StackAI Enterprise AI agent platform Search Audit · 60 prompts · 5 providers · run 2026-10-07

Parallel gives StackAI the best balance of accuracy, cost and speed. 5 providers tie on accuracy, so cost and speed decide.

MOST CORRECT

Keenable search: 60 of 60

Tied within chance with Exa, Keenable SELECT, Parallel and Keenable routed.

CHEAPEST OF THE MOST CORRECT

Parallel: $0.014 per prompt

59 of 60 correct.

FASTEST

Exa: 5.5s median

59 of 60 correct.

Ranking

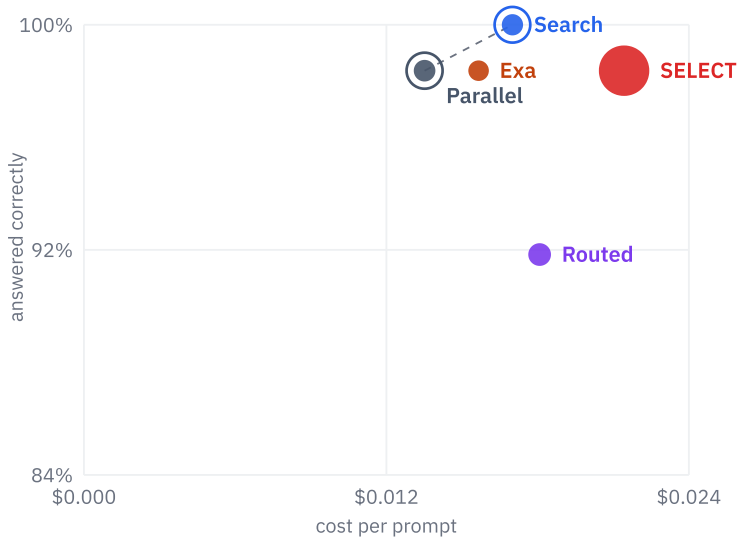

Value score combines accuracy, cost and speed per prompt (wrong = 0). Weights: accuracy 60, cost 25, speed 15.

#	Provider	Value score	Correct	$ / prompt	Time
1	Parallel	91	59/60 tied	$0.014	7.0s p90 15.1s
2	Keenable search	90	60/60 tied	~$0.017	6.3s p90 10.6s
3	Exa uses today	89	59/60 tied	$0.016	5.5s p90 10.3s
4	Keenable routed	79	~~55/60~~ tied	~$0.018	9.8s p90 2.1m
5	Keenable SELECT	~~77~~	59/60 tied	~~~$0.022~~	~~1.1m~~ p90 2.6m

green best · ~~grey~~ worst · tied = accuracy gap within chance (paired McNemar test, Holm-corrected, vs Keenable search). ~ = priced from a list price. How scoring works

Accuracy vs cost

Up and left is better. Dot size = median time. Ringed = Pareto front: no other provider is both at least as accurate and at least as cheap.

How we measured

Setup

Prompts	60 · run 2026-10-07
Agent model	`deepseek/deepseek-v4.1-flash` `openrouter/auto resolved once to deepseek/deepseek-v4.1-flash and pinned for every provider`
Judge model	`anthropic/claude-sonnet-5.5`
Budget per answer	max tool calls 15, max seconds 180.0
Cost of this audit	$8.69

Providers

Exa	OpenRouter openrouter:web_search + openrouter:web_fetch, engine=exa $0.007 per search, $0.001 per fetched page (OpenRouter list price for Exa)
Parallel	OpenRouter openrouter:web_search + openrouter:web_fetch, engine=parallel $0.005 per search, $0.001 per fetched page (OpenRouter list price for Parallel)
Keenable search	Keenable REST /v1/search + /v1/fetch as function tools ~$0.004 per request (Keenable list price)
Keenable SELECT	Keenable SELECT MCP (https://select.keenable.ai/mcp) tools via list_tools + Keenable fetch ~$0.004 per request (Keenable list price)
Keenable routed	Keenable search + SELECT behind one `search` tool; a router model picks the arm per call and the agent model writes the SQL when SELECT is picked ~$0.004 per request (Keenable list price)

CAVEATS

- Every provider ran the same prompts with the same pinned agent model, system prompt and temperature (0.2).
- Budget per run: 15 tool calls and 180 seconds; runs that hit it were forced to answer and are flagged.
- Exa and Parallel ran as OpenRouter server tools (openrouter:web_search and web_fetch), so OpenRouter's own loop decides how often they search inside one model call. Keenable ran as function tools in our own agent loop. Their search cost is what OpenRouter billed, split from the model cost when OpenRouter reported the split, otherwise estimated from list prices (marked ~).
- Keenable search and fetch are priced at the list price of $0.004 per request (marked ~), not from an invoice.
- Keenable SELECT is experimental: the agent writes one read-only SQL query (WEB_SEARCH / WEB_FETCH plus LLM functions) per call. A failed query still counts toward the tool-call budget and is priced at $0, since it is not known whether Keenable bills it.
- Keenable routed is a prototype: a router model (typesafe/jev-router) picks SELECT or Keenable search for each search call, and when it picks SELECT the agent model writes the SQL. Router and SQL-writing calls are counted in its search cost.

- routed: 3 hit the budget of 60 runs. Errored runs count as wrong.
- select: 6 hit the budget of 60 runs. Errored runs count as wrong.
- Judge: anthropic/claude-sonnet-5.5, bundle judge-v1, temperature 0, sees the reference answer.
- The judge has not yet been calibrated against hand-graded answers, so treat small accuracy gaps between providers with care.

Full method: Methodology. Raw data: results.json.

Prompts

All 60 prompts. ✓ correct · ◐ partly · ✗ wrong. Best value = highest value score on that prompt at the default weights. Prompts where providers disagree are detailed in the next section.

#	Prompt	Type	Exa	Parallel	Search	SELECT	Routed	Best value
1	For our KYC file on Apple Inc., what is the company's Central Index Key (CIK) on SEC EDGAR?	Lookup	✓	✓	✓	✓	✓	Parallel

Where providers disagree 7

One row per provider: result, the four judge checks (Answers the prompt · Facts correct · Sources support it · Up to date), failure mode, value score, time, cost and searches. The judge's note is shown under every answer that was not fully correct. Full answers and tool traces are online at /r/stackai/q/<number>.

18 What is the ECB deposit facility rate right now, and when did it last change? Freshness

Exa	✓	✓ ✓ ✓ ✓	91	8.9s	$0.025	3
Parallel	✓	✓ ✓ ✓ ✓	96	9.6s	$0.019	3
Keenable search	✓	✓ ✓ ✓ ✓	100	7.0s	~$0.019	3
Keenable SELECT	✓	✓ ✓ ✓ ✓	80	1.8m	~$0.025	4
Keenable routed → Search	◐	✓ ✓ ✓ ✓ Claim not in sources	~~43~~	16.7s	~$0.024	4

The current rate (2.50%) and the 16 September 2026 effective date are correct and match the official ECB table. However, the answer says the prior hike was 11 June 2026, while the ECB table and reference show 17 June 2026 (the 11 June date is the 2025 cut). The 23 July pause and the 29 October meeting claims are also not backed by the supplied evidence, so the supporting context is partly wrong or unsupported.

25 What was Databricks' most recent funding round: amount, valuation, and lead investor? Freshness

Exa	⊗	✓ ✗ ✓ ✗ Outdated information	~~0~~	5.5s	$0.015	2

The answer names the December 2025 Series L ($4B+ at $134B) as the latest round. The reference shows a newer $5B round at a $190B valuation, led by Coatue and closed August 13, 2026, so the amount, valuation and lead investor are all outdated. The cited sources do support the December 2025 claims, but that round is no longer the most recent.

Parallel	✓	✓ ✓ ✓ ✓	100	9.0s	$0.014	2
Keenable search	✓	✓ ✓ ✓ ✓	85	9.5s	~$0.034	4
Keenable SELECT	✓	✓ ✓ ✓ ✓	83	1.3m	~$0.017	3
Keenable routed → Search	✓	✓ ✓ ✓ ✓	79	15.1s	~$0.034	4

39 Which ransomware group attacked the healthcare clearinghouse that UnitedHealth acquired in 2022, and when did the attack start? Multi-hop

Exa	✓	✓ ✓ ✓ ✓	89	5.7s	$0.016	2
Parallel	✓	✓ ✓ ✓ ✓	78	11.4s	$0.022	4
Keenable search	✓	✓ ✓ ✓ ✓	100	5.0s	~$0.010	2
Keenable SELECT	✓	✓ ✓ ✓ ✓	70	1.6m	~$0.027	4
Keenable routed → Search	◐	✓ ✗ ✓ ✓ Claim not in sources	~~49~~	5.2s	~$0.010	2

The answer correctly names ALPHV/BlackCat and Change Healthcare, and it does give Feb 21, 2024 as the ransomware deployment and outage date. But it states the attack "started" on Feb 12, which departs from the reference's Feb 21 start date, even though the TechTarget source supports Feb 12 as initial access. Some details, such as the 4–6 TB figure and the DOJ suit page supporting the deal closing, are not clearly backed by the cited material.

41 List all ICT providers designated as critical third-party providers (CTPPs) under DORA. List-building

Exa	✓	✓ ✓ ✓ ✓		98	8.6s	$0.017	2
Parallel	✓	✓ ✓ ✓ ✓		91	12.9s	$0.018	3
Keenable search	✓	✓ ✓ ✓ ✓		96	7.4s	~$0.019	2
Keenable SELECT	✓	✓ ✓ ✓ ✓		72	35.7s	~$0.044	3
Keenable routed → SELECT	⊗	✗ ✓ ✗ ✗	Tool error / timeout	~~0~~	3.1m	~$0.002	2

The agent's searches failed (database error and timeout), so it listed none of the 19 designated CTPPs. It correctly declined to guess, but the prompt went unanswered and no sources were cited. It also hedged on whether an official list exists, when the ESAs published one on 18 Nov 2025.

49 Which countries and territories have a GDPR adequacy decision from the European Commission? List-building

Exa	✓	✓ ✓ ✓ ✓		70	11.4s	$0.026	3
Parallel	◐	✓ ✓ ✗ ✓	Claim not in sources	~~37~~	8.7s	$0.014	2

The list matches the reference: all 16 countries and territories with the right Canada and US qualifiers, plus the European Patent Organisation. But some added claims are not in the retrieved sources, including the Korea review concluded 23 July 2026 and the Brazil 26 January 2026 press release, which is not among the cited URLs. The Brazil inclusion itself is not visible in the excerpts either.

Keenable search	✓	✓ ✓ ✓ ✓		79	5.5s	~$0.015	2
Keenable SELECT	✓	✓ ✓ ✓ ✓		62	2.8m	~$0.046	9
Keenable routed → SELECT	◐	✓ ✗ ✗ ✗	Tool error / timeout	43	3.1m	~$0.003	2

The answer lists 15 of the 16 required countries and territories with correct caveats, but it omits Brazil (adopted Jan 2026). It also says it cannot confirm any new adequacy decisions. Both searches failed, so there are no retrieved sources, and the answer is not current as of the reference date. Under the grading rule, missing Brazil makes it partly correct.

50 List the member jurisdictions of the Basel Committee on Banking Supervision. List-building

Exa	✓	✓ ✓ ✓ ✓		100	4.9s	$0.009	1
Parallel	✓	✓ ✓ ✓ ✓		75	15.6s	$0.022	3
Keenable search	✓	✓ ✓ ✓ ✓		77	8.3s	~$0.025	2
Keenable SELECT	✓	✓ ✓ ✓ ✓		63	1.8m	~$0.076	13
Keenable routed → SELECT	◐	✓ ✓ ✗ ✓	Claim not in sources	~~38~~	3.0m	~$0.014	3

The final list of 28 jurisdictions matches the reference, with Turkey for Türkiye. However, the cited governance page excerpt does not contain the quoted '45 members from 28 jurisdictions' text, and the answer wrongly describes Chile, Malaysia and UAE as 2014 member additions when they are observers. The list itself was admitted to be unverified, so the sourcing is weak.

59 **Under the NAIC Insurance Data Security Model Law (#668), how quickly must an insurer notify the state insurance commissioner of a cybersecurity event?** Regulation

Exa	✓	✓ ✓ ✓ ✓		94	7.9s	$0.016	2
Parallel	✓	✓ ✓ ✓ ✓		88	30.5s	$0.014	2
Keenable search	✓	✓ ✓ ✓ ✓		92	6.7s	~$0.020	3
Keenable SELECT	◐	✓ ✗ ✗ ✓	Claim not in sources	~~35~~	2.4m	~$0.034	7

The core answer is correct and sourced: 72 hours from determination, with the correct domicile and 250+ consumer criteria, matching the NAIC text. The state-variation examples are shaky. Pennsylvania at 5 business days and Missouri at 4 business days are not in the retrieved evidence, which instead lists Minnesota at 5 days, and both are likely wrong.

Keenable routed → Search	✓	✓ ✓ ✓ ✓		81	14.2s	~$0.025	3

Failure modes

How each provider's answers went wrong across all 60 prompts (the judge's main reason per answer).
Click a number to open an example.

Failure mode	Exa	Parallel	Search	SELECT	Routed
Used the wrong source Answered from an unrelated or wrong page.	0	0	0	0	0
Outdated information Found only older pages; the answer was right once but isn't now.	~~1~~	0	0	0	0
Incomplete list Returned only some of the items a list prompt asked for.	0	0	0	0	0
Claim not in sources Stated something the cited pages don't say.	0	1	0	1	~~3~~
Wrong tool for the job Built a table for a single-fact prompt.	0	0	0	0	0
Over-searching Used more than 10 searches before answering.	0	0	0	0	0
Tool error / timeout The provider errored or the agent hit its time limit.	0	0	0	0	~~2~~
All failures	**1**	**1**	**0**	**1**	**5**

Failures by prompt type

Prompts each provider did not get fully right, per type. Lower is better.

Type	Prompts	Exa	Parallel	Search	SELECT	Routed
Lookup	16	0	0	0	0	0
Freshness	12	~~1~~	0	0	0	~~1~~
Multi-hop	12	0	0	0	0	~~1~~
List-building	10	0	1	0	0	~~3~~
Regulation	10	0	0	0	~~1~~	0

Head-to-head: Parallel vs Exa

The best-value provider against what StackAI uses today. Every other pair is in the online report.

Both correct	Only Parallel	Only Exa	Neither
58	1	1	0

No clear accuracy difference (paired McNemar test, p = 1.00; difference in share correct +0 points, 95% bootstrap interval -5 to +5). Parallel was cheaper on 46 of 60 prompts and faster on 21. Per prompt: $0.014 vs $0.016; median 7.0s vs 5.5s.

Only Parallel correct 1

Prompt	Type	Parallel	Exa	Failure	Time
What was Databricks' most recent funding round: amount, valuation, and lead investor?	Freshness	✓	✗	Outdated information	9.0s · 5.5s

Only Exa correct 1

Prompt	Type	Parallel	Exa	Failure	Time
Which countries and territories have a GDPR adequacy decision from the European Commission?	List-building	◐	✓	Claim not in sources	8.7s · 11.4s

Implementation guide

Generated from this audit's results; it changes when the results change.

Recommended setup for StackAI

One search tool for StackAI's agents. Jev classifies each call. A prompt type goes to SELECT only when SELECT was clearly better than search on it (paired test, p < 0.05); otherwise it defaults to search, which is cheaper and faster.

Lookup · 16	→	Keenable search lean · re-test
Freshness · 12	→	Keenable search lean · re-test
Multi-hop · 12	→	Keenable search lean · re-test
List-building · 10	→	Keenable search lean · re-test
Regulation · 10	→	Keenable search lean · re-test

List-building: Exa scored 6 points higher than the Keenable route on this type (default weights). If these prompts matter most, route them to Exa.

Regulation: Parallel scored 5 points higher than the Keenable route on this type (default weights). If these prompts matter most, route them to Parallel.

Router config

```
from searchaudit.router import JevRouter

router = JevRouter(
    classify="typesafe/jev-router",  # via OpenRouter
    routes={
        "lookup": "keenable-search",  # lean, re-test
        "fresh": "keenable-search",  # lean, re-test
        "multihop": "keenable-search",  # lean, re-test
        "wide": "keenable-search",  # lean, re-test
        "domain": "keenable-search",  # lean, re-test
    },
    default="keenable-search",
    fallback="exa",  # on provider error
)
results = router.search(prompt)
```

No prompt type routes to SELECT on this data. Drop-in search tool for any agent framework.

Monthly cost at your volume

Search + agent model per prompt, from this audit, times prompts per month. ~ = at least one input priced from a list price.

Setup	100k prompts / mo	1M prompts / mo	10M prompts / mo

Keenable routed	~$2k	~$18k	~$184k
Recommended router	~$2k	~$17k	~$173k

Rollout

Week 1	Shadow 5% of search calls through the router; log both answers.
Week 2	Grade a 5% sample with the same judge. Gate: share correct at or above this audit's lower 95% bound for each route.
Week 3	Move to 50%, then 100%. Keep Exa as the error fallback.
Monthly	Re-run this audit on real prompts from logs; routes update from the results.

Judge

An AI judge graded all 300 answers against the reference for each prompt. This is how far to trust it.

Judge model	`anthropic/claude-sonnet-5.5`
Agreement with human graders	Not measured yet. No answers in this audit have been hand-graded.
Grades that break the rubric rule	3

Rubric

✓ = passes all four · ◐ = passes the first and all but one · ✕ = otherwise.

1. Answers the prompt
2. Facts correct
3. Sources support it
4. Up to date

Partial credit

◐ counts half in value scores and as not correct in the paired accuracy tests, so a tie is never won on half-right answers.

Grades that do not match their checks

The judge's grade differs from what its own four checks imply. Worth a human look.

Prompt	Provider	Grade	Checks imply
What is the ECB deposit facility rate right now, and when did it last change?	Keenable routed	◐	✓
Which countries and territories have a GDPR adequacy decision from the European Commission?	Keenable routed	◐	✕
Under the NAIC Insurance Data Security Model Law (#668), how quickly must an insurer notify the state insurance commissioner of a cybersecurity event?	Keenable SELECT	◐	✕

Closest calls

Prompts where providers split most evenly between right and wrong: the judge's decision there moves the ranking most. Worth a human look.
