qu'aux titulaires historiques. Je n'ai pas pu extraire le dispositif intégral de l'article 20 du PDF primaire (texte tronqué à la consultation). La fiche du Sénat, qui résume la proposition, identifie ces opérateurs historiques comme **Viasat et EchoStar** (fiche Sénat). Les commentaires qui disent avoir lu le texte (Greenberg Traurig, Communications Daily) retiennent les mêmes noms ; je ne peux pas confirmer ici la graphie exacte figurant dans l'article.

Définition d'« incumbent » (article 2). Oui. Le point (16) de l'article 2 vise une entreprise à laquelle des droits sur la bande MSS de 2 GHz ont été assignés conformément à la décision n° 626/2008/CE et à la décision 2009/449/CE, **ainsi que toute entreprise qui en a légalement acquis le contrôle** (extrait EUR-Lex). Une prise de contrôle légale d'un titulaire entre donc dans la définition, ce qui est pertinent pour EchoStar et un acquéreur tel que SpaceX. Cela ne lève pas, à lui seul, l'interdiction de transfert, de location ou de sous-location attachée à la prolongation de l'article 20 : la définition et cette condition sont distinctes, et le texte consulté ne tranche pas explicitement si un changement de contrôle équivaut à un transfert des droits prolongés.

Articles 4 et 16. L'article 4, paragraphe 1, porte sur **six blocs appariés de 5 MHz**. Sont réservés en priorité au système MSS/hybride sécurisé **deux blocs appariés contigus de 5 MHz** (soit 2 × 5 MHz appariés, 10 MHz appariés). Le considérant 28 fixe la durée des nouveaux droits à **20 ans** ; la fiche du Sénat résume la proposition dans le même sens (20 ans, renouvelables une fois — le renouvellement relève plutôt des articles 16 et 17 selon l'exposé des motifs). Le libellé opératoire de l'article 16 n'a pas pu être relu in extenso ici.

Judge: All core and required facts are correct and no trap is asserted. Only context facts (title, Council register copy, Decision 2011/667, Art. 20(2), Art. 4(1)(b)/(c)) are not stated. The answer's added claim about a five-year service-continuity condition is not in the checklist and cannot be confirmed from the DATA window.

Il s'agit d'une **proposition de règlement** (pas d'un règlement adopté), **présentée le 27 mai 2026 : COM(2026) 311 final**, procédure **2026/0134(COD)**.

Source du texte : EUR-Lex, CELEX 52026PC0311. La fiche de procédure confirme la référence : 2026/0134/COD.

Sélection de 2009 et échéance des droits actuels. Le considérant 3 indique que les deux titulaires ont été sélectionnés en 2009 par la **décision 2009/449/CE** de la Commission, chacun pour un bloc apparié de 15 MHz, **jusqu'en mai 2027**. L'exposé des motifs dit aussi que ces droits expirent en mai 2027.

Article 20. Il cite nommément **Viasat** et **Echostar**. Il prolonge, sur demande, la durée de leurs droits existants de **deux ans**, aux conditions d'autorisation applicables à l'entrée en vigueur du règlement proposé, uniquement pour assurer la continuité de services fournis depuis au moins cinq ans avant cette entrée en vigueur. Pour en bénéficier, **pendant cette période de prolongation, les droits ne doivent être ni transférés, ni loués, ni sous-loués.**

Définition d'« incumbent » (article 2, point 16). Oui : elle vise une entreprise à laquelle des droits d'usage de la bande MSS 2 GHz ont été assignés conformément à la décision n° 626/2008/CE et à la décision 2009/449/CE, **ainsi que toute entreprise qui en a légalement acquis le contrôle.** Le texte ne nomme pas SpaceX ; il ne dit donc pas lui-même si SpaceX entre dans cette définition, mais la clause sur l'acquisition légale du contrôle est bien celle qui permettrait de le vérifier.

Articles 4 et 16. L'article 4 met en jeu **six blocs appariés de 5 MHz.** Parmi eux, **deux blocs appariés contigus de 5 MHz** sont réservés en priorité au système MSS/hybride sécurisé (article 4, paragraphe 1, point a). L'article 16 fixe la durée des nouveaux droits d'usage à **20 ans** (renouvelables une fois pour une durée similaire, sous réserve des exceptions prévues au même article).

The 15 MHz block size is not stated but the answer gives the May 2027 expiry the prompt asked for.

Hit its tool-call or time budget and was forced to answer.

Il texte du 27 mai 2026 est une **proposition** de règlement, pas un règlement adopté. Elle est en procédure législative ordinaire (phase préparatoire au Parlement).

Références. COM(2026) 311 final, procédure 2026/0134(COD).
https://oeil.europarl.europa.eu/oeil/en/procedure-file?reference=2026/0134(COD)
https://data.consilium.europa.eu/doc/document/ST-9777-2026-INIT/en/pdf

Décision de 2009 et échéance. Les deux titulaires actuels ont été sélectionnés par la **décision 2009/449/CE de la Commission du 13 mai 2009** (Inmarsat Ventures et Solaris Mobile ; leurs successeurs sont Viasat et EchoStar). Leurs droits courent jusqu'en **mai 2027** (18 ans à compter de la décision de sélection ; les textes britanniques de mise en œuvre précisent la fin du 13 mai 2027).
https://eur-lex.europa.eu/eli/dec/2009/449/oj/eng
https://data.consilium.europa.eu/doc/document/ST-9777-2026-INIT/it/pdf

Article 20. Les deux titulaires nommément visés sont **Viasat** et **EchoStar**. L'article prolonge leurs droits de **deux ans**, sur demande, **à condition que ces droits ne soient ni transférés, ni loués, ni sous-loués** pendant la prorogation.
https://idate.fr/europes-2-ghz-mss-band
https://data.consilium.europa.eu/doc/document/ST-9777-2026-INIT/it/pdf
https://www.gtlaw.com/en/insights/2026/6/eu-commission-proposes-new-authorization-regime-for-mobile-satellite-services

Définition d'« incumbent » (article 2). Oui. En version italienne du texte transmis au Conseil, « operatore storico » désigne l'entreprise à laquelle des droits d'usage de la bande 2 GHz MSS ont été attribués conformément aux décisions 626/2008/CE et 2009/449/CE, **et toute entreprise qui a légalement acquis le contrôle de celle-ci.** Une prise de contrôle légale d'EchoStar entrerait donc dans la définition. Cela ne vaut pas autorisation de cession : l'article 20 interdit transfert, location et sous-location pendant la prorogation, et plusieurs commentaires du texte indiquent qu'un changement de titulaire, y compris par opération sociétaire, n'emporterait pas l'autorisation et exigerait une nouvelle autorisation.
https://data.consilium.europa.eu/doc/document/ST-9777-2026-INIT/it/pdf

Articles 4 et 16. L'article 4 met en jeu **six blocs appariés de 5 MHz.** Deux blocs appariés contigus de 5 MHz sont réservés en priorité au système MSS/hybride sécurisé. L'article 16 fixe la durée des nouveaux droits à **20 ans.**
https://www.parlament.gv.at/dokument/XXVIII/EU/74466/imfname_11623179.pdf

PROMPT 128 · MULTI-HOP · FACTS AS OF 2026-10-09

The Cayman Islands regulator licensed Starlink in December 2025 and later amended the licence for direct-to-device service. From the licence document: its document number, date, and the term in years for the Type H 'Satellite Service Provider' network authorisation, plus the two Ku-band ranges in the original Annex 4 and the number of channels each is divided into for fee purposes. From the amendment: its number, the date it is actually dated, the four space-to-Earth/Earth-to-space band pairs it adds, whether the assignment is exclusive, the sections of which Act it invokes, and which ITU Radio Regulations article its footnote conditions use on. Also name the final determination that created the satellite licensing framework and its date. Some sources date the amendment 5 August 2026; check the instrument itself.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Hop 1: OfReg/URCO press release 23 December 2025 'Regulator Issues Licence to Starlink' (https://www.ofreg.ky/viewPDF/documents/2025-12-23-17-23-27-PressReleaseSateliteStarlink-FINAL.pdf) - first licence under the new satellite framework, set out in the 'Final Determination on the Licensing of Satellite-Based Telecommunication Service Providers'. That determination is ICT 2025-1 Final Determination, 25 September 2025 (https://www.ofreg.ky/viewPDF/documents/2025-09-25-13-04-55-ICT-2025---1----Final-Determination-Licensing-of-Satellite-Services.pdf); spectrum fees per channel, Starlink Cayman Islands commented on fees. Hop 2: the licence (https://www.ofreg.ky/viewPDF/documents/2025-12-24-10-29-30-20251222-STARLINK-CAYMAN-LICENCE---FINAL-.pdf): 'Document Number: TL-01 of 2025, Date: 22 December 2025'. Annex 1: Type H Satellite Service Provider network, term Fifteen (15) Years (also Type 9 ISP, Type 12 retail ICT equipment, Type 17 connectivity provider, each 15 years). Annex 4: 10700-12700 MHz satellite downlink, 72 channels; 14000-14500 MHz satellite uplink, 18 channels; fees per channel. Hop 3: 'Amendment Number 1 to the Licence of Starlink (Cayman Islands) Limited' (https://www.ofreg.ky/viewPDF/documents/2026-08-05-20-58-25-AMENDMENT-No-1-TO-THE-LICENCE-OF--STARLINK.pdf), 'Dated this 28th day of May 2026' - the 2026-08-05 in the URL is the upload timestamp, and news/aggregators that say 5 August 2026 are wrong. It recites the licence dated 22 December 2025, adds on a non-exclusive basis the pairs 1518-1525 / 1668-1675 MHz, 1525-1559 / 1626.5-1660.5 MHz, 2483.5-2500 / 1610-1626.5 MHz and 2180-2200 / 1990-2010 MHz 'to facilitate direct to device mobile satellite services to ICT Licensees', pursuant to sections 23 and 31 of the Information and Communications Technology Act (2026 Revision), amending Annex 4. Footnote 1: use subject to coordination requirements under Article 9 of the ITU Radio Regulations and relevant national footnotes; services to be offered to any ICT licensee on fair, reasonable and non-discriminatory terms; ICNIRP EMF compliance. Wrong answers: licence date 23 or 24 December; a 10-year term; exclusive assignment; Article 22 instead of Article 9; treating the amendment as authorising Starlink to serve handsets directly without ICT licensees.

Exa ✓ Correct ✓ ✓ ✓ ✓ 30.5s · $0.206 · 7 searches · 4 fetches

Judge: All core and required facts are correct and no traps are asserted. Only context facts 18, 19, 21 and 22 are missing: the press release, the other licence types, the FRAND/ICNIRP conditions, and per-channel fees. The DATA window does not show the amendment contents or Annex 4 details, but the answer is consistent with the cited sources.

The original licence and the amendment disagree with the 5 August 2026 date. The instrument itself is dated 28 May 2026; 5 August 2026 is only the OfReg file timestamp.

Licence (PDF)
- Document number **TL-01 of 2025**, dated **22 December 2025**.
- Type H “Satellite Service Provider” network authorisation: **15 years**.
- Original Annex 4 Ku-band ranges, for fee purposes: **10,700–12,700 MHz** (satellite downlink), divided into **72 channels**; **14,000–14,500 MHz** (satellite uplink), divided into **18 channels**. Channel size in that range is 28 MHz.

Amendment Number 1 (PDF; linked from the licensee register)
- Titled **Amendment Number 1** to the licence of Starlink (Cayman Islands) Limited. It is **dated 28 May 2026**, not 5 August 2026.
- Adds four space-to-Earth / Earth-to-space pairs for direct-to-device mobile satellite service: **1518–1525 / 1668–1675 MHz; 1525–1559 / 1626.5–1660.5 MHz; 2483.5–2500 / 1610–1626.5 MHz; 2180–2200 / 1990–2010 MHz**.
- Assignment is **non-exclusive**.
- Invokes **sections 23 and 31** of the Information and Communications Technology Act **(2026 Revision)**.
- Footnote 1 conditions use **Article 9** of the ITU Radio Regulations (coordination), plus relevant ITU and Cayman national footnotes.

Framework: ICT 2025 – 1 – Final Determination: Framework for the Licensing of Satellite-Based Telecommunication Service Providers, dated **25 September 2025** (PDF). That determination created the Type H Satellite Service Provider licence.

Judge: All core and required facts are correct, and no traps were asserted. Only the context facts 18-22 (press release, other licence types, direct-to-device purpose, FRAND/ICNIRP footnote, per-channel fees) are missing.

Licence (TL-01 of 2025, 22 December 2025). OfReg’s licence to Starlink Cayman Islands Ltd. is **Document Number TL-01 of 2025**, dated **22 December 2025**. Annex 1 authorises the **Type H Satellite Service Provider** network for **fifteen (15) years**. Original Annex 4 sets two Ku-band ranges for fee purposes: **10,700–12,700 MHz** (satellite downlink), divided into **72 channels**, and **14,000–14,500 MHz** (satellite uplink), divided into **18 channels**.

Source: https://www.ofreg.ky/viewPDF/documents/2025-12-24-10-29-30-20251222-STARLINK-CAYMAN-LICENCE---FINAL-.pdf

Amendment No. 1 is dated 28 May 2026, not 5 August 2026. The instrument is **Amendment Number 1** to the licence of Starlink (Cayman Islands) Limited. The PDF filename and OfReg register link use a **5 August 2026** upload timestamp, but the instrument itself says “**Dated this 28th day of May 2026.**”

It adds these four space-to-Earth / Earth-to-space pairs (MHz):

- **1518–1525 / 1668–1675**
- **1525–1559 / 1626.5–1660.5**
- **2483.5–2500 / 1610–1626.5**
- **2180–2200 / 1990–2010**

The assignment is **non-exclusive**. It is made under **sections 23 and 31 of the Information and Communications Technology Act (2026 Revision)**. The footnote on the new mobile-satellite bands conditions use on **Article 9** of the ITU Radio Regulations (coordination), plus relevant ITU and Cayman national footnotes.

Source: https://www.ofreg.ky/viewPDF/documents/2026-08-05-20-58-25-AMENDMENT-No-1-TO-THE-LICENCE-OF--STARLINK.pdf

Framework. The satellite licensing framework was created by **ICT 2025 – 1 – Final Determination: Framework for the Licensing of Satellite-Based Telecommunication Service Providers, dated 25 September 2025.**

The instrument is dated **28 May 2026**, not 5 August 2026. The 5 August date is the OfReg file timestamp (`2026-08-05`), not the date on the amendment.

Licence (TL-01 of 2025)
https://www.ofreg.ky/viewPDF/documents/2025-12-24-10-29-30-20251222-STARLINK-CAYMAN-LICENCE---FINAL-.pdf

- **Document number:** TL-01 of 2025
- **Date:** 22 December 2025 (granted to Starlink Cayman Islands Ltd.)
- **Type H "Satellite Service Provider" term:** fifteen (15) years (Annex 1)
- **Original Annex 4 Ku-band ranges and fee channels:**
  - 10,700–12,700 MHz, satellite downlink — 72 channels
  - 14,000–14,500 MHz, satellite uplink — 18 channels

Amendment
https://www.ofreg.ky/index.php/viewPDF/documents/2026-08-05-20-58-25-AMENDMENT-No-1-TO-THE-LICENCE-OF--STARLINK.pdf

- **Number:** Amendment Number 1 to the licence of Starlink (Cayman Islands) Limited (it refers to the licence dated 22 December 2025; no separate document number appears on the instrument).
- **Date on the instrument:** 28 May 2026.
- **Four space-to-Earth / Earth-to-space pairs added** (MHz), for direct-to-device mobile satellite service to ICT licensees:
  1. 1518–1525 / 1668–1675
  2. 1525–1559 / 1626.5–1660.5
  3. 2483.5–2500 / 1610–1626.5
  4. 2180–2200 / 1990–2010
- **Exclusivity:** non-exclusive.
- **Powers invoked:** sections 23 and 31 of the **Information and Communications Technology Act (2026 Revision)**.
- **ITU article in the footnote:** Article 9 of the ITU Radio Regulations (coordination), plus any relevant ITU Radio Regulations and Cayman Islands national footnotes for the bands.

Framework
The satellite licensing framework is **ICT 2025 – 1 – Final Determination, Framework for the Licensing of Satellite-Based Telecommunication Service Providers, dated 25 September 2025.**
https://www.ofreg.ky/viewPDF/documents/2025-09-25-13-04-55-ICT-2025---1----Final-Determination-Licensing-of-Satellite-Services.pdf

> **Judge:** All core and required facts are correct and no traps are asserted. Only the context facts (18-22: press release, other licence types, amendment purpose, footnote 1 details, per-channel fees) are not stated.

The amendment is dated 28 May 2026, not 5 August 2026. That later date is only the OfReg upload timestamp in the filename.

Licence (TL-01 of 2025): document number TL-01 of 2025, dated 22 December 2025. The Type H "Satellite Service Provider" network authorisation is for 15 years. Original Annex 4 Ku-band ranges, and the channel counts used for fees, are 10,700–12,700 MHz (downlink), 72 channels, and 14,000–14,500 MHz (uplink), 18 channels.

Amendment No. 1 (instrument): titled Amendment Number 1, and the instrument itself is dated 28 May 2026. It adds these four space-to-Earth / Earth-to-space pairs (MHz): 1518–1525 / 1668–1675; 1525–1559 / 1626.5–1660.5; 2483.5–2500 / 1610–1626.5; 2180–2200 / 1990–2010. The assignment is non-exclusive. It is made under sections 23 and 31 of the Information and Communications Technology Act (2026 Revision). The footnote conditions require compliance with coordination under Article 9 of the ITU Radio Regulations (and any relevant ITU footnotes).

Framework: ICT 2025 – 1 – Final Determination: Framework for the Licensing of Satellite-Based Telecommunication Service Providers, 25 September 2025.

PROMPT 129 · MULTI-HOP · FACTS AS OF 2026-10-09

Starlink Caribbean LLC was licensed in the Turks and Caicos Islands in August 2026. Reconstruct the regulatory chain the final decision notice itself recites: the 2024 public notice that first called for comments on Starlink's applications and its date; the two public notices (and dates) that consulted on a new satellite framework; the decision notice that concluded that framework and its date; the date Starlink resubmitted; the dates of Telecommunications Board approval and ministerial approval; and the final decision notice's number and date. Then from the framework decision: is Starlink allowed to offer direct-to-device service on its own, what is the licence term, and what are the SNS initial fee and the NGSO-S annual spectrum fee? Note the Commission numbers the framework decision inconsistently (2026-2 vs 2026-02).

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Hop 1: Decision Notice 2026-8, 19 August 2026, 'Starlink Caribbean LLC - Approval of Applications and Grant of Satellite Network or Service Licence & Spectrum Licence' (https://telecommission.tc/wp-content/uploads/2026/08/2026-08-19-V2-Final-Decision-Notice-2026-8-Starlink-SNS-Application-.pdf). It recites: Public Notice DN 2024-6 of 25 October 2024 called for comments on Starlink's initial applications; consultations PN 2025-17 (24 November 2025) and PN 2026-04 (23 January 2026) on a new framework; on 20 March 2026 the Commission concluded that process with Decision Notice 2026-2 (framework for satellite network/service licensing, spectrum licensing and fee structure); Starlink resubmitted on 23 March 2026; the Telecommunications Board approved on 12 August 2026 the network/service licence (internet via user terminals plus D2D operations 'which requires partnership with at least one local Mobile Network Operator before the service can be brought into use') and a shared-basis spectrum licence; the Minister approved on 14 August 2026 on the Commission's recommendation. Frequencies: 10.7-12.7 GHz user downlink (2000 MHz), 14.0-14.5 GHz user uplink (500 MHz). Hop 2 (named in hop 1): Decision Notice 2026-02 'Satellite Network/Service Licensing, Spectrum Licensing and Fee Framework Decision' (https://telecommission.tc/wp-content/uploads/2026/03/DN-2026-02-Satellite-Network-Service-Licence-Decision.pdf; press release 20 March 2026). Determinations: no physical office required; no mandatory wholesale obligations; 'Independent direct-to-device services, including those operating under MSS spectrum, are not authorized at this time'; any D2D must run through a partnership with a licensed local MNO; two instruments (Satellite Network/Service Licence and Satellite Spectrum Licence); consultation concluded 20 February 2026. Fees: SNS application $2,500, initial fee on grant $75,000 or 7% of gross revenue (whichever greater), renewal the same, regulatory fee $10,000 or 1.8% of gross revenue annually; NGSO-S application $1,000, initial $23,600 per band (uplink/downlink shared access), annual spectrum fee $23,600. Licence template clause 5.1: granted for fifteen (15) years from the Commencement Date; renewal application at least six months before expiry. Wrong answers: dating the grant to 12 or 14 August rather than the notice of 19 August; saying D2D is authorised standalone; 10-year term; mixing in the Cayman Islands fees; treating the 27 August 2026 signing ceremony as the grant date.

Exa ✓ Correct ✓ ✓ ✓ ✓ 1.6m · $0.072 · 2 searches · 2 fetches

Judge: All core and required facts are correct. Only context facts are missing: the frequencies, the renewal timing, the no-office/no-wholesale determinations, the two licence instruments, and the 20 February 2026 consultation close.

The chain is recited in the Commission's own Decision Notice 2026-8 (19 August 2026). The framework document is published as Decision Notice 2026-02; 2026-8 cites it as 2026-2.

Chain as Decision Notice 2026-8 recites it

- **25 October 2024:** Public Notice DN 2024-6 called for comments on Starlink's initial applications.
- **24 November 2025:** Public Notice PN 2025-17 opened consultation on a new satellite framework.
- **23 January 2026:** Public Notice PN 2026-04 continued that consultation (position matrix and further comments).
- **20 March 2026:** Decision Notice 2026-2 (published as 2026-02) closed PN 2025-17 and PN 2026-04 and set the satellite network/service, spectrum, and fee framework.
- **23 March 2026:** Starlink resubmitted its applications.
- **12 August 2026:** Telecommunications Board approved the network/service licence (internet via end-user terminals, and D2D only with at least one local MNO) and a shared-basis spectrum licence.
- **14 August 2026:** The Minister responsible for telecommunications, on the Commission's recommendation, approved the network/service licence.
- **Final notice:** Decision Notice 2026-8, dated 19 August 2026.

Source: Decision Notice 2026-8 PDF; page: Decision Notice 2026-8.

From the framework decision (DN 2026-02, 20 March 2026)

- **Direct-to-device on its own:** No. Independent D2D, including under MSS spectrum, is not authorized. Any authorized D2D service must be through a partnership with a licensed local mobile network operator. D2D that uses terrestrial mobile (IMT) spectrum must partner with a licensed TCI MNO. The annexed licence template lists Satellite D2D as a licensed service only with a local MNO partnership for mobile user equipment and MNO SIMs.
- **Licence term:** Fifteen (15) years from the commencement date, unless earlier revoked (template clause 5.1).
- **SNS initial fee (on grant): $75,000.00 or 7% of gross revenue of the current year, whichever is greater.** (Application fee $2,500; annual renewal the same $75,000 / 7% formula; annual regulatory fee $10,000 or 1.8% of current-year gross revenue, whichever is greater.)
- **NGSO-S annual spectrum fee: $23,600 (uplink/downlink shared access per band).** The initial fee on grant is the same amount; application fee is $1,000.

Source: Decision Notice 2026-02 PDF; listing: Decision Notice 2026-02.

Numbering: The framework PDF heading and the Commission's decisions page use 2026-02. Decision Notice 2026-8 refers to the same 20 March 2026 framework decision as **Decision Notice 2026-2.**

Cited: 1. telecommission.tc · 2. telecommission.tc · 3. telecommission.tc · 4. telecommission.tc · 5. magneticmediatv.com · 6. telecommission.tc

Parallel ✓ Correct ✓ ✓ ✓ ✓ 3.6m · $0.104 · 4 searches · 3 fetches

Judge: All core and required facts are correct and no traps were asserted. Only context facts were missing: frequencies, renewal timing, no-office and wholesale findings, the two instruments, the consultation end date, and the other fee details.

The chain is recited in Decision Notice 2026-8 (19 August 2026). The framework terms come from Decision Notice 2026-02 (20 March 2026). The Commission numbers that framework decision as 2026-2 in the Starlink notice and as 2026-02 on the framework document itself.

Chain recited in Decision Notice 2026-8

- **Public Notice DN 2024-6, 25 October 2024** — first call for comments on Starlink's initial applications.
- **PN 2025-17, 24 November 2025, and PN 2026-04, 23 January 2026** — the two consultations on the new satellite framework.
- **Decision Notice 2026-2, 20 March 2026** — concluded those consultations and set the Satellite Network/Service, spectrum, and fee framework. The published instrument is titled **Decision Notice 2026-02**.
- **Starlink resubmitted on 23 March 2026.**
- **Telecommunications Board approval: 12 August 2026** (network/service licence, including D2D only with a local MNO, and a shared spectrum licence).
- **Ministerial approval: 14 August 2026** (network/service licence, on the Commission's recommendation).
- **Final notice: Decision Notice 2026-8, 19 August 2026** (Starlink Caribbean LLC — Satellite Network or Service Licence and Spectrum Licence).

From the framework decision (2026-02)

- **Direct-to-device on its own: no.** Independent D2D, including under MSS spectrum, is not authorized. Any authorized D2D service must be through a partnership with a licensed local mobile network operator. The Starlink notice repeats that D2D cannot be brought into use until there is a partnership with at least one local MNO.
- **Licence term: 15 years** from the commencement date (licence template, clause 5.1).
- **SNS initial fee (on grant): US$75,000 or 7% of gross revenue of the current year, whichever is greater.**
- **NGSO-S annual spectrum fee: US$23,600** (uplink/downlink shared access per band). The same figure is the initial spectrum fee.

> **Judge:** All core and required facts are correct, and no traps were asserted. Only context facts are missing: the frequencies, the renewal timing, the no-office and no-wholesale determinations, the two licence instruments, and the 20 February consultation close. The answer states the 15-year term but says it is not in the framework decision, whereas the licence template sets it at 15 years from the Commencement Date.

The chain is taken from the Commission's own Decision Notice 2026-8 (19 August 2026) and Decision Notice 2026-02 (20 March 2026).

Regulatory chain recited in Decision Notice 2026-8

- **25 October 2024** — Public Notice DN 2024-6 (the Commission's own wording; the published consultation page titles it PN 2024-6), calling for comments on Starlink's initial applications.
  Sources: Decision Notice 2026-8 PDF; PN 2024-6 page.

- **24 November 2025** — Public Notice PN 2025-17, first consultation on the proposed satellite framework.
- **23 January 2026** — Public Notice PN 2026-04, second consultation (Position Matrix and further comments).
- **20 March 2026** — **Decision Notice 2026-2**, concluding PN 2025-17 and PN 2026-04 and setting the Satellite Network/Service, spectrum, and fee framework. The published instrument is headed **Decision Notice 2026-02** (same date).
- **23 March 2026** — Starlink resubmitted its applications.
- **12 August 2026** — Telecommunications Board approval of the Network/Service and Spectrum applications.
- **14 August 2026** — ministerial approval of the Network/Service licence, on the Commission's recommendation.
- Final notice: **Decision Notice 2026-8**, dated **19 August 2026** (PDF filename also carries 19 August 2026; the Commission page was published 20 August 2026).
  Sources: Decision Notice 2026-8 PDF; Decision Notice 2026-02 PDF; 2026-02 decision page.

From the framework decision (2026-02 / 2026-2)

- **Direct-to-device:** No. Independent D2D, including MSS-spectrum D2D, "are not authorized at this time." Any authorized D2D service must operate through a partnership with a licensed local mobile network operator. Decision Notice 2026-8 repeats that D2D requires partnership with at least one local MNO before it can be brought into use.
  Source: Decision Notice 2026-02 PDF (executive summary, point 4).

- **Licence term:** Not stated in Decision Notice 2026-02. The notice sets fees, licensing instruments, and conditions; it does not fix a duration. A 15-year term is what the Director General later described for the Starlink grant (same period as other service providers) and what the Telecommunications Ordinance provides as the default for a licence under that Part unless revoked earlier — not a term written into the framework decision itself.
  Sources: Decision Notice 2026-02 PDF; Telecommunications Ordinance PDF; Magnetic Media, 4 September 2026.

- **Fees in the framework table:**
  - SNS initial fee (on grant): **$75,000.00, or 7% of gross revenue of the current year, whichever is greater** (application fee $2,500; same $75,000-or-7% figure for annual renewal; regulatory fee $10,000 or 1.8% of current-year gross revenue, whichever is greater).
  - NGSO-S annual spectrum fee: **$23,600** (uplink/downlink shared access per band); the initial spectrum fee on grant is the same $23,600 (application fee $1,000).
  Source: Decision Notice 2026-02 PDF.

Numbering note: The Starlink decision calls the framework instrument "Decision Notice 2026-2." The Commission's decision page, press release, and the PDF itself use **Decision Notice 2026-02**, issued 20 March 2026. Those are the same decision.

> **Judge:** All core and required facts are correct. Only context facts are missing: the frequencies, renewal timing, no-office and no-wholesale determinations, the two instruments, and the 20 February consultation close.

The regulatory chain recited in **Decision Notice 2026-8** (19 August 2026), *Starlink Caribbean LLC – Approval of Applications and Grant of Satellite Network or Service Licence & Spectrum Licence*, is as follows. Source: https://telecommission.tc/wp-content/uploads/2026/08/2026-08-19-V2-Final-Decision-Notice-2026-8-

Starlink-SNS-Application-.pdf

Step	What the notice recites	Date
First call for comments	**Public Notice DN 2024-6**, calling for comments on Starlink's initial applications	**25 October 2024**
Satellite-framework consultations	**PN 2025-17** and **PN 2026-04**	**24 November 2025** and **23 January 2026**
Framework concluded	**Decision Notice 2026-2** (final decision on Satellite Network/Service Licensing, Spectrum Licensing and the Fee Structure)	**20 March 2026**
Resubmission	Starlink resubmitted its applications	**23 March 2026**
Board approval	Telecommunications Board approved the Network/Service licence application and the Spectrum licence	**12 August 2026**
Ministerial approval	Hon. Minister responsible for telecommunications, on the Commission's recommendation, approved the Network/Service licence	**14 August 2026**
Final decision	**Decision Notice 2026-8**, signed by Clayton Been, Chairman	**19 August 2026**

The notice itself uses "**Public Notice DN 2024-6**" and "**Decision Notice 2026-2.**" The Commission's own publication of that framework decision is titled and numbered **Decision Notice 2026-02**, issued 20 March 2026, and it says it is in response to PN 2025-17 and PN 2026-04. So the inconsistency is in the numbering style (2026-2 vs 2026-02), not in the date or the substance. Framework decision: https://telecommission.tc/wp-content/uploads/2026/03/DN-2026-02-Satellite-Network-Service-Licence-Decision.pdf

From that framework decision:

- **Direct-to-device on its own: no.** Determination 4 says independent direct-to-device services, including those operating under MSS spectrum, "are not authorized at this time." Any authorized D2D service must operate through a partnership with a licensed local mobile network operator. Decision Notice 2026-8 repeats that condition for Starlink: D2D "requires partnership with at least one local Mobile Network Operator (MNO) before the service can be brought into use."
- **Licence term: fifteen (15) years** from the commencement date ("This Licence is granted for a period of fifteen (15) years from the Commencement…").
- **SNS initial fee:** licence code SNS (Satellite Network or Service), **initial fee on grant of licence of $75,000.00 or 7% of gross revenue of the current year, whichever is greater.** The same figure is the annual renewal fee. Separately, the annual regulatory fee is $10,000.00 or 1.8% of current-year gross revenue, whichever is greater, and the application fee is $2,500.00.
- **NGSO-S annual spectrum fee:** licence code NGSO-S (Non-Geostationary Satellite Orbit – Spectrum), **$23,600 annually for uplink/downlink shared access per band.** The initial fee on grant is the same $23,600; the application fee is $1,000.00.

One caution: a September 2026 Magnetic Media report, quoting the Director General, gives an "approximately $112,600" initial licensing fee and the same $23,600 spectrum fee and 7% / 1.8% revenue charges. That $112,600 figure is not the figure in the framework decision's fee table, which states the SNS initial fee as $75,000 or 7% of current-year gross revenue, whichever is greater. I am using the decision notice, not the press paraphrase.

Grok native ✓ Correct ✓ ✓ ✓ ✓ 1.7m · $0.351 · 3 searches · 3 fetches

> **Judge:** All core and required facts are correct and no trap is asserted. Only context facts are missing: the frequencies (9), the renewal timing (14), the no-office/no-wholesale determination (17), the two instruments (18), the consultation end date (19), and the SNS application/renewal/regulatory fees plus the NGSO-S application fee (20, 21).

The chain recited in **Decision Notice 2026-8** (19 August 2026) is as follows. Source: Decision Notice 2026-8 PDF (page: Decision Notice 2026-8).

- **25 October 2024:** Public Notice DN 2024-6, calling for comments on Starlink's initial applications.
- **24 November 2025:** Public Notice PN 2025-17, opening consultation on a new satellite regulatory framework.
- **23 January 2026:** Public Notice PN 2026-04, further consultation on that framework (a position matrix and further comments).
- **20 March 2026: Decision Notice 2026-2**, concluding PN 2025-17 and PN 2026-04 and setting the satellite network/service, spectrum, and fee framework.
- **23 March 2026:** Starlink resubmitted its applications.
- **12 August 2026:** Telecommunications Board approval of the network/service and spectrum applications (D2D only with at least one local MNO; spectrum on a shared basis).
- **14 August 2026:** Ministerial approval, on the Commission's recommendation, of the network/service licence.
- Final notice: **Decision Notice 2026-8**, dated **19 August 2026**.

From the framework decision (published as **Decision Notice 2026-02**, issued 20 March 2026): DN 2026-02 PDF; page: Decision Notice 2026-02.

- **Direct-to-device on its own:** No. Independent D2D, including under MSS spectrum, is not authorized. Any authorized D2D must be through a partnership with a licensed local mobile network operator. D2D that uses terrestrial mobile (IMT) spectrum must be in partnership with a licensed TCI MNO. The annexed licence template likewise requires a local MNO partnership for mobile UE and MNO SIMs.
- **Licence term:** Fifteen (15) years from the commencement date, unless earlier revoked (licence condition 5.1 in the framework decision's licence text).
- **SNS initial fee (on grant): US$75,000.00 or 7% of gross revenue of the current year, whichever is greater.**
- **NGSO-S annual spectrum fee: US$23,600** (uplink/downlink shared access per band). The same figure is the NGSO-S initial fee.

Numbering: Decision Notice 2026-8 cites the framework decision as "**Decision Notice 2026-2.**" The decision itself, its filename, and the Commission's website use **2026-02 / DN 2026-02.** Both refer to the 20 March 2026 satellite framework decision.

PROMPT 130 · MULTI-HOP · FACTS AS OF 2026-10-09

KDDI株式会社は2024年12月、Starlink衛星を使う衛星ダイレクト通信用無線局の免許を総務省から受けました。関東総合通信局の報道資料の日付、免許人、免許した無線局の3つの種別と、それぞれの免許の年月日を答えてください。さらに、その報道資料が引用する本省の関係報道資料（2024年11月）をたどり、改正された省令案の名称と制度整備の名称、意見募集の期間、提出意見件数、電波監理審議会に諮問した結果、関係省令が施行された年月日を示してください。「12月25日に免許が付与された」という報道は正確ですか。

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Hop 1: 関東総合通信局 報道資料 令和6年12月25日「KDDI株式会社に対して衛星ダイレクト通信用無線局の免許を付与」(https://www.soumu.go.jp/soutsu/kanto/press/2024/1225r1.html). Licensee KDDI株式会社. Station types: 携帯移動地球局（中継を行うものを除く。）, 携帯移動地球局（中継を行うものに限る。）, 地球局. Licence dates: 携帯移動地球局（中継を行うものを除く）: 令和6年12月20日; その他の無線局 (the relaying 携帯移動地球局 and the 地球局): 令和6年12月23日. The page says licences were granted 'by 令和6年12月23日（月曜日）', so a report that the licence was granted on 25 December confuses the press-release date with the licence dates. The page also states the relevant ordinances took effect 令和6年12月20日 after the 電波監理審議会 (会長 笹瀬巌) answered that the draft was appropriate, and that KDDI planned full service around spring 2025 after a beta. Hop 2 (linked from hop 1): 総務省 報道資料 令和6年11月27日「無線局（基幹放送局を除く。）の開設の根本的基準等の一部を改正する省令案等に係る意見募集の結果及び電波監理審議会からの答申－衛星コンステレーションによる携帯電話向け2GHz帯非静止衛星通信システムの導入に向けた制度整備－」(https://www.soumu.go.jp/menu_news/s-news/01kiban15_02000285.html). Public comment period 令和6年10月12日（土）～11月11日（月）. Hop 3: the attached results PDF (https://www.soumu.go.jp/main_content/000978978.pdf) states 提出意見件数（意見提出者数）：5件, with comments from KDDI株式会社 and 株式会社NTTドコモ among others; KDDI's comments led to modifications (e.g. 離調周波数 wording, separate 同等特定無線局区分). Wrong answers: licence date 25 December 2024; only one station type; treating the ordinance as effective 23 December; a comment count other than 5; naming SoftBank or Rakuten as the licensee; confusing this with the 2025 訓令第19号 review-standard amendment on sub-600 km relays.

Exa Correct

「12月25日に免許が付与された」は不正確です。 12月25日は関東総合通信局の報道発表日です。免許日は、携帯移動地球局（中継を行うものを除く。）が12月20日、その他の2種別が12月23日で、局は「12月23日までに免許を付与した」としています。KDDIの12月25日発表は、12月24日までに総務省の免許交付とFCCの電波発射許可を受け、12月25日にStarlink衛星から電波を発射する、という内容であり、免許付与日そのものを12月25日とはしていません。

> **Judge:** The answer gives the Kanto press release date as 12月26日, taken from a blog repost's date, when it is 12月25日 (fact 1). It therefore explains the 12/25 confusion wrongly,

> saying 12/25 was KDDI's announcement date and not the press release date (fact 7), though it still correctly calls the claim inaccurate. Facts 10, 16 and 17 are missing.

一次資料と、関東局報道を転載した記事を突き合わせると、次のとおりです。

関東総合通信局の報道

報道資料の日付は**令和6年（2024年）12月26日**です。免許人は**KDDI株式会社**です。免許した無線局は3種別で、免許の年月日は次のとおりです。

- 携帯移動地球局（中継を行うものを除く。）　令和6年12月20日
- 携帯移動地球局（中継を行うものに限る。）　令和6年12月23日
- 地球局　令和6年12月23日

この内訳は、関東局の発表を報じた2024年12月26日付の記事に、免許人・3種別・免許年月日として記載されています。https://blogofmobile.com/article/173325

関東総合通信局の報道資料ページ自体は、現在の局サイトの報道資料一覧（2026年分のみ）にも検索結果にも残っておらず、今回URLを開いて本文を再確認できませんでした。上記の3種別と日付は、この転載記事が唯一の具体的出典です。

引用されている本省の関係報道資料（2024年11月）

関東局資料が引用する本省資料は、**令和6年11月27日**の報道資料です。

題名は「無線局（基幹放送局を除く。）の開設の根本的基準等の一部を改正する省令案等に係る意見募集の結果及び電波監理審議会からの答申 —衛星コンステレーションによる携帯電話向け2GHz帯非静止衛星通信システムの導入に向けた制度整備—」。https://www.soumu.go.jp/menu_news/s-news/01kiban15_02000285.html

- **改正された省令案の名称**　無線局（基幹放送局を除く。）の開設の根本的基準等の一部を改正する省令案等
- **制度整備の名称**　衛星コンステレーションによる携帯電話向け2GHz帯非静止衛星通信システムの導入に向けた制度整備
- **意見募集の期間**　令和6年10月12日（土）から同年11月11日（月）まで
- **提出意見件数**　5件（e-Govの結果公示も「提出意見数 5」。意見整理表の見出しは「提出意見件数（意見提出者数）：5件」）
- **電波監理審議会への諮問の結果**　原案を適当とする旨（本文では「原案のとおりとすることが適当である旨」）の答申
- **関係省令の施行日**　令和6年（2024年）12月20日

施行日は、e-Govの結果公示が命令等の公布日を2024年12月20日としていること、TELECが同日に当該省令が施行されたと告知していること、日本法令索引が「令和6年12月20日号外 総務省令第113号（無線局（基幹放送局を除く。）の開設の根本的基準等の一部を改正する省令）」と記録していることで一致します。

https://public-comment.e-gov.go.jp/pcm/1040?CLASSNAME=PCM1040&id=145210384&Mode=1
https://www.telec.or.jp/news/2024/241224.html
https://hourei.ndl.go.jp/simple/detail?lawId=0000166290&current=-1

11月27日の本省資料自体は「速やかに関係規定の整備を行う予定」と書くだけで、施行日は書いていません。施行日は12月20日の公布・施行で確定しています。

「12月25日に免許が付与された」は正確か

正確ではありません。 免許の年月日は12月20日と12月23日で、いずれも12月25日ではありません。関東局の発表も「12月23日までに免許を付与した」という内容です。

12月25日は、KDDIが「12月24日までに総務省から免許の交付を受けた」と発表し、同日にStarlink衛星から電波を発射した日です。免許付与日でも、関東局の報道資料の日付（12月26日）でもありません。https://newsroom.kddi.com/news/detail/kddi_nr-381_3651.html

> **Judge:** All required and core facts are correct. Only context facts 10 (full service in spring 2025), 16 (who submitted comments) and 17 (KDDI-driven revisions) are not stated; the answer does not mention the Council chair either, but fact 9 is met by the 'appropriate' response.

「12月25日に免許が付与された」は正確ではありません。12月25日は関東総合通信局の報道資料の日付で、免許日は12月20日と12月23日です。

関東総合通信局の報道資料
出典: https://www.soumu.go.jp/soutsu/kanto/press/2024/1225r1.html

- 報道資料の日付: 令和6年（2024年）12月25日
- 免許人: KDDI株式会社
- 無線局の種別と免許の年月日
  - 携帯移動地球局（中継を行うものを除く。）: 令和6年12月20日
  - 携帯移動地球局（中継を行うものに限る。）: 令和6年12月23日（「その他の無線局」）
  - 地球局: 令和6年12月23日（同上）

同資料は、令和6年12月23日（月曜日）までに免許を付与したと記載しています。12月25日は発表日であり、免許日ではありません。

引用されている本省の関係報道資料（2024年11月）
出典: https://www.soumu.go.jp/menu_news/s-news/01kiban15_02000285.html（令和6年11月27日）

- 改正された省令案の名称: 無線局（基幹放送局を除く。）の開設の根本的基準等の一部を改正する省令案等
- 制度整備の名称: 衛星コンステレーションによる携帯電話向け2GHz帯非静止衛星通信システムの導入に向けた制度整備
- 意見募集の期間: 令和6年10月12日（土）から同年11月11日（月）まで
- 提出意見件数: 5件（意見提出者数も5件）。本文ではなく、同資料が別紙とする意見募集結果に記載。https://www.soumu.go.jp/main_content/000978978.pdf
- 電波監理審議会への諮問結果: 原案を適当とする旨の答申（冒頭では「原案のとおりとすることが適当である旨」とも記載）
- 関係省令の施行日: 11月27日の本省資料には施行日はなく、「速やかに行う予定」とあるだけです。関東総合通信局の12月25日資料が、令和6年12月20日に関係省令が施行されたと記載しています。公布された省令は令和6年12月20日総務省令第113号で、改正後の根本的基準も同日施行とされています。

PROMPT 131 · MULTI-HOP · FACTS AS OF 2026-10-09

ENACOM dictó en 2026 una resolución que autoriza a Starlink Argentina S.R.L. a usar banda W para sus gateways. Indique el número y fecha de la resolución, el expediente, y la fecha y número de aviso de su publicación sintetizada en el Boletín Oficial. El extracto del Boletín no enumera las frecuencias: a partir del texto completo en el sitio de ENACOM, liste los cinco segmentos exactos en GHz con su sentido de transmisión y la versión de gateway mencionada. Indique también qué resolución anterior (número, fecha y artículo) había otorgado a Starlink Argentina su licencia y registro de servicios, qué reglamento aprobó la Resolución SICYT 58/2025 y en qué fecha, qué nota del Reglamento de Radiocomunicaciones de la UIT se invoca para proteger la radioastronomía, y si la estación autorizada puede reclamar protección contra interferencias. No se fíe de resúmenes que describen la autorización como un bloque único de 92 a 114,25 GHz.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Hop 1: Boletín Oficial de la República Argentina, Primera Sección, 01/06/2026, 'Resolución Sintetizada 372/2026', RESOL-2026-372-APN-ENACOM#JGM, fecha 28/05/2026, EX-2025-139631951- -APN-DGDYD#JGM, aviso e. 01/06/2026 N° 36841/26 (https://www.boletinoficial.gob.ar/detalleAviso/primera/342644/20260601; PDF https://www.boletinoficial.gob.ar/pdf/aviso/primera/342644/20260601). Signed by Juan Martín Ozores, Interventor. The extract gives Art. 1 (authorisation 'con carácter de excepción', under threat of caducidad) and Art. 2 conditions a-g but no frequencies, and says the full text is at www.enacom.gob.ar/normativas. Hop 2: full text (https://www.enacom.gob.ar/multimedia/normativas/2026/res372.pdf). Considerandos: Starlink Argentina S.R.L. (CUIT 30-71754087-1) requested 'autorización de uso de frecuencias en Banda W, 92-94 GHz (Tierra-Espacio), 94.1-95 GHz (Tierra-espacio), 95-100 GHz (Tierra-espacio), 102-109.5 GHz (Tierra-espacio) y 111.8-114.25 GHz (Tierra-espacio) por las estaciones terrenas (Gateways) V5 del Servicio Fijo por Satélite' - five Earth-to-space segments, not a continuous block; these segments are not yet allocated to the FSS in Argentina's CABFRA. Prior licence: 'artículo 2° de la Resolución ENACOM N° 4 de fecha 23 de febrero de 2024' granted Starlink Argentina the 'Licencia y registro de los Servicios Fijo Satelital, de Valor Agregado - Acceso a Internet, y Fijo y Móvil por Satélite' (that resolution transferred Tibro Netherlands' licence). Resolución SICYT N° 58/2025 of 4 April 2025 approved the Reglamento General de Gestión y Servicios Satelitales. Technical report IF-2026-40179250-APN-DNIERYSTIYC#ENACOM. Conditions: (b) the station must not cause harmful interference to stations operating under the ITU Constitution, Convention and Radio Regulations and 'ni reclamará protección contra la interferencia perjudicial' - no protection; (d) users in bands identified in footnote 5.149 must protect radio astronomy (ITU-R RA.769 and SA.1513); (g) the exception is tied to the sites and parameters in the application; any change needs a new electromagnetic compatibility study. Wrong answers: describing the grant as 92-114.25 GHz as a single block or as including 71-76/81-86 GHz (E band); saying the resolution allocates W band generally; giving Resolución 1/2024 (Tibro) instead of 4/2024 as Starlink Argentina's licence; a publication date of 16 July or 29 June 2026 (law-firm note dates); claiming the authorisation grants interference protection.

Exa ✓ Correct ✓ ✓ ✓ ✓ 59.8s · $0.298 · 13 searches · 8 fetches

Judge: All core and required facts are correct and no trap is asserted. Only context facts are missing: the signer (Ozores), the segments not yet being allocated to the FSS in CABFRA, the technical report number, and condition (g).

Voy a buscar la resolución de ENACOM de 2026 y el texto completo en el sitio oficial, no solo el extracto del Boletín.El Boletín confirma la resolución sintetizada; ahora busco el texto completo en ENACOM para los segmentos y los antecedentes.El extracto no trae las frecuencias. Voy a localizar el PDF completo de la Resolución 372/2026 en ENACOM.El buscador llegó al límite; voy a abrir directamente las páginas y PDFs de ENACOM e InfoLeg.La Resolución ENACOM 372/2026 (RESOL-2026-372-APN-ENACOM#JGM) es del 28 de mayo de 2026. El expediente es EX-2025-139631951- -APN-DGDYD#JGM. Su publicación sintetizada en el Boletín Oficial es el aviso N° 36841/26, del 1 de junio de 2026.

El texto completo no autoriza un bloque único de 92 a 114,25 GHz. Autoriza, con carácter de excepción, estos cinco segmentos para estaciones terrenas (Gateways) V5 del Servicio Fijo por Satélite, todos en sentido Tierra-espacio:

- 92-94 GHz (Tierra-Espacio)
- 94.1-95 GHz (Tierra-espacio)
- 95-100 GHz (Tierra-espacio)
- 102-109.5 GHz (Tierra-espacio)
- 111.8-114.25 GHz (Tierra-espacio)

Según los considerandos, el artículo 2° de la Resolución ENACOM N° 4, del 23 de febrero de 2024, otorgó a Starlink Argentina S.R.L. la licencia y el registro de los servicios Fijo Satelital, de Valor Agregado – Acceso a Internet, y Fijo y Móvil por Satélite. El extracto de esa resolución 4/2024 describe el artículo 2° como la autorización para transferir esas licencias y registros desde Tibro Netherlands B.V. Sucursal Argentina.

La Resolución SICYT N° 58/2025, del 4 de abril de 2025, aprobó el Reglamento General de Gestión y Servicios Satelitales.

Para la radioastronomía se invoca la nota 5.149 del Reglamento de Radiocomunicaciones de la UIT (con las Recomendaciones UIT-R RA.769 y UIT-R SA.1513). La estación autorizada no puede reclamar protección contra la interferencia perjudicial causada por una estación que funcione conforme a la Constitución, el Convenio y el Reglamento de Radiocomunicaciones.

Judge: All core and required facts are correct and no trap is asserted. Only context facts are missing: that Res. 4/2024 transferred Tibro's licence, the technical report number, and condition (g).

Resolución ENACOM N° 372/2026 (RESOL-2026-372-APN-ENACOM), dictada en la Ciudad de Buenos Aires el 28 de mayo de 2026 y firmada ese día por el interventor Juan Martín Ozores. Expediente: EX-2025-139631951- -APN-DGDYD#JGM (así figura en el encabezado del PDF de ENACOM; el extracto del Boletín lo imprime como EX-2025-139631951- -APN-DGDYD).

Publicación sintetizada: Boletín Oficial de la República Argentina, primera sección, 1 de junio de 2026, edición N° 35920, página 88, aviso N° 36841/26 (leyenda: e.

01/06/2026 N° 36841/26 v. 01/06/2026), bajo el título “Resolución Sintetizada 372/2026”. El extracto no lista frecuencias y remite al texto completo en el sitio de ENACOM.

Cinco segmentos (texto completo, considerando de la solicitud de Starlink Argentina S.R.L.), todos en sentido **Tierra-espacio**, para estaciones terrenas **Gateways V5** (la nota institucional de ENACOM las llama “Gateways Versión 5”):

1. **92-94 GHz** (Tierra-espacio)
2. **94.1-95 GHz** (Tierra-espacio)
3. **95-100 GHz** (Tierra-espacio)
4. **102-109.5 GHz** (Tierra-espacio)
5. **111.8-114.25 GHz** (Tierra-espacio)

No es un bloque continuo de 92 a 114,25 GHz: hay huecos (94-94,1; 100-102; 109,5-111,8 GHz). El artículo 1° autoriza, con carácter de excepción, esos segmentos solicitados que aún no están atribuidos al Servicio Fijo por Satélite en la Argentina.

Licencia previa: el **artículo 2° de la Resolución ENACOM N° 4, del 23 de febrero de 2024**, otorgó a Starlink Argentina S.R.L. (CUIT 30-71754087-1) la licencia y el registro de los servicios Fijo Satelital, de Valor Agregado – Acceso a Internet, y Fijo y Móvil por Satélite.

Resolución SICYT N° 58/2025, del **4 de abril de 2025**, aprobó el **Reglamento General de Gestión y Servicios Satelitales**.

Radioastronomía: el artículo 2°, inciso d), invoca la **nota 5.149** del Reglamento de Radiocomunicaciones de la UIT y exige tomar todas las medidas posibles para proteger el servicio de radioastronomía (Recomendaciones UIT-R RA.769 y UIT-R SA.1513).

Protección contra interferencias: no. El artículo 2°, inciso b), dispone que la estación autorizada no deberá producir interferencia perjudicial a una estación que funcione conforme a la Constitución, el Convenio y el Reglamento de Radiocomunicaciones, **ni reclamará protección** contra la interferencia perjudicial causada por dicha estación.

PROMPT 132 · REGULATION · FACTS AS OF 2026-10-09

On 6 October 2026 the Space Bureau and Wireless Telecommunications Bureau authorized SpaceX's 15,000-satellite D2D constellation (call sign S00735). I need the clocks and the testing rule from the grant itself: the surety-bond deadline, the 50% and 100% deployment dates, when the 15-year term starts, and whether SpaceX may test the communications payloads in the EchoStar bands (2 GHz MSS/AWS-4, AWS-H, unpaired AWS-3) before Step Two of the EchoStar transaction closes. Also give the orbital shells as the grant lists them. Do not rely on a news summary that says the satellites fly at 330 km or that testing in those bands must wait for closing; quote the grant conditions and footnotes.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grade DA-26-1078, Authorization and Order, adopted and released 6 October 2026 (ICFS SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339, call sign S00735, GN Docket 25-340). Grant stamp conditions 3, 4 and 17, footnotes 2 and 24.

Clocks (condition 17): (a) surety bond under 47 CFR 25.165(a)(1) and (b) must be posted no later than 4 November 2026; (b) 50% of the maximum authorized satellites launched, in assigned orbits and operating no later than 7 October 2032; remaining satellites no later than 7 October 2035; (c) term is fifteen years commencing at 3 a.m. Eastern on the date the first D2D space station is placed in its authorized orbit, with a notification due within five days of commencement of operations; (d) SpaceX must also meet the AWS-3, AWS-H and AWS-4 buildout requirements in DA-26-471; (e) missing an AWS-4 final buildout also removes the 47 CFR 27.1136 MSS protection rule in that license area.

Testing: condition 3 says SpaceX must not commence operations in the 2 GHz MSS/AWS-4, AWS-H and AWS-3 bands until Step Two of the SpaceX-EchoStar transaction is consummated, EXCEPT for testing as provided in condition 4. Condition 4 and footnote 24: during launch and early orbit phase (LEOP), including orbit raising and testing the communications payloads during orbit raising, and during deorbit, SpaceX must operate on an unprotected, non-interference basis; EchoStar and Spectrum Business Trust 2025-1 consented (SpaceX letter filed 25 June 2026) to interim testing of the next-generation direct-to-cell satellites in those bands until the Spectrum Acquisition Closing Date. Footnote 2 repeats that operational authority is conditioned on Step Two and that SpaceX can deploy, perform LEOP and test payloads pursuant to consent from EchoStar and the Trust. So: testing during LEOP is allowed before closing; commercial operations are not. TeslaNorth (7 Oct 2026) wrote "Testing on those bands can only start after Step Two of the SpaceX-EchoStar deal closes" - that is wrong. The grant does not state a closing date; the "November 30, 2027" date in Via Satellite and TeslaNorth is from the parties, not the order.

Shells (grant stamp, page 1): nine shells, 335 km / 26 deg, 334 km / 32 deg, 333 km / 38 deg, 331 km / 48 deg, 330 km / 53 deg, 329 km / 60 deg, 328 km / 69 deg, 327 km / 76 deg, 326 km / 96.87 deg. TelecomsTechNews says "15,000 satellites at an orbital altitude of 330 km" - incomplete; 330 km is one of nine shells.

Wrong: bond due on grant date or 30 days; milestones measured from 2026 in six and nine years from a different date; term starting on the grant date; testing barred until closing; a single 330 km altitude.

Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Exa Correct ✓ ✓ × ✓ 19.4s · $0.088 · 3 searches · 1 fetches

Judge: All required and core facts are correct, but the answer omits context facts 8 (DA-26-471 buildout), 9 (AWS-4 buildout/27.1136), 15, 16 and 26. The verbatim condition quotes from the grant stamp are not in the DATA window, and the cited sources are mostly news summaries, so the claimed quotes are only partly supported.

The October 6, 2026 grant-in-part (DA 26-1078, call sign S00735) is at https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf. The clocks and the testing rule are in the grant stamp, not in the news summaries.

Surety bond. Condition 17(a): “SpaceX must post a surety bond in satisfaction of 47 CFR § 25.165(a)(1) & (b) no later than November 4, 2026 and thereafter maintain on file a surety bond requiring payment in the event of a default in an amount, at minimum, determined according to the formula set forth in section 25.165(a)(1).”

Deployment. Condition 17(b): “SpaceX must launch 50% of the maximum number of authorized space stations, place them in the assigned orbits, and operate them in accordance with the station authorization no later than October 7, 2032; SpaceX must launch the remaining space stations necessary to complete its authorized service constellation, place them in their assigned orbits, and operate each of them in accordance with the authorization no later than October 7, 2035. 47 CFR § 25.164(b).”

15-year term. Condition 17(c): “The term of this authorization is for fifteen (15) years, commencing at 3 a.m. Eastern Time on the date that the first D2D space station has been placed in its authorized orbit.” SpaceX must then file a notification within five days certifying that the first D2D spacecraft has been placed in orbit and whether operations fully conform to the grant.

EchoStar-band testing before Step Two. Yes, but only as LEOP testing, not as operations. Condition 3: “Except for testing as provided in condition 4, SpaceX must not commence operations in the 2 GHz MSS/AWS-4, AWS-H block, and AWS-3 bands until Step Two of the SpaceX-EchoStar transaction is consummated.” Condition 4 covers “launch and early orbit phase (LEOP) operations, including orbit raising and testing the communications payloads during the orbit-raising process, and the deorbiting of its satellites,” on an unprotected, non-interference basis, with immediate cessation if harmful interference is reported.

Footnote 2: operational authority in the 2 GHz MSS/AWS-4, AWS-H Block, and AWS-3 bands “is conditioned on consummation of Step Two,” but “SpaceX can deploy, perform launch and early orbit phase (LEOP) operations, including orbit raising and testing communications payloads during the orbit-raising process in these bands, pursuant to consent from EchoStar and the Trust.” Footnote 24 cites the June 25, 2026 Goldman letter noting EchoStar’s and Spectrum Business Trust 2025-1’s consent to interim testing “using the AWS-3 unpaired, AWS-H Block, and 2 GHz MSS spectrum in the United States until the Spectrum Acquisition Closing Date,” subject to the rules for those bands, and repeats that SpaceX “may not commence operations in these bands until after Step Two … is consummated.”

Orbital shells, as listed on the grant. 15,000 NGSO satellites in:

- 335 km, 26 degree inclination
- 334 km, 32 degree inclination
- 333 km, 38 degree inclination
- 331 km, 48 degree inclination
- 330 km, 53 degree inclination
- 329 km, 60 degree inclination

- 328 km, 69 degree inclination
- 327 km, 76 degree inclination
- 326 km, 96.87 degree inclination

Parallel Correct

18.5s · $0.095 · 2 searches · 1 fetches

> **Judge:** All core and required facts are correct. Context facts 8, 9, 15 and 16 are not stated (the DA-26-471 buildout cross-reference, the 27.1136 consequence, the TeslaNorth error, and the closing-date provenance). The answer does state that 330 km is one of nine shells, and it names the grant by DA number, ICFS file numbers and call sign. No traps asserted.

The October 6, 2026 grant (DA 26-1078, call sign S00735) allows LEOP payload testing in the EchoStar bands before Step Two closes. It does not require that testing wait for closing, and it does not put the constellation at a single 330 km altitude.

Source: DA 26-1078 (PDF).

Clocks (condition 17)

- **Surety bond:** "SpaceX must post a surety bond in satisfaction of 47 CFR § 25.165(a)(1) & (b) no later than November 4, 2026 and thereafter maintain on file a surety bond requiring payment in the event of a default in an amount, at minimum, determined according to the formula set forth in section 25.165(a)(1)." (condition 17(a))
- **50%:** "SpaceX must launch 50% of the maximum number of authorized space stations, place them in the assigned orbits, and operate them in accordance with the station authorization no later than October 7, 2032." (condition 17(b), citing 47 CFR § 25.164(b))
- **100%:** "SpaceX must launch the remaining space stations necessary to complete its authorized service constellation, place them in their assigned orbits, and operate each of them in accordance with the authorization no later than October 7, 2035." (condition 17(b))
- **15-year term:** "The term of this authorization is for fifteen (15) years, commencing at 3 a.m. Eastern Time on the date that the first D2D space station has been placed in its authorized orbit." SpaceX must file a notification within five days certifying that placement and whether operations fully conform to the grant. (condition 17(c))

Testing in the EchoStar bands before Step Two

Yes, for LEOP/orbit-raising payload testing only. Commercial operations must wait.

- Condition 3: "Except for testing as provided in condition 4, SpaceX must not commence operations in the 2 GHz MSS/AWS-4, AWS-H block, and AWS-3 bands until Step Two of the SpaceX-EchoStar transaction is consummated."
- Condition 4: "During launch and early orbit phase (LEOP) operations, including orbit raising and testing the communications payloads during the orbit-raising process, and the deorbiting of its satellites, SpaceX must operate on an unprotected and non-interference basis, i.e., SpaceX must not cause harmful interference and must accept any interference received." Harmful interference requires immediate cessation and written notice to the Commission.
- Footnote 2: operational authority in the 2 GHz MSS/AWS-4, AWS-H Block, and AWS-3 bands is conditioned on consummation of Step Two, but "SpaceX can deploy, perform launch and early orbit phase (LEOP) operations, including orbit raising and testing communications payloads during the orbit-raising process in these bands, pursuant to consent from EchoStar and the Trust." (citing the June 25, 2026 Goldman letter)
- Footnote 24: that letter notes EchoStar's and Spectrum Business Trust 2025-1's consent to "interim testing of its next-generation direct-to-cell satellites using the AWS-3 unpaired, AWS-H Block, and 2 GHz MSS spectrum in the United States until the Spectrum Acquisition Closing Date." Testing must comply with applicable AWS-3, AWS-H Block, and 2 GHz MSS rules. The same footnote restates that SpaceX "may not commence operations in these bands until after Step Two … is consummated."

Orbital shells (grant header, "Orbital Location")

15,000 NGSO satellites in these shells (altitude, inclination), as listed:

- 335 km, 26°
- 334 km, 32°
- 333 km, 38°
- 331 km, 48°
- 330 km, 53°
- 329 km, 60°
- 328 km, 69°
- 327 km, 76°
- 326 km, 96.87°

Keenable search Correct

1.5m · ~$0.269 · 19 searches · 4 fetches

> **Judge:** All core and required facts are correct and no trap is asserted. Only context facts are missing: condition 17(d) (DA-26-471 buildout), 17(e) (loss of the 27.1136 MSS protection rule), and that the grant gives no closing date. The answer also never cites footnote 24 by number or mentions the Spectrum Acquisition Closing Date.

The grant itself is DA 26-1078 (adopted and released October 6, 2026), call sign S00735, ICFS File Nos. SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Clocks (grant condition 17)

- **Surety bond:** "SpaceX must post a surety bond in satisfaction of 47 CFR § 25.165(a)(1) & (b) no later than November 4, 2026 and thereafter maintain on file a surety bond requiring payment in the event of a default in an amount, at minimum, determined according to the formula set forth in section 25.165(a)(1)."
- **50%:** "SpaceX must launch 50% of the maximum number of authorized space stations, place them in the assigned orbits, and operate them in accordance with the station authorization no later than October 7, 2032."
- **100%:** "SpaceX must launch the remaining space stations necessary to complete its authorized service constellation, place them in their assigned orbits, and operate each of them in accordance with the authorization no later than October 7, 2035. 47 CFR § 25.164(b)."
- **15-year term:** "The term of this authorization is for fifteen (15) years, commencing at 3 a.m. Eastern Time on the date that the first D2D space station has been

placed in its authorized orbit." SpaceX must then file a notification within five days certifying that the first D2D spacecraft has been placed in orbit and whether operations fully conform to the grant.

Testing before Step Two — yes, for LEOP/orbit-raising payload testing, not for commencing operations

Condition 3: "Except for testing as provided in condition 4, SpaceX must not commence operations in the 2 GHz MSS/AWS-4, AWS-H block, and AWS-3 bands until Step Two of the SpaceX-EchoStar transaction is consummated."

Condition 4: "During launch and early orbit phase (LEOP) operations, including orbit raising and testing the communications payloads during the orbit-raising process, and the deorbiting of its satellites, SpaceX must operate on an unprotected and non-interference basis, i.e., SpaceX must not cause harmful interference and must accept any interference received." If harmful interference occurs, SpaceX must immediately cease and notify the Commission in writing.

Footnote 2 to the scope of grant is consistent: operational authority in the 2 GHz MSS/AWS-4, AWS-H Block, and AWS-3 bands is conditioned on consummation of Step Two, but "SpaceX can deploy, perform launch and early orbit phase (LEOP) operations, including orbit raising and testing communications payloads during the orbit-raising process in these bands, pursuant to consent from EchoStar and the Trust." That footnote cites SpaceX's June 25, 2026 letter (David Goldman to Marlene H. Dortch, ICFS File No. SAT-LOA-20250916-00282).

A news account that testing in those bands must wait until closing is not what the grant says. The grant bars commencing operations until Step Two, with an express exception for the condition 4 testing, and footnote 2 requires EchoStar and Trust consent for that LEOP/payload testing.

Orbital shells, as listed in the grant (15,000 NGSO satellites; station-keeping tolerance required):

- 335 km, 26 degree inclination
- 334 km, 32 degree inclination
- 333 km, 38 degree inclination
- 331 km, 48 degree inclination
- 330 km, 53 degree inclination
- 329 km, 60 degree inclination
- 328 km, 69 degree inclination
- 327 km, 76 degree inclination
- 326 km, 96.87 degree inclination

There is no 332 km shell. A summary that the satellites "fly at 330 km" collapses nine discrete shells into one altitude.

> **Judge:** All core and required facts are stated correctly and no trap is asserted. Missing only context facts: 17(d) and 17(e) buildout provisions, the TeslaNorth error by name, and the absence of a closing date in the grant.

The clocks and the testing rule are in the grant itself, not a news summary: DA 26-1078 (Space Bureau and Wireless Telecommunications Bureau, adopted and released October 6, 2026; ICFS File Nos. SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339; call sign S00735).

Surety bond. Condition 17(a): SpaceX must post a surety bond under 47 CFR § 25.165(a)(1) and (b) **no later than November 4, 2026**, and thereafter keep on file a bond in at least the amount set by the § 25.165(a)(1) formula.

Deployment. Condition 17(b), citing 47 CFR § 25.164(b):
- **50%:** launch 50% of the maximum number of authorized space stations, place them in the assigned orbits, and operate them in accordance with the authorization **no later than October 7, 2032.**
- **100%:** launch the remaining stations needed to complete the authorized constellation, place them in their assigned orbits, and operate each of them **no later than October 7, 2035.**

15-year term. Condition 17(c): fifteen years, **commencing at 3 a.m. Eastern Time on the date the first D2D space station is placed in its authorized orbit** — not on the grant date. SpaceX must file a notification within five days of commencement certifying that the first spacecraft is in orbit and whether operations fully conform to the grant.

EchoStar-band testing before Step Two. Testing is allowed; commercial operations are not. Condition 3: "Except for testing as provided in condition 4, SpaceX must not commence operations in the 2 GHz MSS/AWS-4, AWS-H block, and AWS-3 bands until Step Two of the SpaceX-EchoStar transaction is consummated." Condition 4 covers LEOP, including orbit raising and **testing the communications payloads during the orbit-raising process**, on an unprotected, non-interference basis. Footnote 2 says SpaceX can deploy and do LEOP, "including orbit raising and testing communications payloads during the orbit-raising process in these bands, pursuant to consent from EchoStar and the Trust." Footnote 24 cites SpaceX's June 25, 2026 letter noting EchoStar's and Spectrum Business Trust 2025-1's consent to interim testing with the AWS-3 unpaired, AWS-H Block, and 2 GHz MSS spectrum in the United States until the Spectrum Acquisition Closing Date, and restates that SpaceX may not commence operations in those bands until after Step Two is consummated. A news line that testing must wait for closing is not what the grant says.

Orbital shells (grant stamp, "15,000 satellites operating in the following orbital shells"):

Altitude	Inclination
335 km	26°
334 km	32°
333 km	38°
331 km	48°
330 km	53°

Altitude	Inclination
329 km	60°
328 km	69°
327 km	76°
326 km	96.87°

There is no single 330 km shell. The grant lists nine shells from 326 km to 335 km.

> **Judge:** Missing context facts only: condition 17(d)/(e) (DA-26-471 buildout and 27.1136 loss) and that the grant states no closing date. Fact 2 is covered, as the answer cites conditions 3, 4 and 17 and the footnotes. Everything required and core is correct and no traps were asserted.

I'll look up the 6 October 2026 Space Bureau / Wireless Telecommunications Bureau grant for SpaceX call sign S00735 and pull the bond, milestone, term, testing, and orbital-shell conditions from the order itself.The grant is DA-26-1078. I'll pull the order text and extract the bond, milestone, term, testing, and shell conditions rather than the news summaries.The clocks, the testing rule, and the shells are in the grant stamp and conditions of DA 26-1078 (adopted and released 6 October 2026; call sign S00735), not in the news summaries. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf (text: https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt).

Surety bond. Condition 17(a): "SpaceX must post a surety bond in satisfaction of 47 CFR § 25.165(a)(1) & (b) no later than November 4, 2026 and thereafter maintain on file a surety bond requiring payment in the event of a default in an amount, at minimum, determined according to the formula set forth in section 25.165(a)(1)."

Deployment. Condition 17(b), citing 47 CFR § 25.164(b): "SpaceX must launch 50% of the maximum number of authorized space stations, place them in the assigned orbits, and operate them in accordance with the station authorization no later than October 7, 2032; SpaceX must launch the remaining space stations necessary to complete its authorized service constellation, place them in their assigned orbits, and operate each of them in accordance with the authorization no later than October 7, 2035."

15-year term. Condition 17(c): "The term of this authorization is for fifteen (15) years, commencing at 3 a.m. Eastern Time on the date that the first D2D space station has been placed in its authorized orbit." SpaceX must file a notification within five days of that placement certifying that the first spacecraft is in orbit and whether operations fully conform to the grant. The grant's term-date fields say "See conditions."

Testing in the EchoStar bands before Step Two. Yes for LEOP payload testing; no for commencing operations. The grant stamp states that operational authority in the 2 GHz MSS/AWS-4, AWS-H Block, and AWS-3 bands is conditioned on consummation of Step Two, and then: "SpaceX can deploy, perform launch and early orbit phase (LEOP) operations, including orbit raising and testing communications payloads during the orbit-raising process in these bands, pursuant to consent from EchoStar and the Trust." It cites the 25 June 2026 Goldman letter (ICFS File No. SAT-LOA-20250916-00282).

Condition 3: "Except for testing as provided in condition 4, SpaceX must not commence operations in the 2 GHz MSS/AWS-4, AWS-H block, and AWS-3 bands until Step Two of the SpaceX-EchoStar transaction is consummated."

Condition 4 requires that, during LEOP, "including orbit raising and testing the communications payloads during the orbit-raising process, and the deorbiting of its satellites," SpaceX operate unprotected and non-interference. The condition's citation of the same Goldman letter notes "EchoStar's and Spectrum Business Trust 2025-1's consent to SpaceX conducting interim testing of its next-generation direct-to-cell satellites using the AWS-3 unpaired, AWS-H Block, and 2 GHz MSS spectrum in the United States until the Spectrum Acquisition Closing Date, as defined in the parties' agreement." Testing remains subject to the applicable AWS-3, AWS-H, and 2 GHz MSS rules. The same footnote then repeats that SpaceX "may not commence operations in these bands until after Step Two." A news line that testing in those bands must wait for closing is therefore wrong as to LEOP communications-payload testing.

Orbital shells, as listed on the grant (15,000 satellites; nine shells — not a single 330 km altitude):

- 335 km, 26 degree inclination
- 334 km, 32 degree inclination
- 333 km, 38 degree inclination
- 331 km, 48 degree inclination
- 330 km, 53 degree inclination
- 329 km, 60 degree inclination
- 328 km, 69 degree inclination
- 327 km, 76 degree inclination
- 326 km, 96.87 degree inclination

> **Judge:** All core and required facts are stated correctly and no trap is asserted. Missing only context facts: 17(d) and 17(e) buildout provisions, the TeslaNorth error by name, and the absence of a closing date in the grant.

The clocks and the testing rule are in the grant itself, not a news summary: DA 26-1078 (Space Bureau and Wireless Telecommunications Bureau, adopted and released October 6, 2026; ICFS File Nos. SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339; call sign S00735).

Surety bond. Condition 17(a): SpaceX must post a surety bond under 47 CFR § 25.165(a)(1) and (b) **no later than November 4, 2026**, and thereafter keep on file a bond in at least the amount set by the § 25.165(a)(1) formula.

Deployment. Condition 17(b), citing 47 CFR § 25.164(b):
- **50%:** launch 50% of the maximum number of authorized space stations, place them in the assigned orbits, and operate them in accordance with the authorization **no later than October 7, 2032.**

- **100%:** launch the remaining stations needed to complete the authorized constellation, place them in their assigned orbits, and operate each of them **no later than October 7, 2035.**

15-year term. Condition 17(c): fifteen years, **commencing at 3 a.m. Eastern Time on the date the first D2D space station is placed in its authorized orbit** — not on the grant date. SpaceX must file a notification within five days of commencement certifying that the first spacecraft is in orbit and whether operations fully conform to the grant.

EchoStar-band testing before Step Two. Testing is allowed; commercial operations are not. Condition 3: "Except for testing as provided in condition 4, SpaceX must not commence operations in the 2 GHz MSS/AWS-4, AWS-H block, and AWS-3 bands until Step Two of the SpaceX-EchoStar transaction is consummated." Condition 4 covers LEOP, including orbit raising and **testing the communications payloads during the orbit-raising process**, on an unprotected, non-interference basis. Footnote 2 says SpaceX can deploy and do LEOP, "including orbit raising and testing communications payloads during the orbit-raising process in these bands, pursuant to consent from EchoStar and the Trust." Footnote 24 cites SpaceX's June 25, 2026 letter noting EchoStar's and Spectrum Business Trust 2025-1's consent to interim testing with the AWS-3 unpaired, AWS-H Block, and 2 GHz MSS spectrum in the United States until the Spectrum Acquisition Closing Date, and restates that SpaceX may not commence operations in those bands until after Step Two is consummated. A news line that testing must wait for closing is not what the grant says.

Orbital shells (grant stamp, "15,000 satellites operating in the following orbital shells"):

Altitude	Inclination
335 km	26°
334 km	32°
333 km	38°
331 km	48°
330 km	53°
329 km	60°
328 km	69°
327 km	76°
326 km	96.87°

There is no single 330 km shell. The grant lists nine shells from 326 km to 335 km.

PROMPT 133 · REGULATION · FACTS AS OF 2026-10-09

SpaceX asked the FCC to let its D2D constellation use the 2000-2020 MHz band as a space-to-Earth (downlink) band in the United States, reversing the U.S. Table's Earth-to-space allocation. In the 6 October 2026 authorization, where exactly is the downlink waiver granted, where is the band uplink-only, and is the adjacent 2020-2025 MHz request granted? Also list what the order defers rather than grants in the Ka-band and in the 1429-2690 MHz range outside the United States, and which requests it dismissed as moot. Do not answer from a press list of 'spectrum granted'; the grant conditions and footnotes distinguish granted, deferred and moot.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grade DA-26-1078 (6 October 2026), grant condition 1(a), footnotes 5, 6, 7, 26 and 36, conditions 5(b), 9(a), 12, and Order paragraphs 5-7 and 38.

2000-2020 MHz: condition 1(a) GRANTS the waiver of 47 CFR 2.106(a) to authorize MSS space-to-Earth in 2000-2020 MHz to (1) CONUS, (2) Alaska, (3) Hawaii, (4) American Samoa and (5) Guam/Northern Mariana Islands. Sub-condition (i): Earth-to-space in 2000-2020 MHz is NOT authorized from those five areas. Sub-condition (ii): space-to-Earth is NOT authorized in 2000-2020 MHz to Puerto Rico or the U.S. Virgin Islands; the stamp (Frequencies) says the band is Earth-to-space in PR/USVI. Sub-condition (iii): must accept interference and not cause harmful interference to services operating per the U.S. Table. Paragraph 7 and footnote 21: grant of the direction-reversal waiver is a one-time event, and BEA-174 (PR/USVI) is the exception where SpaceX operates under the Earth-to-space allocation. Paragraph 6: SpaceX is not acquiring AWS-3 uplink or AWS-4 terrestrial licenses in PR/USVI.

2020-2025 MHz (Earth-to-space) in the United States: DEFERRED (footnote 5; footnote 22 of the Order).

Deferred: 20.2-21.2 GHz (space-to-Earth) and 30.0-31.0 GHz (Earth-to-space) outside the U.S. - condition 5(b) and footnote 26 cite extensive federal use and say any reopening will be coordinated with NTIA. The broader request to run MSS direct-to-cell outside the U.S. across the full 1429-2690 MHz range is deferred except for the bands listed in the grant (footnote 7). Viasat's petition to deny is denied-in-part and deferred-in-part (paragraph 48).

Dismissed as moot: the processing-round waiver (sections 25.156/25.157) as applied to the 2 GHz MSS/AWS-4, AWS-3 and AWS-H bands (condition 9(a), paragraph 38); the section 25.112(a)(2) waiver request based on 2000-2020 and 2180-2200 MHz (condition 12, footnote 36, because the EchoStar assignment was approved); Iridium's and Globalstar's petitions on 1610-1626.5 and 2483.5-2500 MHz, and Ligado's L-band comments, because those bands were already dismissed in DA-26-398 (footnote 6).

Wrong answers: that 2000-2020 MHz downlink is authorized nationwide including Puerto Rico; that 2020-2025 MHz was granted; that 20.2-21.2/30-31 GHz were denied rather than deferred; that the processing-round waiver for the MSS bands was granted. TeslaNorth's list ("1695 to 1710, 2000 to 2020, 2180 to 2200, 1915 to 1920 and 1995 to 2000 MHz bands") omits the direction and territory limits.

Exa ✓ Correct ✓ ✓ ✓ ✓ 1.7m · $0.284 · 8 searches · 2 fetches

Judge: Only fact 10 (Viasat petition denied-in-part/deferred-in-part) is missing; it is a context item. All core and required facts are correct and no traps were asserted.

In the October 6, 2026 grant-in-part/deferral-in-part (DA 26-1078, call sign S00735), the 2000–2020 MHz downlink reversal is a conditioned waiver, not a nationwide reallocation. The adjacent 2020–2025 MHz request is deferred, not granted.

Downlink waiver. Grant condition 1(a) grants a waiver of the U.S. Table, 47 CFR § 2.106(a), for MSS (space-to-Earth) in 2000–2020 MHz only to (1) the contiguous United States, (2) Alaska, (3) Hawaii, (4) American Samoa, and (5) Guam/Northern Mariana Islands. The narrative grant is in Order § III.A, paras. 5–7. Condition 1(a)(i) bars Earth-to-space use from those five areas. Operations under the waiver must accept interference from, and not cause harmful interference to, services operating in accordance with the U.S. Table (condition 1(a)(iii)). The frequencies line states 2000–2020 MHz as space-to-Earth "except Earth-to-space in the U.S. Virgin Islands and Puerto Rico," paired with 2180–2200 MHz space-to-Earth for MSS.

Where 2000–2020 MHz is uplink-only. Puerto Rico and the U.S. Virgin Islands. Condition 1(a)(ii) denies space-to-Earth there. Order para. 6 says SpaceX will use the band for uplink only in those islands, where it is not acquiring the AWS-4 terrestrial licenses or AWS-3 uplink spectrum. The waiver is described as a one-time event for SpaceX's MSS authorization(s).

2020–2025 MHz. Not granted. Footnote 5 to the U.S. frequencies list defers the requested MSS (Earth-to-space) use in the United States. Order para. 7 repeats that deferral (it mislabels the band "GHz"; footnote 5 says MHz).

Deferred, not granted — Ka-band. Condition 5(b) defers the U.S. Table waiver for 20.2–21.2 GHz (space-to-Earth) and 30.0–31.0 GHz (Earth-to-space) outside the United States, citing extensive federal use and future NTIA coordination if the request is reopened. Other Ka-band feeder/TT&C in the grant (17.3–20.2 GHz space-to-Earth, including the granted 18.6–18.8 GHz waiver in condition 5(a), and 27.5–30.0 GHz Earth-to-space) is not that deferral.

Deferred, not granted — 1429–2690 MHz outside the United States. Footnote 7 defers the broader request for MSS direct-to-cell across the full 1429–2690 MHz range outside the United States, "except as authorized in this grant or previously dismissed in the MSS Clarification Order" (DA 26-398). The slices this grant does list as authorized outside the United States are not part of that deferral: MSS at 1518–1525 MHz (space-to-Earth), 1668–1675 MHz (Earth-to-space), 1980–2010 MHz (Earth-to-space), 2010–2020 MHz (Earth-to-space, Region 2 only), and 2170–2200 MHz (space-to-Earth); and the direct-to-cell segments 1475–1518, 1805–1880, 1980–2000, 2110–2180, 2180–2200, 2345–2360, and 2620–2690 MHz, plus 1429–1470, 1710–1785, 1850–1920, 1920–1980, 2000–2020, 2305–2320, and 2500–2570 MHz. DA 26-398, not this order, already dismissed the 1610–1626.5 / 2483.5–2500 MHz and 1525–1559 / 1626.5–1660.5 MHz outside-U.S. requests.

Dismissed as moot (not granted or deferred).
- Condition 9(a): waiver of the processing-round rules, 47 CFR §§ 25.156 and 25.157, as applied to the 2 GHz MSS/AWS-4, AWS-3, and AWS-H block bands. The same waiver for Ka-, V-, E-, and W-band FSS is granted in condition 9(b), without processing-round priority in Ka- and V-band.
- Condition 12: waiver of 47 CFR § 25.112(a)(2) for 2000–2020 MHz and 2180–2200 MHz, filed "in an abundance of caution" after an earlier dismissal; moot because of the EchoStar assignment.
- Footnote 6: Iridium's and Globalstar's petitions to deny on the 1610–1626.5 and 2483.5–2500 MHz outside-U.S. requests, and Ligado's comments seeking conditions on 1525–1559 and 1626.5–1660.5 MHz, because those underlying requests were already dismissed in DA 26-398.

Parallel Correct

1.6m · $0.104 · 2 searches · 1 fetches

> **Judge:** Two context facts are missing: the BEA-174 exception in paragraph 7 and footnote 21, and the Viasat petition being denied in part and deferred in part. The answer is otherwise correct and asserts none of the traps.

The October 6, 2026 grant-in-part/defer-in-part (DA 26-1078) is the controlling document, not a spectrum-granted summary. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

2000–2020 MHz downlink waiver. Condition 1(a) grants the waiver of 47 CFR § 2.106(a) for MSS (space-to-Earth) only to (1) the contiguous United States, (2) Alaska, (3) Hawaii, (4) American Samoa, and (5) Guam/Northern Mariana Islands. Condition 1(a)(i) bars Earth-to-space operations from those same areas. The waiver is a one-time grant for SpaceX's MSS authorization(s); operations must accept interference from, and not cause harmful interference to, services operating under the U.S. Table (Order ¶¶ 5–7).

Uplink-only. In Puerto Rico and the U.S. Virgin Islands the band stays Earth-to-space. Condition 1(a)(ii) does not authorize space-to-Earth there; the frequency line states "2000-2020 MHz (space-to-Earth, except Earth-to-space in the U.S. Virgin Islands and Puerto Rico)." Order ¶ 6 says SpaceX will use the band for uplink only there, where it is not acquiring the AWS-4 terrestrial licenses or AWS-3 uplink.

2020–2025 MHz. Not granted. Footnote 5 defers the U.S. MSS request, which the order describes as 2020–2025 MHz (Earth-to-space). Order n.22 also defers action on the adjacent band (it mislabels it "2020-2025 GHz").

Deferred, not granted.
- **Ka-band:** Condition 5(b) defers the U.S. Table waiver for 20.2–21.2 GHz (space-to-Earth) and 30.0–31.0 GHz (Earth-to-space) outside the United States, citing extensive federal use. The 18.6–18.8 GHz NGSO FSS downlink waiver is granted (Condition 5(a)), on an unprotected, non-interference basis.
- **1429–2690 MHz outside the United States:** Footnote 7 defers the broader direct-to-cell request for the full range, except bands authorized in this grant or already dismissed in the MSS Clarification Order (DA 26-398). Authorized direct-to-cell segments listed in the grant are 1429–1470, 1475–1518, 1710–1785, 1805–1880, 1850–1920, 1920–1980, 1980–2000, 2000–2020, 2110–2180, 2180–2200, 2305–2320, 2345–2360, 2500–2570, and 2620–2690 MHz, plus the separate outside-U.S. MSS bands 1518–1525, 1668–1675, 1980–2010, 2010–2020 (Region 2 only), and 2170–2200 MHz. Directionality of the direct-to-cell segments is left to local allocations and authorizations.

Dismissed as moot in this order.
- Waiver of the processing-round rules, 47 CFR §§ 25.156 and 25.157, as applied to 2 GHz MSS/AWS-4, AWS-3, and AWS-H Block (Condition 9(a); Order ¶ 38). The same waiver is granted for FSS in the Ka-, V-, E-, and W-bands, without prior-round priority in Ka and V.
- Waiver of 47 CFR § 25.112(a)(2) tied to 2000–2020 MHz and 2180–2200 MHz (Condition 12), because the EchoStar assignment made it unnecessary.

This order does not newly dismiss the 1610–1626.5, 2483.5–2500, 1525–1559, and 1626.5–1660.5 MHz outside-U.S. requests; footnote 6 says those were already dismissed in DA 26-398, and therefore dismisses as moot the Iridium and Globalstar petitions on the first pair and treats Ligado's comments on the second pair as moot.

> **Judge:** Context facts 4 (interference acceptance condition), 5 (one-time waiver/BEA-174 exception, only partly mentioned), and 10 (Viasat petition) are not stated. All core and required facts are correct and no traps asserted.

The 6 October 2026 grant is DA 26-1078 (Space Bureau and Wireless Telecommunications Bureau), call sign S00735, files SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339. It is granted-in-part and deferred-in-part. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Downlink waiver. Condition 1(a) grants the waiver of the U.S. Table, 47 CFR § 2.106(a), for MSS (space-to-Earth) in 2000-2020 MHz only to (1) the contiguous United States, (2) Alaska, (3) Hawaii, (4) American Samoa, and (5) Guam/Northern Mariana Islands. The Order's discussion is paragraph 5. The frequency table lists "2000-2020 MHz (space-to-Earth, except Earth-to-space in the U.S. Virgin Islands and Puerto Rico)."

Where the band stays uplink-only. Condition 1(a)(ii) says MSS (space-to-Earth) is not authorized in 2000-2020 MHz to Puerto Rico or the U.S. Virgin Islands. Condition 1(a)(i) bars Earth-to-space operations from the five areas where the downlink waiver is granted. The Order says SpaceX will use 2000-2020 MHz for uplink only in Puerto Rico and the U.S. Virgin Islands (BEA-174), where it is not acquiring the AWS-4 terrestrial licenses or AWS-3 uplink spectrum, and will operate there under the existing MSS (Earth-to-space) allocation.

2020-2025 MHz. Not granted. Footnote 5 of the grant stamp defers the request for MSS (Earth-to-space) in 2020-2025 MHz in the United States. Order footnote 22 repeats that deferral (the footnote's "2020-2025 GHz" is a typo; the grant stamp and the rest of the order say MHz).

Deferred, not granted.
- Ka-band: Condition 1(b) defers the waiver of the U.S. Table for 20.2-21.2 GHz (space-to-Earth) and 30.0-31.0 GHz (Earth-to-space) outside the United States. The Order defers any action on those bands because of extensive federal use, and says any reopening will be coordinated with NTIA. Other requested Ka-band gateway frequencies (27.5-30.0 GHz) are in the granted frequency list; only this pair is deferred.
- Outside the United States, 1429-2690 MHz: the grant authorizes only listed sub-bands for MSS and for direct-to-cell. The footnote states that, except as authorized in this grant or previously dismissed in the MSS Clarification Order (DA 26-398), the Bureaus defer the broader request to operate MSS direct-to-cell outside the U.S. in the full 1429-2690 MHz range.

Dismissed as moot in this order.
- Waiver of 47 CFR § 25.112(a)(2) for the 2000-2020 MHz and 2180-2200 MHz operations (grant condition 12).
- Waiver of the processing-round rules, 47 CFR §§ 25.156 and 25.157, as applied to 2 GHz MSS/AWS-4, AWS-3, and AWS-H Block (grant condition on those rules, item (a); Order paragraph 38). The same waiver is granted for FSS in the Ka-, V-, E-, and W-bands, so it is not moot there.

- Petitions to deny by Iridium and Globalstar concerning 1610-1626.5 MHz and 2483.5-2500 MHz outside the United States, because those requests were already dismissed in DA 26-398 (grant footnote 6).
- Ligado's comments seeking conditions on 1525-1559 MHz and 1626.5-1660.5 MHz, because DA 26-398 also dismissed those requests (same footnote). The order calls those comments moot; it does not use the ordering-clause phrase "dismissed as moot" for them.

> **Judge:** Context facts missing: the one-time waiver and BEA-174 point (para 7/fn 21), the AWS-3/AWS-4 non-acquisition in PR/USVI (para 6), and the Viasat petition disposition (para 48). All core and required facts are correct and no trap was asserted.

The 6 October 2026 grant is DA 26-1078 (ICFS SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339, call sign S00735, GN Docket No. 25-340), stamped GRANTED-IN-PART, DEFERRED-IN-PART. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Downlink waiver. It is granted in grant condition 1(a) and explained in Order paragraph 5 ("2000-2020 MHz for MSS Downlink in the United States"). Condition 1(a) grants a waiver of the U.S. Table, 47 CFR § 2.106(a), for MSS (space-to-Earth) in 2000-2020 MHz to the contiguous United States, Alaska, Hawaii, American Samoa, and Guam/Northern Mariana Islands. The frequencies line states the same direction: "2000-2020 MHz (space-to-Earth, except Earth-to-space in the U.S. Virgin Islands and Puerto Rico)." Condition 1(a)(iii) makes those operations accept interference from, and not cause harmful interference to, services operating in accordance with the U.S. Table. Order footnote 11 lists the same five areas for space-to-Earth and says SpaceX plans Earth-to-space in Puerto Rico and the U.S. Virgin Islands.

Where the band is uplink-only. Condition 1(a)(i) says MSS (Earth-to-space) in 2000-2020 MHz is not authorized from those five areas, and condition 1(a)(ii) says space-to-Earth is not authorized to Puerto Rico or the U.S. Virgin Islands. Order paragraph 6 says SpaceX "intends to use the 2000-2020 MHz MSS band for uplink only in Puerto Rico and the U.S. Virgin Islands."

2020-2025 MHz. Not granted. Grant footnote 5 defers the request for MSS (Earth-to-space) in 2020-2025 MHz in the United States. Order footnote 22 repeats that deferral (the footnote text says "2020-2025 GHz," which is inconsistent with the grant footnote's MHz).

Deferred, not granted.
- Ka-band: condition 5(b) and grant footnote 26 defer the U.S. Table waiver for 20.2-21.2 GHz (space-to-Earth) and 30.0-31.0 GHz (Earth-to-space) outside the United States, citing extensive federal use and future NTIA coordination. The separate 18.6-18.8 GHz downlink waiver in condition 5(a) is granted, unprotected and non-interference.
- Outside the United States, 1429-2690 MHz: grant footnote 7 defers the broader direct-to-cell request "in the full 1429-2690 MHz range," except the specific bands authorized in this grant or previously dismissed in the MSS Clarification Order, DA 26-398.

Dismissed as moot in this order.
- Grant footnote 6: Iridium's and Globalstar's petitions to deny concerning 1610-1626.5 MHz and 2483.5-2500 MHz are dismissed as moot because those requests were already dismissed in DA 26-398. The same footnote says Ligado's comments on 1525-1559 MHz and 1626.5-1660.5 MHz are also moot; those underlying requests were dismissed in DA 26-398, not in this order.
- Condition 9(a) and Order paragraph 38: the waiver of processing-round rules 47 CFR §§ 25.156 and 25.157, as applied to 2 GHz MSS/AWS-4, AWS-3, and AWS-H block, is dismissed as moot. Condition 9(b) grants that waiver for FSS in the Ka-, V-, E-, and W-bands.
- Condition 12 and grant footnote 36: the waiver of 47 CFR § 25.112(a)(2) for 2000-2020 MHz and 2180-2200 MHz is dismissed as moot because of the EchoStar-to-SpaceX assignment.

> **Judge:** Only fact 5 (context) is missing: the answer calls the waiver a one-time direction choice but never mentions the BEA-174 exception or footnote 21. All core and required facts are correct and no traps were asserted.

The October 6, 2026 grant-in-part/deferral-in-part (DA 26-1078, call sign S00735) is not a blanket "spectrum granted" list. The stamp conditions and footnotes split the 2000–2020 MHz direction reversal, the adjacent 2020–2025 MHz request, Ka-band, and ex-U.S. 1429–2690 MHz into granted, deferred, and moot.

2000–2020 MHz downlink waiver. Condition 1(a) grants the waiver of the U.S. Table, 47 C.F.R. § 2.106(a), for MSS **space-to-Earth** only to (1) the contiguous United States, (2) Alaska, (3) Hawaii, (4) American Samoa, and (5) Guam/Northern Mariana Islands. Earth-to-space is not authorized from those five areas. Space-to-Earth is not authorized to Puerto Rico or the U.S. Virgin Islands. Operations must accept interference from, and not cause harmful interference to, services operating under the U.S. Table. Order ¶¶ 5–7 treat the waiver as a one-time direction choice for SpaceX's MSS authorization. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

Where the band is uplink-only. In Puerto Rico and the U.S. Virgin Islands the band stays Earth-to-space only. The frequency line is "2000–2020 MHz (space-to-Earth, except Earth-to-space in the U.S. Virgin Islands and Puerto Rico)." Those islands are where SpaceX is not taking the AWS-4 terrestrial licenses (or AWS-3 uplink). Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

2020–2025 MHz. Not granted. The frequencies footnote defers the U.S. request for 2020–2025 MHz (Earth-to-space). Order ¶ 7 likewise defers that part of the application. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

Deferred, not granted — Ka-band. Condition 5(b) defers the U.S. Table waiver for **20.2–21.2 GHz (space-to-Earth)** and **30.0–31.0 GHz (Earth-to-space) outside the United States**, citing extensive federal use; any later reopening would be coordinated with NTIA. Other requested Ka-band feeder/TT&C segments are in the grant (including the 18.6–18.8 GHz NGSO FSS downlink waiver in condition 5(a)). Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

Deferred, not granted — 1429–2690 MHz outside the United States. The order defers the broader request to use the **full 1429–2690 MHz** range for MSS direct-to-cell outside the United States, **except** bands authorized in this grant or already dismissed in the MSS Clarification Order (DA 26-398). It does authorize specific slices in that range (for example 1475–1518, 1805–1880, 1980–2000, 2110–2200, 2345–2360, 2620–2690 MHz space-to-Earth, and 1429–1470, 1710–1785, 1850–2020, 2305–2320, 2500–2570 MHz Earth-to-space, plus listed MSS segments such as 1518–1525, 1668–1675, 1980–2020, and 2170–2200 MHz). DA 26-398 had already dismissed 1610–1626.5 / 2483.5–2500 MHz and 1525–1559 / 1626.5–1660.5 MHz. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

Dismissed as moot (this order).
- Waiver of the processing-round rules, 47 C.F.R. §§ 25.156 and 25.157, **as applied to 2 GHz MSS/AWS-4, AWS-3, and AWS-H** (condition 9(a); Order ¶ 38). The same

waiver is granted for FSS in the Ka-, V-, E-, and W-bands (condition 9(b)).
- Waiver of § 25.112(a)(2) tied to operations in 2000–2020 MHz and 2180–2200 MHz (condition 12), because the EchoStar assignment made the "abundance of caution" request unnecessary.

Because those L-band requests were already dismissed in DA 26-398, this order also treats Iridium's and Globalstar's petitions on 1610–1626.5 / 2483.5–2500 MHz, and Ligado's comments on 1525–1559 / 1626.5–1660.5 MHz, as moot. Viasat's petition is denied-in-part and deferred-in-part, not dismissed as moot. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

> **Judge:** Context facts missing: the one-time waiver and BEA-174 point (para 7/fn 21), the AWS-3/AWS-4 non-acquisition in PR/USVI (para 6), and the Viasat petition disposition (para 48). All core and required facts are correct and no trap was asserted.

The 6 October 2026 grant is DA 26-1078 (ICFS SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339, call sign S00735, GN Docket No. 25-340), stamped GRANTED-IN-PART, DEFERRED-IN-PART. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Downlink waiver. It is granted in grant condition 1(a) and explained in Order paragraph 5 ("2000-2020 MHz for MSS Downlink in the United States"). Condition 1(a) grants a waiver of the U.S. Table, 47 CFR § 2.106(a), for MSS (space-to-Earth) in 2000-2020 MHz to the contiguous United States, Alaska, Hawaii, American Samoa, and Guam/Northern Mariana Islands. The frequencies line states the same direction: "2000-2020 MHz (space-to-Earth, except Earth-to-space in the U.S. Virgin Islands and Puerto Rico)." Condition 1(a)(iii) makes those operations accept interference from, and not cause harmful interference to, services operating in accordance with the U.S. Table. Order footnote 11 lists the same five areas for space-to-Earth and says SpaceX plans Earth-to-space in Puerto Rico and the U.S. Virgin Islands.

Where the band is uplink-only. Condition 1(a)(i) says MSS (Earth-to-space) in 2000-2020 MHz is not authorized from those five areas, and condition 1(a)(ii) says space-to-Earth is not authorized to Puerto Rico or the U.S. Virgin Islands. Order paragraph 6 says SpaceX "intends to use the 2000-2020 MHz MSS band for uplink only in Puerto Rico and the U.S. Virgin Islands."

2020-2025 MHz. Not granted. Grant footnote 5 defers the request for MSS (Earth-to-space) in 2020-2025 MHz in the United States. Order footnote 22 repeats that deferral (the footnote text says "2020-2025 GHz," which is inconsistent with the grant footnote's MHz).

Deferred, not granted.
- Ka-band: condition 5(b) and grant footnote 26 defer the U.S. Table waiver for 20.2-21.2 GHz (space-to-Earth) and 30.0-31.0 GHz (Earth-to-space) outside the United States, citing extensive federal use and future NTIA coordination. The separate 18.6-18.8 GHz downlink waiver in condition 5(a) is granted, unprotected and non-interference.
- Outside the United States, 1429-2690 MHz: grant footnote 7 defers the broader direct-to-cell request "in the full 1429-2690 MHz range," except the specific bands authorized in this grant or previously dismissed in the MSS Clarification Order, DA 26-398.

Dismissed as moot in this order.
- Grant footnote 6: Iridium's and Globalstar's petitions to deny concerning 1610-1626.5 MHz and 2483.5-2500 MHz are dismissed as moot because those requests were already dismissed in DA 26-398. The same footnote says Ligado's comments on 1525-1559 MHz and 1626.5-1660.5 MHz are also moot; those underlying requests were dismissed in DA 26-398, not in this order.
- Condition 9(a) and Order paragraph 38: the waiver of processing-round rules 47 CFR §§ 25.156 and 25.157, as applied to 2 GHz MSS/AWS-4, AWS-3, and AWS-H block, is dismissed as moot. Condition 9(b) grants that waiver for FSS in the Ka-, V-, E-, and W-bands.
- Condition 12 and grant footnote 36: the waiver of 47 CFR § 25.112(a)(2) for 2000-2020 MHz and 2180-2200 MHz is dismissed as moot because of the EchoStar-to-SpaceX assignment.

PROMPT 134 · REGULATION · FACTS AS OF 2026-10-09

Under the 6 October 2026 D2D authorization, SpaceX will provide supplemental coverage from space on its own unpaired AWS-3 (1695-1710 MHz) and AWS-H Block licenses without any terrestrial partner. From the order itself: which rules were waived to allow that, what SpaceX must do before enabling handsets to transmit in 1695-1710 MHz near the federal earth stations, which 911 rule is imposed on SpaceX even though it is not a CMRS provider, and what the out-of-band emission limit and band-edge window are for the AWS-H and PCS G Block downlinks. Press coverage says the FCC 'waived the spectrum leasing rule'; the conditions are more specific than that.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grade DA-26-1078 (6 October 2026), grant conditions 1(b), 1(c), 1(d), 1(e) and Order paragraphs 12-37.

Rules waived: condition 1(b) waives 47 CFR 25.125(a) and (b) (lease arrangement with a terrestrial licensee) for SCS in the AWS-3 and AWS-H bands, because SpaceX will hold both the satellite and terrestrial licenses (paragraph 14). Condition 1(c) waives 2.106(a) and (d)(33)(i) (the unpaired AWS-3 band is not allocated for SCS), 27.77 (mobiles in 1695-1710 MHz may operate only under control of an enabling base station) and 25.125(a)/(b) (the GIA requirement that the terrestrial licensee hold all co-channel licenses throughout CONUS). The result: SpaceX may provide SCS Earth-to-space using mobiles that operate under control of a base station OR a satellite (paragraph 25-26). Condition 1(e) waives section 25.115 so handsets need no separate earth station authorization and, on the Bureaus' own motion, 25.115(q) for AWS-3 SCS earth stations.

Federal protection: condition 1(c)(i) - SpaceX is not authorized to provide SCS or transmit any signal that enables mobiles to transmit in 1695-1710 MHz in a Federal Protection Zone listed in section 27.1134 unless and until it reaches a written coordination agreement with the relevant Federal incumbents; it must accept interference and immediately terminate on notification of harmful interference. Paragraph 18: 47 Federal earth stations and 27 Protection Zones; paragraph 26 says the coordination trigger is SpaceX proposing to have a satellite enable a device to transmit in a Protection Zone. Condition 1(c)(iii): investigate credible claims and cease operations in the affected area until resolved.

911: condition 1(b)(ii) and paragraph 15 - SpaceX must comply with 47 CFR 9.10(t) (interim SCS 911 routing, annual reports, privacy certification, consumer disclosures) as if it were a CMRS provider using an SCS arrangement, even with no lease. The lease waiver is not transferable; an assignee must comply or justify its own waiver (condition 1(b)(i)).

OOBE: condition 1(d) waives 25.202(k)(1) (-120 dBW/m2/MHz at 1.5 m) and sets an aggregate OOBE PFD of -110.6 dBW/m2/MHz at 1.5 m in the five-megahertz segments immediately adjacent to the AWS-H Block and PCS G Block downlinks, covering the aggregate of all downlink operations in both blocks (paragraphs 36-37, footnote 102). Not a general relaxation across all bands.

Wrong answers: a leasing arrangement with T-Mobile covers AWS-3/AWS-H; SpaceX may operate in the Protection Zones at reduced power without an agreement; 911 obligations rest only on terrestrial partners; the OOBE limit remains -120 or the -110.6 figure applies without the 5 MHz window.

Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Exa · Partly correct · Incomplete list · 1.7m · $0.422 · 13 searches · 3 fetches

Judge: The answer omits the condition 1(e) waiver of 25.115 and 25.115(q), which is a required fact. It also leaves out the context facts: 47 Federal earth stations and 27 Protection Zones, the satellite-enable coordination trigger, the duty to investigate credible interference claims, and that the OOBE relaxation is not general.

I'll look up the October 6, 2026 FCC D2D order and pull the waiver conditions directly from the text rather than press summaries.The October 6 order is DA-26-1078. I'll pull that document and the related coverage for the waiver and emission conditions.The grant stamp has the operative conditions. I'll pull the Order's discussion of the leasing waiver, federal protection zones, 911, and the OOBE limit so the citations match the text.The October 6, 2026 grant is DA 26-1078 (call sign S00735). Press shorthand that the FCC "waived the spectrum leasing rule" is incomplete. The operative text is the grant stamp, not a blanket waiver of the part 1 leasing rules.

Rules waived so SpaceX can provide SCS on its own AWS-3 and AWS-H licenses. For both bands, in CONUS (as further conditioned for AWS-3), Alaska, Hawaii, Guam/Northern Mariana Islands, and American Samoa, the Bureaus waived 47 CFR § 25.125(a) and (b). Those provisions require a lease with one or more terrestrial licensees that, collectively or individually, hold all co-channel licenses in the geographically independent area. The leasing-arrangement waiver is not transferable: an assignee must comply with the rule or obtain its own waiver. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Unpaired AWS-3 uplink (1695–1710 MHz) needed more than that. The same grant also waived:

- 47 CFR § 2.106(a) and (d)(33)(i), which limit secondary MSS in the designated SCS bands;
- 47 CFR § 27.77, which allows mobiles and portables in 1695–1710 MHz only when under the control of an enabling base station;
- again § 25.125(a) and (b), the all-co-channel-licenses-throughout-a-GIA requirement.

Handsets may transmit in 1695–1710 MHz only when controlled by a base station or a SpaceX space station. PCS G Block SCS is not covered by this no-partner waiver.

Before enabling 1695–1710 MHz handset transmissions near federal earth stations. SpaceX may not provide SCS, or transmit any signal that enables mobiles or portables to transmit in 1695–1710 MHz, inside a Federal Protection Zone listed in § 27.1134 unless and until it has a written coordination agreement with the relevant Federal incumbents, as described in §§ 2.106(c)(88) and 27.77 (citing § 27.1134). After that, operation in the zone is limited to the agreement and any amendments. AWS-3 operations must accept interference from, and not cause harmful interference to, services operating under the U.S. Table, and must stop if notified of harmful interference. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

911. As a condition of the § 25.125(a)/(b) waiver, SpaceX must comply with 47 CFR § 9.10(t), the interim 911 requirements for SCS. That is the rule the grant imposes directly on SpaceX. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

AWS-H and PCS G Block downlink OOBE. The Bureaus waived § 25.202(k)(1)'s aggregate out-of-band limit of −120 dBW/m²/MHz at 1.5 m above ground. In its place, aggregate OOBE must not exceed −110.6 dBW/m²/MHz at 1.5 m above ground in the five-megahertz segments immediately adjacent to the AWS-H and PCS G Block downlinks, in any configuration. Aggregate OOBE from all downlink operations in those two blocks must stay within that −110.6 dBW/m²/MHz limit within five

megahertz of the band edge. The waiver does not authorize harmful interference to authorized terrestrial licensees. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Commercial operations in the EchoStar AWS-3, AWS-H, and 2 GHz bands still cannot start until Step Two of the SpaceX–EchoStar assignment is consummated, except for consented launch and early-orbit testing on a non-interference basis.

Parallel · Partly correct · Incomplete list · 22.6s · $0.101 · 2 searches · 1 fetches

> **Judge:** All core facts are correct and no trap is asserted. Missing: the condition 1(e) waiver of 25.115 and 25.115(q) (fact 6), the paragraph 26 coordination trigger (10), the duty to investigate credible interference claims and cease operations (11), and that the OOBE change is not a general relaxation (17).

The October 6, 2026 grant is DA 26-1078 (SAT-LOA-20250916-00282 / SAT-AMD-20251125-00339). It is more specific than a blanket waiver of the spectrum-leasing rules.

Rules waived so SpaceX can offer SCS on its own AWS-3 and AWS-H licenses, with no terrestrial partner. The Bureaus waived 47 CFR § 25.125(a) and (b), which require an SCS lease with one or more terrestrial licensees and, for the entry criteria, that those licensees hold all co-channel licenses in the geographically independent area (GIA). That waiver covers SCS in the authorized AWS-3 and AWS-H bands in CONUS (as further conditioned), Alaska, Hawaii, Guam/Northern Mariana Islands, and American Samoa. It is not transferable: on assignment, the assignee must comply with the rule or justify its own waiver. For unpaired AWS-3 (1695–1710 MHz) only, they also waived 47 CFR § 2.106(a) and (d)(33)(i) (secondary MSS limited to SCS; that band is not an SCS allocation) and § 27.77 (mobiles and portables may transmit only under control of an enabling base station). Handsets may transmit in 1695–1710 MHz only when under the control of a base station or SpaceX satellite. Source: grant conditions 1(b)–1(c) and Order ¶¶ 12–17, 25–28. https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

Before enabling handsets in 1695–1710 MHz near the federal earth stations. SpaceX may not provide SCS, or transmit any signal that enables a mobile or portable to transmit, in a Federal Protection Zone listed in § 27.1134 until it has a written coordination agreement with the relevant federal incumbents for that zone, under §§ 2.106(c)(88) and 27.77 (citing § 27.1134). There are 27 such zones protecting 47 co-primary federal earth stations. After an agreement, operations must follow it and any amendments. Operations must accept interference from, and not cause harmful interference to, services operating under the U.S. Table, and must stop immediately if notified of harmful interference. Source: condition 1(c)(i)–(iii); Order ¶¶ 18, 26. https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

911 rule imposed even though SpaceX is not a CMRS provider. The authorization is conditioned on compliance with 47 CFR § 9.10(t)—the interim SCS 911 rules—as if SpaceX were a CMRS provider using an SCS arrangement, despite the absence of a lease. That includes routing SCS 911 voice and text to a PSAP by location-based routing or an emergency call center, annual reports, a one-time privacy certification, and consumer disclosures. Source: condition 1(b)(ii); Order ¶ 15. https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

AWS-H and PCS G Block downlink OOBE. Waiver of the § 25.202(k)(1) aggregate limit of −120 dBW/m²/MHz. SpaceX must instead keep aggregate out-of-band PFD at or below −110.6 dBW/m²/MHz at 1.5 m above ground, in the 5 MHz segments immediately adjacent to its AWS-H (1995–2000 MHz) and PCS G (1990–1995 MHz) downlinks. The aggregate from all downlinks in both blocks must not exceed −110.6 dBW/m²/MHz within 5 MHz of the band edge, in any configuration. Source: condition 1(d); Order ¶¶ 29, 36–37. https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt

> **Judge:** All core facts are correct. Missing: the section 25.115 and 25.115(q) earth-station waiver (fact 6), the 47 Federal earth stations count (fact 9, only the 27 zones are given), and the duty to investigate credible interference claims and cease operations in the affected area (fact 11).

Under DA 26-1078 (adopted and released October 6, 2026), SpaceX may provide SCS on its own unpaired AWS-3 and AWS-H licenses without a terrestrial partner, but the relief is a set of rule waivers with conditions, not a blanket waiver of "the spectrum leasing rule." Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Rules waived. For both the unpaired AWS-3 band (1695–1710 MHz) and the AWS-H Block, the Bureaus waived 47 C.F.R. §§ 25.125(a) and (b), which require an SCS leasing arrangement with one or more terrestrial wireless licensees (and, in (a), that those licensees hold all co-channel licenses in the geographically independent area). That waiver is not transferable: an assignee must comply with the rule or justify its own waiver. For unpaired AWS-3 only, they also waived § 2.106(a) and (d)(33)(i) (the U.S. Table allocation of certain bands for secondary MSS limited to SCS—the unpaired AWS-3 band is not an SCS band) and § 27.77 (mobiles and portables in 1695–1710 MHz may transmit only under the control of an enabling terrestrial base station). The § 27.77 relief is narrow: part 27 devices may transmit in 1695–1710 MHz only when controlled by a base station or by SpaceX's satellite space station(s). The same order also waives the § 25.125(a)/(b) all-co-channel-in-the-CONUS-GIA requirement for AWS-3 because SpaceX will not hold every co-channel license in that GIA after the EchoStar transaction.

Before handsets may transmit in 1695–1710 MHz near federal earth stations. SpaceX is not authorized to provide SCS, or to transmit any signal that enables mobile or portable stations to transmit, in 1695–1710 MHz inside a Federal Protection Zone listed in § 27.1134 (the 27 zones) unless and until it has a written coordination agreement with the relevant federal incumbents, as described in §§ 2.106(c)(88) and 27.77 (citing § 27.1134). Coordination is triggered by a satellite enabling a user device to transmit in a Protection Zone. Operations must accept interference from, and not cause harmful interference to, authorized services operating under the U.S. Table, and must stop immediately if notified of harmful interference. After an agreement, authority in that zone is limited to compliance with the agreement and any amendments.

911. Even though § 9.10(t) is written for a CMRS provider using an SCS arrangement, the authorization is conditioned on SpaceX complying with § 9.10(t)—the interim 911 requirements for SCS—as if it were such a CMRS provider, with no SCS lease. That rule requires routing SCS 911 voice calls and texts to a PSAP by location-based routing or an emergency call center, plus annual reports, a one-time privacy certification, and consumer disclosures on the extent of SCS 911 connectivity.

AWS-H and PCS G downlink OOBE. Section 25.202(k)(1)'s aggregate out-of-band PFD limit of −120 dBW/m²/MHz at 1.5 m above ground is waived for the PCS G Block downlink (1990–1995 MHz) and the AWS-H Block downlink (1995–2000 MHz). In its place, aggregate OOBE from all those downlink operations must not exceed **−110.6 dBW/m²/MHz at 1.5 m above ground**, and only in the **five-megahertz segments immediately adjacent to the band edge**, in any configuration. Outside that window, § 25.202(k)(1) still applies.

> **Judge:** The answer covers the core waivers, the Protection Zone coordination condition, the 9.10(t) obligation and the OOBE limit with its 5 MHz window. It omits the satellite-or-base-station control result, the 25.115/25.115(q) waiver, the accept-interference and terminate duty, the 47 earth stations count, the coordination trigger, the interference investigation duty and the non-transferability of the lease waiver.

The October 6, 2026 grant (DA 26-1078, adopted and released the same day; ICFS SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339, GN Docket No. 25-340) is more specific than a generic leasing-rule waiver. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Rules waived so SpaceX can do SCS on its own unpaired AWS-3 (1695–1710 MHz) and AWS-H Block licenses, without a terrestrial partner or lease

- 47 CFR §§ 25.125(a) and (b) — the SCS lease requirement, and the requirement that terrestrial wireless licensees hold, collectively or individually, all co-channel licenses throughout a geographically independent area (GIA). SpaceX itself will hold the AWS-3 and AWS-H Block licenses in the GIAs.
- 47 CFR §§ 2.106(a) and (d)(33)(i) — the allocation of certain bands for secondary MSS limited to SCS.
- 47 CFR § 27.77 — mobile and portable stations in 1695–1710 MHz may operate only when under the control of an enabling base station.
- 47 CFR § 25.202(k)(1) — the aggregate out-of-band emission (OOBE) power-flux-density limit (waived only in the adjacent 5 MHz segments, and only up to the substitute limit below).

The leasing piece is therefore a waiver of § 25.125(a) and (b), not a free-standing "spectrum leasing rule" waiver, and it is paired with the allocation and § 27.77 waivers.

Before handsets may transmit in 1695–1710 MHz near federal earth stations

SpaceX is not authorized to provide SCS, or to transmit any signal that enables mobile or portable stations to transmit in 1695–1710 MHz, inside a Federal Protection Zone listed in § 27.1134, unless and until it reaches a written coordination agreement with the relevant federal incumbents in that zone, as described under §§ 2.106(c)(88) and 27.77 (citing § 27.1134). The order states there are 27 Protection Zones, and that SpaceX may not operate or enable devices in 1695–1710 MHz inside those zones until coordination is successfully completed.

911 rule imposed even though SpaceX is not a CMRS provider

47 CFR § 9.10(t) (interim 911 requirements for SCS). The authorization is conditioned on SpaceX complying with § 9.10(t) as if it were a CMRS provider using an SCS arrangement, even in the absence of an SCS lease, because SpaceX is both the terrestrial licensee and the SCS satellite operator.

OOBE limit and band-edge window (AWS-H and PCS G Block downlinks)

In place of the −120 dBW/m²/MHz aggregate limit in § 25.202(k)(1), SpaceX must keep aggregate downlink OOBE at or below −110.6 dBW/m²/MHz at 1.5 meters above ground level, measured in the five-megahertz band segments immediately adjacent to its downlink operations in the AWS-H Block and PCS G Block — that is, the aggregate OOBE from all those downlink operations must not exceed −110.6 dBW/m²/MHz within five megahertz of the band edge, in any configuration.

> **Judge:** Missing: the section 25.115 / 25.115(q) waiver (fact 6), the paragraph 26 coordination trigger (fact 10), the duty to investigate credible interference claims and cease operations in the affected area (fact 11), and the statement that the OOBE relief is not a general relaxation (fact 17). Fact 5 is only partly stated, as the answer says mobiles may transmit under satellite control without mentioning Earth-to-space SCS explicitly, but the substance matches. No traps were asserted.

Under DA-26-1078 (adopted and released October 6, 2026), the Space Bureau and Wireless Telecommunications Bureau let SpaceX provide SCS on its own unpaired AWS-3 and AWS-H licenses without a terrestrial partner, but the relief is rule-specific and conditioned. The order is at https://docs.fcc.gov/public/attachments/DA-26-1078A1.txt.

Rules waived (not a generic "spectrum leasing" waiver). For SCS in the authorized AWS-3 and AWS-H bands without a lease, the bureaus waived 47 CFR § 25.125(a) and (b) — the rules that require a lease with one or more terrestrial licensees. They did so because SpaceX will hold both the satellite authorization and the terrestrial licenses, so a lease with itself would not serve the rule's purpose. That waiver is **not transferable**: an assignee must comply with the rule or justify its own waiver. Grant condition 1(b); Order ¶¶ 12–16.

Unpaired AWS-3 (1695–1710 MHz) needed more than that, because the band is not designated for SCS and SpaceX will not hold every co-channel license across the CONUS geographically independent area. The bureaus also waived:

- 47 CFR § 2.106(a) and (d)(33)(i) (U.S. Table secondary MSS allocation limited to designated SCS bands);
- 47 CFR § 25.125(a) and (b) again, as the requirement that the terrestrial licensee(s) hold all co-channel licenses throughout a GIA;
- 47 CFR § 27.77, so mobiles and portables in 1695–1710 MHz may transmit under the control of a satellite-based space station, not only a terrestrial enabling base station.

Grant condition 1(c); Order ¶¶ 17, 25–28. Section 1.9047 is cited as part of the SCS framework; the granted lease waiver is of § 25.125(a) and (b), not a free-standing waiver of the part 1 leasing rules.

Before handsets may transmit in 1695–1710 MHz near federal earth stations. In any Federal Protection Zone listed in § 27.1134 (27 zones drawn around 47 primary federal earth stations), SpaceX may not provide SCS or transmit any signal that enables mobile or portable stations to transmit in 1695–1710 MHz **unless and until it reaches a written coordination agreement with the relevant federal incumbents**, as described in §§ 2.106(c)(88) and 27.77 (citing § 27.1134). After that, operation in the zone is limited to the agreement and any amendments. Operations must accept interference from, and not cause harmful interference to, services operating under the U.S. Table, and must stop immediately if notified of harmful interference. Grant condition 1(c)(i)–(iii); Order ¶¶ 18, 26, 28.

911 rule, even though SpaceX is not a CMRS provider. The lease waiver is conditioned on compliance with 47 CFR § 9.10(t) — the interim SCS 911 rules — as if SpaceX were a CMRS provider using an SCS arrangement, despite the absence of a lease. The order describes § 9.10(t) as requiring routing of SCS 911 voice calls and texts to a PSAP by location-based routing or an emergency call center, plus annual reports, a one-time privacy certification, and consumer disclosures on the extent of SCS 911 connectivity. Grant condition 1(b)(ii); Order ¶ 15.

OOBE limit and band-edge window (AWS-H and PCS G downlinks). The bureaus waived the uniform aggregate limit in § 25.202(k)(1) (−120 dBW/m²/MHz at 1.5 m

above ground). In its place, aggregate out-of-band emissions from all downlink operations in the AWS-H Block (1995–2000 MHz) and PCS G Block (1990–1995 MHz) must not exceed −110.6 dBW/m²/MHz at 1.5 meters above ground level within the five-megahertz segments immediately adjacent to those downlinks ("within five megahertz of the band edge"), in any configuration. Outside that waiver, harmful interference to authorized terrestrial licensees must be stopped immediately. Grant condition 1(d); Order ¶¶ 29, 36–37.

> **Judge:** The answer covers the core waivers, the Protection Zone coordination condition, the 9.10(t) obligation and the OOBE limit with its 5 MHz window. It omits the satellite-or-base-station control result, the 25.115/25.115(q) waiver, the accept-interference and terminate duty, the 47 earth stations count, the coordination trigger, the interference investigation duty and the non-transferability of the lease waiver.

The October 6, 2026 grant (DA 26-1078, adopted and released the same day; ICFS SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339, GN Docket No. 25-340) is more specific than a generic leasing-rule waiver. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

Rules waived so SpaceX can do SCS on its own unpaired AWS-3 (1695–1710 MHz) and AWS-H Block licenses, without a terrestrial partner or lease

- 47 CFR §§ 25.125(a) and (b) — the SCS lease requirement, and the requirement that terrestrial wireless licensees hold, collectively or individually, all co-channel licenses throughout a geographically independent area (GIA). SpaceX itself will hold the AWS-3 and AWS-H Block licenses in the GIAs.
- 47 CFR §§ 2.106(a) and (d)(33)(i) — the allocation of certain bands for secondary MSS limited to SCS.
- 47 CFR § 27.77 — mobile and portable stations in 1695–1710 MHz may operate only when under the control of an enabling base station.
- 47 CFR § 25.202(k)(1) — the aggregate out-of-band emission (OOBE) power-flux-density limit (waived only in the adjacent 5 MHz segments, and only up to the substitute limit below).

The leasing piece is therefore a waiver of § 25.125(a) and (b), not a free-standing "spectrum leasing rule" waiver, and it is paired with the allocation and § 27.77 waivers.

Before handsets may transmit in 1695–1710 MHz near federal earth stations

SpaceX is not authorized to provide SCS, or to transmit any signal that enables mobile or portable stations to transmit in 1695–1710 MHz, inside a Federal Protection Zone listed in § 27.1134, unless and until it reaches a written coordination agreement with the relevant federal incumbents in that zone, as described under §§ 2.106(c)(88) and 27.77 (citing § 27.1134). The order states there are 27 Protection Zones, and that SpaceX may not operate or enable devices in 1695–1710 MHz inside those zones until coordination is successfully completed.

911 rule imposed even though SpaceX is not a CMRS provider

47 CFR § 9.10(t) (interim 911 requirements for SCS). The authorization is conditioned on SpaceX complying with § 9.10(t) as if it were a CMRS provider using an SCS arrangement, even in the absence of an SCS lease, because SpaceX is both the terrestrial licensee and the SCS satellite operator.

OOBE limit and band-edge window (AWS-H and PCS G Block downlinks)

In place of the −120 dBW/m²/MHz aggregate limit in § 25.202(k)(1), SpaceX must keep aggregate downlink OOBE at or below −110.6 dBW/m²/MHz at 1.5 meters above ground level, measured in the five-megahertz band segments immediately adjacent to its downlink operations in the AWS-H Block and PCS G Block — that is, the aggregate OOBE from all those downlink operations must not exceed −110.6 dBW/m²/MHz within five megahertz of the band edge, in any configuration.

PROMPT 135 · REGULATION · FACTS AS OF 2026-10-09

On 5 June 2026 the Space Bureau opened a third Ku/Ka-band processing round and a third V-band processing round (DA-26-552, corrected by an erratum on 16 June 2026). For SpaceX specifically, which Gen2 frequency bands from the January 2026 upgrade grant were placed into those third rounds, which SpaceX-authorized bands were left out of any round, are the original 7,500 V-band Gen2 satellites in the third V-band round, and what is the status of the 14,988 additional satellites SpaceX requested? Give the cut-off date. Law-firm summaries of the Part 100 bond and annual-window regime do not describe this round.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grade DA-26-552, Public Notice released 5 June 2026, and the Erratum released 16 June 2026 (DOC-422371). The erratum only corrected the Additional Applications paragraph on page 4; the cut-off is unchanged.

Cut-off: applications and petitions filed by 6 July 2026 are considered together in the third Ku-/Ka-band and/or third V-band processing round. Filed in ICFS.

SpaceX bands included (page 2-3): as authorized and conditioned in DA-26-36 (SpaceX Gen2 V3 Upgrade Order), SpaceX's operations in 12.7-13.25, 13.75-14.0, 14.5-14.75, 14.75-14.80, 15.43-15.63, 17.3-17.8, 18.6-18.8, 19.3-19.7, 24.75-25.25, 29.1-29.5 GHz go into the third Ku-/Ka-band round, and 37.5-40.0, 40.0-42.0, 47.2-50.2, 50.4-51.4 GHz (for the additional 7,500 satellites) go into the third V-band round.

Left out (footnote 9): 42.0-42.5 GHz, 51.4-52.4 GHz, 92.0-94.0, 94.1-95.0, 95.0-100.0, 102.0-109.5 and 111.8-114.25 GHz are not included in the rounds opened; E-band 71-76/81-86 GHz was waived in 2024 (39 FCC Rcd 2159 para. 12) conditioned on a future round and is not part of these rounds. Footnote 7: the Bureau sets no deadline and invites no applications for bands requested by SpaceX, Amazon or Logos that are not allocated for non-Federal FSS.

Original 7,500 V-band satellites: footnote 12 - they were in the FIRST V-band processing round and are NOT in the third round. Only the additional 7,500 satellites from DA-26-36 are in the third V-band round.

14,988 satellites: footnote 9 - SpaceX's request for an additional 14,988 satellites, including its 25.157 waiver request for Ku, Ka and V bands, is still pending; DA-26-36 para. 5 deferred action on them. Not granted, not placed in a round by this notice.

Other context a good answer may include: Amazon's 4,504 Gen2/Polar satellites (granted 10 Feb 2026) and Logos's 4,178 satellites are also placed in the rounds; the SN Space application is under Team Telecom review.

Wrong answers: that all SpaceX Gen2 V-band satellites are in the third V-band round; that 51.4-52.4 GHz or W-band are in a round; that the 14,988 satellites were granted or are in the round; a cut-off other than 6 July 2026; that the round runs under the Part 100 annual January-October window (those rules were not effective).

Exa Correct

31.8s · $0.121 · 4 searches · 3 fetches

Judge: Only context facts are missing: ICFS filing, the Amazon and Logos inclusion, and the SN Space Team Telecom review. Every core and required fact is correct and no trap is asserted.

The June 5, 2026 Space Bureau public notice (DA 26-552), as corrected by the June 16, 2026 erratum, is a section 25.157 processing-round notice. It is not the later Part 100 annual-window/bond regime. The cut-off is July 6, 2026.

Placed in the third rounds (January 9, 2026 Gen2 V3 Upgrade Order, DA 26-36). The Bureau included SpaceX's authorized, waiver-conditioned operations in:

- Third Ku-/Ka-band round: 12.7–13.25, 13.75–14.0, 14.5–14.75, 14.75–14.80, 15.43–15.63, 17.3–17.8, 18.6–18.8, 19.3–19.7, 24.75–25.25, and 29.1–29.5 GHz.
- Third V-band round: 37.5–40.0, 40.0–42.0, 47.2–50.2, and 50.4–51.4 GHz, for the additional 7,500 satellites authorized in those bands.

Left out of these rounds. From that same January 2026 waiver grant, the Bureau expressly did not open a round for 42.0–42.5, 51.4–52.4, 92.0–94.0, 94.1–95.0, 95.0–100.0, 102.0–109.5, and 111.8–114.25 GHz. It also did not include the 2024 E-band grant (71.0–76.0 GHz space-to-Earth and 81.0–86.0 GHz Earth-to-space). The notice says it is not setting a deadline or inviting applications for additional SpaceX bands that are not allocated for non-Federal FSS.

Original 7,500 V-band Gen2 satellites. No. Footnote 12 states those satellites were in the first V-band processing round and are not in this third V-band round.

14,988 additional satellites. Still pending. DA 26-36 deferred them. The pending request includes a section 25.157 waiver for Ku-, Ka-, and V-band frequencies. The June 5 notice does not place that request in either third round. Post-cutoff applications that sought a processing-round waiver are not automatically included; an applicant that wants third-round consideration must file an appropriate request before the July 6, 2026 cut-off.

The June 16 erratum (DOC-422371) only restates the "Additional Applications" paragraph and the July 6, 2026 cut-off. It does not change the SpaceX band inclusions, exclusions, or the pending status of the 14,988 satellites.

Parallel Correct

44.6s · $0.062 · 2 searches · 2 fetches

Judge: All core and required facts are correct, including the 6 July 2026 cut-off. Only context facts are missing: that the erratum fixed only the page-4 paragraph and left the cut-off unchanged (2), that filings go through ICFS (4), the Amazon and Logos placements (14), and the SN Space Team Telecom review (15).

I'll look up the June 2026 Space Bureau processing-round orders and how they treat SpaceX's Gen2 bands.The June 5, 2026 Space Bureau public notice (DA-26-552), as corrected by the June 16, 2026 erratum, places only specified SpaceX Gen2 operations from the January 9, 2026 upgrade grant (DA-26-36) into the new rounds. The cut-off for additional applications and petitions is July 6, 2026.

Placed in the third rounds (SpaceX Gen2 V3 upgrade grant). The notice includes SpaceX's operations, as authorized and conditioned in that grant, in the third Ku-/Ka-band round and the third V-band round for these bands:

- **Third Ku-/Ka-band:** 12.7–13.25 GHz, 13.75–14.0 GHz, 14.5–14.75 GHz, 14.75–14.80 GHz, 15.43–15.63 GHz, 17.3–17.8 GHz, 18.6–18.8 GHz, 19.3–19.7 GHz, 24.75–25.25 GHz, and 29.1–29.5 GHz.
- **Third V-band:** 37.5–40.0 GHz, 40.0–42.0 GHz, 47.2–50.2 GHz, and 50.4–51.4 GHz. That V-band inclusion is the **additional** 7,500 Gen2 satellites authorized in the January 2026 upgrade, for which the processing-round waiver was conditioned on joining a future round.

Left out of any round opened by DA-26-552. From the same January 2026 waiver/grant, the Bureau expressly did **not** open a round for 42.0–42.5 GHz, 51.4–52.4 GHz, 92.0–94.0 GHz, 94.1–95.0 GHz, 95.0–100.0 GHz, 102.0–109.5 GHz, and 111.8–114.25 GHz. It also did not open a round for SpaceX's separately authorized E-band (71.0–76.0 GHz space-to-Earth and 81.0–86.0 GHz Earth-to-space), which remains conditioned on a future E-band round. The notice says it is not inviting applications for additional bands requested by SpaceX that are not allocated for non-Federal FSS.

Original 7,500 V-band Gen2 satellites. No. Those satellites were in the **first** V-band processing round and are **not** in this third V-band round.

14,988 additional satellites. **Still pending.** DA-26-36 deferred action on them. The request includes a waiver of the section 25.157 processing-round rules for Ku-, Ka-, and V-band frequencies; that request was not granted or placed in these rounds.

> **Judge:** All core and required facts are correct. The answer omits the ICFS filing detail, Amazon/Logos inclusion, and the SN Space Team Telecom review, which are context-only items.

SpaceX's January 9, 2026 Gen2 V3 upgrade grant (DA 26-36) was folded into the June 5, 2026 third rounds only for specified bands; the original 7,500 V-band Gen2 satellites are not in the third V-band round, and the further 14,988 satellites remain pending. Cut-off: July 6, 2026.

Source: DA 26-552 (text: DA-26-552A1.txt); erratum DOC-422371A1 (June 16, 2026). The erratum only rewrites the "Additional Applications" invitation paragraph (it consolidates 27.5–30.0 GHz). It does not change the SpaceX inclusion list.

Bands from the January 2026 grant placed in the third rounds
The Bureau includes SpaceX's operations **as authorized and conditioned** in DA 26-36 in the third Ku/Ka-band round and the third V-band round for:

- **Third Ku/Ka:** 12.7–13.25, 13.75–14.0, **14.5–14.75, 14.75–14.80**, 15.43–15.63, 17.3–17.8, 18.6–18.8, 19.3–19.7, 24.75–25.25, and 29.1–29.5 GHz
- **Third V:** 37.5–40.0, 40.0–42.0, 47.2–50.2, and 50.4–51.4 GHz (the **additional** 7,500 satellites only)

14.5–14.75 and 14.75–14.80 GHz are on that inclusion list even though they are **not** among the bands opened for new applications in the third Ku/Ka round.

SpaceX-authorized bands left out of these rounds
DA 26-552 expressly excludes from the rounds opened that day:

- **42.0–42.5 and 51.4–52.4 GHz**
- **W-band:** 92.0–94.0, 94.1–95.0, 95.0–100.0, 102.0–109.5, and 111.8–114.25 GHz

Also not in this round: the **2024 E-band** grant, 71.0–76.0 GHz (space-to-Earth) and 81.0–86.0 GHz (Earth-to-space), which remains conditioned on a **future** processing round (39 FCC Rcd 2159, para. 12). The notice does not set a deadline or invite applications for other SpaceX-requested bands that are not allocated for non-Federal FSS.

Original 7,500 V-band Gen2 satellites
No. Footnote 12 states those satellites were in the **first** V-band processing round and are **not** in this third V-band round. Only the additional 7,500 V-band satellites authorized in January 2026 are included, and that inclusion was required by the processing-round waiver condition in DA 26-36.

14,988 additional satellites
Still pending. DA 26-552 states that SpaceX's request for authority for another 14,988 satellites, including a waiver of the § 25.157 processing-round rules for Ku-, Ka-, and V-band frequencies, was deferred in DA 26-36, para. 5, and remains pending.

Cut-off
July 6, 2026. Applications and petitions filed by that date are considered together in the Ku/Ka and/or V-band round. Later filings may not share the spectrum on equal terms with grants of pre-cut-off filings.

6.6m · ~$0.295 · 17 searches · 3 fetches

> **Judge:** All core and required facts are correct, and no trap is asserted. Only three context facts are missing: filing in ICFS (4), the Amazon and Logos satellites also being placed in the rounds (14), and the SN Space Team Telecom review (15).

Cut-off: July 6, 2026. Applications and petitions filed by that date are considered together in the third Ku-/Ka-band round and/or the third V-band round. Source: DA-26-552 (June 5, 2026), restated in the June 16, 2026 erratum (DOC-422371A1).

The January 9, 2026 grant is the SpaceX Gen2 V3 Upgrade Order, DA 26-36. It authorized an additional 7,500 Gen2 Starlink satellites in certain Ku-, Ka-, V-, E-, and W-band frequencies and waived the processing-round rules for listed bands, conditioned on SpaceX joining a future round.

Placed into the third rounds. DA-26-552 includes SpaceX's authorized, conditioned operations in:

- Third Ku-/Ka-band round: 12.7–13.25, 13.75–14.0, 14.5–14.75, 14.75–14.80, 15.43–15.63, 17.3–17.8, 18.6–18.8, 19.3–19.7, 24.75–25.25, and 29.1–29.5 GHz.
- Third V-band round: 37.5–40.0, 40.0–42.0, 47.2–50.2, and 50.4–51.4 GHz — these are the V-band frequencies authorized for the *additional* 7,500 satellites, not the

original constellation.

Left out of any round opened that day. Of the bands for which the January order granted a processing-round waiver, the notice expressly excludes 42.0–42.5, 51.4–52.4, 92.0–94.0, 94.1–95.0, 95.0–100.0, 102.0–109.5, and 111.8–114.25 GHz. It also says it is not setting a deadline or inviting applications for additional bands SpaceX requested that are not allocated for non-Federal FSS (it names 21.2–23.55, 25.5–27.0, 42.0–42.5, and 47.0–47.2 GHz as not allocated to FSS). Separately, SpaceX's 2024 E-band authority at 71.0–76.0 GHz (space-to-Earth) and 81.0–86.0 GHz (Earth-to-space) stays outside these rounds; that waiver was conditioned on a future E-band round.

Original 7,500 V-band Gen2 satellites: no. The notice says they were already in the first V-band processing round and are not in this third round.

14,988 additional satellites: still pending. The request, including a waiver of the § 25.157 processing-round rules for Ku-, Ka-, and V-band frequencies, was not granted. DA 26-36 deferred action on those remaining proposed Gen2 satellites (para. 5).

The June 16 erratum amends only the last paragraph on page 4. It consolidates the invited Ku/Ka list so 27.5–29.1, 29.1–29.5, and 29.5–30.0 GHz read as 27.5–30.0 GHz, and leaves the July 6, 2026 cut-off and the V-band list unchanged. It does not change the SpaceX inclusion or exclusion lists above.

Grok native ✓ Correct ✓ ✓ ✓ ✓ 1.7m · $0.238 · 11 searches · 4 fetches

> **Judge:** All core and required facts are correct. Only context facts are missing: filing in ICFS, Amazon/Logos inclusion, and the SN Space Team Telecom review.

I'll look up the June 2026 Space Bureau processing-round orders and how they treat SpaceX's Gen2 bands.The public notice is in hand; next I'll check the June 16 erratum so the SpaceX band list matches the corrected text.The June 16 erratum is listed in the FCC daily digest; I'll read that correction next.The June 16, 2026 erratum (DOC-422371) corrected only the "Additional Applications" paragraph of DA 26-552. It did not change the SpaceX band list or the cut-off. The cut-off is **July 6, 2026.**

Placed in the third rounds. DA 26-552 folds SpaceX's operations authorized and conditioned in the January 9, 2026 Gen2 V3 Upgrade Order (DA 26-36) into the third Ku/Ka-band round and the third V-band round only for these bands: 12.7–13.25 GHz, 13.75–14.0 GHz, 14.5–14.75 GHz, 14.75–14.80 GHz, 15.43–15.63 GHz, 17.3–17.8 GHz, 18.6–18.8 GHz, 19.3–19.7 GHz, 24.75–25.25 GHz, 29.1–29.5 GHz, 37.5–40.0 GHz, 40.0–42.0 GHz, 47.2–50.2 GHz, and 50.4–51.4 GHz. The V-band entries are the additional 7,500 satellites' operations, not the original tranche.

Left out of these rounds. The same notice expressly excludes the other January 2026 waiver bands: 42.0–42.5 GHz, 51.4–52.4 GHz, 92.0–94.0 GHz, 94.1–95.0 GHz, 95.0–100.0 GHz, 102.0–109.5 GHz, and 111.8–114.25 GHz. It also does not open a round for the 2024 E-band grant, 71.0–76.0 GHz (space-to-Earth) and 81.0–86.0 GHz (Earth-to-space), which remains conditioned on a future processing round. The Bureau said it was neither setting a deadline nor inviting applications for the additional SpaceX, Amazon, or Logos bands that are not allocated for non-Federal FSS.

Original 7,500 V-band Gen2 satellites. No. Footnote 12 states they were in the first V-band processing round and are not in this third V-band round.

14,988 additional satellites. Still pending. DA 26-552 says the request, including the section 25.157 processing-round waiver for Ku-, Ka-, and V-band frequencies, remains pending, and cites paragraph 5 of DA 26-36, which deferred action on those satellites.

Keenable router → SELECT ✓ Correct ✓ ✓ ✓ ✓ 6.6m · ~$0.295 · 17 searches · 3 fetches

> **Judge:** All core and required facts are correct, and no trap is asserted. Only three context facts are missing: filing in ICFS (4), the Amazon and Logos satellites also being placed in the rounds (14), and the SN Space Team Telecom review (15).

Cut-off: July 6, 2026. Applications and petitions filed by that date are considered together in the third Ku-/Ka-band round and/or the third V-band round. Source: DA-26-552 (June 5, 2026), restated in the June 16, 2026 erratum (DOC-422371A1).

The January 9, 2026 grant is the SpaceX Gen2 V3 Upgrade Order, DA 26-36. It authorized an additional 7,500 Gen2 Starlink satellites in certain Ku-, Ka-, V-, E-, and W-band frequencies and waived the processing-round rules for listed bands, conditioned on SpaceX joining a future round.

Placed into the third rounds. DA-26-552 includes SpaceX's authorized, conditioned operations in:

- Third Ku-/Ka-band round: 12.7–13.25, 13.75–14.0, 14.5–14.75, 14.75–14.80, 15.43–15.63, 17.3–17.8, 18.6–18.8, 19.3–19.7, 24.75–25.25, and 29.1–29.5 GHz.
- Third V-band round: 37.5–40.0, 40.0–42.0, 47.2–50.2, and 50.4–51.4 GHz — these are the V-band frequencies authorized for the *additional* 7,500 satellites, not the original constellation.

Left out of any round opened that day. Of the bands for which the January order granted a processing-round waiver, the notice expressly excludes 42.0–42.5, 51.4–52.4, 92.0–94.0, 94.1–95.0, 95.0–100.0, 102.0–109.5, and 111.8–114.25 GHz. It also says it is not setting a deadline or inviting applications for additional bands SpaceX requested that are not allocated for non-Federal FSS (it names 21.2–23.55, 25.5–27.0, 42.0–42.5, and 47.0–47.2 GHz as not allocated to FSS). Separately, SpaceX's 2024 E-band authority at 71.0–76.0 GHz (space-to-Earth) and 81.0–86.0 GHz (Earth-to-space) stays outside these rounds; that waiver was conditioned on a future E-band round.

Original 7,500 V-band Gen2 satellites: no. The notice says they were already in the first V-band processing round and are not in this third round.

14,988 additional satellites: still pending. The request, including a waiver of the § 25.157 processing-round rules for Ku-, Ka-, and V-band frequencies, was not granted. DA 26-36 deferred action on those remaining proposed Gen2 satellites (para. 5).

The June 16 erratum amends only the last paragraph on page 4. It consolidates the invited Ku/Ka list so 27.5–29.1, 29.1–29.5, and 29.5–30.0 GHz read as 27.5–30.0 GHz, and leaves the July 6, 2026 cut-off and the V-band list unchanged. It does not change the SpaceX inclusion or exclusion lists above.

PROMPT 136 · REGULATION · FACTS AS OF 2026-10-09

Starlink routers were affected by the FCC's March 2026 addition of foreign-produced routers to the Covered List. Using the FCC public notice that lists the Starlink conditional approval (July 2026): which agency actually issued the conditional approval, what the FCC's own role was, the start and termination dates of the Starlink approval, the date routers went on the Covered List and the notice that added them, and whether the conditional approvals for uncrewed aircraft systems in the same appendix carry a termination date. Press reports say 'the FCC granted SpaceX a carve-out'; check who the notice says granted it.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grade DA-26-775, Public Notice released 27 July 2026, Public Safety and Homeland Security Bureau, WC Docket 18-89, ET Docket 21-232, EA Docket 21-233, with Appendix A (Covered List) and Appendix B (Conditional Approvals, updated 27 July 2026).

Who granted: the Department of War (DoW) granted the Conditional Approval. PSHSB's role is to publish and update the Covered List under 47 CFR 1.50002(a) and 1.50003; the notice says the Bureau "is required to update the Covered List to exclude" the approved devices and treats the DoW approval as "a specific determination". DHS can also issue approvals but did not here. Broadband Breakfast (28 July 2026) wrote "The Federal Communications Commission has granted SpaceX a carve-out" - the FCC did not grant it; DoW did.

Dates: Appendix B lists "SpaceX Services, Inc.'s Starlink routers, July 27, 2026 - February 1, 2028". Page 2 says "terminating February 1, 2028". Start date is 27 July 2026, not 28 July.

Covered List addition: on 23 March 2026 the Commission added "routers produced in a foreign country, except routers which have been granted a Conditional Approval by DoW or DHS", by Public Notice DA 26-278 (Routers Public Notice), based on a National Security Determination from an Executive Branch interagency body. Appendix A shows the 23 March 2026 inclusion date.

UAS vs routers: Appendix B footnote (*) - consistent with the 21 July 2026 National Security Determination, UAS Conditional Approvals "do not reflect a termination date and will remain effective indefinitely" so long as the entity follows its onshoring plan and updated vetting. Router approvals, including Starlink's, do carry termination dates. Comparable entries: eero/Amazon Leo routers 22 April 2026 - 31 October 2027; Netgear and Adtran 14 April 2026 - 1 October 2027.

Wrong answers: FCC or DHS issued the Starlink approval; approval is permanent; no start date; routers added to the list in April 2026 (14 April 2026 is the Covered List page's last-update date, not the inclusion date); UAS approvals expire on a fixed date.

Exa Correct

35.1s · $0.183 · 6 searches · 2 fetches

Judge: All core and required facts are correct. Missing context facts: DHS could issue approvals but did not (4), the Broadband Breakfast quote (5), the National Security Determination basis (11), Appendix A's inclusion date (12), router approvals carrying termination dates (15), and the comparable eero, Netgear and Adtran entries (16). Fact 17 is mostly covered, though the docket numbers and the Appendix A/B structure are only partly stated.

The July 27, 2026 public notice (DA 26-775) says the **Department of War (DoW)** granted the Starlink conditional approval. The FCC did not. Press lines that “the FCC granted SpaceX a carve-out” do not match the notice.

Who granted it, and the FCC’s role. DA 26-775, released July 27, 2026, states that the FCC’s Public Safety and Homeland Security Bureau (PSHSB) “announces that the Department of War (DoW) has granted Conditional Approval” and that “DoW has reviewed the submission and granted Conditional Approval” for SpaceX Services, Inc.’s Starlink routers. PSHSB treats that as “a specific determination” by DoW and says it is required to update the Covered List to exclude that equipment. The Bureau’s role is to publish, maintain, and update the list under 47 C.F.R. §§ 1.50002(a) and 1.50003—not to issue the approval. Source: https://docs.fcc.gov/public/attachments/DA-26-775A1.pdf

Starlink dates. The same notice lists “SpaceX Services, Inc.’s Starlink routers (terminating February 1, 2028).” Appendix B’s “Dates of Conditional Approval” for those routers is **July 27, 2026 – February 1, 2028.** The Bureau’s Covered List page records the same window. Sources: https://docs.fcc.gov/public/attachments/DA-26-775A1.pdf and https://www.fcc.gov/supplychain/coveredlist

When routers went on the Covered List. On **March 23, 2026,** PSHSB added “routers produced in a foreign country, except routers which have been granted a Conditional Approval by DoW or DHS,” in public notice **DA 26-278.** DA 26-775 cites that notice for the addition. Sources: https://docs.fcc.gov/public/attachments/DA-26-278A1.pdf and https://docs.fcc.gov/public/attachments/DA-26-775A1.pdf

UAS approvals in the same appendix. They do not carry a termination date. The Appendix B footnote in DA 26-775 says that, consistent with the National Security Determination of July 21, 2026, “UAS Conditional Approvals do not reflect a termination date and will remain effective indefinitely,” so long as the recipient follows the onshoring plan in its application and updated product vetting. The date column shows a start date only (for example, “July 24, 2026 –”). Source: https://docs.fcc.gov/public/attachments/DA-26-775A1.pdf

Parallel Correct

29.5s · $0.097 · 4 searches · 2 fetches

Judge: All core and required facts are correct. Only context facts 4, 11, 12, 15 and 16 are missing (DHS did not issue the approval, the National Security Determination basis, Appendix A inclusion date, router approvals carrying termination dates, comparable entries), and no traps were asserted.

The July 27, 2026 public notice (DA 26-775) says the **Department of War (DoW)** granted the Starlink conditional approval. The FCC did not. Press accounts that “the FCC granted SpaceX a carve-out” do not match the notice.

Who granted it, and the FCC’s role. DA 26-775, released by the FCC’s Public Safety and Homeland Security Bureau (PSHSB), states that PSHSB “announces that the Department of War (DoW) has granted Conditional Approval” and that “DoW has reviewed the submission and granted Conditional Approval” for SpaceX Services, Inc.’s Starlink routers. PSHSB treated that as “a specific determination” by DoW that the devices do not pose risks to U.S. national security, and therefore updated

the Covered List to exclude them. The Bureau's role is to publish, maintain, and update the list under 47 CFR §§ 1.50002(a) and 1.50003—not to make the national-security approval. Source: DA 26-775 text; document page: FCC announcement.

Starlink dates. Appendix B of that notice lists "SpaceX Services, Inc.'s Starlink routers" as **July 27, 2026 – February 1, 2028**. The body says the approval is "terminating February 1, 2028." The same window still appears on the FCC Covered List page (updated October 2, 2026): fcc.gov/supplychain/coveredlist.

When routers were added, and by which notice. Foreign-produced routers were added **March 23, 2026**, by public notice **DA 26-278**, *FCC's Public Safety and Homeland Security Bureau Announces Addition of Routers Produced in Foreign Countries to FCC Covered List* (WC Docket No. 18-89). The listing is "routers produced in a foreign country, except routers which have been granted a Conditional Approval by DoW or DHS." Sources: DA 26-775; DA 26-278 document page; Covered List.

UAS approvals in the same appendix. They do not carry a termination date. Appendix B's footnote says that, consistent with the July 21, 2026 National Security Determination, "UAS Conditional Approvals do not reflect a termination date and will remain effective indefinitely," so long as the recipient follows its onshoring plan and updated vetting. The UAS column shows start dates only (for example, "March 17, 2026 –"), with no end date. Source: DA 26-775, Appendix B.

Keenable search ✓ Correct

50.1s · ~$0.144 · 10 searches · 3 fetches

> **Judge:** All core and required facts are correct and no trap is asserted. Three context facts are missing: Appendix A showing the 23 March inclusion date (12), the comparable eero and Netgear/Adtran entries (16), and the full docket numbers and Appendix A/B description (17).

The July 27, 2026 public notice (DA 26-775) says the Department of War granted the Starlink conditional approval. The FCC did not. Press lines that "the FCC granted SpaceX a carve-out" do not match the notice.

Who granted it, and what the FCC did. DA 26-775, released July 27, 2026, by the FCC's Public Safety and Homeland Security Bureau (PSHSB), states that PSHSB "announces that the Department of War (DoW) has granted Conditional Approval" for certain routers, and that "DoW has reviewed the submission and granted Conditional Approval" for "SpaceX Services, Inc.'s Starlink routers (terminating February 1, 2028)." The Bureau treats that DoW action as "a specific determination" that the devices do not pose a U.S. national-security risk and says PSHSB is required to update the Covered List to exclude them. The FCC's role in this notice is publication and list maintenance under 47 CFR §§ 1.50002(a) and 1.50003, not issuance of the approval. Source: https://docs.fcc.gov/public/attachments/DA-26-775A1.pdf

Starlink dates. Appendix B of the same notice ("Conditional Approvals, Updated July 27, 2026") lists SpaceX Services, Inc.'s Starlink routers as **July 27, 2026 – February 1, 2028**. The body text gives the same termination date. Source: https://docs.fcc.gov/public/attachments/DA-26-775A1.pdf

When routers went on the Covered List. DA 26-775 says that on **March 23, 2026**, the Commission added "routers produced in a foreign country, except routers which have been granted a Conditional Approval by DoW or DHS," citing **DA 26-278** (*FCC's Public Safety and Homeland Security Bureau Announces Addition of Routers Produced in Foreign Countries to FCC Covered List*, March 23, 2026). That notice confirms the addition date and the same Covered List wording, based on a National Security Determination received March 20, 2026. Sources: https://docs.fcc.gov/public/attachments/DA-26-775A1.pdf and https://docs.fcc.gov/public/attachments/DA-26-278A1.pdf

UAS approvals in the same appendix. They do not carry a termination date. The Appendix B footnote in DA 26-775 says that, consistent with the National Security Determination of July 21, 2026, "UAS Conditional Approvals do not reflect a termination date and will remain effective indefinitely," so long as the recipient abides by the onshoring plan in its application and updated product vetting. Entries such as Exedy Globalparts' Ayre CX and Parallel Flight Technologies' Firefly are dated "July 24, 2026 –" with no end date, unlike the router rows. Source: https://docs.fcc.gov/public/attachments/DA-26-775A1.pdf

Keenable SELECT ✓ Correct

3.4m · ~$0.108 · 7 searches · 0 fetches

> **Judge:** All core and required facts are correct and no traps were asserted. Only context facts are missing: the notice's "required to update" wording (3), DHS not being the grantor (4), the Broadband Breakfast quote (5), the National Security Determination behind the March addition (11), the comparable eero/Netgear/Adtran entries (16), and the docket numbers (17).

The July 2026 notice does not say the FCC granted SpaceX a carve-out. It says the Department of War did.

Who granted it. DA 26-775 (released July 27, 2026) is titled as an announcement by the FCC's Public Safety and Homeland Security Bureau. The body says PSHSB "announces that the Department of War (DoW) has granted Conditional Approval" for certain routers, and that "DoW has reviewed the submission and granted Conditional Approval" for the listed devices, including "SpaceX Services, Inc.'s Starlink routers." PSHSB's stated role is to publish and maintain the Covered List under section 2 of the Secure Networks Act and 47 CFR §§ 1.50002(a) and 1.50003 — not to grant the approval. Source: https://docs.fcc.gov/public/attachments/DA-26-775A1.pdf

Starlink dates. Appendix B of that notice lists the Starlink router approval as **July 27, 2026 – February 1, 2028.**

When routers went on the Covered List. The same notice says that on **March 23, 2026**, the Commission added "routers produced in a foreign country, except routers which have been granted a Conditional Approval by DoW or DHS," citing **DA 26-278**. That notice, released March 23, 2026, is "FCC's Public Safety and Homeland Security Bureau Announces Addition of Routers Produced in Foreign Countries to FCC Covered List," and Appendix A gives **March 23, 2026** as the date of inclusion. Source: https://docs.fcc.gov/public/attachments/DA-26-278A1.pdf

UAS entries in the same appendix. They do not carry a termination date. The footnote to Appendix B says that, consistent with the National Security Determination of July 21, 2026, "UAS Conditional Approvals do not reflect a termination date and will remain effective indefinitely," so long as the recipient follows its onshoring plan and updated product vetting. That is the opposite of the Starlink router entry, which has an explicit end date.

> **Judge:** All core and required facts are correct. Several context facts are not stated, namely 3 (partly), 4, 5 (the Broadband Breakfast attribution), 11, 15 and 16, but none is contradicted and no trap is asserted.

The July 27, 2026 public notice (DA 26-775) says the **Department of War (DoW)** granted the Starlink conditional approval. The FCC did not. Press lines that "the FCC granted SpaceX a carve-out" do not match the notice.

Who granted it, and the FCC's role. PSHSB announced that DoW "has granted Conditional Approval" and that "DoW has reviewed the submission and granted Conditional Approval" for SpaceX Services, Inc.'s Starlink routers. PSHSB treated that as "a specific determination" by DoW that the devices do not pose risks to U.S. national security, and updated the Covered List to exclude them. That update is the Bureau's duty to publish and maintain the list under 47 CFR §§ 1.50002(a) and 1.50003. Source: DA-26-775A1.txt (PDF: DA-26-775A1.pdf).

Starlink dates. Appendix B of that notice lists SpaceX Services, Inc.'s Starlink routers as **July 27, 2026 – February 1, 2028.** The body states only the termination: "terminating February 1, 2028."

When routers went on the Covered List. **March 23, 2026**, by Public Notice **DA 26-278** (*FCC's Public Safety and Homeland Security Bureau Announces Addition of Routers Produced in Foreign Countries to FCC Covered List*). The entry is "routers produced in a foreign country, except routers which have been granted a Conditional Approval by DoW or DHS." DA 26-775 cites that notice; the same date appears in Appendix A of DA 26-775 and on the Covered List. Text of the March notice: DA-26-278A1.pdf.

UAS approvals in the same appendix. **They do not carry a termination date.** The Appendix B footnote says that, consistent with the National Security Determination (July 21, 2026), "UAS Conditional Approvals do not reflect a termination date and will remain effective indefinitely," so long as the recipient follows the onshoring plan in its application and updated product vetting. The UAS rows show a start date only (for example, "July 24, 2026 –").

PROMPT 137 · REGULATION · FACTS AS OF 2026-10-09

The FCC adopted new NEPA rules on 30 September 2026 declaring that space-based operations are not major federal actions, and six days later it authorized SpaceX's 15,000-satellite D2D constellation over DarkSky International's environmental objection. Did the Bureaus apply the new NEPA rules to that authorization? Explain which rule framework they used, how they treated DarkSky's letter, when the new rules take effect, what the new rule text (section 1.1302) says about launches, and who the order says is responsible for launch and re-entry effects. News reports describe a 2-1 vote; check what the order's caption says about the dissent.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grade two documents: FCC-26-64 (Modernizing the Commission's NEPA Rules, WT Docket 25-217, Report and Order and FNPRM, adopted 30 September 2026, released 1 October 2026) and DA-26-1078 (6 October 2026) paragraph 45 and footnotes 136-146.

Did the Bureaus apply the new rules? No. DA-26-1078 paragraph 45: the new rules "do not come into effect until 30 days after publication in the Federal Register or after conclusion of the Paperwork Reduction Act process", so the Bureaus "review these comments under our current rules", find the action categorically excluded under 47 CFR 1.1306(a), and decline to require further NEPA review. Footnote 140: DarkSky's letter is treated as a petition for environmental review under 47 CFR 1.1307(c). The paragraph notes that under the new framework the authorization would not require NEPA review and the comments would be moot, but that is dicta; the operative basis is the current categorical exclusion. Footnotes 142-143: the FAA conducts environmental review of launches; an agency need not duplicate another agency's review (47 CFR 1.1311(e)). Footnote 145 calls the aluminum-oxide claim speculative.

FCC-26-64: paragraphs 62-65 find Commission-licensed space-based operations are "extraterritorial activities" excluded from the MFA definition (42 U.S.C. 4336e(10)(B)(vi)) and that spectrum authorizations do not create federal control over deployments. New section 1.1302(c)(5): "Actions associated with space-based operations, including the launch, deployment, and operation of space stations" are not Commission MFAs; 1.1302(b)(6) codifies the extraterritorial exclusion. Footnote 201: the FAA is charged by statute (51 U.S.C. 50903) with licensing launches and controlled re-entries, and the FCC does not view NEPA as giving it authority superseding the FAA's. Paragraph 221: the Report and Order, including revised 1.1301 and 1.1302, is effective 30 days after Federal Register publication; other Appendix A revisions wait for OMB PRA approval and a WTB notice. Caption: "Commissioner Gomez dissenting in part and issuing a statement" - a partial dissent, not a full one; SatNews reported "voted 2-1".

Wrong answers: that the D2D grant relied on the new 1.1302 exclusion; that the new rules were effective on 1 or 6 October 2026; that the FCC now reviews launch emissions; that DarkSky's filing was ignored rather than treated as a 1.1307(c) petition; that the vote was unanimous.

Exa · Partly correct · Incomplete list · 4.7m · $2.626 · 13 searches · 53 fetches

Judge: The answer gets the main conclusions right (current rules used, the 30-day effective date, the partial dissent), but it omits several required items. Missing: the footnote 140 treatment of DarkSky's letter as a 1.1307(c) petition, the PRA/OMB condition on the other rule changes, the FAA non-duplication footnotes (1.1311(e)), and the verbatim 1.1302(c)(5) text, which it said it could not retrieve. The context facts on the extraterritorial exclusion and 1.1302(b)(6), the dicta point, and footnote 145 are also missing.

No. The Space and Wireless Bureaus did not apply the new NEPA rules to the October 6 authorization. They used the existing categorical-exclusion framework.

Authorization and framework. On October 6, 2026—six days after the September 30 adoption—the Space Bureau and Wireless Telecommunications Bureau granted in part and deferred in part SpaceX's application for a 15,000-satellite NGSO D2D system (DA 26-1078; SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339). DarkSky International had filed comments asking for environmental review. A report that read the order says the Bureaus declined because the action is categorically excluded under the current rules, not because space operations are outside NEPA as "not a major Federal action." That is the pre-existing categorical exclusion (47 C.F.R. § 1.1306), not the new major-Federal-action rules. Source: DA 26-1078; Ex Terra summary of that order.

When the new rules take effect. FCC 26-64 was adopted September 30, 2026, and released October 1, 2026 (WT Docket No. 25-217). It was not yet in force on October 6. SatNews reports that the satellite-licensing change takes effect 30 days after Federal Register publication. I could not extract the ordering clause from the 144-page order itself, and I did not find a Federal Register citation as of this check, so that 30-day figure is from SatNews, not independently confirmed in the order text. Source: FCC 26-64; SatNews.

What the Commission said about launches, and who is responsible. The adopted news release states that the final rules "[d]etermine that the actions associated with space-based operations, including the launch, deployment, and operation of space stations, are not major Federal action (MFA)." The order codifies the statutory MFA definition in new 47 C.F.R. § 1.1302 (Appendix A). I could not retrieve the appendix text verbatim, so I cannot quote the exact § 1.1302 sentence on launches. In the order's discussion, the Commission says it has no authority over "the terrestrial impacts from space launches, a responsibility expressly assigned to another agency but not the Commission," citing 51 U.S.C. § 50905 and identifying the FAA. SatNews adds that the agency said launch and re-entry environmental impacts remain under FAA oversight; that re-entry point is from SatNews, not a sentence I could pull from the order. Sources: news release; FCC 26-64 ¶ 24; SatNews.

The "2-1" caption. News descriptions of a 2-1 vote oversimplify the caption. The order says: "By the Commission: Chairman Carr and Commissioner Trusty issuing separate statements; Commissioner Gomez dissenting in part and issuing a statement." The news release is more precise: Carr and Trusty approving; Gomez approving in part and dissenting in part. Gomez's statement dissents from the Report and Order and approves the Further Notice. Sources: FCC 26-64 caption; news release; Gomez statement.

Judge: Missing context facts: the extraterritorial-activity reasoning in FCC-26-64 paras 62-65, the spectrum-authorization finding, the 1.1302(b)(6) codification, and SatNews's "voted 2-1" quote. All required facts are correct and no traps were asserted.

No. The Space Bureau and Wireless Telecommunications Bureau did not apply the new NEPA rules to the October 6, 2026 SpaceX grant. They said the new framework would make this kind of authorization exempt and DarkSky's comments moot, but the new rules were not yet effective, so they decided the case under

the existing rules.

Framework used. In DA 26-1078 (adopted and released October 6, 2026), the Bureaus treated the grant as categorically excluded under current 47 CFR § 1.1306(a) and found commenters had not justified extra review. They followed the same approach as earlier SpaceX orders that the D.C. Circuit upheld. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf (Order ¶ 45).

DarkSky's letter. The January 5, 2026 letter from Ruskin Hartley was treated as a petition for environmental review under current 47 CFR § 1.1307(c). DarkSky asked the Commission not to authorize the 15,000-satellite D2D system until it assessed space and Earth impacts, including atmospheric effects of launches and demising satellites. The Bureaus rejected that. They said the FAA already reviews launch effects and that NEPA does not require the FCC to duplicate another agency's review (citing current 47 CFR § 1.1311(e)); orbital-debris plans were reviewed under FCC rules; reflectivity is outside FCC authority, though SpaceX must follow its mitigation commitments; and claims about atmospheric effects of demising satellites were speculative and not specific enough to require an environmental assessment. Source: https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf (Order ¶¶ 45 and notes).

When the new rules take effect. FCC 26-64 (adopted September 30, 2026; released October 1, 2026) says the Report and Order, including revised §§ 1.1301 and 1.1302, is effective 30 days after Federal Register publication. All other rule revisions take effect only after OMB Paperwork Reduction Act review and a Wireless Telecommunications Bureau Federal Register notice. The SpaceX order therefore said the new rules were not yet in force. Sources: https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf (ordering clause ¶ 221); https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf (Order ¶ 45).

Section 1.1302 and launches. New § 1.1302(c)(5) lists, among actions the Commission has determined are not major Federal actions: "Actions associated with space-based operations, including the launch, deployment, and operation of space stations." Source: https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf (Appendix A, § 1.1302(c)(5); discussion ¶¶ 62–69, 76).

Who is responsible for launch and re-entry effects. FCC 26-64 says terrestrial launch impacts are assigned to another agency, not the FCC, and that the FAA licenses launches and controlled, non-destructive re-entries under 51 U.S.C. § 50903 (the order also cites § 50905). It says NEPA does not give the FCC authority that supersedes the FAA's. The SpaceX order likewise points to FAA environmental review of rocket launches and says the FCC need not duplicate it. Sources: https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf (¶¶ 24, 69 n.199, 69 n.201); https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf (Order ¶ 45).

The 2-1 vote and the caption. The 2-1 description fits the September 30 Commission NEPA item, not the SpaceX grant. DA 26-1078 is a Bureau authorization "By the Acting Chief, Space Bureau and Chief, Wireless Telecommunications Bureau." Its caption records no vote and no dissent. The NEPA order's caption is narrower than a straight 2-1 dissent: "By the Commission: Chairman Carr and Commissioner Trusty issuing separate statements; Commissioner Gomez dissenting in part and issuing a statement." The Commission's release says Carr and Trusty approved and Gomez approved in part and dissented in part (she dissented from the Report and Order and approved the Further Notice). Sources: https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf (caption); https://docs.fcc.gov/public/attachments/DOC-425491A1.pdf; https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf (caption).

> **Judge:** The answer says it could not find how the order disposed of DarkSky's letter (footnote 140, 1.1307(c) treatment) or the FAA responsibility language (footnotes 142-143 and 201, and the FCC not superseding the FAA). It also omits the extraterritorial rationale, the 1.1302(b)(6) codification, the dicta point and the aluminum-oxide footnote.

No. The Space Bureau and Wireless Telecommunications Bureau did not apply the new NEPA rules to the October 6 authorization. Those rules were not yet effective, so the grant was made under the existing Part 1 framework.

Which framework applied. On September 30, 2026, the Commission adopted FCC 26-64 in WT Docket No. 25-217, released October 1. It concludes that space-based operations, including launch, deployment, and operation of space stations, are not "major Federal actions." The ordering clause makes the new major-Federal-action definition and its carve-outs effective 30 days after Federal Register publication; other procedural changes wait for OMB approval under the Paperwork Reduction Act. No Federal Register publication of that final rule had occurred by October 6. DA 26-1078, adopted and released that day by the Acting Chief of the Space Bureau and the Chief of the Wireless Telecommunications Bureau, is a bureau grant-in-part and deferral-in-part (call sign S00735; GN Docket No. 25-340). In that order the Bureaus themselves treat other newly adopted but not-yet-effective space rules as inapplicable and continue to apply the rules still in force. The NEPA framework still in force was the existing categorical exclusion in 47 C.F.R. § 1.1306, which can be overcome only under § 1.1307, not the new "not a major Federal action" rule.

DarkSky's letter. DarkSky International's January 5, 2026 filing in SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339 opposed the 15,000-satellite authorization and petitioned under 47 C.F.R. § 1.1307(c) for an environmental assessment or impact statement, arguing that a categorical exclusion was unlawful. DA 26-1078 lists DarkSky among timely commenters. It does not list DarkSky among the petitions to deny, which were filed by Globalstar, Viasat, and Iridium. The public PDF extract does not include the paragraph disposing of that letter, so the exact wording of the denial is not verified here. A secondary report paraphrases the order as saying the FCC lacks authority over satellite brightness while still requiring SpaceX to honor astronomy-mitigation commitments; that paraphrase is not confirmed from the order text.

When the new rules take effect. Thirty days after Federal Register publication for the major-Federal-action definition and the carve-outs, including launch, deployment, and operation of space stations. Notice, petition, timeline, page-limit, and emergency provisions are delayed until OMB approval and a Wireless Telecommunications Bureau announcement.

Section 1.1302 and launches. Appendix A of FCC 26-64 revises § 1.1302. It codifies a major Federal action as an action the Commission determines is subject to substantial Commission control and responsibility, tracking 42 U.S.C. § 4336e(10)(A). The adopted non-MFA list includes actions associated with space-based operations, including the launch, deployment, and operation of space stations. The verbatim Code of Federal Regulations sentence could not be extracted from the truncated PDF.

Launch and re-entry effects. FCC 26-64 takes those activities out of FCC NEPA review. It does not say the effects are unregulated. Coverage of the order states that FAA environmental review of launch and re-entry remains under the FAA's own authority. The FCC PDF extract does not include a sentence that expressly assigns "responsibility for launch and re-entry effects" to the FAA. The FAA's own rule, 14 C.F.R. § 450.47, makes the FAA responsible for NEPA compliance before it issues a launch or re-entry license.

The dissent. The "2-1" description is about the September 30 Commission vote on FCC 26-64, not about DA 26-1078. Carr and Trusty approved the Report and Order; Gomez dissented from that order and approved the Further Notice. The caption does not say "dissenting." It says: "Chairman Carr and Commissioner Trusty

issuing separate statements; Commissioner Gomez dissenting in part and issuing a statement." DA 26-1078 is a bureau order and has no commissioner dissent in its caption.

Keenable SELECT ✓ Correct ✓ ✓ ✓ ✓ 4.3m · ~$0.329 · 19 searches · 0 fetches

> **Judge:** All core and required facts are correct and no traps were asserted. Missing context facts: the extraterritorial-activities rationale (9), the finding that spectrum authorizations create no federal control (10), new section 1.1302(b)(6) (12), and SatNews's reported 2-1 vote (18).

No. The Space Bureau and the Wireless Telecommunications Bureau did not apply the new NEPA rules to the October 6, 2026 authorization (DA 26-1078). They said the new framework would have made the authorization exempt, but those rules were not yet in effect, so they used the existing rules.

Which framework. DA 26-1078, adopted and released October 6, 2026, grants in part Space Exploration Holdings' application for a 15,000-satellite NGSO D2D system. In the "Protection of Human Environment" section the Bureaus note that *Modernizing the Commission's National Environmental Policy Act Rules*, FCC 26-64, concluded that commercial space-based operations licensed by the FCC are not major federal actions. Under that framework this authorization "would not require NEPA review," and the environmental comments "would be moot." Because FCC 26-64 was not yet effective, they reviewed the comments under the current rules: a categorical exclusion under 47 CFR § 1.1306(a), with the petition-for-review path in § 1.1307(c). They found commenters had not shown with specificity that the grant may have a significant environmental effect, so no environmental assessment was required. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

DarkSky's letter. DarkSky International Executive Director Ruskin Hartley's January 5, 2026 letter, opposing authorization until the Commission assessed environmental impact and citing atmospheric effects of launches and demising satellites, was treated as a § 1.1307(c) petition. The Bureaus called the claims speculative and insufficient. They said the FAA reviews rocket-launch effects and has reviewed SpaceX launches, and that NEPA does not require the FCC to duplicate another agency's review. The only scientific evidence DarkSky cited, a 2021 article, was described as "entirely speculative and theoretical" on atmospheric harm from demising satellites. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

When the new rules take effect. FCC 26-64 was adopted September 30, 2026, and released October 1, 2026. Paragraph 221 orders that the Report and Order, including revised §§ 1.1301 and 1.1302, "SHALL BE EFFECTIVE 30 days after publication in the Federal Register." All other rule revisions in Appendix A take effect only after OMB completes Paperwork Reduction Act review and the Wireless Telecommunications Bureau publishes a Federal Register notice of that completion and the effective date. https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf

Section 1.1302 and launches. Amended § 1.1302(c)(5) lists, among actions the Commission has determined are not major federal actions: "Actions associated with space-based operations, including the launch, deployment, and operation of space stations." The preamble also says the FAA is charged by statute with licensing launches and controlled, non-destructive re-entries (51 U.S.C. § 50903), and that NEPA does not give the FCC authority superseding the FAA's. https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf

Who is responsible for launch and re-entry effects. In DA 26-1078, the Bureaus say the FAA conducts environmental review of rocket-launch effects and has reviewed SpaceX's launches. FCC 26-64 places statutory licensing of launches and controlled, non-destructive re-entries with the FAA, not the FCC. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf

The dissent. A 2–1 description fits FCC 26-64, not the SpaceX grant. The NEPA order's caption reads: "By the Commission: Chairman Carr and Commissioner Trusty issuing separate statements; Commissioner Gomez dissenting in part and issuing a statement." DA 26-1078 is a Bureau authorization and order ("By the Acting Chief, Space Bureau and Chief, Wireless Telecommunications Bureau"). Its caption has no dissent parenthetical, and the order does not record a Commission vote. https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

> **Judge:** The answer gets every required fact right and asserts no traps. It omits three context facts: the 'extraterritorial activities' rationale (FCC-26-64 ¶¶62-65), the finding that spectrum authorizations do not create federal control, and the new §1.1302(b)(6) codification.

No. The Space Bureau and Wireless Telecommunications Bureau did not apply the new NEPA rules to the October 6, 2026 SpaceX authorization. They said those rules were not yet effective, so they used the existing categorical-exclusion framework.

What they authorized. On October 6, 2026, the Bureaus adopted and released DA 26-1078, granting in part SpaceX authority for a 15,000-satellite NGSO direct-to-device constellation (call sign S00735; ICFS File Nos. SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339). The order is a Bureau action, not a Commission vote. Source: DA-26-1078A1.txt.

Framework used. In paragraph 45, the Bureaus noted that the Commission had just adopted FCC 26-64, concluding that commercial space-based operations licensed by the FCC are not major federal actions. Under that framework, they said, this authorization would not require NEPA review and the environmental comments would be moot. They then said the new rules "do not come into effect until 30 days after publication in the Federal Register or after conclusion of the Paperwork Reduction Act process," so they reviewed the comments under the rules then in force. Those rules categorically exclude Commission actions under 47 C.F.R. § 1.1306(a), subject to a petition under § 1.1307(c). They declined further environmental review, consistent with prior SpaceX orders affirmed by the D.C. Circuit. Source: DA-26-1078A1.txt, ¶ 45.

DarkSky's letter. DarkSky International's January 5, 2026 letter (Ruskin Hartley to the FCC Secretary) asked the Commission not to authorize the constellation until it assessed environmental impacts, including atmospheric effects of launches and demising satellites. The Bureaus treated that letter as a § 1.1307(c) petition. They found the licensing action categorically excluded and the petition insufficiently specific to require an environmental assessment. They said the FAA reviews launch effects and that the FCC need not duplicate another agency's review (citing then-current § 1.1311(e) and prior FAA SpaceX launch reviews). They called claims about atmospheric harm from satellites that burn up on re-entry speculative, and said the Commission's rules do not cover optical-astronomy impacts,

though SpaceX remains bound by its coordination commitments with NSF and NASA. Source: DA-26-1078A1.txt, ¶¶ 44–45.

When the new rules take effect. FCC 26-64 was adopted September 30, 2026, and released October 1, 2026, in WT Docket No. 25-217. Ordering clause paragraph 221 makes the Report and Order, including revised §§ 1.1301 and 1.1302, effective 30 days after Federal Register publication. All other rule revisions wait for Office of Management and Budget review under the Paperwork Reduction Act and a Wireless Telecommunications Bureau Federal Register notice of the effective date. ASR system changes take effect 30 days after a Bureau notice that those system changes are implemented (¶ 206). As of the October 6 authorization, the Bureaus said the new rules were not yet in effect. Sources: FCC-26-64A1.txt, ¶¶ 206, 221; DA-26-1078A1.txt, ¶ 45.

Section 1.1302 and launches. New § 1.1302(c) lists actions the Commission has determined are not Commission major federal actions, including: "(5) Actions associated with space-based operations, including the launch, deployment, and operation of space stations." That is a legal exclusion from NEPA as an FCC major federal action, not a finding that launches have no environmental effects. Source: FCC-26-64A1.txt, Appendix A, § 1.1302(c)(5); discussion at ¶¶ 62–69, 76.

Who is responsible for launch and re-entry effects. FCC 26-64 says the FAA, not the FCC, is charged by statute with licensing launches and controlled, non-destructive re-entries, citing 51 U.S.C. §§ 50903 and 50905. The order says NEPA does not give the FCC authority that supersedes the FAA's, and that the Commission does not control satellite design, post-mission disposal, or the physical configuration that drives many of the effects commenters raised. Orbital-debris rules remain in force as spectrum-management conditions; the order says they are not a NEPA trigger. Source: FCC-26-64A1.txt, ¶¶ 24, 65, 69.

The 2-1 vote and the caption. News accounts of a 2-1 vote match the Commission meeting: Chairman Carr and Commissioner Trusty voted for the Report and Order; Commissioner Gomez dissented from that order and approved the accompanying Further Notice. The order's caption does not say "dissenting." It says: "By the Commission: Chairman Carr and Commissioner Trusty issuing separate statements; Commissioner Gomez dissenting in part and issuing a statement." Her statement confirms the partial dissent is from the Report and Order, not the Further Notice. Sources: FCC-26-64A1.txt (caption and Gomez statement); Wireless Estimator.

Keenable router → SELECT ✓ Correct ✓ ✓ ✓ ✓ 4.3m · ~$0.329 · 19 searches · 0 fetches

> **Judge:** All core and required facts are correct and no traps were asserted. Missing context facts: the extraterritorial-activities rationale (9), the finding that spectrum authorizations create no federal control (10), new section 1.1302(b)(6) (12), and SatNews's reported 2-1 vote (18).

No. The Space Bureau and the Wireless Telecommunications Bureau did not apply the new NEPA rules to the October 6, 2026 authorization (DA 26-1078). They said the new framework would have made the authorization exempt, but those rules were not yet in effect, so they used the existing rules.

Which framework. DA 26-1078, adopted and released October 6, 2026, grants in part Space Exploration Holdings' application for a 15,000-satellite NGSO D2D system. In the "Protection of Human Environment" section the Bureaus note that *Modernizing the Commission's National Environmental Policy Act Rules*, FCC 26-64, concluded that commercial space-based operations licensed by the FCC are not major federal actions. Under that framework this authorization "would not require NEPA review," and the environmental comments "would be moot." Because FCC 26-64 was not yet effective, they reviewed the comments under the current rules: a categorical exclusion under 47 CFR § 1.1306(a), with the petition-for-review path in § 1.1307(c). They found commenters had not shown with specificity that the grant may have a significant environmental effect, so no environmental assessment was required. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

DarkSky's letter. DarkSky International Executive Director Ruskin Hartley's January 5, 2026 letter, opposing authorization until the Commission assessed environmental impact and citing atmospheric effects of launches and demising satellites, was treated as a § 1.1307(c) petition. The Bureaus called the claims speculative and insufficient. They said the FAA reviews rocket-launch effects and has reviewed SpaceX launches, and that NEPA does not require the FCC to duplicate another agency's review. The only scientific evidence DarkSky cited, a 2021 article, was described as "entirely speculative and theoretical" on atmospheric harm from demising satellites. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

When the new rules take effect. FCC 26-64 was adopted September 30, 2026, and released October 1, 2026. Paragraph 221 orders that the Report and Order, including revised §§ 1.1301 and 1.1302, "SHALL BE EFFECTIVE 30 days after publication in the Federal Register." All other rule revisions in Appendix A take effect only after OMB completes Paperwork Reduction Act review and the Wireless Telecommunications Bureau publishes a Federal Register notice of that completion and the effective date. https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf

Section 1.1302 and launches. Amended § 1.1302(c)(5) lists, among actions the Commission has determined are not major federal actions: "Actions associated with space-based operations, including the launch, deployment, and operation of space stations." The preamble also says the FAA is charged by statute with licensing launches and controlled, non-destructive re-entries (51 U.S.C. § 50903), and that NEPA does not give the FCC authority superseding the FAA's. https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf

Who is responsible for launch and re-entry effects. In DA 26-1078, the Bureaus say the FAA conducts environmental review of rocket-launch effects and has reviewed SpaceX's launches. FCC 26-64 places statutory licensing of launches and controlled, non-destructive re-entries with the FAA, not the FCC. https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf

The dissent. A 2–1 description fits FCC 26-64, not the SpaceX grant. The NEPA order's caption reads: "By the Commission: Chairman Carr and Commissioner Trusty issuing separate statements; Commissioner Gomez dissenting in part and issuing a statement." DA 26-1078 is a Bureau authorization and order ("By the Acting Chief, Space Bureau and Chief, Wireless Telecommunications Bureau"). Its caption has no dissent parenthetical, and the order does not record a Commission vote. https://docs.fcc.gov/public/attachments/FCC-26-64A1.pdf https://docs.fcc.gov/public/attachments/DA-26-1078A1.pdf

PROMPT 138 · REGULATION · FACTS AS OF 2026-10-09

The FCC's April 2026 NGSO-GSO sharing order replaced EPFD limits with performance criteria and added a minimum GSO-arc avoidance angle. For a SpaceX analyst: what is the rule's minimum avoidance angle and the equivalent exclusion zone, in which bands does it apply, may an NGSO operator start service while its compliance demonstration is still pending, and what are the three numerical protection criteria? Then compare that with the GSO-arc exclusion the 6 October 2026 D2D grant actually imposes on SpaceX until the new rules are effective. Finally, when do the rules take effect and which two sections are carved out? Do not conflate the rule's angle with the angle in SpaceX's waiver condition.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grade FCC-26-26 (Modernizing Spectrum Sharing for Satellite Broadband, SB Docket 25-157, adopted 30 April 2026, released 1 May 2026) paragraphs 50, 54, 59-65, footnote 225 and ordering clause 90, plus DA-26-1078 (6 October 2026) grant condition 11.

Rule: paragraph 63 - NGSO systems in the 10.7-12.7, 17.3-18.6 and 19.7-20.2 GHz bands must observe a 3-degree GSO-arc avoidance angle with respect to any operational co-frequency GSO satellite serving the United States. Footnote 225: 3 degrees measured on either side of the GSO satellite equals a total 6-degree GSO-arc avoidance zone. Paragraph 64: applicants may submit technical demonstrations and begin operating on an unprotected, non-interference basis while the demonstrations are pending, provided they operate within the demonstrated parameters and the 3-degree angle. Paragraph 65: the Commission may revisit the requirement.

Criteria: paragraph 50 - long-term 3% time-weighted average degraded throughput for GSO links using ACM; paragraph 54 - short-term 0.1% absolute increase in link unavailability (more protective than the 0.4% used in NGSO-NGSO sharing); paragraphs 59-61 - for non-ACM links, -10.5 dB I/N not to be exceeded for 80% of the time, applied in Ku and Ka bands. 328 GSO reference links (paragraph 67); Space Bureau to open a reference-link proceeding within 15 days of release (paragraph 69).

SpaceX D2D grant: DA-26-1078 condition 11(a) requires a minimum GSO arc exclusion zone of at least FOUR degrees with respect to operational GSO satellites, until the new rules are effective and SpaceX demonstrates compliance; 11(b) operations outside the U.S. must meet the EPFD limits unless another country authorizes otherwise; 11(c) unprotected, non-interference, must return to EPFD limits on a Bureau determination of harmful interference, waiver revocable; 11(d) must share ITU validation input data until a favorable or qualified favorable ITU finding. So the waiver condition (4 degrees) is stricter than the rule's 3-degree minimum; an answer that says SpaceX operates under a 3-degree angle today, or that the rule sets 4 degrees, is wrong.

Effective date: ordering clause 90 - effective 60 days after Federal Register publication, except sections 25.146(a)(3) and 25.289(a)(2), which await OMB Paperwork Reduction Act review and a Space Bureau Federal Register notice. The Federal Register summary appeared 13 May 2026 (2026-09565); DA-26-1078 footnote 131 confirms the rules were not yet effective on 6 October 2026 as to those sections.

Exa · Partly correct · Incomplete list · 28.3s · $0.202 · 7 searches · 2 fetches

Judge: Fact 8 is missing because the answer gives the 0.1% criterion but not the comparison to the 0.4% used in NGSO-NGSO sharing. Fact 13 is missing because the answer never states that the waiver's 4 degrees is stricter than the rule's 3. Several context facts (6, 10, 11, 15, 16, 19, 20) are not stated. Fact 17: the answer gives July 13, 2026, which is 60 days after the 13 May publication and so is consistent with the fact.

Rule (FCC 26-26, adopted April 30, 2026; released May 1, 2026). The order replaces U.S. EPFD limits with performance-based GSO protection criteria plus a **minimum 3-degree GSO-arc avoidance angle**, which the order states is **equivalent to a 6-degree GSO-arc exclusion zone** (avoidance angle is half the exclusion zone). It applies in the **10.7–12.7, 17.3–18.6, and 19.7–20.2 GHz** bands, with respect to any operational co-frequency GSO satellite serving the United States.

An NGSO applicant **may start service while its compliance demonstration is still pending**, on an unprotected, non-interference basis, if it operates consistent with the parameters in that demonstration and with the 3-degree avoidance angle.

The three numerical protection criteria are:
- **3%** time-weighted average throughput degradation (long-term; GSO links using ACM);
- **0.1%** absolute increase in link unavailability (short-term);
- **−10.5 dB I/N for 80% of the time** (supplemental long-term criterion for non-ACM GSO links, such as point-to-multipoint video).

Sources: FCC-26-26A1 (fn. 6: “Equivalently, a GSO-arc exclusion zone of 6 degrees”); 91 FR 26928 (paras. 3, 63–64).

D2D grant (DA 26-1078, Oct. 6, 2026) — do not equate the angles. Until the NGSO–GSO sharing rules are effective **and** SpaceX demonstrates compliance, the grant requires a **minimum GSO-arc exclusion zone of at least 4 degrees** (not a 4-degree avoidance angle, and not the rule’s 3-degree avoidance / 6-degree exclusion). Operations under that EPFD waiver are unprotected and non-interference; outside the United States, EPFD limits still apply unless another administration authorizes otherwise. Source: DA-26-1078A1, condition 11.

Effective date. The rules are effective **July 13, 2026**, except amendments to **§ 25.146(a)(3)** (amendatory instruction 2) and **§ 25.289(a)(2)** (amendatory instruction 4), which are **indefinitely delayed** pending a later Federal Register notice. Source: 91 FR 26928, DATES.

Parallel · Correct · 35.8s · $0.258 · 8 searches · 2 fetches

Judge: All core and required facts are correct. Only context facts are missing: the Commission may revisit the requirement (6), 328 reference links (10), the reference-link proceeding within 15 days (11), the return-to-EPFD and revocability terms (15), the ITU data-sharing condition (16), and footnote 131 (20).

The April 30, 2026 order (FCC 26-26, released May 1, 2026) sets a **minimum 3-degree GSO-arc avoidance angle**, which the Commission treats as an **equivalent 6-degree exclusion zone** (the avoidance angle is half the exclusion-zone angle). It applies to NGSO FSS downlinks in the United States in **10.7–12.7, 17.3–18.6, and 19.7–20.2 GHz**. An NGSO operator **may start service** while its compatibility showing is still pending, but only on an **unprotected, non-interference basis**, and only if it follows the parameters in that showing and the 3-degree avoidance angle.

The three numerical backstops (when coordination is not completed) are:

- 3% time-weighted average throughput degradation for GSO links that use adaptive coding and modulation (ACM);
- 0.1% absolute increase in link unavailability;
- −10.5 dB I/N for 80% of the time for GSO links that do not use ACM.

Sources: 91 FR 26928 (paras. 3, 14, 50, 54, 58, 63–64, and § 25.146(a)(3)); FCC 26-26 (equivalent 6-degree zone).

Do not equate that with the D2D waiver condition. The October 6, 2026 D2D grant (DA 26-1078) waives §§ 25.146(a)(2) and (c) for U.S. downlinks, but **until the new rules are effective and SpaceX shows compliance**, it requires a **minimum GSO-arc exclusion zone of at least 4 degrees** relative to operational GSO satellites—not the rule's 3-degree avoidance angle and not the rule's 6-degree equivalent zone. Operations under that waiver are unprotected and non-interference; outside the United States, EPFD limits still apply unless another administration authorizes otherwise. Source: DA 26-1078, grant condition 11 and Order paras. 41–43.

The rules took effect **July 13, 2026** (60 days after the May 13, 2026 Federal Register publication). The two carved-out provisions, delayed indefinitely pending Paperwork Reduction Act review, are § 25.146(a)(3) and § 25.289(a)(2). Source: 91 FR 26928, DATES.

Cited: 1. federalregister.gov · 2. govinfo.gov · 3. jdsupra.com · 4. docs.fcc.gov · 5. docs.fcc.gov · 6. insidetowers.com · 7. lightreading.com · 8. satnews.com · 9. satellitetoday.com · 10. federalregister.gov · 11. docs.fcc.gov · 12. docs.fcc.gov · 13. docs.fcc.gov · 14. docs.fcc.gov · 15. docs.fcc.gov · 16. docs.fcc.gov · 17. docs.fcc.gov · 18. docs.fcc.gov · 19. newamerica.org · 20. docs.fcc.gov · 21. insideglobaltech.com · 22. public-inspection.federalregister.gov · 23. fcc.gov · 24. docs.fcc.gov · 25. docs.fcc.gov · 26. govinfo.gov · 27. laweconcenter.org · 28. jdsupra.com

Keenable search · Partly correct · ✓ ✗ ✓ ✓ · Claim not in sources · 1.0m · ~$0.219 · 14 searches · 2 fetches

> **Judge:** Fact 13 is contradicted: the answer treats the grant's 4° as a different metric and calls it about a 2° avoidance angle, narrower than the rule, when it is stricter than the rule's 3°. That 2° equivalence is the answer's own inference and is not in the sources. Context facts 1, 6, 10, 11, 14, 15, 16 and 20 are not stated.

Rule (FCC 26-26). Minimum GSO-arc avoidance angle is 3°, which the order treats as equivalent to a **6° GSO-arc exclusion zone** (avoidance angle is one half of the exclusion-zone angle). It applies in the **10.7–12.7, 17.3–18.6, and 19.7–20.2 GHz** space-to-Earth bands, with respect to operational co-frequency GSO satellites serving the United States.

Yes, service may start while the showing is pending. An NGSO applicant may submit a technical demonstration and begin operating on an unprotected, non-interference basis before the Commission acts, if it operates consistent with the parameters in that demonstration and the 3° avoidance angle.

Three numerical protection criteria (backstops when coordination is incomplete):
- Long-term, ACM links: no more than 3% time-weighted average throughput degradation.
- Short-term: no more than 0.1% absolute increase in link unavailability.
- Non-ACM links (e.g., point-to-multipoint video): **−10.5 dB I/N for 80% of the time.**

D2D grant (DA 26-1078, Oct. 6, 2026) is stricter and uses a different metric. Until the new rules are effective and SpaceX demonstrates compliance, SpaceX must keep a minimum GSO-arc exclusion zone of at least 4° versus operational GSO satellites (U.S. EPFD waiver for the D2D system). That is not the rule's 3° avoidance angle, and it is also not the January 9, 2026 waiver's 4° avoidance angle (Nco of 8). Under the order's own definition, a 4° exclusion zone is about a 2° avoidance angle—narrower than the rule's 6° exclusion / 3° avoidance—so do not treat the grant's "4 degrees" as the same quantity as either the rule or the earlier waiver.

Effective date and carve-outs. Rules are effective **July 13, 2026** (published May 13, 2026, 91 FR 26928), except amendments to § 25.146(a)(3) (amendatory instruction 2) and § 25.289(a)(2) (amendatory instruction 4), delayed indefinitely pending Paperwork Reduction Act approval. The Bureau has said it has not begun reviewing compatibility showings under § 25.146(a)(3) for that reason.

Sources: FCC 26-26 (fn. 6: "Equivalently, a GSO-arc exclusion zone of 6 degrees"; fn. 44); Federal Register summary; DA 26-1078 condition 11.a; DA 26-973.

---

Keenable SELECT · Partly correct · ✓ ✓ ✓ ✓ · Incomplete list · 4.5m · ~$0.308 · 17 searches · 0 fetches

> **Judge:** Fact 8 is missing because the answer gives the 0.1% criterion but omits that it is more protective than the 0.4% NGSO-NGSO figure. Several context facts (1, 6, 10, 11, 14-16, 20) are not stated. All core and the other required facts are correct and no trap is asserted.

The rule's minimum GSO-arc avoidance angle is **3 degrees**, measured on either side of an operational co-frequency GSO satellite serving the United States. The order treats that as a **6-degree total exclusion zone** (3 degrees on each side). It applies in the **10.7–12.7 GHz, 17.3–18.6 GHz, and 19.7–20.2 GHz** bands.

An NGSO applicant **may start service while its compliance demonstration is still pending**, but only on an unprotected, non-interference basis, and only if it operates consistent with the parameters in that demonstration and with the 3-degree avoidance angle.

The three numerical protection criteria that replace EPFD limits are:

1. 3% time-weighted average throughput degradation (long-term; ACM GSO links).
2. 0.1% absolute increase in link unavailability (short-term).
3. **−10.5 dB I/N for 80% of the time** (GSO links that do not use ACM).

Do not use the D2D waiver angle as the rule. In DA 26-1078 (adopted and released **6 October 2026**, ICFS File Nos. SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339), the Bureau waived §§ 25.146(a)(2) and (c) so SpaceX's D2D space-to-Earth operations in the United States may exceed applicable EPFD limits, but only if SpaceX maintains a **minimum 4-degree GSO-arc exclusion zone** with respect to operational GSO satellites. That condition lasts until the new sharing rules are effective and SpaceX demonstrates compliance with them. The rule's figure is a 3-degree avoidance angle (equated to a 6-degree zone); the grant's interim figure is a 4-degree exclusion zone.

The rules took effect **13 July 2026** (60 days after the 13 May 2026 Federal Register publication, 91 FR 2026-09565). Amendments to § 25.146(a)(3) and § 25.289(a)(2) are carved out and indefinitely delayed pending OMB review of the information-collection requirements.

> **Judge:** The answer contradicts fact 13: it says the waiver's 4-degree exclusion zone is narrower than the rule's 6-degree zone (about a 2-degree avoidance angle), when the waiver is stricter than the rule's 3-degree minimum. That comparison is not supported by the cited sources. It also omits facts 6, 10, 11 and 16 (the Commission may revisit the requirement, 328 reference links, the 15-day reference-link proceeding, and condition 11(d) on ITU data sharing).

The April 30, 2026 order (FCC 26-26) sets a 3-degree GSO-arc avoidance angle, which the Commission treats as a 6-degree exclusion zone. That is not the angle in the October 6 D2D waiver.

FCC 26-26 (adopted April 30, released May 1, 2026). In the 10.7–12.7, 17.3–18.6, and 19.7–20.2 GHz bands, NGSO systems must keep a minimum 3-degree avoidance angle from any operational co-frequency GSO satellite serving the United States. Footnote 6 of the order states that this is equivalently a 6-degree GSO-arc exclusion zone (avoidance angle is half the exclusion zone). Sources: FCC 26-26; Federal Register summary.

An NGSO operator **may start service while its compatibility showing is still pending**, on an unprotected, non-interference basis, if it operates within the parameters in that showing and observes the 3-degree avoidance angle. See 47 CFR § 25.146(a)(3)(ii) in the same Federal Register text.

The three numerical backstops (coordination first; these apply if coordination is not reached):

- 3% time-weighted average throughput degradation (long-term, ACM links)
- 0.1% absolute increase in link unavailability (short-term)
- −10.5 dB I/N for 80% of the time (non-ACM links, such as point-to-multipoint video)

The 3-degree angle is a separate supplemental requirement, not one of those three criteria.

D2D grant (DA 26-1078, October 6, 2026), condition 11. Until the FCC 26-26 rules are effective and SpaceX demonstrates compliance, U.S. downlink operations that exceed EPFD must keep a minimum **GSO-arc exclusion zone of 4 degrees** — not a 4-degree avoidance angle and not the rule's 6-degree exclusion zone. Under the Commission's own half-angle definition, 4 degrees of exclusion is narrower than 6 degrees of exclusion (about a 2-degree avoidance angle). Outside the United States, EPFD still applies unless another administration authorizes otherwise. The waiver is unprotected and non-interference; if the Space Bureau finds harmful interference, SpaceX must return to EPFD in the affected bands. Source: DA 26-1078 (grant condition 11; Order paras. 41–43).

Effective date. Rules are effective **July 13, 2026** (60 days after the May 13, 2026 Federal Register publication), **except** amendments to §§ 25.146(a)(3) and 25.289(a)(2), which are indefinitely delayed pending OMB Paperwork Reduction Act review. Those two sections are the alternative to an EPFD certification (coordination or a degraded-throughput showing, including the 3-degree avoidance certification) and the corresponding "unacceptable interference" safe harbor. The Commission must publish a later Federal Register notice before they take effect. As of the September 10, 2026 PRA notice, that review was still open, which is why the October 6 grant still conditions SpaceX on the 4-degree exclusion zone until the new rules are effective and compliance is shown. Sources: 91 Fed. Reg. 26928 (DATES and ordering clause 131); PRA notice.

> **Judge:** Fact 8 is missing because the answer gives the 0.1% criterion but omits that it is more protective than the 0.4% NGSO-NGSO figure. Several context facts (1, 6, 10, 11, 14-16, 20) are not stated. All core and the other required facts are correct and no trap is asserted.

The rule's minimum GSO-arc avoidance angle is 3 degrees, measured on either side of an operational co-frequency GSO satellite serving the United States. The order treats that as a 6-degree total exclusion zone (3 degrees on each side). It applies in the 10.7–12.7 GHz, 17.3–18.6 GHz, and 19.7–20.2 GHz bands.

An NGSO applicant **may start service while its compliance demonstration is still pending**, but only on an unprotected, non-interference basis, and only if it operates consistent with the parameters in that demonstration and with the 3-degree avoidance angle.

The three numerical protection criteria that replace EPFD limits are:

1. 3% time-weighted average throughput degradation (long-term; ACM GSO links).
2. 0.1% absolute increase in link unavailability (short-term).
3. −10.5 dB I/N for 80% of the time (GSO links that do not use ACM).

Do not use the D2D waiver angle as the rule. In DA 26-1078 (adopted and released **6 October 2026**, ICFS File Nos. SAT-LOA-20250916-00282 and SAT-AMD-20251125-00339), the Bureau waived §§ 25.146(a)(2) and (c) so SpaceX's D2D space-to-Earth operations in the United States may exceed applicable EPFD limits, but only if SpaceX maintains a **minimum 4-degree GSO-arc exclusion zone** with respect to operational GSO satellites. That condition lasts until the new sharing rules are effective and SpaceX demonstrates compliance with them. The rule's figure is a 3-degree avoidance angle (equated to a 6-degree zone); the grant's interim figure is a 4-degree exclusion zone.

The rules took effect **13 July 2026** (60 days after the 13 May 2026 Federal Register publication, 91 FR 2026-09565). Amendments to § 25.146(a)(3) and § 25.289(a)(2) are carved out and indefinitely delayed pending OMB review of the information-collection requirements.

PROMPT 139 · REGULATION · FACTS AS OF 2026-10-09

The FCC adopted its Satellite Spectrum Abundance order on 30 September 2026 (released 1 October 2026, FCC-26-65). Press says it 'unlocks 1,050 MHz' including '550 MHz for downlinks to consumer dishes' in 12.7-13.25 GHz. From the order itself: how many megahertz does the Commission say it unlocks in the 12.7 GHz band, what may NGSO systems do in the band and on what interference footing relative to uplink earth stations, which uplinks remain allowed and from whom, what happens to the application freeze in 12.7-12.75 GHz versus 12.75-13.25 GHz, and when do grandfathered fixed and mobile licensees drop to secondary status. Also give the 42 GHz allocation direction and earth-station licensing type, and the effective-date rule with its exceptions. Note whether Starlink can use the band immediately.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grade FCC-26-65 (SB Docket 25-180 et al., adopted 30 September 2026, released 1 October 2026), paragraphs 15-19, 22-26, 29-30, 36-38, footnotes 62, 66, 72, and ordering clauses 132 and 134.

Megahertz: paragraphs 15-16 - "525 megahertz" of additional, contiguous downlink spectrum in the 12.7 GHz band, "a more than 25% increase". The 550 and 1,050 MHz figures in press coverage (TeslaNorth, 30 Sept 2026) are not the order's figures; the order says 525 MHz for 12.7 GHz and 500 MHz for 42 GHz.

NGSO: new primary FSS (space-to-Earth) allocation for NGSO systems in 12.7-13.25 GHz (new footnote NG144), with blanket licensing of user terminals and ESIMs on land, sea and air (paragraphs 15, 18). NGSO FSS downlinks must accept any interference from FSS uplinks from gateway or feeder-link earth stations and operate unprotected vis-a-vis grandfathered terrestrial stations (paragraphs 15, 18). PFD limits from 10.7-11.7 GHz are extended (paragraph 19).

Uplinks: limited to individually licensed gateway and feeder-link earth stations communicating with GSO and NGSO space stations (paragraph 23), plus blanket-licensed ESIMs on aircraft at altitude and ships away from the coast communicating with GSO satellites only (paragraphs 25-26). No ESIM uplinks to NGSO. The "international systems only" limit on GSO uplinks (NG52) is removed (paragraph 22).

Freezes: footnote 62 - the temporary freeze on 12.75-13.25 GHz applications is lifted effective upon Federal Register publication (procedural, no APA delay); paragraph 24 and footnote 72 - 12.7-12.75 GHz gets a permanent freeze on new FSS (Earth-to-space) space and earth station applications via NG144, as a buffer for 12.2-12.7 GHz DBS and FSS downlinks.

Incumbents: paragraphs 29-30 and ordering clause 134 - existing FS and MS licensees are grandfathered co-primary for 10 years from Federal Register publication, after which they become secondary (unprotected, non-harmful-interference basis); the Order of Proposed Modification under section 316 gives licensees 30 days from publication to protest; overall FS/MS allocations change to secondary.

42 GHz: paragraph 36-37 - primary FSS space-to-Earth (downlink only) for GSO and NGSO, to individually licensed and Nationwide Non-Site licensed gateway/feeder-link earth stations (new NG150), no blanket licensing, PFD limits extended from 40.5-42 GHz; MS allocation changed to secondary (paragraph 38); light licensing (paragraph 39).

Effective: ordering clause 132 - 60 days after Federal Register publication, except sections 100.212(c), (i), (j), 100.275(n) and (o), which await OMB review and a Space Bureau notice. Note the rules are written into part 100 even though part 100 is not yet effective (Background section, which states the Commission amends part 100 sections rather than part 25 because part 25 will be removed once part 100 is effective). Starlink cannot use the band immediately: it needs a modification of its space station authorization (SpaceX already requested 12.7-13.25 GHz in DA-26-36, conditions 2-3, and the Gen3 application SAT-LOA-20260630-00264 is pending, per footnotes 140 and 143).

Wrong answers: 550 or 1,050 MHz as the order's figure; NGSO uplinks from user terminals; ESIM uplinks to NGSO; terrestrial incumbents made secondary immediately; 42 GHz allowed for uplinks or blanket-licensed terminals.

Source: https://docs.fcc.gov/public/attachments/FCC-26-65A1.pdf

Exa · Partly correct · Incomplete list · 5.3m · $2.571 · 14 searches · 48 fetches

Judge: The answer missed the effective-date rule (60 days after Federal Register publication) and its exceptions (100.212(c),(i),(j), 100.275(n),(o)), and it did not commit to grandfathered FS/MS becoming secondary after 10 years (only the FSS protection sunset). It also omitted that no ESIM uplinks to NGSO are allowed, the PFD extensions, the part 100 explanation, and the SpaceX DA-26-36 and Gen3 filings.

The Commission's own figure in FCC 26-65 is 525 MHz in the 12.7 GHz band, not the press figure of 550 MHz. In the 12.7 GHz discussion it says it "aggressively unlock[s] 525 megahertz" and that it is "adding 525 megahertz of additional, contiguous downlink spectrum—a more than 25% increase." Across 12.7 GHz and 42–42.5 GHz together it says it unlocks "more than 1,000 megahertz," not 1,050. Source: https://docs.fcc.gov/public/attachments/FCC-26-65A1.pdf (paras. 2, 15–16).

NGSO use and interference footing. NGSO systems get a new primary FSS (space-to-Earth) allocation and may downlink to blanket-licensed user terminals and ESIMs on land, sea, and air. Both uplink and downlink FSS are primary in the United States, but NGSO receiving earth stations, including ESIMs, must operate unprotected relative to uplink earth stations: they must accept any interference from gateway and feeder-link FSS uplinks, and any harmful interference when geographically near GSO FSS transmitting earth stations. The Commission declined to put all GSO uplinks secondary to NGSO downlinks. NGSO downlinks must also protect, or accept interference from, grandfathered fixed and mobile stations until the sunset below. Aircraft GSO ESIM uplinks in U.S. airspace are limited to altitudes of at least 3 km, on top of the international limits, so they do not constrain NGSO receivers. (Paras. 15, 18–20, 23, 26.) A later paragraph on GSO ESIMs not constraining NGSO terminals was cut off in the text retrieved; Communications Daily reported that the adopted item, unlike the draft, also has GSO uplinks protect NGSO downlinks: https://communicationsdaily.com/news/2026/10/01/fccs-september-meeting-creates-big-spectrum-availability-for-satellite-updates-tcpa-rules-2609300037.

Uplinks that remain allowed. Ground uplinks are limited to individually licensed gateway and feeder-link earth stations talking to GSO and NGSO space stations. Blanket-licensed uplinks are allowed only in 12.75–13.25 GHz from ESIMs on aircraft at altitude and ships away from the coast, and only to GSO space stations. The old "international systems only" limit (NG52) is removed for 12.75–13.25 GHz Earth-to-space. Ubiquitous ground transmitting terminals, including blanket-licensed fixed VSATs, are not authorized. Existing Earth-to-space assignments in 12.7–12.75 GHz stay; new ones do not. (Paras. 15, 21–25.)

Freezes. The temporary freeze on new space-station and earth-station applications and U.S. market-access requests is lifted in 12.75–13.25 GHz upon Federal Register publication. That lift is treated as procedural and not subject to the Administrative Procedure Act delayed-effective-date rule, 5 U.S.C. § 553(d). In 12.7–

12.75 GHz, the temporary freeze is replaced by a permanent freeze: new FSS (Earth-to-space) space- and earth-station applications will not be accepted after the effective date of the Report and Order (new footnote NG144), as a buffer for adjacent 12.2–12.7 GHz satellite-TV and FSS downlinks. (Paras. 21, 24.)

Grandfathered fixed and mobile. The FS and MS allocations change from primary to secondary, but FSS must keep protecting incumbent terrestrial licensees for 10 years. The sunset of that protection for grandfathered FS and MS is **Federal Register publication of this R&O plus 10 years.** (Paras. 15, 20.) The later paragraph that would spell out post-sunset secondary operation of the licenses themselves was not in the portion retrieved.

42 GHz. Primary FSS **downlink** (space-to-Earth) allocation to **individually licensed and Nationwide Non-site** earth stations—not consumer blanket terminals. Terrestrial fixed service stays primary; non-Federal mobile service goes from primary to secondary. A 70/80/90 GHz-style light-licensing regime is found appropriate, but implementation is deferred to other proceedings. (Para. 4.)

Effective date. The ordering clauses (around para. 131) were not in the text retrieved, so the general effective-date rule and any information-collection or other exceptions cannot be verified from the order here. What the retrieved text does say: the 12.75–13.25 GHz freeze lift is effective on Federal Register publication and is exempt from the APA § 553(d) delay; the 12.7–12.75 GHz permanent freeze runs from the effective date of the Report and Order. FNPRM comments are due 30 days after Federal Register publication, replies 60 days.

Starlink. The order does not authorize Starlink, or any named operator, to use the band immediately. It only records commenters' claim that operators are positioned to put the bands to use. Press reports that SpaceX still needs a modification application, and compatible equipment, before Starlink can use the new frequencies: https://teslanorth.com/2026/09/30/starlink-fcc-spectrum-boost/ and https://uk.pcmag.com/networking/167588/fcc-clears-more-downlink-spectrum-for-satellite-internet-services-like-starlink. Those are press accounts, not findings in FCC 26-65.

> **Judge:** Only context facts are missing: the 42 GHz PFD extension (20), the reason the rules sit in part 100 (24), and SpaceX's DA-26-36 request and pending Gen3 application (26). All core and required facts are correct and no trap is asserted. The answer does not explicitly say Starlink needs a space station modification, only that nothing is granted immediately.

The order itself is FCC 26-65 (adopted Sept. 30, 2026; released Oct. 1, 2026): https://docs.fcc.gov/public/attachments/FCC-26-65A1.pdf. Figures below are from that text. Press "550 MHz / 1,050 MHz" does not match the decision paragraphs.

12.7 GHz megahertz. In the decision, the Commission says it unlocks **525 megahertz** in the 12.7 GHz band (12.7–13.25 GHz), including 525 MHz of contiguous NGSO downlink spectrum (**¶¶**15–16). That conflicts with Appendix G, which describes the same action as **550 MHz** of Ku-band spectrum and **1,050 MHz** combined with 500 MHz at 42–42.5 GHz. ¶2 only says "more than 1,000 megahertz" across both bands. The 12.7–13.25 GHz range is 550 MHz wide; the order does not explain the 525 vs. 550 gap.

NGSO use and interference footing. NGSO FSS may transmit **space-to-Earth on a primary basis** to **blanket-licensed** user terminals, including ESIMs on land, sea, and air (**¶¶**3, 15, 18; new footnote NG144). Those receiving earth stations, including ESIMs, must **accept any harmful interference** from co-primary FSS (Earth-to-space) uplink earth stations and are unprotected against them; they are not secondary to those uplinks (**¶¶**15, 18; NG144). They must also protect, and accept interference from, grandfathered terrestrial stations until the sunset. PFD limits from 10.7–11.7 GHz are extended to 12.7 GHz (¶19).

Uplinks that remain allowed. Ground uplinks are limited to **individually licensed gateway and feeder-link earth stations** talking to GSO and NGSO space stations (**¶¶**3, 21, 23; NG144). The old NG52 limit of GSO uplinks to international systems is removed for 12.75–13.25 GHz (**¶**22). Separately, **blanket-licensed ESIMs on aircraft at altitude and ships away from the coast** may uplink **only to GSO** satellites, **only in 12.75–13.25 GHz**, under WRC-23 Resolution 121 limits, and **on a secondary basis to NGSO FSS downlinks**; aircraft transmissions in U.S. airspace are limited to **3 km or higher** (**¶¶**25–27; NG527A). No blanket-licensed fixed/VSAT uplinks. No ESIM uplinks in 12.7–12.75 GHz.

Freezes. In **12.7–12.75 GHz**, the temporary freeze on new space and earth station filings is replaced by a **permanent freeze** on new FSS (Earth-to-space) space and earth station applications, to buffer 12.2–12.7 GHz satellite-TV and NGSO FSS downlink receivers; applications will not be accepted after the **effective date** of the R&O (**¶¶**21, 24; NG144). In **12.75–13.25 GHz**, the temporary freeze on new space and earth station licenses and new U.S. market-access requests is **lifted effective on Federal Register publication** (treated as procedural, so not subject to 5 U.S.C. § 553(d)) (**¶**21). The freeze on **new** fixed microwave, BAS, and CARS licenses is made permanent; renewals of grandfathered licenses continue (**¶**29 n.85).

Grandfathered FS/MS. Existing fixed and mobile licensees stay **co-primary for 10 years after Federal Register publication** of the R&O, then automatically become **secondary**: they may continue only on an unprotected, non-harmful-interference basis vis-à-vis FSS uplinks and downlinks (**¶¶**29–30, 33; ordering clause **¶**134; NG144). The U.S. Table FS/MS allocations are changed from primary to secondary now, with grandfathering carrying the 10-year protection. **¶**33's "after 2036" is an illustration, not the rule. Affected licensees have **30 days after FR publication** to protest the proposed Section 316 modification (**¶**134).

42 GHz. Primary **FSS (space-to-Earth)** for **GSO and NGSO downlinks** to **individually licensed and Nationwide Non-Site** earth stations, limited to **gateway and feeder-link** stations (new NG150); no blanket-licensed user terminals or ESIMs (**¶¶**4, 36–37). FS stays primary; non-Federal MS goes from primary to **secondary** and must protect fixed FSS and FS sites (**¶**38). "Light licensing" is found appropriate, but the mechanics are **deferred**; until then, applications are processed under existing licensing rules (**¶¶**39–40).

Effective date. The R&O and Order of Proposed Modification are effective **60 days after Federal Register publication**, except revisions to **47 C.F.R. §§ 100.212(c), 100.212(i), 100.212(j), 100.275(n), and 100.275(o)**, which wait until OMB finishes any Paperwork Reduction Act review the Space Bureau determines is required, with the date set by a later public notice (ordering clause **¶**132). The 12.75–13.25 GHz freeze lift is separately effective on FR publication (**¶**21).

Starlink. The order does **not** let Starlink (or any named operator) use the band immediately. There is no operator-specific grant. Substantive rules are not effective until 60 days after FR publication (and some earth-station rules later, pending OMB). New 12.75–13.25 GHz applications can be filed only once that freeze lift is published. Any NGSO downlink must still be licensed, must protect grandfathered terrestrial stations for 10 years, and must accept interference from co-primary uplink earth stations. The order also notes that Region 2 has no international downlink allocation for most of the band, so these operations do not get immediate international coordination protection (**¶**17 n.52).

> **Judge:** The answer denies that the order says 525 MHz and says the Sept. 9 draft rather than the order is the source, and it claims the released order reversed the NGSO-downlink interference footing (contradicting facts 1, 2, 5). It also states a 30-day effective date (contradicting the 60-day rule) and omits the 100.212/100.275 exceptions.

From FCC 26-65 itself (adopted Sept. 30, 2026; released Oct. 1, 2026): the Commission does not say it unlocks 550 MHz, or 525 MHz, "in the 12.7 GHz band." Paragraph 2 says it unlocks **more than 1,000 MHz combined** in 12.7–13.25 GHz and 42–42.5 GHz, and estimates high-throughput satellite capacity will rise about **25% in 12.7 GHz and 7.2% in 42 GHz**. The "525 MHz of additional, contiguous downlink" / "more than 25%" figure is in the Sept. 9 draft, not restated as an "unlock" number in the released order's opening. Press "550 MHz" is just the width of 12.7–13.25 GHz. Source: https://docs.fcc.gov/public/attachments/FCC-26-65A1.txt

12.7 GHz (¶ 3). Bi-directional FSS. Allowed uplinks: individually licensed gateway and feeder-link earth stations to **GSO and NGSO**, plus ESIMs on aircraft and ships to **GSO only**. Downlink: **NGSO only**, to blanket-licensed user terminals, including ESIMs. Incumbent terrestrial operations are protected and then sunset after **10 years**.

Interference footing. The Sept. 9 draft required NGSO downlinks to **accept any interference from FSS uplinks**. The released order changed that. Communications Daily (Space Bureau) and Quilty report that **GSO ESIMs on aircraft and ships are now secondary to NGSO downlinks to user terminals**, while **GSO gateways keep priority**. I could not retrieve the later paragraphs of FCC-26-65A1 to quote the footnote, so treat the ESIM-secondary / gateway-primary split as reported from the order, not as text I verified line by line. https://communicationsdaily.com/article/2026/10/01/fccs-september-meeting-creates-big-spectrum-availability-for-satellite-updates-tcpa-rules-2609300037 ; https://advanced-television.com/2026/10/07/quilty-examines-fccs-spectrum-order/

Freeze (draft ¶¶ 24, 66; not re-verified in the released text). New FSS Earth-to-space space- and earth-station applications in **12.7–12.75 GHz are permanently frozen** after the effective date (buffer to 12.2–12.7 GHz TV/FSS downlinks). The temporary freeze on new space/earth-station applications and U.S. market-access requests in **12.75–13.25 GHz lifts on Federal Register publication**. The freeze on new fixed-microwave, BAS, and CARS licenses (in place since Sept. 19, 2022) is made permanent; renewals of grandfathered licenses continue. https://docs.fcc.gov/public/attachments/DOC-424841A1.pdf

Grandfathered FS/MS. They stay primary for **10 years after Federal Register publication**, then drop to secondary and may not cause harmful interference to, or claim protection from, FSS uplinks or downlinks. The draft also says "after 2036," which only matches a 2026 publication year. https://docs.fcc.gov/public/attachments/DOC-424841A1.pdf

42 GHz (¶ 4). Primary FSS **downlink** allocation to **individually licensed and Nationwide Non-site** earth stations. Terrestrial FS stays primary; non-Federal MS goes from primary to **secondary**. "Light licensing" (non-exclusive nationwide license plus third-party database registration, as in 70/80/90 GHz) is the intended approach, but **implementation is deferred**. Quilty says the final order added the nationwide V-band gateway license at SpaceX's request; the draft had only individually licensed gateways. https://docs.fcc.gov/public/attachments/FCC-26-65A1.txt

Effective date. I could not retrieve the ordering clauses. The draft ties the 12.75–13.25 GHz freeze lift and the 12.7–12.75 GHz permanent freeze to **Federal Register publication / the effective date**, and the usual PRA pattern is 30 days after publication except information-collection rules delayed pending OMB. I cannot confirm the exceptions from the released order.

Starlink cannot use the new downlink immediately. The rules are not yet effective, the 12.75–13.25 GHz application freeze lifts only on Federal Register publication, and an operator still needs a modified authorization before transmitting. Starlink already uses much of 12.7–13.25 GHz for **uplink**; the new piece is NGSO **downlink** to consumer and in-motion dishes, on the interference footing above. https://myitcon.com/blog/post/fcc-opens-more-bandwidth-for-broadband-satellites

Keenable SELECT ✓ Correct ✓ ✓ ✓ ✓ 5.4m · ~$0.421 · 18 searches · 12 fetches

> **Judge:** All core and required facts are correct, and no trap is asserted. Only context facts are missing: the 10.7-11.7 GHz PFD extension, NG52 removal, the 12.7-12.75 GHz buffer rationale, the 30-day protest window, the 42 GHz PFD limits, the part 100 drafting rationale, and SpaceX's DA-26-36 request and Gen3 application. The answer relies on the September draft rather than the released order.

The released order (FCC-26-65A1) was not on the FCC site when checked: `docs.fcc.gov/public/attachments/FCC-26-65A1.pdf` returned 404, and contemporaneous reports said the final text had not been published. What follows is from the September 9, 2026 draft the Commission circulated for the September 30 vote (`DOC-424841A1`), plus post-vote reporting of changes. Treat the draft figures as the Commission's own wording only where noted.

12.7 GHz megahertz. In the draft, the Commission says it "aggressively unlock[s] **525 megahertz**" in the 12.7–13.25 GHz band for new uses, including consumer satellite broadband. The same draft's band math and cost analysis use the full **550 MHz** width of 12.7–13.25 GHz, and the press "550 MHz for downlinks" figure matches that width, not the "525" sentence. The combined "more than 1,000 MHz" / press "1,050 MHz" is 12.7 GHz plus 500 MHz at 42–42.5 GHz, not the 12.7 GHz band alone. Source: https://docs.fcc.gov/public/attachments/DOC-424841A1.pdf

NGSO use and interference footing. The draft adopts a primary FSS (space-to-Earth) allocation so NGSO systems may downlink to blanket-licensed user terminals and ESIMs on land, at sea, and in the air. Those downlinks must accept any interference from FSS uplinks, and NGSO receiving terminals operate unprotected relative to uplink earth stations and grandfathered terrestrial stations. Source: https://docs.fcc.gov/public/attachments/DOC-424841A1.pdf

Uplinks that remain allowed. Ground uplinks stay limited to individually licensed gateway and feeder-link earth stations, to both GSO and NGSO space stations. Blanket-licensed ESIM uplinks are allowed only in 12.75–13.25 GHz, from aircraft (at least 3 km in U.S. airspace) and maritime vessels away from the coast, to GSO space stations. New FSS Earth-to-space licenses in 12.7–12.75 GHz are not accepted. Source: https://docs.fcc.gov/public/attachments/DOC-424841A1.pdf

Freeze. On Federal Register publication, the temporary freeze is lifted for new space and earth-station applications and U.S. market-access requests in **12.75–13.25 GHz**. In **12.7–12.75 GHz**, the temporary freeze is replaced by a permanent freeze on new FSS (Earth-to-space) space and earth-station applications after the Report and Order's effective date (footnote NG144). Source: https://docs.fcc.gov/public/attachments/DOC-424841A1.pdf

Grandfathered fixed and mobile. They stay co-primary until Federal Register publication plus 10 years (the draft says "after 2036"), then automatically become secondary and must operate unprotected and without causing harmful interference to FSS uplinks and downlinks. Source: https://docs.fcc.gov/public/attachments/DOC-424841A1.pdf

42 GHz. The draft adds a primary FSS (space-to-Earth) allocation at 42–42.5 GHz for downlinks to individually licensed gateway and feeder-link earth stations only (no blanket user terminals). Fixed service stays primary; non-Federal mobile becomes secondary. It endorses light licensing but defers the mechanism. Quilty, reporting on the adopted text, says the final order added a nationwide V-band gateway license at 42–42.5 GHz at SpaceX's request. Sources:

https://docs.fcc.gov/public/attachments/DOC-424841A1.pdf ; https://advanced-television.com/2026/10/07/quilty-examines-fccs-spectrum-order/

Effective date. Ordering clause: the Report and Order and Order of Proposed Modification is effective **60 days after Federal Register publication**, except revisions to sections 100.212(c), 100.212(i), 100.212(j), 100.275(n), and 100.275(o), which wait for any OMB Paperwork Reduction Act review the Space Bureau requires and a later Public Notice. Separately, the 12.75–13.25 GHz freeze lift is effective on Federal Register publication and is treated as procedural, so not subject to the APA delayed-effective-date rule, 5 U.S.C. § 553(d). Source: https://docs.fcc.gov/public/attachments/DOC-424841A1.pdf

Starlink immediately: no. Allocation does not authorize SpaceX's system. Reports after the vote say SpaceX still needs a modification application and compatible equipment. The FCC had not published the final text as of September 30. Source: https://teslanorth.com/2026/09/30/starlink-fcc-spectrum-boost/

Adopted-text changes I could verify only second-hand. Quilty says the final text demotes GSO aircraft and ship terminals to secondary relative to NGSO user-terminal downlinks, while GSO gateways keep priority, and that five of seven September 21 SpaceX requests were adopted in whole or in part. Communications Daily says the adopted order adds language, not in the draft, requiring GSO uplinks in 12.7 GHz to protect NGSO downlinks. I could not confirm those sentences in the order itself. Sources: https://advanced-television.com/2026/10/07/quilty-examines-fccs-spectrum-order/ ; https://communicationsdaily.com/article/2026/10/01/fccs-september-meeting-creates-big-spectrum-availability-for-satellite-updates-tcpa-rules-2609300037?BC=bc_6abddb9e28f3d

Grok native **Partly correct** Claim not in sources `50.7s · $0.428 · 13 searches · 2 fetches`

> **Judge:** The answer says NGSO downlinks must protect grandfathered fixed and mobile stations, but the order makes them unprotected (fact 6). It also calls SpaceX only a commenter, though SpaceX requested the band in DA-26-36 and has a Gen3 application pending (fact 26). It omits the 10.7-11.7 GHz PFD extension (fact 7), the 42 GHz PFD extension (fact 20), and the part 100 drafting rationale (fact 24).

The Commission's own order, FCC 26-65 (adopted 30 September 2026, released 1 October 2026), does not match the press figure of 550 MHz "unlocked" in 12.7 GHz. Source: https://docs.fcc.gov/public/attachments/FCC-26-65A1.txt

Megahertz in 12.7 GHz. In the decision text the Commission says it "aggressively unlock[s] **525 megahertz**" in the 12.7 GHz band for new uses, and that this is "525 megahertz of additional, contiguous downlink spectrum—a more than 25% increase" beside existing Ku-band NGSO downlinks (¶¶ 15–16). The band itself is 12.7–13.25 GHz. Elsewhere the same document is inconsistent: the regulatory-impact analysis describes "550 MHz of Ku-band spectrum" in 12.7–13.25 GHz and an alternative that would "unlock 1,050 megahertz" across 12.7 and 42 GHz (App. G), while the introduction says only "more than 1,000 megahertz" in both bands together (¶ 2). The 42 GHz piece is consistently **500 MHz** (42–42.5 GHz) (¶ 36).

NGSO use and interference footing. NGSO systems get a new **primary FSS (space-to-Earth)** allocation across 12.7–13.25 GHz, with **blanket-licensed** user terminals and ESIMs on land, at sea, and in the air (¶¶ 15, 18; new footnote NG144). Those receiving earth stations, including ESIMs, must **accept harmful interference** from co-primary FSS (Earth-to-space) uplink earth stations when geographically near them (¶ 18; NG144). They must also protect grandfathered fixed and mobile stations until the sunset (¶ 20). GSO ESIM uplinks in this band are **secondary to NGSO FSS downlinks** (¶ 27).

Uplinks that remain allowed. Ground uplinks are limited to **individually licensed gateway and feeder-link earth stations** talking to **GSO and NGSO** space stations (¶¶ 15, 23). The old limit of GSO uplinks to international systems is removed in 12.75–13.25 GHz (¶ 22). Separately, **blanket-licensed ESIMs** may uplink **only to GSO** space stations, and **only in 12.75–13.25 GHz**, from aircraft at altitude and maritime vessels away from the U.S. coast, consistent with Resolution 121 (WRC-23). Aircraft in U.S. airspace may transmit only at **3 km or higher** (¶¶ 25–26; NG527A). Ubiquitous ground uplinks (for example VSATs) are not authorized. New FSS (Earth-to-space) licenses in **12.7–12.75 GHz** will not be accepted (¶ 24).

Application freeze. The temporary freeze on new space- and earth-station applications and U.S. market-access requests in **12.75–13.25 GHz** is **lifted effective on Federal Register publication**; that lift is treated as procedural and not subject to the APA's delayed effective date (¶ 21). In **12.7–12.75 GHz**, the temporary freeze is lifted as of the Report and Order's effective date and **replaced by a permanent freeze** on new FSS (Earth-to-space) space- and earth-station applications, to buffer 12.2–12.7 GHz satellite-television and FSS downlinks (¶ 24; NG144).

Grandfathered fixed and mobile. Existing fixed microwave, BAS, and CARS licensees are grandfathered. No new terrestrial licenses; renewals of grandfathered licenses continue (¶ 29). They keep **co-primary** status for **10 years after Federal Register publication** of this order, then drop automatically to **secondary**: they may continue, but must not cause harmful interference to, or claim protection from, primary FSS uplinks or downlinks (¶¶ 29–30, 33; ordering clause ¶ 134). The order also refers to continued primary operation "until 2036" and secondary status "after 2036" (¶ 33); that is the same 10-year sunset counted from a 2026 publication, not a separate date. Affected licensees have **30 days after Federal Register publication** to protest the proposed Section 316 modification (¶ 134).

42 GHz. Primary **FSS (space-to-Earth)** for **both GSO and NGSO** downlinks, limited to **gateway and feeder-link** earth stations that are **individually licensed or Nationwide Non-Site licensed** (¶¶ 4, 36–37; NG150). Blanket-licensed user terminals are not authorized. "Light licensing" is the preferred framework, but mechanics are deferred; until then, applications are processed under existing licensing rules (¶¶ 39–40). Terrestrial fixed service stays primary; non-Federal mobile is changed from primary to **secondary** and must protect fixed FSS and FS sites (¶¶ 4, 38).

Effective date. The Report and Order and Order of Proposed Modification are effective **60 days after Federal Register publication**, except revisions to **§§ 100.212(c), 100.212(i), 100.212(j), 100.275(n), and 100.275(o)**, which stay ineffective until any Paperwork Reduction Act review the Space Bureau determines is required is finished and a later public notice sets their effective date (¶ 132). The 12.75–13.25 GHz freeze lift is separately effective on publication (¶ 21).

Starlink. The order does not authorize Starlink, or any operator, to use the band immediately. SpaceX is only a commenter. New NGSO downlinks and related earth-station rules are not effective until the dates above, and an operator still needs an authorization or modification before transmitting.

PROMPT 140 · REGULATION · FACTS AS OF 2026-10-09

The FAA signed a Record of Decision for Starship-Super Heavy at Launch Complex 39A in late January 2026. From the ROD, not the news: what is the signature date, which alternative did the FAA select and which did it identify as environmentally preferable, which three impact categories are listed as unavoidable and significant, how many closure hours per year the ROD gives for tests versus launches and reentries and what share is at night, the NPS annual fee-loss range, the Section 4(f) finding, and how the mitigation measures bind SpaceX. Do not report the draft-EIS '60.5 beach-closure days' as the ROD's number, and do not say the ROD issued a launch license.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Grade the FAA Record of Decision for SpaceX Starship-Super Heavy Launch Vehicle at LC-39A, Kennedy Space Center (ROD, 52 pages), signed 1/29/2026 by Katie L. Cranor, Executive Director, Office of Operational Safety, ASA-1, Commercial Space Transportation (Decision and Order, page 52). News said "released January 30, 2026"; the signature date is 29 January 2026.

Alternatives: the FAA selected the Preferred Alternative (issue a new vehicle operator license or modify an existing license for up to 44 launches and 88 landings per year, 44 per stage, plus about 800,000 sq ft of infrastructure). The Environmentally Preferable Alternative is the No Action Alternative, rejected because it is inconsistent with purpose and need and the Commercial Space Launch Act direction (page 10). The ROD does not issue a license: "The completion of the environmental review process does not guarantee that the FAA would issue a license"; the action must also meet safety, risk and indemnification requirements (page 5).

Unavoidable significant effects (page 16): noise and noise-compatible land use, air quality, and airspace transportation. Noise detail (pages 18-20): outdoor levels above 97 dBA max at representative locations; awakening likelihood as high as 82 percent during late-night operations, which make up about half of annual events; sonic booms above 60 dB C-weighted DNL over 28,595 acres off KSC/CCSFS; "Significant effects associated with the Preferred Alternative are unavoidable."

Closures (Health and Safety, pages 16-17): up to 396 hours per year for tests and 462 hours per year for launches and reentries, just under 10 percent of the year (4.5 percent tests, 5.3 percent launches/reentries); half of closure time by day and half at night. The "60.5 days" / "33 to 44 full-day and up to 33 half-day Playalinda closures" figures come from the August 2025 Draft EIS coverage (Florida Today / Yahoo), not from the ROD summary.

NPS: annual fee loss potentially between $239,000 and $423,000, about 13 to 24 percent of revenue (page 20).

Section 4(f) (U.S. DOT Act, Section 4(f) subsection of the consequences summary): no use of Section 4(f) resources; 392 Section 4(f) resources in the noise study area; MINWR and CANA found not subject to 4(f) evaluation for this action; no officials with jurisdiction objected.

Mitigation (Mitigation and Monitoring Summary, pages 20-21): measures include USFWS ESA Section 7 terms, NMFS MMPA stipulations and the NHPA Section 106 Programmatic Agreement; "The issuance of a license to SpaceX will be conditioned upon SpaceX's demonstration that it has complied with required mitigation measures"; mitigation actions "will be made the subject of the terms and conditions of any license issued"; the FAA may enter an agreement for annual environmental inspections.

Wrong answers: ROD issued or modified the license; Preferred Alternative is also environmentally preferable; closure figures given in days from the draft EIS; signature date 30 January.

Source: https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc/SpaceX-SSH-LC-39A-Final-EIS-ROD.pdf (same document as https://www.faa.gov/sites/faa.gov/files/20260123-SSH-LC-39A-ROD-Final.pdf)

Exa ✓ Correct ✓ ✓ ✓ ✓ 9.3m · $2.249 · 14 searches · 37 fetches

Judge: All core and required facts are correct, and no trap is asserted. Only context facts are missing: the noise details (97 dBA, 82 percent awakening, sonic boom acreage), the 'unavoidable' quote, the draft-EIS source of the 60.5 days, the 392 resources and the specific consultation names in the mitigation measures.

I'll look up the FAA Record of Decision itself and pull the signature date, alternatives, impacts, closures, and related findings from that document.The ROD PDF is on FAA.gov. I'll read it for the signature date, closure hours, NPS fee loss, Section 4(f), and how mitigations bind SpaceX.The first fetch cut off before the signature block and the NPS fee-loss language. I'll pull those remaining sections from the ROD.The signature block was not in the excerpt. I'll try the ROD PDF and the docket page again for the signed date.From the FAA Record of Decision (ROD) for Starship-Super Heavy at LC-39A, not the Draft EIS and not a launch license.

Signature date. The ROD is a 52-page PDF. The signature block is on the last pages, which were not in the text returned from the file. Readings of that block date it **January 29, 2026**, signed by Katie L. Cranor, Executive Director, Office of Operational Safety. The file was posted January 30, 2026 (filename `20260123-SSH-LC-39A-ROD-Final.pdf`). The January 29, 2026 Federal Register notice is a separate availability notice signed by Stacey Molinich Zee, not the ROD signature.

Alternatives. The FAA selected the Preferred Alternative: issue a new vehicle operator license, or modify an existing one, for Starship-Super Heavy at LC-39A (with renewals and modifications within the Final EIS scope), plus temporary airspace closures. It identified the No Action Alternative as environmentally preferable, because its effects would be less, but rejected it as inconsistent with the purpose and need and the Commercial Space Launch Act.

Unavoidable significant impacts. Noise and noise-compatible land use, air quality, and airspace transportation.

Closures (ROD hours, not the draft "60.5 beach-closure days"). Up to **396 hours per year for tests** and **462 hours per year for launches and reentries** — just under 10 percent of the year (about 4.5 percent tests, 5.3 percent launches and reentries). **Half of those closure hours are daytime and half nighttime.**

NPS fee loss. Canaveral National Seashore could lose **$239,000 to $423,000 per year** in fees, about **13 to 24 percent** of average annual revenue. The ROD says NPS may treat that as a significant effect on park operations.

Section 4(f). No use. No permanent incorporation or temporary occupancy of Section 4(f) property, and no significant impairment of historic sites, parks, or refuges (so no constructive use). Using the joint-development exception in 23 CFR §774.11(i) as guidance, the FAA found Merritt Island National Wildlife Refuge and Canaveral National Seashore are not subject to a Section 4(f) evaluation. Officials with jurisdiction were notified; none nonconcurred.

How mitigation binds SpaceX. Measures are a condition of any launch license, not of this ROD. The ROD says a license will be conditioned on SpaceX showing it has complied; operational mitigations will be license terms and conditions; SpaceX must monitor and report; and the FAA may agree to annual environmental inspections. The ROD states that finishing NEPA does not issue or guarantee a license; safety, risk, and indemnification requirements still apply.

Parallel Correct

24.6s · $0.095 · 2 searches · 1 fetches

> **Judge:** Every core and required fact is correct and no trap is asserted. Several context facts are missing: the 52-page description, the noise detail, the 392 resources, the draft-EIS figures, and the named mitigation instruments.

From the FAA Record of Decision (ROD) itself (PDF):

Signature date. Katie L. Cranor, Executive Director, Office of Operational Safety, Commercial Space Transportation, signed the ROD on January 29, 2026.

Alternatives. The FAA selected the Preferred Alternative: issue a new vehicle operator license, or modify an existing one, for Starship-Super Heavy at LC-39A (with potential renewals and modifications within the scope analyzed, plus temporary airspace closures). It identified the No Action Alternative as environmentally preferable, because its effects would be less than those of the Preferred Alternative. The ROD states that finishing the environmental review does not guarantee a license and does not itself issue one; safety, risk, and indemnification requirements still apply.

Unavoidable significant impacts. The ROD lists unavoidable, significant direct and indirect effects in three categories: noise and noise-compatible land use, air quality, and airspace transportation.

Closures. Approximate closure times are up to 396 hours per year for tests and 462 hours per year for launches and reentries (about 4.5% and 5.3% of the year, just under 10% combined). Half of the closure time would be at night and half during the day. The ROD does not use a beach-closure-days figure.

NPS fee loss. The NPS could lose $239,000 to $423,000 per year in fees from closures, about 13% to 24% of annual average revenue. The ROD notes the NPS may treat that as a significant adverse effect on its operations.

Section 4(f). The FAA found no use of Section 4(f) resources: no permanent incorporation or temporary occupancy, and no significant impairment of historic sites, public parks and recreation areas, or wildlife and waterfowl refuges (and no constructive use). Using the Joint Development Exception as guidance, it also found Merritt Island National Wildlife Refuge and Canaveral National Seashore are not subject to Section 4(f) evaluation. Officials with jurisdiction were notified and did not respond with issues or nonconcurrence.

How mitigation binds SpaceX. Measures in the ROD are conditions of approval. Any license would be conditioned on SpaceX showing it has complied with required mitigation; operational mitigation would be written into the terms and conditions of any license. SpaceX must monitor implementation and report; the FAA may agree to annual environmental inspections.

> **Judge:** All core and required facts are correct. Some context facts are missing: noise detail, awakening likelihood, sonic boom acreage, MINWR/CANA finding, no objections, specific mitigation instruments, annual inspections agreement, and the page count.

The FAA's Record of Decision (ROD) for Starship-Super Heavy at Launch Complex 39A was signed January 29, 2026, by Katie L. Cranor, Executive Director of the Office of Operational Safety, and posted January 30, 2026. It is an environmental decision, not a launch license.

Alternatives. The FAA selected the Preferred Alternative: issue a new vehicle operator license, or modify an existing one, for Starship-Super Heavy at LC-39A (with renewals and modifications within the scope analyzed), and issue related temporary airspace closures. It identified the No Action Alternative as environmentally preferable because its effects would be less than those of the Preferred Alternative. The FAA did not select No Action because it would not meet the purpose and need, including the FAA's commercial-space statutory direction.

Unavoidable significant impacts. The ROD states there would be unavoidable, significant direct and indirect effects in three categories: noise and noise-compatible land use, air quality, and airspace transportation. It says all practicable means to minimize harm to those resources were considered.

Closures (ROD figures, not the draft EIS's 60.5 "closure days"). Up to 396 hours per year for tests and 462 hours per year for launches and reentries—about 4.5% and 5.3% of the year, just under 10% combined. Half of those closure hours would be at night and half during the day.

NPS fees. The National Park Service could lose about $239,000 to $423,000 per year in fees from closures, roughly 13% to 24% of annual average revenue.

Section 4(f). The ROD finds no use of Section 4(f) resources from construction under the Preferred Alternative. It identifies 392 Section 4(f) resources in the project area associated with noise, finds the project would not significantly impair historic sites, public parks and recreation areas, or wildlife and waterfowl refuges, and does not find a constructive use. Noise and closures are treated as temporary.

How mitigation binds SpaceX. Avoidance, minimization, and mitigation measures are part of the selected alternative and are to be required as conditions of any launch license, with a mitigation monitoring program. The ROD also states that finishing this review does not guarantee a license; SpaceX must still meet FAA safety, risk, and financial-responsibility requirements in 14 CFR parts 400–460.

Sources: ROD (FAA); FAA project page; posted copy used for text: ROD PDF. Signature date as reported with that signed ROD: Talk of Titusville, Jan. 30, 2026.

Keenable SELECT Correct

3.6m · ~$0.192 · 10 searches · 2 fetches

> **Judge:** All core and required facts are correct and no trap is asserted. Only context facts are missing: the 52-page length, the noise details (97 dBA, 82% awakening, 28,595 acres), the

> 392 Section 4(f) resources, and the named mitigation instruments (USFWS, NMFS, NHPA).

From the Record of Decision itself, not the news coverage. The ROD is the FAA Office of Commercial Space Transportation document for SpaceX Starship-Super Heavy at Launch Complex 39A, Kennedy Space Center. The official file is SpaceX-SSH-LC-39A-Final-EIS-ROD.pdf; the FAA PDF returned an error when fetched, so the quotations below are from a hosted copy of that same ROD: talkoftitusville.com copy.

Signature date. January 29, 2026 (`01/29/2026`), signed by Katie L. Cranor, Executive Director, Office of Operational Safety, ASA-1, Commercial Space Transportation. The date sits above the signature block and the Right of Appeal section. Public release was the next day; that is not the signature date.

Alternative selected. The Preferred Alternative: FAA issuance of a new vehicle operator license, or modification of an existing license, for Starship-Super Heavy at LC-39A, plus potential renewals and modifications within the scope of the Final EIS, and temporary airspace closures. The ROD says the FAA "has selected the Preferred Alternative."

Environmentally preferable alternative. The No Action Alternative. The ROD states that this is the environmentally preferable alternative in the Final EIS "because the effects of the No Action Alternative would be less than those expected from the Preferred Alternative." It also says the No Action Alternative is not the FAA's Preferred Alternative because it does not meet the purpose and need.

Unavoidable significant impacts. Three categories: noise and noise-compatible land use, air quality, and airspace transportation. The ROD's wording is "unavoidable, significant direct and indirect effects" in those categories.

Closure hours. Approximate times of closure are up to 396 hours per year for tests and 462 hours per year for launches and reentries. The ROD says that is just under 10 percent of the hours in a year (about 4.5 percent for tests and 5.3 percent for launches and reentries). Half of the closure times would be during the day and half at night. These are hours, not the draft-EIS figure of 60.5 beach-closure days.

NPS fee loss. The National Park Service "could experience a range of annual fee loss due to closures potentially between $239,000 and $423,000," about 13 to 24 percent of annual average revenue. The ROD notes NPS may consider that a significant adverse effect on its ability to fund projects, staff, and park maintenance.

Section 4(f). No use. Construction would not use Section 4(f) resources. The project does not require permanent incorporation or temporary occupancy of Section 4(f) resources, and the FAA determined it "does not significantly impair historic sites, public parks and recreation areas, or wildlife and waterfowl refuges; thus, the project would not use Section 4(f) resources." The FAA also treated Merritt Island National Wildlife Refuge and Canaveral National Seashore as not subject to Section 4(f) evaluation under the joint-development exception in 23 CFR §774.11(i). Officials with jurisdiction were notified and none responded with issues or nonconcurrence.

How mitigation binds SpaceX. The ROD lists mitigation measures "that SpaceX will be required to implement as a condition of the launch license." "The issuance of a license to SpaceX will be conditioned upon SpaceX's demonstration that it has complied with required mitigation measures," and "mitigation actions related to SpaceX operations will be made the subject of the terms and conditions of any license issued to SpaceX." The FAA may also agree with SpaceX on annual environmental inspections.

The ROD does not itself issue a launch license. It says the decision means applicable federal environmental requirements for the FAA's federal action have been met and "enables the FAA to implement that action." The federal action is later issuance, modification, or renewal of a license, plus temporary airspace closures.

Grok native ✓ Correct ✓ ✓ ✓ ✓ `1.3m · $0.561 · 14 searches · 6 fetches`

> **Judge:** All core and required facts are covered. Only context facts are missing: the 52-page length, the noise details (97 dBA, 82% awakening, 28,595 acres), the 392 Section 4(f) resources, the named consultation measures, and the draft-EIS figure explanation. The answer also omits the 44 launch / 88 landing numbers for the Preferred Alternative, and it hedges that the signature page itself was not retrieved.

The FAA Record of Decision (ROD) is the January 2026 document for Starship-Super Heavy at LC-39A: https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc/SpaceX-SSH-LC-39A-Final-EIS-ROD.pdf. The signature block itself was not in the ROD text retrieved here (FAA PDFs returned 403). Accounts that quote that block date it **January 29, 2026**, signed by Katie L. Cranor, Executive Director, Office of Operational Safety. That date matches the Final EIS cover signed by the same official, but it is not independently confirmed from the ROD signature page.

Alternative. The FAA selected the **Preferred Alternative**: SpaceX's proposal, as modified by the avoidance, minimization, and mitigation measures in the Final EIS—i.e., issuing a new vehicle operator license or modifying an existing one for Starship-Super Heavy at LC-39A, plus temporary airspace closures. It identified the **No Action Alternative** as environmentally preferable because its effects would be less. No Action was not selected because it does not meet the purpose and need, including the Commercial Space Launch Act direction to encourage commercial launch and reentry.

The ROD is an environmental decision only. It states that completing the review **does not guarantee a license**; safety, risk, and indemnification requirements still apply.

Unavoidable significant effects. The ROD lists unavoidable, significant direct and indirect effects in three categories: **noise and noise-compatible land use, air quality, and airspace transportation.**

Closures (ROD figures, not the draft-EIS beach-day figure). Up to **396 hours per year for tests** and **462 hours per year for launches and reentries**—about **4.5 percent** and **5.3 percent** of the year, **just under 10 percent** combined. **Half of those closure hours would be at night** and half during the day.

NPS fees. The ROD gives a potential annual NPS fee loss from closures of **$239,000 to $423,000**, about **13 to 24 percent** of average annual revenue, which the NPS may treat as a significant adverse effect on park operations.

Section 4(f). The ROD finds **no Section 4(f) use**: no permanent incorporation or temporary occupancy of Section 4(f) land, and no significant impairment of historic sites, public parks and recreation areas, or wildlife and waterfowl refuges. It treated MINWR and Canaveral National Seashore as not subject to Section 4(f) under the joint-development exception at 23 CFR §774.11(i). Officials with jurisdiction were notified; the ROD states none responded with issues or nonconcurrence.

How mitigation binds SpaceX. Measures are a condition of approval of the action. License issuance is conditioned on SpaceX showing it has complied with required mitigation. Operational mitigation becomes **terms and conditions of any license** issued to SpaceX. SpaceX must monitor implementation; the FAA may agree to annual environmental inspections.

PROMPT 141 · LIST-BUILDING · FACTS AS OF 2026-10-09

List every Federal Register notice the FAA published in 2026 that concerns SpaceX: FR document number, publication date, docket number, the action it announces, the vehicle and site, and the date and official in the signature block. Include notices of intent, draft documents and comment-period extensions, not only final decisions.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Six notices (FR API query: agency FAA, term SpaceX, 2026). Each from federalregister.gov.

1. 2026-02108, published February 3, 2026, Docket FAA-2024-1395: Notice of Availability of the Final EIS and ROD for Starship-Super Heavy at LC-39A, Kennedy Space Center (up to 44 launches, 44 Super Heavy and 44 Starship landings per year). Dated January 29, 2026, Stacey Molinich Zee, Manager, Operations Support Branch. https://www.federalregister.gov/documents/2026/02/03/2026-02108/
2. 2026-03291, February 19, 2026, Docket FAA-2025-3124: NOA of the Final Tiered EA and FONSI/ROD for Updates to Airspace Closures for Additional Launch Trajectories and Starship Boca Chica Landings (27 public comments; draft released Sept 19, 2025; comment period closed Oct 20, 2025). Issued February 17, 2026, Stacey Molinich Zee. https://www.federalregister.gov/documents/2026/02/19/2026-03291/
3. 2026-14148, July 14, 2026, Docket FAA-2026-6968: NOA and request for comment on the Draft Tiered EA for Starship Reentry Contingency Operations in the Pacific Ocean and Additional Starship Landing Trajectory; comments due July 27, 2026. Dated July 10, 2026, Zee. https://www.federalregister.gov/documents/2026/07/14/2026-14148/
4. 2026-15089, July 27, 2026, Docket FAA-2026-6968: extension of the comment period to August 3, 2026. Dated July 23, 2026, Zee. https://www.federalregister.gov/documents/2026/07/27/2026-15089/
5. 2026-18135, September 4, 2026, Docket FAA-2026-6968: NOA of the Final Tiered EA and FONSI/ROD for the Pacific contingency landing areas (37 comments; 22-day comment period July 13 to Aug 3, 2026). Dated September 2, 2026, Zee. https://www.federalregister.gov/documents/2026/09/04/2026-18135/
6. 2026-19897, September 29, 2026, Docket FAA-2026-10792: Notice of Intent to prepare a Supplemental EIS and open scoping for Starship-Super Heavy at SLC-37, Cape Canaveral SFS (up to 76 launches and 152 landings a year; scoping comments due October 14, 2026; supplements the 2025 DAF EIS, EISX-007-057-USF-1730277197). Signed Katie L. Cranor, Executive Director, Office of Operational Safety. https://www.federalregister.gov/documents/2026/09/29/2026-19897/

The DAF notice of its SLC-37 ROD (2025-23314) was published December 18, 2025 and is not an FAA 2026 notice. Wrong answers: fewer than six rows; a Falcon notice in 2026 (the SLC-40 EA notice 2025-16880 is from Sept 3, 2025); calling 2026-19897 a draft EIS.

Exa ✓ Correct ✓ ✓ ✓ ✓ 44.7s · $0.297 · 7 searches · 11 fetches

Judge: All core and required facts are correct: six notices with the right document numbers, dates, dockets, actions and signature blocks. Only the context facts are missing: comment counts and draft dates (7, 17), the DAF EIS reference (21), and the DAF SLC-37 ROD note (23).

The Federal Register API lists six FAA documents published in 2026 that match “SpaceX” (search run through the 2026 calendar year; API response retrieved 2026-10-09). No other 2026 FAA notice using “Space Exploration Technologies” appeared. All six are NEPA notices. Signature text is taken from the GPO versions.

1. 2026-02108 — published February 3, 2026 — Docket No. FAA-2024-1395
Action: Notice of availability of the final EIS and record of decision.
Vehicle and site: SpaceX Starship-Super Heavy at Launch Complex 39A, Kennedy Space Center, Merritt Island, Florida (up to 44 launches and landings per year; Atlantic, Pacific, and Indian Ocean landing/expend options; related construction).
Signature block: Dated January 29, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-02-03/html/2026-02108.htm

2. 2026-03291 — published February 19, 2026 — Docket No. FAA-2025-3124
Action: Notice of availability of the Final Tiered EA and FONSI/ROD.
Vehicle and site: SpaceX Starship-Super Heavy at the Boca Chica Launch Site, Cameron County, Texas — additional launch trajectories and Starship return-to-launch-site profiles, plus related temporary airspace closures.
Signature block: Issued in Washington, DC, on February 17, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-02-19/html/2026-03291.htm

3. 2026-14148 — published July 14, 2026 — Docket No. FAA-2026-6968
Action: Notice of availability, public comment period, and request for comment on a Draft Tiered EA (comment period to close July 27, 2026).
Vehicle and site: Starship expenditure in Pacific Ocean contingency landing areas (new Northern Pacific area; expanded Hawaii and Central Pacific area; expanded Southeast Pacific area) and an additional Starship landing trajectory, including related airspace closures. The notice body does not name the landing site; the later final notice identifies Starbase, Texas.
Signature block: Dated July 10, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-07-14/html/2026-14148.htm

4. 2026-15089 — published July 27, 2026 — Docket No. FAA-2026-6968
Action: Extension of the public comment period on that Draft Tiered EA, to August 3, 2026. Same vehicle, contingency areas, and airspace-closure scope as 2026-14148.
Signature block: Dated July 23, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-07-27/html/2026-15089.htm

5. 2026-18135 — published September 4, 2026 — Docket No. FAA-2026-6968
Action: Notice of availability of the Final Tiered EA and FONSI/ROD.
Vehicle and site: Starship reentry contingency operations in the Pacific Ocean (Northern Pacific; expanded Hawaii and Central Pacific; expanded Southeast Pacific) and airspace closures for an additional Starship reentry trajectory for landing at Starbase, Texas.
Signature block: Dated September 2, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-09-04/html/2026-18135.htm

6. 2026-19897 — published September 29, 2026 — FAA-2026-10792
Action: Notice of intent to prepare a supplemental EIS and open a public scoping period (comments due October 14, 2026). Not a final licensing decision.
Vehicle and site: SpaceX Starship-Super Heavy at Space Launch Complex 37, Cape Canaveral Space Force Station, Florida — proposed license modification for up to 76 launches and 152 landings per year (return-to-launch-site and ocean landings in the Atlantic, Pacific, and Indian Oceans and the Gulf of America), plus

temporary airspace closures.
Signature block: No date appears in the signature block. Official: Katie L. Cranor, Executive Director, Office of Operational Safety.
https://www.govinfo.gov/content/pkg/FR-2026-09-29/html/2026-19897.htm

The API count of six is the basis for treating this as the complete FAA set that names SpaceX. Coast Guard rules that mention SpaceX (for example the May 5, 2026 Boca Chica safety-zone rule) are not FAA notices and are omitted.

> **Judge:** All six notices and every required field are correct. Only context facts are missing: the comment counts and dates for notices 2 and 5, the 2025 DAF EIS ID for notice 6, and the note that the DAF SLC-37 ROD (2025-23314) is not an FAA 2026 notice.

The Federal Register API lists six FAA notices published in 2026 that name SpaceX (searched through October 9, 2026). All six are NEPA notices. No other 2026 FAA document matched "SpaceX," "Space Exploration Technologies," "Starship," or "Starbase." Dassault Falcon aircraft rules are unrelated. EPA's February 6, 2026, EIS weekly notice (FR Doc. 2026-02362) lists the LC-39A EIS, but EPA published that notice, not the FAA.

1. **FR Doc. 2026-02108 — published February 3, 2026 (91 FR 5020). Docket No. FAA-2024-1395.**
Action: Notice of availability of the final EIS and record of decision.
Vehicle and site: SpaceX Starship-Super Heavy at Launch Complex 39A, Kennedy Space Center, Merritt Island, Florida (up to 44 launches and landings per year; landings at LC-39A or in the Atlantic, Pacific, or Indian Oceans).
Signature block: Dated January 29, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-02-03/html/2026-02108.htm

2. **FR Doc. 2026-03291 — published February 19, 2026 (91 FR 8054). Docket No. FAA-2025-3124.**
Action: Notice of availability of the Final Tiered EA and FONSI/ROD.
Vehicle and site: SpaceX Starship-Super Heavy at the Boca Chica Launch Site, Cameron County, Texas — additional launch trajectories and Starship return-to-launch-site landings, plus related temporary airspace closures.
Signature block: Issued in Washington, DC, on February 17, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-02-19/html/2026-03291.htm

3. **FR Doc. 2026-14148 — published July 14, 2026 (91 FR 43144). Docket No. FAA-2026-6968.**
Action: Notice of availability, public comment period, and request for comment on a draft tiered EA (comment period to close July 27, 2026).
Vehicle and site: Starship reentry contingency expenditure in the Pacific Ocean (new Northern Pacific Contingency Landing Area, and expansion of the Hawaii/Central Pacific and Southeast Pacific areas), plus an additional Starship landing trajectory and related airspace closures. The later final notice ties the extra trajectory to landing at Starbase, Texas.
Signature block: Dated July 10, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-07-14/html/2026-14148.htm

4. **FR Doc. 2026-15089 — published July 27, 2026 (91 FR 47030). Docket No. FAA-2026-6968.**
Action: Extension of the public comment period on that draft tiered EA, to August 3, 2026.
Vehicle and site: Same Starship Pacific contingency landings and additional landing trajectory as 2026-14148.
Signature block: Dated July 23, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-07-27/html/2026-15089.htm

5. **FR Doc. 2026-18135 — published September 4, 2026 (91 FR 56939). Docket No. FAA-2026-6968.**
Action: Notice of availability of the Final Tiered EA and FONSI/ROD.
Vehicle and site: Starship reentry contingency operations in the Pacific Ocean (Northern Pacific area, plus expanded Hawaii/Central Pacific and Southeast Pacific areas) and airspace closures for an additional Starship reentry trajectory for landing at Starbase, Texas.
Signature block: Dated September 2, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-09-04/html/2026-18135.htm

6. **FR Doc. 2026-19897 — published September 29, 2026 (91 FR 61551). Docket No. FAA-2026-10792.**
Action: Notice of intent to prepare a supplemental EIS and open a public scoping period (comments requested by October 14, 2026).
Vehicle and site: SpaceX Starship-Super Heavy at Space Launch Complex 37, Cape Canaveral Space Force Station, Cape Canaveral, Florida — proposed license modification for up to 76 launches and 152 landings per year (RTLS and ocean landings, including the Atlantic, Pacific, and Indian Oceans and the Gulf of America), plus temporary airspace closures.
Signature block: No date is printed in the signature block. Signed Katie L. Cranor, Executive Director, Office of Operational Safety.
https://www.govinfo.gov/content/pkg/FR-2026-09-29/html/2026-19897.htm

> **Judge:** All six notices are listed with correct details. The intro wrongly says 'five' notices, but six rows are given. Missing only context facts: comment counts for notices 2 and 5, the 2025 DAF EIS reference, and the DAF SLC-37 ROD exclusion.

I found five FAA Federal Register notices published in 2026 that concern SpaceX. All are environmental-review notices for Starship–Super Heavy; I did not find a 2026 FAA notice concerning Falcon. The signature date for the September 29 notice is not visible in the available text.

1. FR Doc. 2026-02108 — February 3, 2026
Docket No. FAA-2024-1395. Notice of availability of the final EIS and record of decision. Vehicle/site: SpaceX Starship–Super Heavy at Launch Complex 39A, Kennedy Space Center, Merritt Island, Florida. Signature: dated January 29, 2026, Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-02-03/html/2026-02108.htm

2. FR Doc. 2026-03291 — February 19, 2026

Docket No. FAA-2025-3124. Notice of availability of the Final Tiered EA and FONSI/ROD for updated airspace closures, additional launch trajectories, and Starship return-to-launch-site landings. Vehicle/site: SpaceX Starship–Super Heavy at the Boca Chica Launch Site, Cameron County, Texas. Signature: issued in Washington, DC, on February 17, 2026, Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-02-19/html/2026-03291.htm

3. FR Doc. 2026-14148 — July 14, 2026
Docket No. FAA-2026-6968. Notice of availability of, and request for comment on, the Draft Tiered EA; comments originally closed July 27, 2026. Vehicle/site: Starship contingency landings in a new Northern Pacific area and expanded Hawaii/Central Pacific and Southeast Pacific areas, plus airspace closures for an additional reentry trajectory to Starbase, Texas. Signature: dated July 10, 2026, Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-07-14/html/2026-14148.htm

4. FR Doc. 2026-15089 — July 27, 2026
Docket No. FAA-2026-6968. Extension of the public comment period on that Draft Tiered EA to August 3, 2026. Same vehicle and sites as notice 3. Signature: dated July 23, 2026, Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-07-27/html/2026-15089.htm

5. FR Doc. 2026-18135 — September 4, 2026
Docket No. FAA-2026-6968. Notice of availability of the Final Tiered EA and FONSI/ROD. Same vehicle and sites as notices 3 and 4. Signature: dated September 2, 2026, Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-09-04/html/2026-18135.htm

6. FR Doc. 2026-19897 — September 29, 2026
Docket FAA-2026-10792. Notice of intent to prepare a supplemental EIS and open public scoping, with comments requested by October 14, 2026. Vehicle/site: Starship–Super Heavy at Space Launch Complex 37, Cape Canaveral Space Force Station, Florida—up to 76 launches and 152 landings per year. Signature: Katie L. Cranor, Executive Director, Office of Operational Safety. The signature date is not included in the portions of the official HTML or PDF that I could retrieve.
https://www.govinfo.gov/content/pkg/FR-2026-09-29/html/2026-19897.htm

I cannot certify that this is exhaustive. Govinfo and Federal Register search results do not provide a complete agency-filtered list, and page text was truncated in some copies. PHMSA hazardous-materials special-permit notices naming SpaceX were excluded because FAA did not publish them.

Keenable SELECT ✓ Correct ✓ ✓ ✓ ✓ 2.8m · ~$0.396 · 9 searches · 12 fetches

> **Judge:** All six notices and their required fields are correct. Only the context facts are missing: the comment counts and dates (facts 7 and 17), the SLC-37 supplement details (21), and the DAF ROD exclusion (23). The answer also omits the July 27 comment deadline from notice 3 and the per-year launch counts, but the core actions match.

The Federal Aviation Administration published six Federal Register notices in 2026 that concern SpaceX. That count is the full result of the Federal Register API search for “SpaceX” (and the identical “Starship” search) limited to the FAA and publication year 2026: six documents, one page. A separate FAA search for “Falcon” returned only Dassault Falcon airworthiness documents, not SpaceX. PHMSA special-permit notices that name Space Exploration Technologies Corp. are excluded because PHMSA, not the FAA, published them.

All six are Office of Commercial Space Transportation environmental notices about Starship–Super Heavy. None is a license grant itself.

1. 2026-02108 — published February 3, 2026 (91 FR 5020). Docket FAA-2024-1395. Action: notice of availability of the final EIS and record of decision (ROD). Vehicle: SpaceX Starship–Super Heavy. Site: Launch Complex 39A, Kennedy Space Center, Merritt Island, Florida (landings also analyzed at LC-39A and in the Atlantic, Pacific, and Indian Oceans). Signature: Dated January 29, 2026, Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-02-03/html/2026-02108.htm

2. 2026-03291 — published February 19, 2026 (91 FR 8054). Docket FAA-2025-3124. Action: notice of availability of the Final Tiered EA and FONSI/ROD. Vehicle: SpaceX Starship–Super Heavy. Site: SpaceX Boca Chica Launch Site, Cameron County, Texas (additional launch trajectories and Starship return-to-launch-site landings). Signature: Issued in Washington, DC, on February 17, 2026, Stacey Molinich Zee, Manager, Operations Support Branch.
https://www.govinfo.gov/content/pkg/FR-2026-02-19/html/2026-03291.htm

3. 2026-14148 — published July 14, 2026 (91 FR 43144). Docket FAA-2026-6968. Action: notice of availability and public comment period (draft). Vehicle: Starship. Site: Pacific Ocean contingency landing areas (new Northern Pacific area, plus expanded Hawaii and Central Pacific and Southeast Pacific areas), and an additional Starship landing trajectory. Signature: Dated July 10, 2026, Stacey Molinich Zee, Manager, Operations Support Branch. https://www.govinfo.gov/content/pkg/FR-2026-07-14/html/2026-14148.htm

4. 2026-15089 — published July 27, 2026 (91 FR 47030). Docket FAA-2026-6968. Action line as printed: “Public comment period.” The summary says the FAA is extending the comment period on that same draft tiered EA, with a new close date of August 3, 2026. Vehicle and site: same as 2026-14148. Signature: Dated July 23, 2026, Stacey Molinich Zee, Manager, Operations Support Branch. https://www.govinfo.gov/content/pkg/FR-2026-07-27/html/2026-15089.htm

5. 2026-18135 — published September 4, 2026 (91 FR 56939). Docket FAA-2026-6968. Action: notice of availability of the Final Tiered EA and FONSI/ROD. Vehicle: Starship. Site: Pacific Ocean contingency landing areas as above, plus airspace closures for an additional reentry trajectory for landing at Starbase, Texas. Signature: Dated September 2, 2026, Stacey Molinich Zee, Manager, Operations Support Branch. https://www.govinfo.gov/content/pkg/FR-2026-09-04/html/2026-18135.htm

6. 2026-19897 — published September 29, 2026 (91 FR 61551). Docket FAA-2026-10792 (printed as “[FAA-2026-10792],” without the “Docket No.” label used on the others). Action: notice of intent to prepare a SEIS and notice of public scoping period. Vehicle: Starship–Super Heavy. Site: Space Launch Complex 37, Cape Canaveral Space Force Station, Cape Canaveral, Florida. Signature block: **no date is printed**; the signer is Katie L. Cranor, Executive Director, Office of Operational Safety. https://www.govinfo.gov/content/pkg/FR-2026-09-29/html/2026-19897.htm

Grok native ✓ Correct ✓ ✓ ✓ ✓ 42.3s · $0.281 · 11 searches · 8 fetches

> **Judge:** All core and required facts are correct, with all six notices listed. Only the context facts are missing: the comment counts and draft dates (7, 17), the 2025 DAF EIS link (21), and

> the DAF SLC-37 ROD note (23).

The Federal Register API lists six FAA notices published in 2026 that match “SpaceX” (through October 9, 2026). A separate search for “Space Exploration Technologies” returned only the September 29 notice already in that set. No 2026 FAA Falcon or Vandenberg notice matched.

1. 2026-02108 — February 3, 2026 — Docket No. FAA-2024-1395
   Action: Notice of availability of the final EIS and record of decision.
   Vehicle and site: Starship-Super Heavy at Launch Complex 39A, Kennedy Space Center, Merritt Island, Florida (up to 44 launches and up to 44 landings each of Super Heavy and Starship per year, plus related construction).
   Signature block: Dated January 29, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
   https://www.govinfo.gov/content/pkg/FR-2026-02-03/html/2026-02108.htm

2. 2026-03291 — February 19, 2026 — Docket No. FAA-2025-3124
   Action: Notice of availability of the Final Tiered EA and FONSI/ROD.
   Vehicle and site: Starship-Super Heavy at the SpaceX Boca Chica Launch Site, Cameron County, Texas (additional launch trajectories and Starship return-to-launch-site profiles, plus related temporary airspace closures).
   Signature block: Issued in Washington, DC, on February 17, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
   https://www.govinfo.gov/content/pkg/FR-2026-02-19/html/2026-03291.htm

3. 2026-14148 — July 14, 2026 — Docket No. FAA-2026-6968
   Action: Notice of availability and public comment period on a draft tiered EA (comments originally due July 27, 2026).
   Vehicle and site: Starship reentry contingency operations in the Pacific Ocean (new Northern Pacific Contingency Landing Area, plus expansion of the Hawaii and Central Pacific and Southeast Pacific contingency landing areas) and an additional Starship landing trajectory, with related airspace closures; landing trajectory tied to Starbase, Texas, in the later final notice.
   Signature block: Dated July 10, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
   https://www.govinfo.gov/content/pkg/FR-2026-07-14/html/2026-14148.htm

4. 2026-15089 — July 27, 2026 — Docket No. FAA-2026-6968
   Action: Extension of the public comment period on that draft tiered EA to August 3, 2026.
   Vehicle and site: Same Starship Pacific contingency landing areas and related airspace closures as 2026-14148.
   Signature block: Dated July 23, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
   https://www.govinfo.gov/content/pkg/FR-2026-07-27/html/2026-15089.htm

5. 2026-18135 — September 4, 2026 — Docket No. FAA-2026-6968
   Action: Notice of availability of the Final Tiered EA and FONSI/ROD.
   Vehicle and site: Starship reentry contingency operations in the Pacific Ocean (Northern Pacific Contingency Landing Area and expanded Hawaii/Central Pacific and Southeast Pacific areas) and airspace closures for an additional Starship reentry trajectory for landing at Starbase, Texas.
   Signature block: Dated September 2, 2026; Stacey Molinich Zee, Manager, Operations Support Branch.
   https://www.govinfo.gov/content/pkg/FR-2026-09-04/html/2026-18135.htm

6. 2026-19897 — September 29, 2026 — FAA-2026-10792
   Action: Notice of intent to prepare a supplemental EIS and notice of a public scoping period (comments due October 14, 2026). A draft SEIS is to follow.
   Vehicle and site: Starship-Super Heavy at Space Launch Complex 37, Cape Canaveral Space Force Station, Cape Canaveral, Florida (up to 76 launches and up to 152 landings per year, including return-to-launch-site and ocean landings, plus temporary airspace closures).
   Signature block: Katie L. Cranor, Executive Director, Office of Operational Safety. The notice does not include a date in the signature block.

PROMPT 142 · LIST-BUILDING · FACTS AS OF 2026-10-09

Trace the FAA environmental review for Starship-Super Heavy at Kennedy Space Center LC-39A through its Federal Register and decision documents: for the notice of intent, the draft EIS notice, the comment-period extension, the final EIS/ROD notice and the ROD itself, give the document number or title, publication or signing date, docket, the comment deadline it set (where any), and the signing official. State the launch and landing cadence the ROD covers. The ROD and the Federal Register give different dates for the draft-EIS notice; report both.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

Docket FAA-2024-1395 throughout.

1. Notice of Intent, FR 2024-10149, published May 10, 2024 (89 FR 40526); FAA with NASA, USFWS, NPS, USCG and DAF; scoping comments due June 24, 2024. https://www.federalregister.gov/documents/2024/05/10/2024-10149/
2. Draft EIS NOA, FR 2025-14888, published August 6, 2025 (90 FR 37946); issued August 4, 2025 by Stacey Molinich Zee; in-person meetings August 26 and 28, 2025, virtual September 3, 2025; comment deadline September 22, 2025. https://www.federalregister.gov/documents/2025/08/06/2025-14888/
3. Extension, FR 2025-18523, published September 24, 2025 (90 FR 45975); issued September 22, 2025, Zee; new deadline September 29, 2025. https://www.federalregister.gov/documents/2025/09/24/2025-18523/
4. Final EIS and ROD NOA, FR 2026-02108, published February 3, 2026 (91 FR 5020); dated January 29, 2026, Zee. https://www.federalregister.gov/documents/2026/02/03/2026-02108/
5. ROD signed January 29, 2026 by Katie L. Cranor, Executive Director, Office of Operational Safety, ASA-1. The ROD says the Draft EIS NOA was published in the Federal Register on August 8, 2025 (90 Fed. Reg. 37946) and the comment period ran August 8 to September 29, 2025, and that USEPA would publish a Final EIS NOA on February 6, 2026; the FAA's own notice is dated August 6, 2025. https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc/SpaceX-SSH-LC-39A-Final-EIS-ROD.pdf

Cadence: up to 44 Starship-Super Heavy launches per year, up to 44 Super Heavy landings (LC-39A, droneship or expended in the Atlantic) and up to 44 Starship landings (LC-39A, droneship, or ocean landings in the Atlantic, Pacific or Indian Ocean), plus construction at LC-39A (FR 2026-02108 and the FAA project page). The FAA page says the review does not guarantee a licence; no Starship licence for LC-39A appears in DRS as of October 9, 2026 (VOL 23-129 covers Starbase only). Wrong answers: a 2025 ROD date; a comment deadline of September 22 as final; saying the ROD issued the licence.

Exa ✓ Correct ✓ ✓ ✓ ✓ 1.0m · $0.400 · 13 searches · 9 fetches

Judge: All core and required facts are correct, including the Aug 6 vs Aug 8 date discrepancy. Missing context facts: NOI co-issuing agencies (3), draft EIS meeting dates (7), the ROD's Aug 8–Sept 29 comment period (16), the EPA Feb 6 NOA date (17), construction coverage (21), and the no-licence-guarantee note (22). The ROD signing date is hedged but still given as Jan 29, 2026.

The FAA's LC-39A Starship–Super Heavy review is docket FAA-2024-1395 throughout. The draft-EIS notice date is inconsistent across documents.

Notice of intent
- **Document:** FR Doc. 2024-10149, "Office of Commercial Space Transportation; Notice of Intent To Prepare an Environmental Impact Statement (EIS), Open a Public Scoping Period, and Hold Public Scoping Meetings," **89 FR 40526** (pp. 40526–40528; Vol. 89, No. 92).
- **Published:** May 10, 2024 (filed May 9, 2024). The notice says only "Issued in Washington, DC," with no calendar date on the signature block.
- **Docket:** FAA-2024-1395.
- **Comment deadline:** scoping comments no later than **June 24, 2024**.
- **Signing official:** Daniel P. Murray, Executive Director, Office of Operational Safety.

Final EIS / ROD availability notice
- **Document:** FR Doc. **2026-02108**, "Notice of Availability of the Final Environmental Impact Statement and Record of Decision..." **91 FR 5020**.
- **Published:** February 3, 2026 (filed February 2). **Dated January 29, 2026.**
- **Docket:** FAA-2024-1395.
- **Comment deadline:** none (availability notice only).
- **Signing official:** Stacey Molinich Zee, Manager, Operations Support Branch.
- This notice repeats the **August 8, 2025** date for the draft-EIS Federal Register notice.
- Source: https://www.federalregister.gov/documents/2026/02/03/2026-02108/notice-of-availability-of-the-final-environmental-impact-statement-and-record-of-decision-for-spacex

Record of Decision
- **Title:** *Record of Decision for SpaceX Starship-Super Heavy Launch Vehicle at Launch Complex 39A (LC-39A) at the Kennedy Space Center (KSC), Merritt Island,

Florida* (not a Federal Register document).
- **URL:** https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc/SpaceX-SSH-LC-39A-Final-EIS-ROD.pdf
- **Signing official:** Katie L. Cranor (Katie Cranor), Executive Director, Office of Operational Safety, Office of Commercial Space Transportation. SpaceNews quotes the ROD's "undersigned" findings and attributes the signature to her. The Final EIS signature block for the same official is dated **January 29, 2026** (Katie L. Cranor, Executive Director, Office of Operational Safety, ASA-1). Secondary write-ups of the signed ROD also give **January 29, 2026.** The PDF text returned here did not include the signature page, so that calendar date is not independently confirmed from the ROD signature line itself. SpaceNews says the FAA publicly released the Final EIS and ROD on **January 30, 2026.**
- Sources: https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc/SpaceX-SSH-LC-39A-Final-EIS-ROD.pdf ; https://spacenews.com/faa-approves-starship-launches-from-lc-39a/ ; Final EIS signature block in https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc/SpaceX-SSH-LC-39A-Final-EIS-Volume-I.pdf

Cadence the ROD covers
Up to **44 Starship–Super Heavy launches per year** and **88 landings per year** (44 Super Heavy and 44 Starship). Super Heavy may land at LC-39A, land on an Atlantic droneship, or be expended in the Atlantic. Starship may land at LC-39A, land on an Atlantic droneship, or make a soft-water or hard-water landing with expenditure or recovery in the Atlantic, Pacific, or Indian Ocean. The same cadence is restated in the February 3, 2026 notice.

Draft-EIS notice dates (they disagree)
- **The notice itself:** published **August 6, 2025** (90 FR 37946; Vol. 90, No. 149; issued August 4, 2025).
- **The ROD:** says the Notice of Availability was published **August 8, 2025**, while citing **90 Fed. Reg. 149-37946** — the same issue and page as the August 6 notice. The February 3, 2026 Federal Register availability notice also says August 8, 2025. The FAA project page likewise says the Draft EIS went on the website August 4, 2025, and that the Federal Register notice was August 8, 2025.

ROD
- **Title:** "Record of Decision for SpaceX Starship-Super Heavy Launch Vehicle at Launch Complex 39A (LC-39A) at the Kennedy Space Center (KSC), Merritt Island, Florida," FAA Office of Commercial Space Transportation.
- **Signed:** January 29, 2026, by **Katie L. Cranor**, Executive Director, Office of Operational Safety, ASA-1. That date and official are on the Final EIS cover as the responsible FAA official and are reported for the ROD itself; the FAA-hosted ROD PDF did not return readable text in this session.
- **Cadence it covers: up to 44 Starship-Super Heavy launches per year and 88 landings per year—44 for each stage.** Super Heavy landings are at LC-39A, on an Atlantic droneship, or expended in the Atlantic. Starship landings are at LC-39A, on an Atlantic droneship, or soft- or hard-water landings with expenditure or recovery in the Atlantic, Pacific, or Indian Oceans. The same cadence is restated in the February 3, 2026 notice.
- ROD text: https://old-man-par.com/wp-content/uploads/2026/01/SpaceX-SSH-LC-39A-Final-EIS-ROD-1.pdf
- FAA project page: https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc

Draft-EIS notice dates
The documents do not agree.

- The ROD says public review began with a Federal Register notice of availability on **August 8, 2025**, cited as **90 Fed. Reg. 149-37946.**
- That citation is the FAA notice above, and the **Federal Register published it on August 6, 2025** (Vol. 90, No. 149, p. 37946). It was signed August 4 and filed August 5.
- The **February 3, 2026** Federal Register notice also says the draft-EIS notice was published on **August 8, 2025.** August 8 is the date of EPA's weekly notice (90 FR 38468), not of 90 FR 37946.

Cited: 1. govinfo.gov · 2. govinfo.gov · 3. govinfo.gov · 4. federalregister.gov · 5. govinfo.gov · 6. old-man-par.com · 7. faa.gov

> **Judge:** All core and required facts are correct, including both draft-EIS notice dates. Only context facts are missing: the NOI co-agencies (3), the draft EIS meeting dates (7), the ROD's Aug 8 to Sept 29 comment period (16), the ROD's Feb 6 EPA notice date (17), the LC-39A construction coverage (21), and the licence status note (22).

The FAA environmental review for Starship-Super Heavy at Kennedy Space Center LC-39A is docket FAA-2024-1395. The Record of Decision covers up to 44 launches and 88 landings per year (44 Starship and 44 Super Heavy), including ocean landings.

Notice of intent. FR Doc. 2024-10149, 89 FR 40526, published May 10, 2024. Issued in Washington, DC, on May 9, 2024, by Daniel P. Murray, Executive Director, Office

of Operational Safety. Scoping comments were due June 24, 2024. Docket FAA-2024-1395. https://www.govinfo.gov/content/pkg/FR-2024-05-10/html/2024-10149.htm

Draft EIS notice. FR Doc. 2025-14888, 90 FR 37946–37947, published August 6, 2025 (filed August 5, 2025). Issued in Washington, DC, on August 4, 2025, by Stacey Molinich Zee, Manager, Operations Support Branch. Comment deadline: September 22, 2025. Docket FAA-2024-1395. https://www.govinfo.gov/content/pkg/FR-2025-08-06/html/2025-14888.htm

Comment-period extension. FR Doc. 2025-18523, 90 FR 45975, published September 24, 2025. Issued in Washington, DC, on September 22, 2025, by Stacey Molinich Zee, Manager, Operations Support Branch. Extended deadline: September 29, 2025. Docket FAA-2024-1395. https://www.govinfo.gov/content/pkg/FR-2025-09-24/html/2025-18523.htm

Final EIS and ROD notice. FR Doc. 2026-02108, 91 FR 5020, published February 3, 2026. Dated January 29, 2026, by Stacey Molinich Zee, Manager, Operations Support Branch. No new comment deadline. Docket FAA-2024-1395. https://www.govinfo.gov/content/pkg/FR-2026-02-03/html/2026-02108.htm

ROD. "Record of Decision for SpaceX Starship-Super Heavy Launch Vehicle at Launch Complex 39A (LC-39A) at the Kennedy Space Center (KSC), Merritt Island, Florida." Signed 01/29/2026 by Katie L. Cranor, Executive Director, Office of Operational Safety, ASA-1, Commercial Space Transportation. It covers "up to 44 launches and 88 landings—44 for each stage [Starship and Super Heavy] of the launch vehicle—per year," including ocean landings of Super Heavy in the Atlantic and Starship in the Atlantic, Pacific, and Indian Oceans. https://talkoftitusville.com/wp-content/uploads/2026/01/SpaceX-SSH-LC-39A-Final-EIS-ROD.pdf

Draft-notice date conflict. The draft notice itself is dated August 6, 2025 (90 FR 37946). Both the February 3, 2026 final-EIS notice and the ROD say it was published August 8, 2025. The ROD cites "90 Fed. Reg. 149-37946," which is the August 6 issue (Vol. 90, No. 149, p. 37946), so the August 8 date is inconsistent with the citation. The FAA project page also says the Draft EIS was released on the website August 4, 2025, and that the Federal Register notice was August 8, 2025: https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc

- **Signing official:** Stacey Molinich Zee, Manager, Operations Support Branch.
- Source: https://www.govinfo.gov/content/pkg/FR-2026-02-03/html/2026-02108.htm

Record of Decision
- **Title:** *Record of Decision for SpaceX Starship-Super Heavy Launch Vehicle at Launch Complex 39A (LC-39A) at the Kennedy Space Center (KSC), Merritt Island, Florida*.
- **Signing date and official:** January 29, 2026, **Katie L. Cranor**, Executive Director, Office of Operational Safety (ASA-1), Office of Commercial Space Transportation. That date and signer are reported from the ROD by contemporaneous accounts that quote it (SpaceNews; Talk of Titusville) and match the Final EIS signature block of the same date and official. The FAA PDF itself returned 403 here, so the signature line was not read from the file.
- **Cadence the ROD covers:** up to **44 Starship–Super Heavy launches per year** and **88 landings per year—44 Super Heavy and 44 Starship**. Super Heavy may land at LC-39A, on an Atlantic droneship, or be expended in the Atlantic. Starship may land at LC-39A, on an Atlantic droneship, or make a soft- or hard-water landing with expenditure or recovery in the Atlantic, Pacific, or Indian Ocean. The same cadence is restated in the February 3, 2026 Federal Register notice.
- ROD: https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc/SpaceX-SSH-LC-39A-Final-EIS-ROD.pdf
- Cadence also in the FR notice: https://www.govinfo.gov/content/pkg/FR-2026-02-03/html/2026-02108.htm

Draft-EIS notice date: ROD vs. Federal Register
The two dates do not match.

- The ROD says August 8, 2025, citing "90 Fed. Reg. 149-37946." That volume, issue, and page are the August 6, 2025 issue.
- The Federal Register notice itself (2025-14888) was published August 6, 2025 (issued August 4, 2025).

The February 3, 2026 availability notice repeats the ROD's August 8 date, so that later Federal Register document disagrees with the original notice's publication date as well.

> **Judge:** Only context facts were missing: the NOI co-issuing agencies (3), draft EIS meeting dates (7), the ROD's Aug 8 to Sep 29 comment period (16), the EPA Feb 6 publication statement (17), construction at LC-39A (21) and the no-licence-yet note (22). All required and core facts are correct, and no trap was asserted.

The FAA's Starship-Super Heavy review at Kennedy Space Center LC-39A ran under docket FAA-2024-1395. The Record of Decision (ROD) covers up to 44 launches and 88 landings a year (44 Super Heavy and 44 Starship).

Notice of intent
- Document: "Office of Commercial Space Transportation; Notice of Intent To Prepare an Environmental Impact Statement (EIS), Open a Public Scoping Period, and Hold Public Scoping Meetings," FR Doc. 2024-10149, 89 FR 40526 (Vol. 89, No. 92).
- Published: May 10, 2024. Signature block: "Issued in Washington, DC," Daniel P. Murray, Executive Director, Office of Operational Safety. The notice does not give a separate issuance date.
- Docket: FAA-2024-1395.
- Scoping deadline: June 24, 2024.
- https://www.govinfo.gov/content/pkg/FR-2024-05-10/html/2024-10149.htm

Draft EIS notice
- Document: "Notice of Availability, Notice of Public Comment Period, Notice of Public Meetings, and Request for Comment on the Draft Environmental Impact Statement..." FR Doc. 2025-14888, 90 FR 37946 (Vol. 90, No. 149).
- Published: August 6, 2025. Issued in Washington, DC, on August 4, 2025, by Stacey Molinich Zee, Manager, Operations Support Branch.
- Docket: FAA-2024-1395.
- Comment deadline: September 22, 2025.
- https://www.govinfo.gov/content/pkg/FR-2025-08-06/html/2025-14888.htm

EPA's weekly notice is separate: EIS No. 20250110, Draft, FAA, in "Environmental Impact Statements; Notice of Availability," FR Doc. 2025-15103, 90 FR 38468, published August 8, 2025; comment period ends September 22, 2025; dated August 4, 2025, Nancy Abrams, Associate Director, Office of Federal Activities. https://www.govinfo.gov/content/pkg/FR-2025-08-08/html/2025-15103.htm

Comment-period extension
- Document: "Notice of Extension of Public Comment Period on the Draft Environmental Impact Statement..." FR Doc. 2025-18523, 90 FR 45975.

- https://www.federalregister.gov/documents/2025/09/24/2025-18523/notice-of-extension-of-public-comment-period-on-the-draft-environmental-impact-statement-for-the-spacex-starship-super-heavy-vehicle-at-launch-complex-39a-at-kennedy-space-center-in-merritt-island-florida

Final EIS / ROD notice
- Document: "Notice of Availability of the Final Environmental Impact Statement and Record of Decision..." FR Doc. 2026-02108, 91 FR 5020.
- Published: February 3, 2026. Dated January 29, 2026, Stacey Molinich Zee, Manager, Operations Support Branch.
- Docket: FAA-2024-1395.
- Comment deadline: none; it is an availability notice.
- https://www.govinfo.gov/content/pkg/FR-2026-02-03/html/2026-02108.htm

ROD
- Title: "Record of Decision for SpaceX Starship-Super Heavy Launch Vehicle at Launch Complex 39A (LC-39A) at the Kennedy Space Center (KSC), Merritt Island, Florida," FAA Office of Commercial Space Transportation.
- Signed: January 29, 2026, by Katie L. Cranor, Executive Director, Office of Operational Safety, ASA-1. That date and official are on the Final EIS cover as the responsible FAA official and are reported for the ROD itself; the FAA-hosted ROD PDF did not return readable text in this session.
- Cadence it covers: up to 44 Starship-Super Heavy launches per year and 88 landings per year—44 for each stage. Super Heavy landings are at LC-39A, on an Atlantic droneship, or expended in the Atlantic. Starship landings are at LC-39A, on an Atlantic droneship, or soft- or hard-water landings with expenditure or recovery in the Atlantic, Pacific, or Indian Oceans. The same cadence is restated in the February 3, 2026 notice.
- ROD text: https://old-man-par.com/wp-content/uploads/2026/01/SpaceX-SSH-LC-39A-Final-EIS-ROD-1.pdf
- FAA project page: https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc

Draft-EIS notice dates
The documents do not agree.

- The ROD says public review began with a Federal Register notice of availability on August 8, 2025, cited as 90 Fed. Reg. 149-37946.
- That citation is the FAA notice above, and the Federal Register published it on August 6, 2025 (Vol. 90, No. 149, p. 37946). It was signed August 4 and filed August 5.
- The February 3, 2026 Federal Register notice also says the draft-EIS notice was published on August 8, 2025. August 8 is the date of EPA's weekly notice (90 FR 38468), not of 90 FR 37946.

Cited: 1. govinfo.gov · 2. govinfo.gov · 3. govinfo.gov · 4. federalregister.gov · 5. govinfo.gov · 6. old-man-par.com · 7. faa.gov

PROMPT 143 · LIST-BUILDING · FACTS AS OF 2026-10-09

Compare the two Florida sites proposed for Starship-Super Heavy as of 9 October 2026. For LC-39A at Kennedy Space Center and SLC-37 at Cape Canaveral Space Force Station give: the lead agency for the EIS, the date the record of decision was signed and by whom, the launches and landings per year analysed, what the ROD actually authorises, and the FAA's next procedural step with its docket number and deadline. Be careful: news stories say SpaceX was 'cleared' for 76 Starship launches at SLC-37; check what the DAF ROD conditions on.

REFERENCE ANSWER (WHAT THE JUDGE GRADED AGAINST)

LC-39A: FAA is lead agency (NASA's request). FAA ROD signed January 29, 2026 by Katie L. Cranor, Executive Director, Office of Operational Safety; up to 44 launches, 44 Super Heavy landings and 44 Starship landings per year plus infrastructure; the ROD is the environmental determination supporting a new or modified vehicle operator licence; the project page says completion of the review does not guarantee a licence and the application must still meet safety, risk and financial responsibility requirements. Sources: https://www.faa.gov/space/stakeholder_engagement/spacex_starship_ksc/SpaceX-SSH-LC-39A-Final-EIS-ROD.pdf and FR 2026-02108 (Feb 3, 2026, docket FAA-2024-1395).

SLC-37: Department of the Air Force is lead agency; FAA was a cooperating agency and did not issue a ROD because SpaceX had not applied for a licence modification. DAF ROD signed November 20, 2025 by Michael E. Saunders, Acting Assistant Secretary of the Air Force (Energy, Installations and Environment); it authorises (1) construction to redevelop SLC-37, (2) prelaunch operations including transport of components and static fires, and (3) up to 76 launches and 152 landings (76 Super Heavy, 76 Starship) per year only once the FAA completes a supplemental airspace analysis, after which the DAF will finalize a revised ROD before any launch or landing. Sources: https://spaceforcestarshipeis.com/wp-content/uploads/2025/11/CCSFS-Starship-ROD_FINAL_SIGNED_508.pdf and FR 2025-23314 (Dec 18, 2025; Final EIS available Nov 26, 2025; NOA Dec 5, 2025). FAA next step: Notice of Intent to prepare a Supplemental EIS, FR 2026-19897, published September 29, 2026, Docket FAA-2026-10792, scoping comments due October 14, 2026, supplementing DAF EIS EISX-007-057-USF-1730277197; the SEIS covers temporary airspace closures, Section 4(f) resources, a contingency landing area 1 nm offshore extending 50 miles north of LC-39A and 50 miles south of SLC-37, and RTLS trajectories; signed Katie L. Cranor.
https://www.federalregister.gov/documents/2026/09/29/2026-19897/

Wrong answers: saying SpaceX is licensed to launch Starship from either Florida pad; saying the FAA issued a ROD for SLC-37; giving 44 for SLC-37 or 76 for LC-39A; dating the DAF ROD to December 2025 (that is the FR notice).

Exa Correct

51.0s · $0.453 · 10 searches · 8 fetches

Judge: All required and core facts are correct and no trap is asserted. Two context facts are missing: the answer names only temporary airspace closures from the SEIS scope (omitting Section 4(f), the contingency landing area and RTLS trajectories), and it does not say the NOI was signed by Katie L. Cranor.

I'll look up the official EIS and ROD documents for both Florida Starship sites and compare what each record actually authorizes.The Federal Register notices confirm the split between the two RODs. I still need the signature dates and signatories from the documents themselves.The LC-39A signature block is still only in secondary coverage. I'll pull the ROD itself to confirm the date and signatory.The LC-39A ROD text I have stops before the signature block. I'll check the other FAA copy and the DAF ROD signature page.As of 9 October 2026, the two Florida Starship records are not equivalent. LC-39A has a completed FAA environmental decision that still does not issue a license. SLC-37 has a Department of the Air Force (DAF) decision that allows construction and prelaunch work, but not launches or landings, until the FAA finishes an airspace supplement and the DAF issues a revised record of decision (ROD).

LC-39A, Kennedy Space Center

- **Lead agency:** The Federal Aviation Administration (FAA), Office of Commercial Space Transportation. Cooperating agencies were NASA (KSC), the DAF/U.S. Space Force, the National Park Service, the U.S. Fish and Wildlife Service, and the U.S. Coast Guard. (FAA ROD)
- **ROD signed:** 29 January 2026. The Final EIS responsible-official block that accompanies the ROD is signed that day by Katie L. Cranor, Executive Director, Office of Operational Safety (ASA-1); the digital signature time on the EIS abstract is 10:00:10 ET. (Final EIS, Vol. I) The FAA's notice of availability of the Final EIS and ROD is also dated 29 January 2026 and was published 3 February 2026 (91 FR 5020). That Federal Register notice itself is signed by Stacey Molinich Zee, Manager, Operations Support Branch, not by Cranor. (91 FR 5020)
- **Analysed cadence:** Up to 44 Starship-Super Heavy launches per year and up to 88 landings per year (44 Super Heavy and 44 Starship). Super Heavy landings may be at LC-39A, on an Atlantic droneship, or expended in the Atlantic. Starship landings may be at LC-39A, on an Atlantic droneship, or soft- or hard-water landings with expenditure or recovery in the Atlantic, Pacific, or Indian Ocean. (FAA project page; ROD)
- **What the ROD actually authorises:** It is the FAA's environmental determination selecting the Preferred Alternative: issuance of a new vehicle operator license, or modification of an existing one, for Starship-Super Heavy at LC-39A, plus later renewals and modifications within the EIS scope, and temporary airspace closures. It does not issue the license. The ROD states that finishing NEPA does not guarantee a license; the proposal must still meet FAA safety, risk, and indemnification requirements. (ROD; FAA project page)

There is no open FAA NEPA docket or comment deadline for LC-39A. The related docket, FAA-2024-1395, was the EIS docket. The remaining FAA step is the license decision under 14 CFR parts 400–460.

SLC-37, Cape Canaveral Space Force Station

- **Lead agency:** The Department of the Air Force. The FAA was a cooperating agency and did not issue a ROD, because SpaceX had not yet applied for an FAA vehicle-operator license for SLC-37. (DAF ROD; FAA SLC-37 page)
- **ROD signed:** 20 November 2025, by Michael E. Saunders, P.E., SES, Acting Assistant Secretary of the Air Force (Energy, Installations, and Environment). The digital signature is 16:36:09 ET that day. (Signed DAF ROD; 90 FR 59094)
- **Analysed cadence:** Up to 76 Starship-Super Heavy launches and 152 landings per year (76 Super Heavy and 76 Starship), including return-to-launch-site and ocean landings. The 2025 DAF EIS found no significant impacts except noise, with mitigation and adaptive management. (FAA SLC-37 page)
- **What the DAF ROD actually authorises — not a clearance for 76 launches:** After the real-property agreement and associated documents, and only while mitigation in ROD Appendix A is followed, SpaceX may (1) construct the SLC-37 redevelopment and associated infrastructure and (2) conduct prelaunch operations, including transport of vehicle components and static-fire tests. Item (3), up to 76 launches and 152 landings a year, is authorised only **once the FAA completes a supplemental analysis of airspace impacts.** The DAF must assess that analysis and **finalize a revised ROD before any Starship-Super Heavy launch or landing at CCSFS.** Range acceptance by Space Launch Delta 45 is also required; the vehicle is not accepted onto the Eastern Range until CCSFS Range Safety requirements are met. (DAF ROD; 90 FR 59094)

News phrasing that SpaceX was “cleared” for 76 Starship launches at SLC-37 omits those conditions. The 76/152 figures are the analysed ceiling and a future authorisation, not a present launch approval. The FAA has not licensed those operations.

FAA’s next procedural step

For SLC-37, the FAA published a notice of intent on 29 September 2026 to prepare a supplemental EIS and to adopt the 2025 DAF EIS (EISX-007-057-USF-1730277197) in support of a modification of SpaceX’s vehicle operator license, including temporary airspace closures. Public scoping comments are due **14 October 2026** under **Docket No. FAA-2026-10792** (91 FR 61551). A draft SEIS will follow. (91 FR 61551; FAA SLC-37 page) After that airspace analysis, the DAF still has to issue the revised ROD before launches or landings.

Parallel Correct

1.1m · $0.342 · 10 searches · 8 fetches

> **Judge:** All core and required facts are correct and no trap is asserted. Two context facts are missing: the DAF EIS identifier EISX-007-057-USF-1730277197 that the SEIS supplements, and that Katie L. Cranor signed the NOI.

I'll look up the official EIS and ROD records for both Florida Starship sites and compare what each decision actually authorizes.The official notices distinguish the two decisions. I’ll pull the ROD text and Federal Register notices next so the comparison matches what each agency actually signed.The Federal Register notices give the cadence and conditions, but not the ROD signatories. I’ll open the decision documents themselves.The DAF ROD PDF should name the signer and spell out the launch condition that news coverage compresses.As of 9 October 2026, the two Florida Starship decisions are not equivalent. LC-39A has a completed FAA environmental decision that still does not issue a launch license. SLC-37 has a Department of the Air Force (DAF) decision that allows construction and prelaunch work, but not launches or landings, until the FAA finishes a supplemental review and the DAF issues a revised record of decision (ROD).

LC-39A, Kennedy Space Center

The Federal Aviation Administration (FAA) was the lead agency. NASA, the Department of the Air Force / U.S. Space Force, the National Park Service, the U.S. Fish and Wildlife Service, and the U.S. Coast Guard were cooperating agencies. (FAA project page; ROD)

The ROD was signed on **29 January 2026** by **Katie L. Cranor**, Executive Director, Office of Operational Safety, Commercial Space Transportation. The Federal Register notice of availability, dated the same day and published 3 February 2026, was signed by Stacey Molinich Zee; that is the notice, not the ROD. (ROD, p. 52; 91 FR 5020)

The EIS analyzed up to **44 Starship-Super Heavy launches per year** and up to **88 landings per year** (44 Super Heavy and 44 Starship), at LC-39A, on a droneship, or expended or recovered in the ocean. (91 FR 5020; ROD)

The ROD is an environmental decision. It selects the Preferred Alternative and authorizes the FAA to take the federal action of issuing, modifying, or renewing a vehicle operator license within the analyzed scope, and of issuing temporary airspace closures, subject to the mitigation in the ROD. It does **not** itself issue the license. The ROD and the FAA project page both state that SpaceX must still meet FAA safety, risk, and indemnification or financial-responsibility requirements. (ROD; FAA project page)

There is no open FAA NEPA docket or comment deadline for LC-39A as of 9 October 2026. The environmental review is closed. The remaining FAA step is the separate license determination. I did not find an official notice that a Starship vehicle operator license for LC-39A has been issued.

SLC-37, Cape Canaveral Space Force Station

The **Department of the Air Force** was the lead agency. The FAA was a cooperating agency and did not issue a ROD, because SpaceX had not yet applied for a vehicle operator license for SLC-37. (90 FR 59094; FAA CCSFS page)

The ROD was signed on **20 November 2025** by **Michael E. Saunders, P.E., SES**, Acting Assistant Secretary of the Air Force (Energy, Installations, and Environment). The 18 December 2025 Federal Register notice was signed by a Federal Register liaison, not by the ROD official. (DAF ROD; 90 FR 59094)

The EIS analyzed up to **76 launches and 152 landings per year** (76 Super Heavy and 76 Starship). The DAF found significant impacts only for noise, with mitigation. (FAA CCSFS page; 91 FR 61551)

The ROD does **not** clear 76 launches now. After the real-property agreement and while mitigation is followed, it authorizes (1) construction to redevelop SLC-37 and associated infrastructure and (2) prelaunch operations, including transport of vehicle components and static-fire tests. Item (3), up to 76 launches and 152 landings a year, is authorized only **once the FAA completes a supplemental airspace analysis**. The DAF must assess that analysis and **issue a revised ROD before any Starship-Super Heavy launch or landing at CCSFS**. Range acceptance by Space Launch Delta 45 is also still required. (DAF ROD; 90 FR 59094)

The FAA’s current step is a **supplemental EIS**, not a license. The 2025 DAF EIS did not analyze temporary airspace closures, DOT Section 4(f) resources, the proposed Atlantic contingency landing area, or the full range of return-to-launch-site trajectories. The Notice of Intent was published **29 September 2026**. Scoping comments are due **14 October 2026** under **Docket No. FAA-2026-10792**. A draft SEIS comes later. A commercial launch still also requires an FAA license modification. (91 FR 61551; FAA CCSFS page)

Keenable search Correct

50.6s · ~$0.178 · 11 searches · 6 fetches

> **Judge:** Missing only context facts: the FR 2026-02108/docket FAA-2024-1395 and FR 2025-23314 citations, and that the NOI was signed by Cranor. All required and core facts are correct and no traps asserted. The answer did not explicitly call out the contingency landing area distances, but it mentions the SEIS topics, so it is treated as correct.

As of 9 October 2026, the two Florida Starship-Super Heavy reviews are at different stages. The LC-39A environmental review is finished; the SLC-37 review is not, and the often-cited “76 launches cleared” figure is conditioned.

LC-39A, Kennedy Space Center

- **Lead agency:** The Federal Aviation Administration (FAA), Office of Commercial Space Transportation. Cooperating agencies included NASA, the Department of the Air Force (U.S. Space Force), the National Park Service, the U.S. Fish and Wildlife Service, and the U.S. Coast Guard. (ROD; FAA project page)
- **ROD signed:** 29 January 2026, by Katie L. Cranor, Executive Director, Office of Operational Safety (ASA-1). The Final EIS and ROD were released publicly on 30 January 2026. (Final EIS signature block, NASA-hosted Volume I; FAA project page)
- **Cadence analysed:** Up to **44 launches and 88 landings per year** (44 Super Heavy and 44 Starship), including ocean landings of Super Heavy in the Atlantic and of Starship in the Atlantic, Pacific, and Indian Oceans, plus droneship landings. (ROD)
- **What the ROD authorises:** An environmental determination selecting the Preferred Alternative, to **support** FAA issuance, modification, or renewal of a vehicle operator license (14 CFR Chapter III, parts 400–460) and temporary airspace closures, with required mitigations. It is not itself the launch license. The FAA states that finishing the environmental review does not guarantee a license; safety, risk, and indemnification requirements still apply. (ROD; FAA project page)
- **FAA next step:** No further NEPA step is open for LC-39A. The remaining FAA action is the license decision itself. No open docket or comment deadline was identified for that licensing step.

SLC-37, Cape Canaveral Space Force Station

- **Lead agency for the 2025 EIS:** The Department of the Air Force (DAF). The FAA was a cooperating agency and did **not** issue a ROD, because SpaceX had not yet applied to modify its vehicle operator license for SLC-37. EIS ID: EISX-007-057-USF-1730277197. (DAF ROD; FAA SLC-37 page)
- **ROD signed:** 20 November 2025, by Michael E. Saunders, P.E., SES, Acting Assistant Secretary of the Air Force (Energy, Installations, and Environment). (Final EIS transmittal; SpaceNews)
- **Cadence analysed:** Up to **76 Starship-Super Heavy launches and 152 landings per year** (76 Super Heavy and 76 Starship). The DAF EIS found no significant impacts with mitigation except noise (community annoyance). (FAA SLC-37 page; 91 FR 61551)
- **What the DAF ROD actually authorises — and what it conditions:** It is not an unconditional clearance for 76 launches. Upon the real-property agreement and compliance with Appendix A mitigations, it authorises (1) construction to redevelop SLC-37 and related infrastructure, (2) prelaunch operations, including transport and static fires, and (3) up to 76 launches and 152 landings **only after** the FAA completes a supplemental airspace analysis and the DAF issues a **revised ROD**. The DAF ROD states launches or landings will not occur until that revised ROD. (DAF ROD, Decision paragraph)

The 2025 DAF EIS also did not analyse temporary airspace closures, DOT Section 4(f) resources, the proposed Atlantic contingency landing area, or the full range of return-to-launch-site trajectories. Commercial operations still require an FAA license modification. (91 FR 61551; FAA SLC-37 page)

- **FAA's next procedural step:** A Supplemental EIS to support adopting the 2025 DAF EIS and a later license decision. Notice of Intent published **29 September 2026**. Public scoping comments are due **no later than 14 October 2026**, Docket **FAA-2026-10792** (regulations.gov, or mail to Eva Long, FAA, c/o ICF). A Draft SEIS will follow. The proposed FAA action is a modification (and later renewals) of SpaceX's existing vehicle operator license under 14 CFR part 400, plus temporary airspace closures, for the same 76/152 annual ceilings. (91 FR 61551; FAA SLC-37 page)

Bottom line: News accounts that SpaceX was "cleared" for 76 Starship launches at SLC-37 overstate the DAF ROD. That decision clears construction and prelaunch work now; launches and landings remain contingent on the FAA airspace supplement, a revised DAF ROD, and an FAA license modification. LC-39A's FAA ROD is complete for up to 44 launches and 88 landings a year, but it likewise supports licensing rather than issuing the license.

> **Judge:** Only context facts were missed: the FAA page's no-guarantee statement (6), the DAF EIS number (20) and the NOI signer (22). The answer got all required and core facts right and asserted no traps.

As of 9 October 2026 the two Florida Starship–Super Heavy proposals are at different stages. News that SpaceX was "cleared" for 76 launches at SLC-37 overstates the Department of the Air Force (DAF) record of decision (ROD).

LC-39A, Kennedy Space Center
- **Lead agency:** FAA. Cooperating agencies included NASA, the DAF, the Coast Guard, the Fish and Wildlife Service, and the National Park Service. (ROD PDF)
- **ROD signed:** 29 January 2026 by Katie L. Cranor, Executive Director, Office of Operational Safety, ASA-1, Commercial Space Transportation. Notice of availability: 91 FR, 3 February 2026, document 2026-02108.
- **Cadence analysed:** up to **44 launches and 88 landings per year** (44 Super Heavy and 44 Starship), including ocean landings of Super Heavy in the Atlantic and of Starship in the Atlantic, Pacific, and Indian Oceans.
- **What the ROD does:** It is the FAA's final environmental determination selecting the Preferred Alternative—issuance of a new vehicle operator license, or modification of an existing one, plus temporary airspace closures, with renewals and modifications inside the analysed scope. It does **not** itself issue the license. The license still depends on FAA safety, risk, and indemnification findings, and on SpaceX implementing the required mitigation measures as license conditions. (same ROD)
- **FAA next step for this site:** license issuance or modification. That is a safety/licensing action, not another EIS. The open FAA docket below is for SLC-37, not LC-39A.

SLC-37, Cape Canaveral Space Force Station
- **Lead agency for the EIS:** Department of the Air Force. FAA was a cooperating agency and did not issue its own ROD, because SpaceX had not yet applied to modify its vehicle operator license for SLC-37. (Federal Register, 29 September 2026)
- **ROD signed:** 20 November 2025 (digital signature 16:36:09 −05:00) by Michael E. Saunders, P.E., SES, DAF, Acting Assistant Secretary of the Air Force (Energy, Installations, and Environment). (signed ROD; FR notice, 18 December 2025, 2025-23314)
- **Cadence analysed:** up to **76 Starship–Super Heavy launches and 152 landings per year** (76 Super Heavy and 76 Starship), including return-to-launch-site and ocean landings.
- **What the ROD actually authorises:** After a real-property agreement, and subject to Appendix A mitigation, SpaceX may (1) construct the SLC-37 redevelopment and associated infrastructure and (2) conduct prelaunch operations, including transport of vehicle components and static-fire tests. The "up to 76 launches and 152 landings" is **not** cleared now. The ROD says those operations may occur only **once FAA completes a supplemental airspace analysis and DAF assesses it and finalizes a revised ROD**. No Starship–Super Heavy launch or landing may occur before that revised ROD. Range acceptance also still requires CCSFS Range Safety approval. (signed ROD)
- **FAA's next procedural step:** a Supplemental EIS to the 2025 DAF EIS, covering temporary airspace closures, DOT Section 4(f) resources, a contingency landing area, and Starship RTLS trajectories the DAF EIS did not analyse, in support of a license modification. Scoping comments go to **docket FAA-2026-10792, due no later than 14 October 2026**. A draft SEIS comes later; DAF then needs a follow-on decision before launches. (FR notice, 29 September 2026, 2026-19897)

> **Judge:** Only context facts were missing: the SEIS-supplemented DAF EIS number (fact 20) and the NOI signer (fact 22). The answer also only partly covers the contingency landing area distances, which does not change fact 21's substance. Every required and core fact was correct and no trap was asserted.

I'll look up the official EIS and ROD records for both Florida Starship sites and check what the SLC-37 decision actually conditions.The SLC-37 ROD is conditional. I'll pull the signed decision pages for both sites so the dates, signers, and authorizations are exact.The Federal Register pages blocked the fetch. I'll use the signed ROD PDFs and GovInfo copies for the signature blocks.The LC-39A signature looks like it is in the Final EIS volume. I'll confirm that page and whether either site still has an open FAA docket.As of 9 October 2026, the two Florida Starship-Super Heavy proposals are at different stages. LC-39A has a completed FAA environmental review that still does not issue a launch license. SLC-37 has a Department of the Air Force (DAF) decision that does not yet allow launches or landings. Reports that SpaceX was "cleared" for 76 Starship launches at SLC-37 overstate that record of decision (ROD).

LC-39A, Kennedy Space Center

The Federal Aviation Administration (FAA) was the lead agency for the environmental impact statement (EIS). Cooperating agencies included NASA at Kennedy Space Center, the Department of the Air Force / U.S. Space Force, the National Park Service, the U.S. Fish and Wildlife Service, and the U.S. Coast Guard. (FAA ROD)

The Final EIS is dated and signed **29 January 2026** by **Katie L. Cranor**, Executive Director, Office of Operational Safety, as the responsible FAA official. (Final EIS, Vol. I) The Federal Register notice of availability of the Final EIS and ROD is also dated 29 January 2026; that notice, not the ROD, is signed by Stacey Molinich Zee. (91 FR 5020) SpaceNews, quoting the ROD, reports that Cranor signed the ROD. The FAA ROD PDF itself returned a 403 here, so the signature block on that PDF was not re-read directly.

The EIS analysed **up to 44 Starship-Super Heavy launches per year** and **up to 88 landings per year** (44 Super Heavy and 44 Starship). Super Heavy landings could be at LC-39A, on an Atlantic droneship, or expended in the Atlantic. Starship landings could be at LC-39A, on an Atlantic droneship, or soft- or hard-water landings with expenditure or recovery in the Atlantic, Pacific, or Indian Oceans. (91 FR 5020)

The ROD is the FAA's environmental determination for issuing, modifying, or renewing a vehicle operator license, and for temporary airspace closures, within the operations analysed and with the stated mitigation. It does **not** issue the license. The FAA states that the proposal must still meet safety, risk, and indemnification requirements. (FAA ROD; FAA project page)

No open FAA comment docket or deadline for the LC-39A license was found as of 9 October 2026. The earlier NEPA docket, **FAA-2024-1395**, is closed. The remaining FAA step is the license decision under 14 CFR parts 400–460.

SLC-37, Cape Canaveral Space Force Station

The **Department of the Air Force** was the lead agency. The FAA was a cooperating agency and did not issue a ROD, because SpaceX had not yet applied to modify its vehicle operator license for SLC-37. (90 FR 59094; 91 FR 61551)

The DAF ROD was signed **20 November 2025** by **Michael E. Saunders, P.E., SES**, Acting Assistant Secretary of the Air Force (Energy, Installations, and Environment). The digital signature is timestamped 2025.11.20 16:36:09 −05:00. (Signed ROD; 90 FR 59094)

The 2025 DAF EIS analysed **up to 76 launches and 152 landings per year** (76 Super Heavy and 76 Starship), including return-to-launch-site and ocean landings. The FAA's later notice also describes Starship ocean landings in the Atlantic, Pacific, and Indian Oceans and the Gulf of America. (91 FR 61551)

What the DAF ROD actually authorises, and only after the real-property agreement and the Appendix A mitigations, is:

1. construction to redevelop SLC-37 and associated infrastructure;
2. prelaunch operations, including transport of vehicle components and static-fire tests;
3. up to 76 launches and 152 landings a year **only after** the FAA completes a supplemental airspace analysis.

The DAF must then assess that analysis and issue a **revised ROD before any Starship-Super Heavy launch or landing at CCSFS**. Range acceptance by Space Launch Delta 45 is also required. The 76-launch figure is the analysed ceiling, not a present launch clearance. (Signed ROD; 90 FR 59094)

The FAA's next procedural step is a supplemental EIS covering temporary airspace closures, DOT Act Section 4(f) resources, a contingency landing area, and return-to-launch-site trajectories that the 2025 DAF EIS did not analyse. Public scoping comments are due **14 October 2026** under docket **FAA-2026-10792**. A draft supplemental EIS comes later; a license modification is still a separate FAA action. (91 FR 61551; FAA SLC-37 page)

> **Judge:** Missing only context facts: the FR 2026-02108/docket FAA-2024-1395 and FR 2025-23314 citations, and that the NOI was signed by Cranor. All required and core facts are correct and no traps asserted. The answer did not explicitly call out the contingency landing area distances, but it mentions the SEIS topics, so it is treated as correct.

As of 9 October 2026, the two Florida Starship-Super Heavy reviews are at different stages. The LC-39A environmental review is finished; the SLC-37 review is not, and the often-cited "76 launches cleared" figure is conditioned.

LC-39A, Kennedy Space Center

- **Lead agency:** The Federal Aviation Administration (FAA), Office of Commercial Space Transportation. Cooperating agencies included NASA, the Department of the Air Force (U.S. Space Force), the National Park Service, the U.S. Fish and Wildlife Service, and the U.S. Coast Guard. (ROD; FAA project page)
- **ROD signed:** 29 January 2026, by Katie L. Cranor, Executive Director, Office of Operational Safety (ASA-1). The Final EIS and ROD were released publicly on 30 January 2026. (Final EIS signature block, NASA-hosted Volume I; FAA project page)
- **Cadence analysed:** Up to **44 launches and 88 landings per year** (44 Super Heavy and 44 Starship), including ocean landings of Super Heavy in the Atlantic and of Starship in the Atlantic, Pacific, and Indian Oceans, plus droneship landings. (ROD)
- **What the ROD authorises:** An environmental determination selecting the Preferred Alternative, to **support** FAA issuance, modification, or renewal of a vehicle operator license (14 CFR Chapter III, parts 400–460) and temporary airspace closures, with required mitigations. It is not itself the launch license. The FAA states

that finishing the environmental review does not guarantee a license; safety, risk, and indemnification requirements still apply. (ROD; FAA project page)
- **FAA next step:** No further NEPA step is open for LC-39A. The remaining FAA action is the license decision itself. No open docket or comment deadline was identified for that licensing step.

SLC-37, Cape Canaveral Space Force Station

- **Lead agency for the 2025 EIS:** The Department of the Air Force (DAF). The FAA was a cooperating agency and did **not** issue a ROD, because SpaceX had not yet applied to modify its vehicle operator license for SLC-37. EIS ID: EISX-007-057-USF-1730277197. (DAF ROD; FAA SLC-37 page)
- **ROD signed:** 20 November 2025, by Michael E. Saunders, P.E., SES, Acting Assistant Secretary of the Air Force (Energy, Installations, and Environment). (Final EIS transmittal; SpaceNews)
- **Cadence analysed:** Up to **76 Starship-Super Heavy launches and 152 landings per year** (76 Super Heavy and 76 Starship). The DAF EIS found no significant impacts with mitigation except noise (community annoyance). (FAA SLC-37 page; 91 FR 61551)
- **What the DAF ROD actually authorises — and what it conditions:** It is not an unconditional clearance for 76 launches. Upon the real-property agreement and compliance with Appendix A mitigations, it authorises (1) construction to redevelop SLC-37 and related infrastructure, (2) prelaunch operations, including transport and static fires, and (3) up to 76 launches and 152 landings **only after** the FAA completes a supplemental airspace analysis and the DAF issues a **revised ROD**. The DAF ROD states launches or landings will not occur until that revised ROD. (DAF ROD, Decision paragraph)

The 2025 DAF EIS also did not analyse temporary airspace closures, DOT Section 4(f) resources, the proposed Atlantic contingency landing area, or the full range of return-to-launch-site trajectories. Commercial operations still require an FAA license modification. (91 FR 61551; FAA SLC-37 page)

- **FAA's next procedural step:** A Supplemental EIS to support adopting the 2025 DAF EIS and a later license decision. Notice of Intent published **29 September 2026.** Public scoping comments are due **no later than 14 October 2026**, Docket **FAA-2026-10792** (regulations.gov, or mail to Eva Long, FAA, c/o ICF). A Draft SEIS will follow. The proposed FAA action is a modification (and later renewals) of SpaceX's existing vehicle operator license under 14 CFR part 400, plus temporary airspace closures, for the same 76/152 annual ceilings. (91 FR 61551; FAA SLC-37 page)

Bottom line: News accounts that SpaceX was "cleared" for 76 Starship launches at SLC-37 overstate the DAF ROD. That decision clears construction and prelaunch work now; launches and landings remain contingent on the FAA airspace supplement, a revised DAF ROD, and an FAA license modification. LC-39A's FAA ROD is complete for up to 44 launches and 88 landings a year, but it likewise supports licensing rather than issuing the license.
