Illustrative fixture: seeded synthetic data, not real results.

StackAI Enterprise AI agent platform Search Audit · 80 prompts · 5 providers · run 2026-10-08

Keenable routed gives StackAI the best balance of accuracy, cost and speed. 4 providers tie on accuracy, so cost and speed decide.

MOST CORRECT

Keenable routed: 67 of 80

Tied within chance with Parallel, Keenable search and Exa.

CHEAPEST OF THE MOST CORRECT

Keenable search: $0.019 per prompt

61 of 80 correct.

FASTEST

Keenable search: 6.1s median

61 of 80 correct.

Ranking

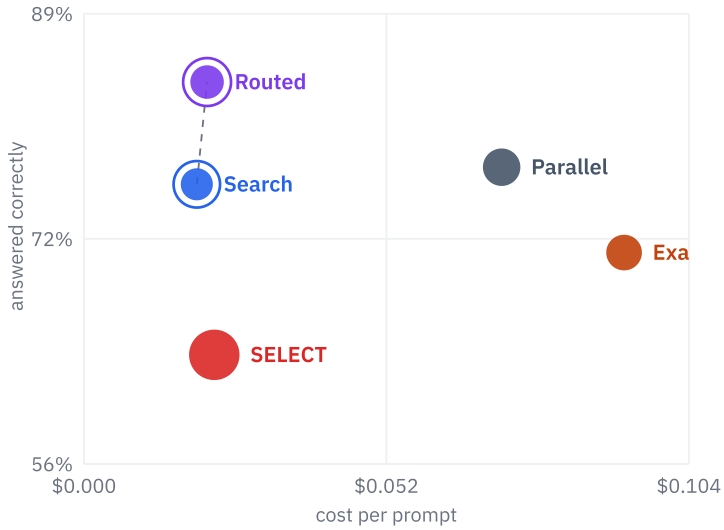

Value score combines accuracy, cost and speed per prompt (wrong = 0). Weights: accuracy 60, cost 25, speed 15.

#	Provider	Value score	Correct	$ / prompt	Time p50 / p90
1	Keenable routed	83	67/80 tied	$0.021	6.7s / 14.7s
2	Keenable search	81	61/80 tied	$0.019	6.1s / 7.0s
3	Parallel	62	62/80 tied	~$0.072	8.4s / 10.5s
4	Keenable SELECT	60	~~51/80~~	$0.022	~~13.9s~~ / 53.6s
5	Exa uses today	~~59~~	57/80 tied	~~~$0.093~~	7.5s / 9.4s

green best · ~~grey~~ worst · tied = accuracy gap within chance (paired McNemar test, Holm-corrected, vs Keenable routed). ~ = priced from a list price. How scoring works

Accuracy vs cost

Up and left is better. Dot size = median time. Ringed = Pareto front: no other provider is both at least as accurate and at least as cheap.

How we measured

Setup

Prompts	80 · run 2026-10-08
Agent model	`anthropic/claude-sonnet-4.5` `openrouter/auto resolved once and pinned`
Judge model	`anthropic/claude-opus-4.1`
Budget per answer	max tool calls 15, max seconds 180
Cost of this audit	$21.29

Providers

Exa	Exa MCP (web_search_exa, web_fetch_exa) ~$0.007 per search (list price)
Parallel	Parallel Search MCP (web_search, web_fetch) ~$0.005 per search (list price)
Keenable search	Keenable MCP (search_web_pages, fetch_page_content) from response usage
Keenable SELECT	Keenable SELECT MCP from response usage
Keenable routed	One search tool; Jev picks SELECT or search per call sum of the routed calls + Jev

CAVEATS

- Illustrative fixture: seeded synthetic data, not real results.
- Prompts were generated from public information about the company, not from its logs.
- Exa and Parallel costs use list prices, so they are estimates (marked ~).

Full method: Methodology. Raw data: results.json.

Prompts

All 80 prompts. ✓ correct · ◐ partly · ✗ wrong. Best value = highest value score on that prompt at the default weights. Prompts where providers disagree are detailed in the next section.

Failure modes

How each provider's answers went wrong across all 80 prompts (the judge's main reason per answer).
Click a number to open an example.

Failure mode	Exa	Parallel	Search	SELECT	Routed
Used the wrong source Answered from an unrelated or wrong page.	6	8	4	0	3
Outdated information Found only older pages; the answer was right once but isn't now.	1	1	3	1	3
Incomplete list Returned only some of the items a list prompt asked for.	7	5	8	1	1
Claim not in sources Stated something the cited pages don't say.	5	3	3	6	3
Wrong tool for the job Built a table for a single-fact prompt.	0	0	0	19	1
Over-searching Used more than 10 searches before answering.	0	0	0	0	0
Tool error / timeout The provider errored or the agent hit its time limit.	4	1	1	2	2
All failures	**23**	**18**	**19**	**29**	**13**

Failures by prompt type

Prompts each provider did not get fully right, per type. Lower is better.

Type	Prompts	Exa	Parallel	Search	SELECT	Routed
Lookup	22	6	5	2	12	2
Freshness	14	2	1	3	7	3
Multi-hop	18	7	5	5	6	6
List-building	16	8	6	8	1	1
Regulation	10	0	1	1	3	1

Head-to-head: Keenable routed vs Exa

The best-value provider against what StackAI uses today. Every other pair is in the online report.

Both correct	Only Keenable routed	Only Exa	Neither
49	18	8	5

No clear accuracy difference (paired McNemar test, p = 0.08; difference in share correct +12 points, 95% bootstrap interval +0 to +24). Keenable routed was cheaper on 80 of 80 prompts and faster on 49. Per prompt: $0.021 vs ~$0.093; median 6.7s vs 7.5s.

Only Keenable routed correct 18

Who is Gong's current CTO?	Freshness	◐	✓	Outdated information	4.4s · 8.2s
Has Datadog announced a funding round this quarter?	Freshness	◐	✓	Outdated information	6.9s · 8.4s
Compare Notion and its closest rival on uptime SLA and support hours.	Multi-hop	✗	✓	Tool error / timeout	2.1m · 9.2s
Which of Rippling's partners are also ISO 27001 certified?	Multi-hop	✗	✓	Used the wrong source	7.0s · 7.3s
Which of Zendesk's top three competitors integrate with Salesforce, and on which plans?	Multi-hop	◐	✓	Claim not in sources	4.5s · 8.3s
What does the EU AI Act require for high-risk identity systems, and from when?	Regulation	✗	✓	Tool error / timeout	6.2s · 7.5s

Implementation guide

Generated from this audit's results; it changes when the results change.

Recommended setup for StackAI

One search tool for StackAI's agents. Jev classifies each call. A prompt type goes to SELECT only when SELECT was clearly better than search on it (paired test, p < 0.05); otherwise it defaults to search, which is cheaper and faster.

Lookup · 22	→	Keenable search clear
Freshness · 14	→	Keenable search lean · re-test
Multi-hop · 18	→	Keenable search lean · re-test
List-building · 16	→	Keenable SELECT clear
Regulation · 10	→	Keenable search lean · re-test

Router config

```
from searchaudit.router import JevRouter

router = JevRouter(
    classify="typesafe/jev-router",  # via OpenRouter
    routes={
        "lookup": "keenable-search",  # clear, p = 0.002
        "fresh": "keenable-search",  # lean, re-test
        "multihop": "keenable-search",  # lean, re-test
        "wide": "keenable-select",  # clear, p = 0.016
        "domain": "keenable-search",  # lean, re-test
    },
    default="keenable-search",
    fallback="exa",  # on provider error
)
results = router.search(prompt)
```

Routes list-building prompts to SELECT. Drop-in search tool for any agent framework.

Monthly cost at your volume

Search + agent model per prompt, from this audit, times prompts per month. ~ = at least one input priced from a list price.

Setup	100k prompts / mo	1M prompts / mo	10M prompts / mo
Exa uses today	~~~$9k~~	~~~$93k~~	~~~$928k~~
Parallel	~$7k	~$72k	~$717k
Keenable search	**$2k**	**$19k**	**$194k**
Keenable SELECT	$2k	$22k	$224k
Keenable routed	$2k	$21k	$211k
Recommended router	$2k	$20k	$204k

Rollout

Week 1	Shadow 5% of search calls through the router; log both answers.
Week 2	Grade a 5% sample with the same judge. Gate: share correct at or above this audit's lower 95% bound for each route.
Week 3	Move to 50%, then 100%. Keep Exa as the error fallback.
Monthly	Re-run this audit on real prompts from logs; routes update from the results.

Judge

An AI judge graded all 400 answers against the reference for each prompt. This is how far to trust it.

Judge model	`anthropic/claude-opus-4.1`
Agreement with human graders	Not measured yet. No answers in this audit have been hand-graded.
Grades that break the rubric rule	`0 every grade matches its four checks`

Rubric

✓ = passes all four · ◐ = passes the first and all but one · ✕ = otherwise.

1. Answers the prompt
2. Facts correct
3. Sources support it
4. Up to date

Partial credit

◐ counts half in value scores and as not correct in the paired accuracy tests, so a tie is never won on half-right answers.

Closest calls

Prompts where providers split most evenly between right and wrong: the judge's decision there moves the ranking most. Worth a human look.

Prompt	Type	Exa	Parallel	Search	SELECT	Routed
