SpaceX Compliance

Keenable for SpaceX compliance

Parallel 61, Exa 60, Grok native 56, Keenable router 48, Keenable SELECT 45, Keenable search 43 correct out of 100. Keenable search ran out of its budget on 11 of 100 prompts, with a median of 14 searches per prompt against Exa's 7. The router sent 37 of 100 to search. On 22 prompts a rival was right and none of the three Keenable columns was correct.

What the run shows

WHERE KEENABLE WINS

- On 4 prompts, Keenable was right and Exa, Parallel, and Grok native all missed. They are listed below.
- Against Exa alone, Keenable SELECT got 11 prompts right that Exa missed (regulation 4, list-building 4, multi-hop 3); Exa got 26 that Keenable SELECT missed.
- On the 45 cross-document prompts added in the reset: Parallel 35, Keenable SELECT 27, Keenable router 25, Exa 24, Grok native 23, Keenable search 20 correct. That is the slice the reset was built to test, and the one place Keenable pulls ahead of Exa.
- On accuracy, these pairs are not distinguishable on 100 prompts (Holm-corrected McNemar, 5% level): Keenable search and Parallel; Keenable search and Grok native; Keenable SELECT and Exa; Keenable SELECT and Parallel; Keenable SELECT and Grok native; Keenable router and Exa; Keenable router and Parallel; Keenable router and Grok native.

Prompt Keenable got and rivals missed	Right
8 Did the January grant leave Big LEO open outside the US?	Keenable search, Keenable SELECT, Keenable router
52 Does one favorable ITU finding close the Gen2 reporting condition?	Keenable search
60 Did December 2022 authorize the Gen2 tracking beacons?	Keenable search, Keenable SELECT, Keenable router
73 Does launch insurance protect only the licensee?	Keenable search, Keenable router

WHERE IT FALLS SHORT

- The best Keenable column, Keenable router, got 48 of 100. Parallel got 61, 13 more. Paired 95% interval for the gap: 2 to 24 points. On its own that is a clear gap, but after correcting for the 9 comparisons it is not ($p = 0.205$).
- On 22 prompts a rival was right and none of the three Keenable columns was correct. They are listed under Final thoughts.
- Keenable search ran out of its budget on 11 of 100 prompts (Exa on 0). On those 11, search got 2 right and Exa 3.
- Keenable SELECT is slow: a median of 4.6m per prompt against Exa's 43.9s. Fine for a compliance memo, too slow for chat.
- On the 12 prompts not in English, Keenable search got 5 right and Exa 10.

WHAT WOULD CHANGE THE RESULT

- A larger tool-call budget would show whether Keenable search's misses are budget or index. That is a re-run of the prompts where the budget ran out.
- For SpaceX today, Parallel is the most accurate. Keenable has to close the 13-answer gap on this set before it is the better choice here.

Why SpaceX

SpaceX is not a random pick. There are three reasons.

1. THEY HAVE SAID THEY WILL PICK THE BEST TOOL

On 7 October Elon Musk said SpaceX will use the best back-end model for each task. He was talking about models, not search. I expect the same rule to reach search, and under that rule a search provider gets in by being more accurate on SpaceX's own work.

> Going forward, @SpaceX will use the best back end model for any given task, including Claude Opus 5.5, MidJourney, Suno and other leading APIs. Whatever is most likely to give you the best outcome.
>
> Elon Musk, 7 October 2026. link

2. COMPLIANCE IS HEAVY THERE, AND IT IS A SEARCH PROBLEM

SpaceX is the largest satellite operator. That means launch licenses, spectrum orders, launch insurance, and the law of every country it sells service in, much of it not in English. In Canada the decision is often in French, and the English summary is a different document. A compliance specialist I know at an Entrepreneur First company told me this is a real problem, and the company's CEO and CTO said the same. If Keenable does this well for SpaceX, the same work carries over to every space operator behind it, including newer ones like Starcloud.

3. IT IS A WAY INTO CURSOR AND GROK

Cursor joined SpaceX on 14 August 2026. Compliance is the first job; the larger prize is a place as a search provider inside Grok and Cursor. My rough estimate is that this alone would more than double Keenable's daily queries, and the queries are data Keenable can learn from. Developers rarely want to depend on one search provider. Exa is the visible incumbent: it publishes a Cursor plugin, though I don't know whether Cursor's own agent uses it. A Keenable listing next to Exa in Cursor puts the name in front of millions of developers.

None of this works unless Keenable is accurate on the compliance work. That is what the rest of this document tests.

How I'm comparing them

Inside Grok or Claude, search is one tool among many, so a bad answer is hard to blame on search. Here the search tool is the only thing that changes. Every column runs x-ai/grok-4.7 with the same instructions (find sources, read the pages, answer, cite the URLs, say what you could not verify) and the same budget of 100 tool calls and 1800 seconds. A run that hits the budget is made to answer, and that answer is graded like any other.

Two exceptions. SELECT gets a short note on how to write its SQL, because that is how SELECT is meant to be used. The router, Jev (typesafe/jev-1.13), picks search or SELECT once per question, and then the agent has only that tool. The router column is a replay: Jev's pick decides which of the two Keenable runs is scored, with that run's answer, time and cost, plus the routing call itself.

Column	What it is
Exa	Exa search.
Parallel	Parallel search.
Grok native	Grok's own web search.
Keenable search	Keenable's search endpoint.
Keenable SELECT	Keenable's SQL-over-the-web tool, plus the SQL note.
Keenable router	Jev picks search or SELECT for each question.

Each prompt has a reference answer I wrote from the primary document, naming that document. Once per prompt, the reference is turned into a checklist of facts and of wrong answers to watch for, and every provider is graded against the same checklist. anthropic/claude-sonnet-5.5 marks each item, and the grade follows a fixed rule over those marks rather than the judge's overall impression. Only a correct grade counts toward accuracy. Cost is the dollars for the run. Speed is wall-clock time, wrong answers included.

A second judge model, openai/gpt-6.1-sol, re-graded every answer against the same checklists. It agreed with the first judge on correct-versus-not 77% of the time and on the exact grade 75% (Cohen's κ 0.61).

Cost and speed are recorded, but the bar is accuracy. A cheap wrong answer is not a reason to switch.

The prompts

100 prompts about SpaceX's licenses, spectrum, launch rules, and insurance. Each is written so that reading only the headline of the filing gives a wrong answer. The right answer is in the order itself. 12 are asked in the language of the source (French, Spanish, Dutch, Portuguese, Japanese). No prompt pins the search index to a date. Where a date matters, it is in the prompt. The set was reset once, on 2026-10-09: 45 prompts that every provider had answered correctly were removed, since they could not separate anyone, and 45 harder ones were written in their place, cross-document tables and multi-step chains checked against the primary documents.

Question	Wrong answer it tests for	Language	Source
Did the FCC give Amazon the 24-month extension?	The extension to 30 July 2028 was granted.	English	DA-26-553
Do Gen2 and Polar share Gen1's milestone dates?	Every Amazon constellation is due 30 July 2026 and 30 July 2029.	English	DA-26-553, footnote 8
Did the 22 July 2026 vote repeal Part 25 the next day?	Part 25 ended when the Commission voted.	English	FCC-26-47
Did the FCC authorize all 29,988 Gen2 satellites?	The January 2026 order granted the full request.	English	DA-26-36
Are the new Gen2 shells a single altitude and inclination?	One shell, and the old altitudes were cancelled.	English	DA-26-36
Did the January grant leave Big LEO open outside the US?	Still pending, and 2 GHz inside the US was granted with it.	English	DA-26-36 and DA-26-398

Question	Wrong answer it tests for	Language	Source
Does Starlink now hold permanent UK gateway licences at every site it asked for?	All of them were granted, including E-band, with no end date.	English	Ofcom, 2025 and 2026
Is the Eloy quad-band gateway still running under its July STA?	The 60-day STA is still in force, and Iridium lost outright.	English	SES-STA-20260511-01297
Must every Falcon launch carry $500 million and $100 million?	Those figures are the minimums, and cover lasts until disposal.	English	14 CFR Part 440
Must existing licenses be rewritten the day after the Part 100 vote?	Yes. A Part 25 citation died with the vote.	English	FCC-26-47
Are both Starlink Australia area licences still in force?	The register says Granted, so both are current.	English	ACMA 11240791 and 11240792
Did ACMA license W-band earth stations in Melbourne, Perth, and Sydney?	All three cities, renewable, with interference protection.	English	ACMA interim W-band
Are the Gen2, direct-to-cell, data-center, and Eloy files one granted call sign?	One constellation, and the million-satellite system was licensed.	English	S2992, S00735, S00798, E260362
Did Falcon miss the deadline to move onto Part 450?	The deadline passed and Falcon 9, Falcon Heavy, and Dragon are still on the old part.	English	FAA, 17 March 2026
Did Arcep authorize Starlink to use USASAT-NGSO-3X in France?	France authorized USASAT-NGSO-3X, and the terminals are protected from interference.	French	Arcep 2024-2687
Did the FCC refuse the EchoStar assignment because of the control allegation?	The assignment was denied because Elon Musk is controlled by the Chinese Communist Party.	English	DA-26-471
Did the March 2024 E-band order add satellites and grant the beacons?	DA-24-222 authorized E-band on a new tranche, and granted the beacons the same day.	English	DA-24-222
Did the court strike the 2022 grant, and did 2024 fill the low shells?	The D.C. Circuit struck down the 2022 grant, and November 2024 put all 29,988 satellites in the 340-360 km shells.	English	DA-24-1193

Question	Wrong answer it tests for	Language	Source
Are these six Starlink authorizations permanent rights to interference protection?	They are permanent protected grants. France covers USASAT-NGSO-3X, and Melbourne was included.	English	Six authorizations
Was the March 2024 Big LEO file parked until the rulemaking?	The Bureau parked 00022 until the rulemaking, and it is the T-Mobile SCS file.	English	DA-24-300
Did the June 2026 filing grant Starlink a South African licence?	ICASA licensed Starlink for 10 years that day, and the letter abolished the 30 percent equity rule.	English	ICASA, 29 June 2026
Is the separate V-band constellation still authorized beside Gen2?	The separate V-band constellation still sits alongside Gen2, and November 2024 granted the bond and milestone change.	English	DA-24-1193
Does the January 2026 grant still exclude both of those V-band uplinks?	Both uplinks are still refused because of the 2018 order. 50.4-51.4 GHz was granted in 2018.	English	FCC-18-161 and DA-26-36
Does 27.5-28.35 GHz let Starlink put user terminals inside a Chilean city?	That band authorizes user terminals in the city, and the 21 March 2026 journal already granted the new gateway.	Spanish	Decreto 5, 9 January 2025
Did December 2022 add 7,500 satellites on top of every existing authorization?	December 2022 added 7,500 satellites on top of every existing authorization, and granted E-band and the beacons that day.	English	FCC-22-91
Could one Gen2 satellite light two co-frequency beams on the same area?	Each satellite could light two co-frequency beams on the same area, and 580 km was a floor.	English	FCC-22-91
Did the May 2022 Arcep decision already authorize earth stations in motion?	ESIMs were already in the 25 May 2022 decision, and the 28 March 2023 decision authorizes STEAM-1B.	French	Arcep 2023-0680
Did the RDI grant SpaceX Netherlands a concession for the whole of the Netherlands?	SpaceX Netherlands B.V. received a concession for the whole of the Netherlands in February 2025, and the December 2025 concession went to the same company.	Dutch	RDI, 1 December 2025
Does one favorable ITU finding close the Gen2 reporting condition?	Any one favorable ITU finding closes the reporting condition, and launches may continue after the failure threshold is crossed.	English	FCC-22-91
Were the March 2026 earth-station actions ordinary licenses still in force in October?	The March 2026 actions were ordinary licenses still running in October, and the two section 1.62 actions expired on 1 May 2026.	English	DOC-419216

Question	Wrong answer it tests for	Language	Source
Do satellite gateways share 27.5-28.35 GHz inside New Zealand cities with mobile?	Satellite gateways and mobile share that band inside cities without a geographic split, and a new gateway application could be filed on 2 April 2026.	English	RSM New Zealand
Did the December 2022 grant make SpaceX wait for the ITU finding?	SpaceX had to wait for the ITU finding before the operations authorized that day, and the waiver removed the combined-filings report.	English	FCC-22-91
May a foreign satellite operator keep serving Kenya with no landing rights?	A foreign satellite firm already serving Kenyan networks was excused from landing rights, and the 2025 note is Starlink's Kenyan licence.	English	Communications Authority of Kenya
Is the Nigerian landing permit a licence for 6,000 satellites?	The landing permit is 6,000 satellites through 2032, and the Ka uplink is continuous from 27.5 to 30 GHz.	English	Nigerian Communications Commission
Did December 2022 authorize the Gen2 tracking beacons?	The December 2022 grant authorized the beacons, and the application put 137-138 MHz on the space-to-Earth link.	English	FCC-22-91
Did the October 2025 Vandenberg record issue the license?	The October 2025 record of decision is the launch license for SLC-6, and the FAA preferred the no-action alternative.	English	FAA, October 2025
Has the FAA notice already waived NEPA for a Falcon license?	Notice 26-11 has already waived NEPA for Falcon licenses, and the notice is a final rule with an effective date.	English	FAA-2026-8614
Is the Vandenberg cadence 100 Falcon 9 launches from SLC-4?	The decision authorizes 100 Falcon 9 launches a year from SLC-4 and five Falcon Heavy launches in addition, and the number is the FAA launch license.	English	FAA, October 2025
Does the Vandenberg record find no environmental harm?	The record finds no environmental harm, and the Jalama Beach and vegetation measures are already license conditions because the record of decision exists.	English	FAA, October 2025
After the policy expires, does the United States still pay only above it?	After the policy expires the government still pays only above the old insurance limit, and participant additional-insured status ended on 30 September 2025.	English	51 USC 50914
Does the United States automatically pay the next $1.5 billion?	The $1.5 billion is paid automatically once claims exceed the insurance, an experimental permit gets the same payment, and willful misconduct by the licensee is covered.	English	51 USC 50915
May a space flight participant sue in state court?	The participant may sue in state court, and subsection (g) is the permit rule as well as the license rule.	English	51 USC 50914(g)
Is a suborbital flight insured until 30 days after payload separation?	A suborbital flight is insured until 30 days after payload separation, and coverage attaches when the policy is issued.	English	14 CFR 440.11

Question	Wrong answer it tests for	Language	Source
Is every United States property claim inside the $100 million cover?	Every United States property claim is inside the $100 million cover, a non-insurance demonstration is due on the 30-day schedule, and the insurer's certificate without the broker's opinion is enough.	English	14 CFR 440.9
Does launch insurance protect only the licensee?	The policy names only the licensee, and the customer's contractor pays the United States for this cover.	English	51 USC 50914(a)(4)
Did the Boca Chica finding license 25 launches a year?	This finding is a license for 25 launches, the pad is authorized for night landings, and the no-action case allows no flights.	English	FAA, April 2025
Can Boca Chica beach stay closed for the whole campaign?	The beach can be closed for the whole campaign, summer weekends are ordinary closure days, and an anomaly permanently takes the state parks.	English	FAA, April 2025
Did the later airspace study authorize a night landing at the pad?	This study licenses a night landing of Starship at the pad, and the only airspace at issue is over the Gulf.	English	FAA tiered EA
Does one payload-class finding clear every later satellite?	A class determination clears each later satellite, and the FAA's determination covers the aspects the FCC regulates.	English	14 CFR 450.43
Can a permittee charge a passenger for crew training?	Crew training authorizes a paying passenger, and a payload flown for a fee is allowed because the ban covers only people.	English	14 CFR 437.91
Did January 2026 leave the one-beam cap in place?	The December 2022 one-beam cap still limits 12.2-12.7 and 19.7-20.2, and Ku-band beams are unlimited once it is lifted.	English	DA-26-36
Can a new crew member be told on launch day?	Every crew member may be told on launch day, and a person employed on 23 December 2004 had to be told before being hired.	English	14 CFR 460.9
Must the vehicle be destroyed whenever it leaves the planned path?	The vehicle must be destroyed whenever it leaves the planned path, invalid tracking always means abort, and every flight uses the highly reliable abort standard through landing.	English	14 CFR 450.108
Can SpaceX keep the higher power while it studies interference?	SpaceX may keep operating above the EPFD limits while it studies the complaint, and the waiver cannot be revoked.	English	DA-26-36
Is the W-band grant a protected downlink with no elevation floor?	The W-band grant is a protected space-to-Earth downlink, and the order sets no elevation floor.	English	DA-26-36
Quelles décisions Arcep ont autorisé les passerelles Starlink en France, et lesquelles subsistent ?	Trois stations, toutes encore autorisées, sous le nom Starlink dès 2020.	French	Arcep 2020-0727 à 2022-0182

Question	Wrong answer it tests for	Language	Source
¿Cuántas estaciones terrenas autorizan los tres extractos de Subtel, y en qué comunas?	Una sola concesión, Cabrero 1 en la comuna de Cabrero, todo ya en servicio.	Spanish	Subtel 24-SP157939, 25-SP69683, 25-SP69681
Which Starlink entity holds which licence in Guernsey, Jersey, Cayman, TCI and the Falklands?	One entity everywhere, Jersey Class III, TCI licensed in March.	English	GCRA, JCRA, OfReg, TCI, FIG
What did ComReg's three Killala documents each decide, and who objected?	A licence number and grant date already in 25/31; ComReg ran the EPFD assessment itself.	English	ComReg 25/31, 25/36R, 25/79
What did Namibia's gazette notice decline, and what happened to the reconsideration?	Starlink never filed; the appeal was decided on the merits.	English	Gazette 8872, notice 197
¿Qué ampara cada uno de los tres títulos del IFT de Starlink México?	La modificación de 2022 amplió Ku/Ka para Gen2; USASAT-NGSO-3X figura en los títulos.	Spanish	IFT AUT-SAT-EXT-029/2021, 1262/2022, P/IFT/070721/319
Which UK gateway sites did Ofcom grant, see surrendered, then vary, with which licence numbers?	Nine sites still licensed; Morn Hill varied; 2022 band edges quoted as 2024's.	English	Ofcom 2022, 2023, 2024
¿Qué dispone cada una de las Resoluciones ENACOM 4/2024, 372/2026 y 663/2026?	Licencia directa en 2024; atribución general de banda W; USD 9.978.000 leídos como millones.	Spanish	ENACOM 4/2024, 372/2026, 663/2026
O que pede cada uma das três frentes da Starlink na Anatel, e quando foi publicada?	CP 9 ou CP 29 já concedidas; banda E entre as faixas da CP 9.	Portuguese	Anatel CP 9/2026, CP 29/2026, SEI 12964217
Every 2026 STA for the Hillsboro and Atlanta gateways: file, dates, term, basis?	Four dated STAs only; the two section 1.62 grants are 60-day STAs.	English	SES-02843, 02845, 02864, 02895
Which of the seven blanket-terminal modifications were granted, and which are still pending?	The 13.75-14.0 and 14.5-14.75 GHz additions were granted on 15 April.	English	SES-02842, 02850, 02852, 02853

Question	Wrong answer it tests for	Language	Source
What became of Swarm's filings to add Starlink as a point of communication?	Seven or eight STAs granted; the points of communication were added permanently.	English	SES-02738 to 02766
Which five gateway licences did SpaceX surrender on 16 April 2026, and when were they granted?	Expirations or Bureau cancellations; a different count than five.	English	SES-02855, 02754, 02772, 02779
Status of each SpaceX space-station filing placed on notice in 2026, as of 9 October?	The one-million-satellite application is granted; S00887 belongs to another file.	English	DA 26-113, DA 26-1078, SAT notices
Where do the five Texas quad-band gateways stand: STA, re-grant, 42 GHz STA, licence?	The licences are granted; Falfurrias has a September re-grant.	English	SES-02880 to 02901
List every 2026 action on the Redmond V-band gateway E240163.	Only three rows; 60-day terms for the section 1.62 grants; a Ka-band station.	English	SES-02843, 02864
What do the ELS records for SpaceX's 2026 Starship STA applications show?	A file number and grant date read off a mirror site as if from the ELS record.	English	FCC ELS STA_Print records
Which call signs got 42.0-42.5 GHz STAs on 28 September 2026, and which other STA was in force for each?	The dual-band Atlanta E250226 is in the batch; Wills Point and Falfurrias have a parallel STA.	English	SES-02901, 02887, 02897, 02899
Where does DIRECTV's reconsideration of FCC 26-26 stand, and what did the Bureau say in DA 26-973?	The petition is decided; compatibility showings are already under review.	English	FCC 26-26, Report 3234, DA 26-973
How did Sateliot's second petition end, and what came after the dismissal?	The petition was denied after public notice; EchoStar opposed the application for review.	English	DA 26-398, DA 25-20
What happened to SpaceX's Big LEO petition for rulemaking and the Kuiper and Iridium filings around it?	Denied rather than dismissed under 1.401(e); Iridium's petition went on public notice.	English	DA 24-298, DA 26-398

Question	Wrong answer it tests for	Language	Source
What is the object-years condition Kuiper and Telesat tried to remove, and where did it come from?	A threshold of 100 satellites; the condition was removed in 2026.	English	DA 26-36, FCC 22-91
When does Part 100 take effect, and what does the transition guidance require?	Effective 23 July 2026 or 30 days after publication; two eligibility conditions.	English	FCC 26-47, DA 26-1080
How did the 2023 Starship NEPA lawsuit end, by which orders and judge?	The September ruling dismissed the whole case; an appeal is pending.	English	D.D.C. 1:23-cv-01204
How many GSO reference links were adopted, and what did the September 2026 notice change?	328 GSO satellites or networks; 12.6 dB adopted; the selection criteria changed.	English	FCC 26-26, DA 26-467, DA 26-973
What happened to the 2 GHz MSS inquiry into EchoStar, and what did DA 26-471 add?	Carr's September 2025 letter closed the docket; the FCC opened the band.	English	DA 25-405, DA 26-398, DA 26-471
What did the House Science Committee ask the FCC about Part 100, and what did Carr reply?	The reply came before the vote; orbital debris is an independent authority.	English	Babin/Lofgren letters, DOC-424156
What does the GX10 application annex say about Starlink, and what did Ofcom decide?	USASAT filing names; Starlink objected; decided 2 September.	English	Ofcom GX10 application and decision
Que propose la Commission pour la bande MSS 2 GHz après 2027, et pour quels opérateurs ?	Un règlement adopté ; Inmarsat et Solaris comme titulaires visés par l'article 20.	French	COM(2026) 311
What did the Cayman licence authorise, and what did Amendment No. 1 add for direct-to-device?	The amendment is dated 5 August; the MSS bands are exclusive.	English	OfReg TL-01 of 2025, Amendment No. 1
Reconstruct the chain of notices that led to Starlink Caribbean's TCI licence.	Granted on 12 or 14 August; direct-to-device authorised standalone.	English	TCI DN 2024-6 to DN 2026-8

Question	Wrong answer it tests for	Language	Source
KDDIの衛星ダイレクト通信用無線局は、いつ、どの種別で免許され、どの省令改正に基づくか？	12月25日に免許が付与された。	Japanese	関東総合通信局・総務省 報道資料
¿Qué segmentos exactos de banda W autoriza la Resolución ENACOM 372/2026 a Starlink Argentina?	Un bloque continuo de 92 a 114,25 GHz con protección contra interferencias.	Spanish	ENACOM 372/2026
What bond deadline, milestones, term and testing rules does the D2D authorization set?	Testing in the EchoStar bands only after Step Two closes; one 330 km shell.	English	DA-26-1078
In which territories may 2000-2020 MHz be a downlink, and what was deferred or dismissed?	Downlink nationwide including Puerto Rico; 2020-2025 MHz granted.	English	DA-26-1078
Which SCS rules were waived for SpaceX's own spectrum, and what coordination comes first?	A general relaxation across all bands; 911 duties waived.	English	DA-26-1078
Which SpaceX bands fall inside the third processing rounds, and which stay in the first?	All SpaceX Gen2 V-band satellites are in the third V-band round.	English	DA-26-552 and erratum
Who approved Starlink routers after the Covered List addition, for how long?	The FCC granted it; the approval is permanent.	English	DA-26-775, DA 26-278
Do the new FCC NEPA rules already apply to the D2D grant?	The grant used the new rules; Gomez dissented in full.	English	FCC-26-64, DA-26-1078
What GSO arc avoidance angle does FCC 26-26 set, and how does SpaceX's waiver condition differ?	SpaceX operates under the rule's 3-degree angle.	English	FCC-26-26, DA-26-1078
How much spectrum does FCC-26-65 unlock at 12.7 GHz, and on what footing for NGSO downlinks?	550 MHz for consumer dishes and 1,050 MHz in total.	English	FCC-26-65

Question	Wrong answer it tests for	Language	Source
What did the LC-39A Record of Decision decide on closures, mitigation and the licence?	The ROD issued the licence; the preferred alternative is environmentally preferable.	English	FAA ROD, 29 January 2026
Every 2026 Federal Register notice from the FAA that concerns SpaceX: document, docket, date?	Fewer than six rows; a Falcon notice dated 2026.	English	federalregister.gov, FAA 2026
Trace the KSC Starship environmental review from notice of intent to Record of Decision.	A 2025 ROD; the ROD issued the licence.	English	FAA EIS notices, VOL 23-129
Compare the LC-39A and SLC-37 Starship decisions as of 9 October 2026.	SpaceX is licensed to launch Starship from Florida today.	English	FAA ROD, DAF ROD, FAA-2026-10792

Finished 9 October 2026.

ACCURACY

A partial is not counted as correct. 2 router prompts never ran (one Keenable arm failed); they count against accuracy but sit in neither the partial nor the wrong column. "Out of budget" is how many runs used up the tool-call or time budget and were made to answer.

Provider	Correct	95% interval	Partial	Wrong	Out of budget
Exa	60/100	50–69%	24	16	0
Parallel	61/100	51–70%	27	12	0
Keenable search	43/100	34–53%	39	18	11
Keenable SELECT	45/100	36–55%	37	18	7
Grok native	56/100	46–65%	25	19	0
Keenable router	48/100	38–58%	37	13	5

COST

Search $ is what the searches cost. Model $ is the agent's tokens. $ / correct is the mean cost of the prompts that provider answered correctly, not total spend divided by correct answers. Searches is the median per prompt.

Provider	$ / prompt	$ / correct	Search $	Model $	Searches
Exa	$0.6741	$0.2301	$0.0463	$0.6277	7
Parallel	$0.4396	$0.2318	$0.0314	$0.4082	5
Keenable search	$0.5479	$0.3384	$0.1283	$0.4196	14

Provider	$ / prompt	$ / correct	Search $	Model $	Searches
Keenable SELECT	$0.5712	$0.4070	$0.0858	$0.4854	9
Grok native	$0.8648	$0.3615	$0.0472	$0.8176	6
Keenable router	$0.4552	$0.2898	$0.0855	$0.3698	10

SPEED

Wall-clock seconds per prompt, wrong answers included.

Provider	Median time	Mean time	Fastest prompt	Slowest prompt
Exa	43.9s	1.9m	10.1s	15.2m
Parallel	56.7s	2.0m	11.7s	14.3m
Keenable search	1.2m	2.8m	8.5s	12.9m
Keenable SELECT	4.6m	6.9m	1.2m	28.7m
Grok native	44.5s	1.7m	9.5s	11.2m
Keenable router	3.6m	4.8m	9.0s	19.5m

Median seconds by grade. A dash means that provider had no answers of that grade.

Provider	When correct	When partial	When wrong
Exa	32.0s	1.3m	4.3m
Parallel	45.0s	54.7s	3.5m
Keenable search	1.0m	1.0m	6.4m
Keenable SELECT	3.8m	5.6m	8.4m
Grok native	33.9s	40.3s	3.9m
Keenable router	3.4m	3.8m	6.5m

IS THE DIFFERENCE REAL?

Each Keenable column against each rival, on the same 100 prompts. Accuracy uses an exact McNemar test on the prompts where only one of the two was right; the interval is a paired bootstrap. Seconds and dollars use a Wilcoxon signed-rank test on the per-prompt pairs. Every p-value is Holm-corrected for the 9 pairs. A negative gap means Keenable is behind, faster, or cheaper.

Keenable	Rival	Correct gap	95% interval	Only Keenable / only rival right	p	Accuracy	Seconds gap	p	Dollars gap
Keenable search	Exa	-17	-27 to -7	7 / 24	0.030	**Exa ahead**	+13.7s	0.001	-0.008
Keenable search	Parallel	-18	-29 to -6	12 / 30	0.063	No clear difference	+7.3s	0.014	+0.003
Keenable search	Grok native	-13	-24 to -2	11 / 24	0.205	No clear difference	+20.0s	0.000	-0.051
Keenable SELECT	Exa	-15	-27 to -3	11 / 26	0.120	No clear difference	+219.5s	0.000	+0.004
Keenable SELECT	Parallel	-16	-26 to -5	9 / 25	0.063	No clear difference	+203.5s	0.000	-0.003

Keenable	Rival	Correct gap	95% interval	Only Keenable / only rival right	p	Accuracy	Seconds gap	p	Dollars gap
Keenable SELECT	Grok native	-11	-22 to 1	13 / 24	0.205	No clear difference	+221.3s	0.000	-0.039
Keenable router	Exa	-12	-23 to -1	10 / 22	0.205	No clear difference	+134.5s	0.000	-0.011
Keenable router	Parallel	-13	-24 to -2	11 / 24	0.205	No clear difference	+152.5s	0.000	-0.018
Keenable router	Grok native	-8	-19 to 3	12 / 20	0.215	No clear difference	+152.0s	0.000	-0.060

The correct gap is in percentage points. The seconds and dollars gaps are the median per-prompt difference. With 100 prompts, an accuracy gap under about 10 points is usually not distinguishable.

Exa Parallel Keenable search Keenable SELECT Grok native Keenable router

DOLLARS AND TIME

Across: dollars per prompt. Up: median seconds, including the wrong answers. A provider past the scale sits on the frame.

DOLLARS AND CORRECT ANSWERS

Across: dollars per prompt. Up: percent correct. A provider past the scale sits on the frame.

By prompt

Every prompt and every provider: the grade, seconds, dollars, and searches. Green is correct, amber is partial, grey is wrong; a dash with no time is a prompt that column never ran. The notes are the judge model's own words: "DATA" is the material the agent retrieved, and "fact n" or "trap n" point at items on that prompt's checklist.

Question	Exa	Parallel	Keenable search	Keenable SELECT	Grok native	Keenable router
1 Did the FCC give Amazon the 24-month extension?	correct 32.0s · $0.0648	correct 39.2s · $0.0598	partial 21.8s · $0.0721	correct 191.2s · $0.0550	correct 37.5s · $0.0422	correct 191.5s · $0.0550
2 Do Gen2 and Polar share Gen1's milestone dates?	correct 46.5s · $0.0843	correct 76.4s · $0.0942	correct 42.3s · $0.1382	correct 286.9s · $0.1095	partial 30.5s · $0.0349	correct 42.7s · $0.1383
4 Did the 22 July 2026 vote repeal Part 25 the next day?	correct 264.2s · $0.4578	partial 219.5s · $1.3542	correct 74.3s · $0.2731	correct 236.5s · $0.0811	correct 353.5s · $0.4132	correct 74.6s · $0.2732
6 Did the FCC authorize all 29,988 Gen2 satellites?	correct 16.3s · $0.0696	correct 19.6s · $0.1206	partial 8.5s · $0.0349	correct 321.4s · $0.0921	correct 17.1s · $0.1316	correct 321.7s · $0.0922

Final thoughts

Some limits hold whatever the grades say. SELECT takes minutes, which is fine for a memo and too slow for chat. SELECT is the only column with a usage note, so its result is the tool plus the note. Jev can send a table prompt to search, or a one-page prompt to SELECT; that is a routing miss, not a search miss.

SELECT returns the filing as a table of fields, often up to the 12,000-character cap this audit puts on one SELECT result. That helps only when the model trusts the table. On the Big LEO prompt (8, the January grant read with the April order) a row said the request was dismissed with prejudice, the answer used it, and SELECT was right where Exa was not.

WHY KEENABLE MISSED

Keenable answers graded partial or wrong, by the cause the judge named. The explanations are the judge model's own notes; "fact n" and "trap n" refer to items on the prompt's checklist and "DATA" to the pages the agent retrieved.

Provider	Cause	Prompts	What that means
Keenable search	Incomplete list	48	Returned only some of the items a list prompt asked for.
Keenable SELECT	Incomplete list	40	Returned only some of the items a list prompt asked for.
Keenable router	Incomplete list	40	Returned only some of the items a list prompt asked for.
Keenable SELECT	Claim not in sources	9	Stated something the cited pages don't say.
Keenable router	Claim not in sources	7	Stated something the cited pages don't say.
Keenable search	Claim not in sources	6	Stated something the cited pages don't say.
Keenable SELECT	Used the wrong source	3	Answered from an unrelated or wrong page.
Keenable router	Tool error / timeout	3	The provider errored or the agent hit its time limit.
Keenable SELECT	Outdated information	2	Found only older pages; the answer was right once but isn't now.
Keenable router	Used the wrong source	2	Answered from an unrelated or wrong page.
Keenable search	Tool error / timeout	2	The provider errored or the agent hit its time limit.
Keenable SELECT	Tool error / timeout	1	The provider errored or the agent hit its time limit.

Provider	Cause	Prompts	What that means
Keenable search	Outdated information	1	Found only older pages; the answer was right once but isn't now.

Keenable search: Incomplete list

- 1 Amazon asked the FCC to extend the Gen1 50% deployment milestone by 24 months, to 30 … The answer omits the paragraph 12 consequence that missing the 2029 milestone reduces the authorization to the satellites operational on that date. It also omits the Light Reading error, the 1,618 vs 1,616 distinction, and the ordering clause 20 citation discrepancy, which are context items.
- 6 On 9 January 2026 the Space Bureau acted on SpaceX's Gen2 upgrade. SpaceX had asked f… The answer omits the deferred MSS operations outside the US in the 1429-2690 MHz band (fact 8) and the deferred 20.2-21.2 GHz and 30.0-31.0 GHz operations (fact 9). It also does not state that the second tranche uses the same frequencies and orbital parameters as the first (fact 5). It does correctly state the deferral of the remaining 14,988 satellites.
- 11 Starlink asked Ofcom for UK gateway authority in Ka band at two urban sites, and earl… All core and required facts are correct. Context facts 8-12, 19 and 21-23 are missing, and the Ka statement date is given as 16 July 2026 rather than 20 July 2026, which contradicts fact 13.
- 12 SpaceX Services received a special temporary authority for a quad-band gateway in Elo… The answer says Iridium's petition was not found denied, so the partial denial limited to STA operations (13) and the no-determination on the license application (14) are missing. The U.S. Table waivers (15-18) are not stated. It also claims a renewal/extension (SES-STA-20260815-02301) in force on 8 Oct, which conflicts with the no-renewal fact (3) and trips trap 2; the extension's grant details are not shown in the DATA.
- 14 For a licensed orbital launch, what does 14 CFR Part 440 actually require on insuranc… The answer covers the core and required facts accurately. It omits the context facts on permits (7), space flight participants and the 30 September 2025 sunset (13-15), and does not explicitly say that cover does not run until disposal or mission end (10), though its stated duration implies it.
- 19 ACMA considered interim W-band earth-station transmitters for Starlink at Melbourne, … The answer does not say Melbourne's proponent will deal directly with the radar operator. It only says ACMA proposed using subsection 10(10), not that it made 10(10) decisions for Perth and Sydney. It also hedges on the final non-renewable one-year term and does not state that first W-band licences were issued.
- 29 The 8 March 2024 E-band order, DA-24-222, is often described as giving Starlink E-ban… Missing: the non-harmful-interference condition (6), the stop-on-notice requirement (7), the 20 November 2024 beacon grant (9), and the pending appeals and reconsideration petitions (12). The core and required facts on satellite count, no additions, no processing round, the waiver, and deferral of the beacons are all correct.
- 30 What did the D.C. Circuit do with the 29 November 2022 Gen2 grant, what was still pen… The answer never says that petitions for reconsideration of the 2022 grant were still pending at the Commission (facts 2, 3, 4), which was the second part of the question. It also omits the Commission's continued monitoring of interference, debris and astronomy (fact 10).

- 35 For each of these Starlink authorizations, say whether the operator may claim protect… Missing: the UK non-interference duty toward fixed links and EESS (the answer only describes protecting existing links), and the Australian final no-protection and one-year term (the answer only cites the proposal and says it could not verify). Also missing are context details: the Canada ITU filing, UK sites and issue date, France's STEAM-1/1B-only scope, and Brazil's R$ 102,677 price.
- 37 In March 2024 the Space Bureau acted on SpaceX's application to add mobile-satellite … Core facts are all correct. Missing context facts: the 7 Feb 2023 filing date, the distinction from -00021, the 2020-2025 MHz US allocation, no rights gained, reapplication option, and the later DA-26-398 order.
- 42 On 29 June 2026 SpaceX filed written representations with ICASA on the draft amendmen… Missing or only partially covered: the Notice 3926/Gazette 54677 details, SpaceX's stated intent via a South African subsidiary, the draft not setting licence duration, the existing 30% regulation basis, the 12 December 2025 ministerial direction, and the Gazette 52530 inquiry findings. The core answers (no licence granted, 10 years is a request, 30% HDG equity application unresolved) are correct.
- 44 In 2018 the Commission dismissed SpaceX's request to operate in 51.4-52.4 GHz and def… The answer correctly says the 2018 exclusion no longer applies, but it does not state the three-band uplink list from DA-26-36, so fact 2 is missing. It also omits the 2018 context: FCC-18-161, the 'no allocation' reason for the 51.4-52.4 GHz dismissal, the GN Docket 14-177 deferral, the 42.0-42.5 GHz dismissal, and the milestone and bond points.
- 45 El decreto de 9 de enero de 2025 otorga a Starlink Chile SpA una concesión de servici… Fact 2 (seven earth stations, RUT) and facts 10-11 (reporting duty) are missing. Fact 6 is contradicted because the answer states a specific publication date (25 February 2025), though the BCN page title does show that date, so this is a minor issue.
- 51 Heeft de RDI in 2025 aan SpaceX Netherlands B.V. een concessie verleend voor heel Ned… The answer correctly says no nationwide concession was granted, and gives the BES registration reason, Starlink Caribbean LLC, the three islands and 15 years. It missed the 14 June 2024 order to stop by 21 June (it only says it couldn't verify a June order), the 7 February 2025 rejection date, and the 26 June 2024 application date; it also omitted the second order and the other context facts.
- 53 In early March 2026 the FCC acted on several SpaceX Services earth-station files. Wer… The answer gets the main conclusion right (STAs, not licenses; terms over by October; unprotected/non-interference basis). It misses the six specified STA file numbers and terms, and fails to identify the two section 1.62 actions (E220009 file 00812 and E210309 file 00918), instead saying they could not be verified.
- 55 New Zealand decided in 2026 how 27.5-28.35 GHz would be shared between mobile and fix… Fact 9 (news said new gateway licensing was 'expected' to open 8 June) is not stated as such; the answer gives the 8 June opening as fact. Fact 11 (not a Starlink licence) is not mentioned. Both are minor, and the core and required facts are correct.
- 61 In October 2025 the FAA adopted the environmental impact statement for Falcon launche… The answer omits that a license application changing operations beyond the EIS scope needs further environmental review (fact 4), and omits the FAA's concurrence/adoption of the EIS (6), the preferred alternative (8), and the no-action alternative points (9, 10). It states annual launch numbers (up to 100) even though the

checklist says the ROD extract does not give one (11), though the figures come from the Air Force ROD notice.

- 62 The FAA's commercial-space waiver notice, docket FAA-2026-8614, lists the National En... Fact 2 is missing because the answer omits Notice No. 26-11, RIN 2120-AM51 and the docket together as identifiers. Fact 5 is contradicted because the answer states comments were due August 31, 2026, treating the placeholder date as real. Facts 4, 6, 9, 10 and 11 are not stated.
- 64 The October 2025 Vandenberg record of decision studies a higher Falcon cadence. Does ... The answer omits the unavoidable terrestrial biological impacts from vegetation clearing, and it never says the measures bind SpaceX as a condition of an FAA license that the DAF ROD does not itself issue. It instead frames the binding as a DAF precondition tied to a 90-day plan and Attachment A, claims the DATA window does not show, and says the FAA decision was unavailable.
- 67 After the insurance policy on a licensed Falcon launch expires, does the United State... Missing: the 14 CFR 440.17(f) waiver sunset (fact 8, only 440.9(b)(4) mentioned), the space-flight-participant-not-a-customer point (7), the authority edition framing (3), and the note that no adjusted dollar figure is computed (14, though the answer did not compute one). No traps asserted.
- 70 A suborbital licensed flight is insured on the same clock as an orbital launch: cover... Fact 4 (coverage does not attach merely when the policy is bound) is not stated explicitly, though the answer says coverage attaches when the launch starts. All other facts are correct and no traps are asserted.
- 76 Did the FAA's finding on a higher Starship cadence at Boca Chica license 25 launches ... The answer gets the core points right: daytime-only pad landings, night landings offshore only, and the 25 launch and 50 landing cadence. It omits the explicit statement that this is not the modified license, the VOL 23-129 distinction, the no-action alternative, the static-fire caps and the notification requirements. It says the document was issued in May 2025 where the checklist says April, which the judge treated as a minor date slip.
- 77 Does the April 2025 finding on a higher Starship cadence let Boca Chica beach stay cl... The answer correctly says no and gives the 500-hour and 300-hour limits with no change. It omits that the finding is not the license, the Cameron County/GLO memorandum of agreement and public-safety condition, SpaceX's record on summer holidays and weekends, and all the section 4(f) and state-park facts (9-15).
- 78 Did the later Boca Chica airspace study authorize Starship to land back at the pad at... The core answers are right: no night landing at the pad and the closed airspace is not Gulf-only. It omits the 2022 programmatic tiering, the Gulf expended nighttime Starship reentries (it says only 'offshore'), the 22 daytime reentries, the commercial aircraft impact figures (200 an hour, 4,400 a year), the 72-hour closure determination, hazard area variability, and the unanalyzed resource categories.
- 83 Does a favorable FAA determination for the communications-satellite class clear every... The answer gets the core points right. It does not state that an FCC license is not an FAA payload determination (required fact 6), and it omits several context facts (5, 9-14), including the US Government payload exception and the 413.17/413.21 procedures.
- 86 DA-26-36, released 9 January 2026, grants SpaceX's request to remove the condition th... The answer commits to all core facts (grant, eight-beam Ku-band cap, 4-

degree GSO exclusion). Context facts on the date and paragraph numbers are not stated, and it does not say that no eight-beam cap is stated for 19.7-20.2 GHz, though it implies the cap is Ku-band only.

- 97 If the Space Bureau determines that Gen2 operations under the January 2026 EPFD waive… The answer never mentions paragraph 17 or its 'may revoke' wording (facts 5 and 6), and it does not identify the grant stamp versus paragraph 17 as the relevant sources (fact 1). It reports only the 'will revoke' sentence from the grant stamp without saying which sentence it uses.
- 100 Starlink Chile SpA ha pedido a la Subtel modificar dos concesiones distintas para ins… Missing: the 17 January 2025 signing date for 24-SP157939 (the answer only says the PDF has no Diario Oficial header), the 1/22/24-month deadlines, and the point that the extracts are open requests with a 30 business-day opposition period. The vLex publication date it adds is hedged and is not among the cited sources.
- 101 Starlink is licensed in several small British-linked jurisdictions through different … Missing: Cayman Amendment No. 1 (28 May 2026) and the D2D MSS frequencies it added, the Cayman 'first under the framework' point, Guernsey's Ku-band/Ofcom term and the 15 June comment deadline, Jersey's 15-year term, and the Falklands 3 Nov 2025 resumption of VSAT licensing. Context facts on the Sure objection, the TCI framework notice and Sure's claim were also omitted.
- 103 CRAN refused Starlink's Namibian licence in March 2026 and then closed a reconsiderat… The agent could not read CRAN's 22 June release and relied on secondary reports. It hedged on Starlink's 8 June filing date and did not attribute 23 April to the release and 22 April to the CEO remarks. It omitted the 17 June petition, the Minister's role under section 46(2), and High Court review under section 32.
- 104 En México, Starlink Satellite Systems México, S. de R.L. de C.V. opera bajo tres títu… The answer says it could not verify the 2022 registry date and number (10 Aug 2022, inscripción 061647), so fact 18 is missing. It also does not state that the Secretaría kept the 5% Reserva for the 2022 modification (fact 17), and it omits several context facts (filing dates, the oficio of 24 May 2021, the MSS service, no exclusivity).
- 105 Between 2022 and 2024 Ofcom granted, then saw surrendered, then varied Starlink's UK … The answer omits the six 2022 sites (core), the Bristol and Hoo St Werburgh surrenders in October 2023 (core), and the Viasat respondent. It also contradicts the Isle of Man holder: it says Starlink Internet Services Limited rather than Starlink Internet Services UK Limited.
- 106 Starlink Argentina S.R.L. no obtuvo su licencia TIC por un acto directo sino por tran… The answer is only a progress statement with no substantive content; all 22 facts (dates, expedientes, dispositions, amounts, signatory) are missing. No sources were cited.
- 107 A Starlink tem três frentes abertas na Anatel sobre o Direito de Exploração de Satéli… Missing: the Gen2 Relatório SEI nº 12964217 signed 02/12/2024 by Freire, the 26/12/2023 request date (answer hedges), and the 12/11/2024 referral and MPA 928/2024. Contradicted: CP 38 is dated 22 July 2024 instead of 19 July, and CP 29 is given as DOU página 62 instead of 63.
- 108 SpaceX Services runs two dual-band gateways on rolling special temporary authority: H… The answer lists only six of the eight grants. It misses both Hillsboro grants from March and May (SES-STA-20260306-00718 and SES-STA-20260428-

01175) and the Atlanta May grant (SES-STA-20260428-01170). It also does not state that nothing appears in the 7 October notices, and it omits the Starlink system and frequency details.

- 109 In spring 2026 SpaceX Services filed two rounds of modification applications for its ... The answer covers only E230036 (round-one file number and term), E210127's round-two acceptance in SES-02850, and the 23 March filing date. It misses the other six call signs' terms and file numbers, the notices SES-02842, SES-02853 and SES-02852, the 15-year-term point, and the pending status of the round-two applications.
- 110 In December 2024 Swarm Technologies (SpaceX's VHF subsidiary) filed to let its licens... Missing: the withdrawals of the Clarksville and Brewster modifications, the Wailuku 2022 modification withdrawal, the Draper modification number (SES-MOD-20221216-01370), the Sunnyvale call sign and original application SES-LIC-20230728-01922, and the statement that every application was withdrawn. Contradicted: the answer denies that Sussex's STA withdrawal came before the other grants, which is the premise of the question.
- 111 On 16 April 2026 SpaceX Services surrendered by letter five Ka/E-band gateway earth-s... The answer declined to list any of the five licences, so all facts are missing, including the surrender itself (it only echoes the question's date and names SES-02855 without confirming the surrender entries). No traps were asserted.
- 113 SpaceX Services' quad-band Gen1/Gen2 gateways in Roma, Harlingen, Hidalgo, Falfurrias... The answer missed the 22 Sep 2026 re-grants (term 23 Sep to 21 Nov, SES-02899) for Roma, Harlingen, Hidalgo and Dallas, and said they were not found granted, which contradicts fact 9. It also omitted the Gen1/Gen2 antenna counts and frequency bands, the Falfurrias dual-band antennas, and the point that Roma, Harlingen and Hidalgo have no 42 GHz STAs. It tied the Iridium ruling only to Roma, though it said the paragraph is repeated across the notice.
- 114 SpaceX Services holds call sign E240163 for a single-antenna V-band gateway in Redmon... The answer found no 2026 STA actions, so it misses the five actions, their file numbers, dates and terms, and the explanation of the three same-day actions (facts 1, 4-13). It does correctly give the 1.85 m antenna, the S3069 link and the bands, though those came from a 2024 notice.
- 118 In April 2026 the Space Bureau dismissed Satelio IoT Services USA's (Sateliot's) seco... Missing: the 'not placed on public notice' detail, the AWS-4 R&O/DA 24-300 citation as the ground (the answer gave only a generic ground), the mooted SpaceX/EchoStar dismissal requests in DA 25-20, Sateliot's June 23 reply, and the status as of October 2026. The core and required facts are otherwise correct and no traps were asserted.
- 120 In DA-26-36 (9 January 2026) Kuiper and Telesat asked the Space Bureau to remove a co... The answer did not give the Bureau's two reasons (pending reconsideration petitions; SpaceX's very low disposal failure rate) and denied that Kuiper and Telesat asked to remove the object-years condition, contradicting fact 2. It also did not state that SpaceX never asked for removal, and omitted the 2023 screening figures, the Viasat petition and the semiannual report.
- 122 Environmental groups sued the FAA in 2023 over the Starship/Super Heavy programmatic ... The answer never states that the court rejected the unlawful-delegation theory (fact 9), and it omits the 19 Nov 2025 filing date of ECF 73 and the 18 Nov 2025 Minute Order behind it (fact 14). It also omits the Seven County citation (fact 8) and the status of any appeal (fact 22); the last two are context-only.

- 123 FCC 26-26 adopted an initial dataset of GSO reference links that NGSO systems such as… The answer omits the explicit exclusion of Astranis's prospective 121 deg W.L. links and the rationale that an NGSO operator would have nobody to coordinate with. It also omits several context items (delegated authority, 9 comments/7 replies, Amazon Ka-band replacement links, 25-degree and ESIM, FCC 26-26 effective date). It does not contradict any fact or assert any trap.
- 125 The chair and ranking member of the House Science, Space, and Technology Committee wr… The answer gives the 25 Feb date but not what the February letter asked (suspend or narrow the NPRM), so fact 1 is missing. It also omits the context facts: the unanswered February letter, the section 310/301/302/303(r)/307/309 ties, and the 23 July release date.
- 126 On 22 July 2025 Ofcom published a joint application from Inmarsat Global Limited and … The answer never gave the 15 October 2025 decision date or the zero consultation responses, and it did not list the licence's Ka-band uplink ranges (27.5-27.9405 and 28.4545-28.9485 GHz were absent). It hedged on the annex's Starlink number, so that fact is marked missing. It also wrongly explained the naming difference as Amazon's Kuiper-to-Leo rebrand, when the real reason is that Network Access Associates is a subsidiary of Eutelsat OneWeb (footnote 9).
- 134 Under the 6 October 2026 D2D authorization, SpaceX will provide supplemental coverage… All core facts are correct. Missing: the section 25.115 and 25.115(q) earth-station waiver (fact 6), the 47 Federal earth stations count (fact 9, only the 27 zones are given), and the duty to investigate credible interference claims and cease operations in the affected area (fact 11).
- 137 The FCC adopted new NEPA rules on 30 September 2026 declaring that space-based operat… The answer says it could not find how the order disposed of DarkSky's letter (footnote 140, 1.1307(c) treatment) or the FAA responsibility language (footnotes 142-143 and 201, and the FCC not superseding the FAA). It also omits the extraterritorial rationale, the 1.1302(b)(6) codification, the dicta point and the aluminum-oxide footnote.

Keenable SELECT: Incomplete list

- 12 SpaceX Services received a special temporary authority for a quad-band gateway in Elo… The answer correctly says 01297 expired on 7 September 2026 and gives the call sign, antennas and term. It misses the unprotected non-interference basis (it hedges), Iridium's petition being denied as to the STA only, the no-determination-on-license point, the coordinates, and all the U.S. Table waivers. It also asserts a separate extension STA (02301), which conflicts with the reference not establishing any renewal.
- 19 ACMA considered interim W-band earth-station transmitters for Starlink at Melbourne, … The answer gives the one-year non-renewable term and the no-interference/no-protection conditions only as proposals, and explicitly says the final licences are unconfirmed, so facts 5-7 are missing. It also omits the radar operator and proponent detail for Melbourne (fact 1), the issuing of the first licences (4), and the no-precedent/future-review condition (9).
- 21 These four SpaceX file numbers are easy to conflate: the Gen2 call sign, the direct-t… The answer never says the Gen2 grant was 15,000 satellites against 29,988 requested, and never says DA-26-398 dismissed the Big LEO and L-band parts of the

Gen2 requests or left the January 2 GHz grant intact. It also omits that acceptance of the data-center application waived neither milestones nor the surety bond.

- 28 A petitioner asked the FCC to hold a hearing on whether SpaceX could be an EchoStar-s… The answer never states that the Bureaus found SpaceX qualified (fact 3). It also omits the Trust qualification finding, the two-year trust term, and the expected 30 November 2027 closing (facts 5-7).
- 29 The 8 March 2024 E-band order, DA-24-222, is often described as giving Starlink E-ban… Missing context facts 6, 7 and 12 (non-harmful-interference conditions, stop-on-notice duty, pending appeals) and required fact 9 (the beacon grant came in a later 20 November 2024 order). All core and other required facts are correct and no trap was asserted.
- 30 What did the D.C. Circuit do with the 29 November 2022 Gen2 grant, what was still pen… The answer does not mention that the 9 January 2026 grant stamp still lists petitions for reconsideration as pending (fact 3). It also omits that the Commission will keep watching interference, debris and astronomy for the larger proposal (fact 10).
- 35 For each of these Starlink authorizations, say whether the operator may claim protect… The answer hedged on the UK no-harmful-interference clause (fact 10) and on whether the Australian grant adopted the no-protection term and one-year non-renewable term (17, 18). It also omitted the Canadian ITU filing (5), the French frequency bands (13), the UK no-access-promise point (11), the Australian ARSP point (19) and the Brazilian R$ 102,677 payment condition (21).
- 42 On 29 June 2026 SpaceX filed written representations with ICASA on the draft amendmen… Core and required facts are covered except fact 6, the draft not setting licence duration, which the answer never states. Context facts 1, 3, 4, 5, 11 and 12 are not stated, and no traps were asserted.
- 44 In 2018 the Commission dismissed SpaceX's request to operate in 51.4-52.4 GHz and def… The answer correctly says neither uplink is excluded and explains the 51.4-52.4 GHz dismissal. It never says the 2018 deferral of 50.4-51.4 GHz was pending Spectrum Frontiers (GN Docket 14-177), and it omits the FCC-18-161 citation, the public notice error, the 42.0-42.5 GHz dismissal, and the milestone and bond points.
- 51 Heeft de RDI in 2025 aan SpaceX Netherlands B.V. een concessie verleend voor heel Ned… The answer says no concession for all of the Netherlands and gives the registration requirement and the 15-year BES concession to Starlink Caribbean LLC. It misses the 14 June 2024 order to stop by 21 June, the 26 June 2024 application, the 7 February 2025 rejection date (it gives 11 February), and the 2024 sommation chronology. It even denies the June 2024 order, which is a missing fact rather than an affirmative contradiction.
- 53 In early March 2026 the FCC acted on several SpaceX Services earth-station files. Wer… Fact 5 is missing: the answer never says the licensee stays bound by the space-station grant for the associated points of communication. The answer lists five section 1.62 grants rather than two, but this includes the two required ones (00812 and 00918) with no end date, so it is not contradicted.
- 57 Under the Communications Authority of Kenya's telecommunications market-structure rev… The answer never gives the 1 November 2025 date for when applications open, so facts 4, 5 and 6 are missing. It says applications follow gazettement and development of the licences instead. It also omits the market-structure page's separation of LRA from the international gateway licence (fact 9).

- 61 In October 2025 the FAA adopted the environmental impact statement for Falcon launche… The answer correctly says the ROD is not the license and that the EIS does not guarantee one. It never mentions the FAA safety, risk and indemnification requirements, or that further environmental review is needed if the operations fall outside the EIS scope. It also omits the lead and cooperating agency roles (Coast Guard), the preferred and no-action alternative points, and the note that the FAA ROD extract gives no launch number.
- 62 The FAA's commercial-space waiver notice, docket FAA-2026-8614, lists the National En… The answer correctly says NEPA has not been waived and the document is a proposed rule. It omits Notice No. 26-11 and RIN 2120-AM51, the list of CFR parts being amended, the Chapter 509 actions in detail, the 51 USC 50905(b)(2)(C) consultation, and the 450.47 NEPA exception. It also presents the August 31 comment date as real rather than a placeholder.
- 63 The Vandenberg Falcon decision raises the launch cadence to 100 a year. Is that 100 F… All core facts are correct. Missing are the required fact that the FAA ROD says completing the environmental review does not guarantee a license (12) and several context facts: the FAA ROD's combined increase, no SLC-4 modification, the new hangar, the two landing zones, safety and indemnification requirements, and license conditions.
- 64 The October 2025 Vandenberg record of decision studies a higher Falcon cadence. Does … The answer never says the measures bind SpaceX as a condition of a license (facts 8 and 9), and omits the 'all practicable means' statement (fact 6). It treats the document as an Air Force ROD with the FAA only a cooperating agency, which conflicts with fact 1's FAA ROD framing.
- 67 After the insurance policy on a licensed Falcon launch expires, does the United State… Fact 8 is only partly covered: the answer quotes 440.9(b)(4) but never mentions 440.17(f), so it is marked missing. Facts 3 (Public Law 118-159 and the 2024 edition framing) and 7 (a space flight participant is not a customer) are not stated explicitly.
- 68 If third-party claims from a licensed Falcon launch exceed the required insurance, do… Fact 5 is contradicted: the answer cites a secondary-source ~$3.4 billion inflation-adjusted figure, though it says the statute itself doesn't state one. Facts 7-14 (uninsured-exclusion payment, pre-payment conditions, reasonableness, compensation plan details) were not mentioned.
- 69 A space flight participant, or a third party, wants to sue in state court for injury … The answer does not address a state-court forum clause (fact 2) or note that the sentence names no separate crew-member category (fact 4). The core jurisdiction rule and the experimental permit point are correct.
- 70 A suborbital licensed flight is insured on the same clock as an orbital launch: cover… The answer never says that coverage does not attach when the policy is merely bound (fact 4), and it omits the rule on modifying or cancelling financial responsibility with 30 days' notice to the FAA (fact 9). All other facts are correct and no trap is asserted.
- 72 Is every property-damage claim by the United States on a licensed launch paid from th… Fact 3 is contradicted: the answer says the third-party MPL amount is capped at $500 million but omits the 'lesser of… maximum liability insurance available on the world market' limit. Facts 2, 7, 8 and 10 are missing: no mention of the license-

condition language, the 440.9(f) detail requirement, the 30-day insurance deadline, or the explicit contrast with the 60-day clock.

- 76 Did the FAA's finding on a higher Starship cadence at Boca Chica license 25 launches ... The answer dates the finding to May 6, 2025 where the checklist says April 2025 (fact 1). It also omits the June 2022 tiering, no EIS required, incorporation by reference, the static-fire caps, the no-action alternative, and the 15-day notification requirements (facts 2, 5, 6, 13, 14, 16-21).
- 77 Does the April 2025 finding on a higher Starship cadence let Boca Chica beach stay cl... The answer gets the core 'no' and the 500+300 hour limits right. It omits that the finding is not the license, the Cameron County/GLO MOA and public-safety-only basis, SpaceX's compliance with the summer holiday/weekend rule, and all the section 4(f) and agency-concurrence facts.
- 78 Did the later Boca Chica airspace study authorize Starship to land back at the pad at... Both core facts are right (no night Starship pad landing; closures not Gulf-only). It omits the three nighttime Gulf expended reentries, the 22 daytime reentries, the aircraft-per-hour and annual flight impact figures, the 72-hour notice timing, and the license-modification and tiering context.
- 83 Does a favorable FAA determination for the communications-satellite class clear every... Missing fact 6 (an FCC license is not an FAA payload determination), which the answer does not state explicitly, plus context facts 9-14 (who may request review, agency consultation, written advisement and denial, license application use, and change reporting). Core facts and the required fact 8 are correct, and neither trap is asserted.
- 85 Crew training is an allowed use of an experimental permit. Can the permittee charge a... The answer never says outright that training creates no exception to the ban, although it implies this by saying crew training is allowed but the ban still applies. It also omits the 19 September 2024 amendment (89 FR 76728).
- 95 If destroying the vehicle would put more people at risk than letting it fly, do the f... The answer covers the core facts (collective-risk limit, lost track not forcing abort, conditional abort on invalid data). It omits the other abort triggers, the 450.145/450.143 consequence thresholds, and the provisions for ending abort protection or substituting a 450.145 system. It also never states that an abort is not required merely because it is available.
- 100 Starlink Chile SpA ha pedido a la Subtel modificar dos concesiones distintas para ins... Contradicted: 24-SP157939 was dated 24 Jan 2025 in the Diario Oficial rather than a PDF signed 17 Jan 2025; 25-SP69681 gateway is said to have 10 domos rather than 20, with an unverified comuna; nota 5 is stated as 'independent of' elevation limits. Missing: the 24-SP157939 gateway list and domos, the 25-SP69681 Diario Oficial number and date, and the band/timeline/opposition context.
- 101 Starlink is licensed in several small British-linked jurisdictions through different ... The answer missed Cayman Amendment No. 1 (date and D2D MSS frequencies) and the Cayman first-under-framework point. It also omitted Guernsey's 15 June comment deadline and Ku band/Ofcom licence term, the Falklands 3 November 2025 VSAT resumption, and several context items. The Guernsey case number appears only inside a URL and is not stated.
- 103 CRAN refused Starlink's Namibian licence in March 2026 and then closed a reconsiderat... The answer gives gazette No. 8872 and the date but says it could not

verify General Notice No. 197, so fact 1 is missing. It also omits the 17 June petition, the Minister's role under section 46(2), and High Court review under section 32 (all context facts).

- 104 En México, Starlink Satellite Systems México, S. de R.L. de C.V. opera bajo tres títu… Missing the 2022 modification's registry date (10 Aug 2022) and inscription number 061647, which the answer says it could not verify; also missing several context facts (filing dates, exclusivity, MSS capacity). The 2024 USASAT-NGSO-3X mention is explicitly attributed to a later modification, not the 2022 documents, so no trap is asserted. The Reserva statement for 2022 cites the 2024 modification rather than the 2022 resolution, but the 5% substance matches.
- 110 In December 2024 Swarm Technologies (SpaceX's VHF subsidiary) filed to let its licens… The Sunnyvale row omits the withdrawn original application SES-LIC-20230728-01922 and lists only amendment 02720, so fact 20 is missing. The Sussex timing sentence is muddled, since 30 April is after 25 April, but the answer still identifies Sussex and mentions the 30 April publication date.
- 111 On 16 April 2026 SpaceX Services surrendered by letter five Ka/E-band gateway earth-s… The answer declined to list any surrendered licences, so all facts (the five call signs, file numbers, site IDs, terms, grant dates and STA details) are missing. It also incorrectly suggested no surrender appeared in the FCC notices, when the surrender is in Report SES-02855 (22 Apr 2026), which it did not check.
- 113 SpaceX Services' quad-band Gen1/Gen2 gateways in Roma, Harlingen, Hidalgo, Falfurrias… The answer omits Dallas's 42 GHz-only STA SES-STA-20260831-02458, even though the prompt asked for every 2026 STA. It also does not state that Roma, Harlingen and Hidalgo have no 42 GHz-only STAs, and it leaves out the context details on antenna counts and bands (facts 1 and 8).
- 115 Using the FCC Experimental Licensing System records as filed, build a table of SpaceX… The answer gives seq 150221 a blank call sign (should be WB9XCZ) and WA8XHK a start date of 08/28/2026 (should be 09/25/2026). It omits the ground forms 150224, 150226 and 151990 for 2026 and treats 2203/2201-EX-ST-2025 as Test Flight 12 forms. It also lacks the vehicle frequency lists and the 2056/2062 MHz uplinks.
- 122 Environmental groups sued the FAA in 2023 over the Starship/Super Heavy programmatic … The answer never mentions the court's rejection of the unlawful-delegation theory (fact 9). It also omits the 18 November 2025 Minute Order that prompted ECF 73 and gives only 'Nov. 18/19' for the filing date (fact 14), and it does not say that no notice of appeal appears on the docket (fact 22).
- 123 FCC 26-26 adopted an initial dataset of GSO reference links that NGSO systems such as… Missing the stated reason for removing the legacy links (no one for an NGSO operator to coordinate with). Also missing the SES 12.6 dB outlier rejection with ACM links at 0 dB, the kept 25-degree elevation criterion and no ESIM links, and the explicit para 69 delegation of authority.
- 126 On 22 July 2025 Ofcom published a joint application from Inmarsat Global Limited and … The answer never states the decision date (15 October 2025) or the zero consultation responses, and it does not cite footnote 9 of the decision. It also hedges on the Starlink licence number, saying only that a different Kuiper annex records 1239247 rather than committing it from the GX10 annex. The coordination partners are named correctly, but via the consultation document rather than the annex,

and the Eutelsat OneWeb/Network Access Associates explanation is inferred from the consultation, not from the decision.

- 134 Under the 6 October 2026 D2D authorization, SpaceX will provide supplemental coverage… The answer covers the core waivers, the Protection Zone coordination condition, the 9.10(t) obligation and the OOBE limit with its 5 MHz window. It omits the satellite-or-base-station control result, the 25.115/25.115(q) waiver, the accept-interference and terminate duty, the 47 earth stations count, the coordination trigger, the interference investigation duty and the non-transferability of the lease waiver.
- 138 The FCC's April 2026 NGSO-GSO sharing order replaced EPFD limits with performance cri… Fact 8 is missing because the answer gives the 0.1% criterion but omits that it is more protective than the 0.4% NGSO-NGSO figure. Several context facts (1, 6, 10, 11, 14-16, 20) are not stated. All core and the other required facts are correct and no trap is asserted.

Keenable router: Incomplete list

- 11 Starlink asked Ofcom for UK gateway authority in Ka band at two urban sites, and earl… All core and required facts are correct. Context facts 8-12, 19 and 21-23 are missing, and the Ka statement date is given as 16 July 2026 rather than 20 July 2026, which contradicts fact 13.
- 12 SpaceX Services received a special temporary authority for a quad-band gateway in Elo… The answer correctly says 01297 expired on 7 September 2026 and gives the call sign, antennas and term. It misses the unprotected non-interference basis (it hedges), Iridium's petition being denied as to the STA only, the no-determination-on-license point, the coordinates, and all the U.S. Table waivers. It also asserts a separate extension STA (02301), which conflicts with the reference not establishing any renewal.
- 14 For a licensed orbital launch, what does 14 CFR Part 440 actually require on insuranc… The answer covers the core and required facts accurately. It omits the context facts on permits (7), space flight participants and the 30 September 2025 sunset (13-15), and does not explicitly say that cover does not run until disposal or mission end (10), though its stated duration implies it.
- 19 ACMA considered interim W-band earth-station transmitters for Starlink at Melbourne, … The answer does not say Melbourne's proponent will deal directly with the radar operator. It only says ACMA proposed using subsection 10(10), not that it made 10(10) decisions for Perth and Sydney. It also hedges on the final non-renewable one-year term and does not state that first W-band licences were issued.
- 21 These four SpaceX file numbers are easy to conflate: the Gen2 call sign, the direct-t… The answer never says the Gen2 grant was 15,000 satellites against 29,988 requested, and never says DA-26-398 dismissed the Big LEO and L-band parts of the Gen2 requests or left the January 2 GHz grant intact. It also omits that acceptance of the data-center application waived neither milestones nor the surety bond.
- 28 A petitioner asked the FCC to hold a hearing on whether SpaceX could be an EchoStar-s… The answer never states that the Bureaus found SpaceX qualified (fact 3). It also omits the Trust qualification finding, the two-year trust term, and the expected 30 November 2027 closing (facts 5-7).
- 29 The 8 March 2024 E-band order, DA-24-222, is often described as giving Starlink E-ban… Missing context facts 6, 7 and 12 (non-harmful-interference conditions, stop-on-

notice duty, pending appeals) and required fact 9 (the beacon grant came in a later 20 November 2024 order). All core and other required facts are correct and no trap was asserted.

- 30 What did the D.C. Circuit do with the 29 November 2022 Gen2 grant, what was still pen… The answer does not mention that the 9 January 2026 grant stamp still lists petitions for reconsideration as pending (fact 3). It also omits that the Commission will keep watching interference, debris and astronomy for the larger proposal (fact 10).
- 35 For each of these Starlink authorizations, say whether the operator may claim protect… Missing: the UK non-interference duty toward fixed links and EESS (the answer only describes protecting existing links), and the Australian final no-protection and one-year term (the answer only cites the proposal and says it could not verify). Also missing are context details: the Canada ITU filing, UK sites and issue date, France's STEAM-1/1B-only scope, and Brazil's R$ 102,677 price.
- 42 On 29 June 2026 SpaceX filed written representations with ICASA on the draft amendmen… Missing or only partially covered: the Notice 3926/Gazette 54677 details, SpaceX's stated intent via a South African subsidiary, the draft not setting licence duration, the existing 30% regulation basis, the 12 December 2025 ministerial direction, and the Gazette 52530 inquiry findings. The core answers (no licence granted, 10 years is a request, 30% HDG equity application unresolved) are correct.
- 44 In 2018 the Commission dismissed SpaceX's request to operate in 51.4-52.4 GHz and def… The answer correctly says neither uplink is excluded and explains the 51.4-52.4 GHz dismissal. It never says the 2018 deferral of 50.4-51.4 GHz was pending Spectrum Frontiers (GN Docket 14-177), and it omits the FCC-18-161 citation, the public notice error, the 42.0-42.5 GHz dismissal, and the milestone and bond points.
- 51 Heeft de RDI in 2025 aan SpaceX Netherlands B.V. een concessie verleend voor heel Ned… The answer correctly says no nationwide concession was granted, and gives the BES registration reason, Starlink Caribbean LLC, the three islands and 15 years. It missed the 14 June 2024 order to stop by 21 June (it only says it couldn't verify a June order), the 7 February 2025 rejection date, and the 26 June 2024 application date; it also omitted the second order and the other context facts.
- 53 In early March 2026 the FCC acted on several SpaceX Services earth-station files. Wer… Fact 5 is missing: the answer never says the licensee stays bound by the space-station grant for the associated points of communication. The answer lists five section 1.62 grants rather than two, but this includes the two required ones (00812 and 00918) with no end date, so it is not contradicted.
- 55 New Zealand decided in 2026 how 27.5-28.35 GHz would be shared between mobile and fix… Fact 9 (news said new gateway licensing was 'expected' to open 8 June) is not stated as such; the answer gives the 8 June opening as fact. Fact 11 (not a Starlink licence) is not mentioned. Both are minor, and the core and required facts are correct.
- 61 In October 2025 the FAA adopted the environmental impact statement for Falcon launche… The answer correctly says the ROD is not the license and that the EIS does not guarantee one. It never mentions the FAA safety, risk and indemnification requirements, or that further environmental review is needed if the operations fall outside the EIS scope. It also omits the lead and cooperating agency roles (Coast Guard), the preferred and no-action alternative points, and the note that the FAA ROD extract gives no launch number.

- 62 The FAA's commercial-space waiver notice, docket FAA-2026-8614, lists the National En... The answer correctly says NEPA has not been waived and the document is a proposed rule. It omits Notice No. 26-11 and RIN 2120-AM51, the list of CFR parts being amended, the Chapter 509 actions in detail, the 51 USC 50905(b)(2)(C) consultation, and the 450.47 NEPA exception. It also presents the August 31 comment date as real rather than a placeholder.
- 63 The Vandenberg Falcon decision raises the launch cadence to 100 a year. Is that 100 F... All core facts are correct. Missing are the required fact that the FAA ROD says completing the environmental review does not guarantee a license (12) and several context facts: the FAA ROD's combined increase, no SLC-4 modification, the new hangar, the two landing zones, safety and indemnification requirements, and license conditions.
- 64 The October 2025 Vandenberg record of decision studies a higher Falcon cadence. Does ... The answer never says the measures bind SpaceX as a condition of a license (facts 8 and 9), and omits the 'all practicable means' statement (fact 6). It treats the document as an Air Force ROD with the FAA only a cooperating agency, which conflicts with fact 1's FAA ROD framing.
- 67 After the insurance policy on a licensed Falcon launch expires, does the United State... Missing: the 14 CFR 440.17(f) waiver sunset (fact 8, only 440.9(b)(4) mentioned), the space-flight-participant-not-a-customer point (7), the authority edition framing (3), and the note that no adjusted dollar figure is computed (14, though the answer did not compute one). No traps asserted.
- 70 A suborbital licensed flight is insured on the same clock as an orbital launch: cover... Fact 4 (coverage does not attach merely when the policy is bound) is not stated explicitly, though the answer says coverage attaches when the launch starts. All other facts are correct and no traps are asserted.
- 76 Did the FAA's finding on a higher Starship cadence at Boca Chica license 25 launches ... The answer gets the core points right: daytime-only pad landings, night landings offshore only, and the 25 launch and 50 landing cadence. It omits the explicit statement that this is not the modified license, the VOL 23-129 distinction, the no-action alternative, the static-fire caps and the notification requirements. It says the document was issued in May 2025 where the checklist says April, which the judge treated as a minor date slip.
- 77 Does the April 2025 finding on a higher Starship cadence let Boca Chica beach stay cl... The answer correctly says no and gives the 500-hour and 300-hour limits with no change. It omits that the finding is not the license, the Cameron County/GLO memorandum of agreement and public-safety condition, SpaceX's record on summer holidays and weekends, and all the section 4(f) and state-park facts (9-15).
- 78 Did the later Boca Chica airspace study authorize Starship to land back at the pad at... The core answers are right: no night landing at the pad and the closed airspace is not Gulf-only. It omits the 2022 programmatic tiering, the Gulf expended nighttime Starship reentries (it says only 'offshore'), the 22 daytime reentries, the commercial aircraft impact figures (200 an hour, 4,400 a year), the 72-hour closure determination, hazard area variability, and the unanalyzed resource categories.
- 83 Does a favorable FAA determination for the communications-satellite class clear every... The answer gets the core points right. It does not state that an FCC license is not an FAA payload determination (required fact 6), and it omits several context facts

(5, 9-14), including the US Government payload exception and the 413.17/413.21 procedures.

- 97 If the Space Bureau determines that Gen2 operations under the January 2026 EPFD waive… The answer never mentions paragraph 17 or its 'may revoke' wording (facts 5 and 6), and it does not identify the grant stamp versus paragraph 17 as the relevant sources (fact 1). It reports only the 'will revoke' sentence from the grant stamp without saying which sentence it uses.
- 100 Starlink Chile SpA ha pedido a la Subtel modificar dos concesiones distintas para ins… Contradicted: 24-SP157939 was dated 24 Jan 2025 in the Diario Oficial rather than a PDF signed 17 Jan 2025; 25-SP69681 gateway is said to have 10 domos rather than 20, with an unverified comuna; nota 5 is stated as 'independent of' elevation limits. Missing: the 24-SP157939 gateway list and domos, the 25-SP69681 Diario Oficial number and date, and the band/timeline/opposition context.
- 101 Starlink is licensed in several small British-linked jurisdictions through different … Missing: Cayman Amendment No. 1 (28 May 2026) and the D2D MSS frequencies it added, the Cayman 'first under the framework' point, Guernsey's Ku-band/Ofcom term and the 15 June comment deadline, Jersey's 15-year term, and the Falklands 3 Nov 2025 resumption of VSAT licensing. Context facts on the Sure objection, the TCI framework notice and Sure's claim were also omitted.
- 103 CRAN refused Starlink's Namibian licence in March 2026 and then closed a reconsiderat… The answer gives gazette No. 8872 and the date but says it could not verify General Notice No. 197, so fact 1 is missing. It also omits the 17 June petition, the Minister's role under section 46(2), and High Court review under section 32 (all context facts).
- 104 En México, Starlink Satellite Systems México, S. de R.L. de C.V. opera bajo tres títu… Missing the 2022 modification's registry date (10 Aug 2022) and inscription number 061647, which the answer says it could not verify; also missing several context facts (filing dates, exclusivity, MSS capacity). The 2024 USASAT-NGSO-3X mention is explicitly attributed to a later modification, not the 2022 documents, so no trap is asserted. The Reserva statement for 2022 cites the 2024 modification rather than the 2022 resolution, but the 5% substance matches.
- 108 SpaceX Services runs two dual-band gateways on rolling special temporary authority: H… The answer lists only six of the eight grants. It misses both Hillsboro grants from March and May (SES-STA-20260306-00718 and SES-STA-20260428-01175) and the Atlanta May grant (SES-STA-20260428-01170). It also does not state that nothing appears in the 7 October notices, and it omits the Starlink system and frequency details.
- 109 In spring 2026 SpaceX Services filed two rounds of modification applications for its … The answer covers only E230036 (round-one file number and term), E210127's round-two acceptance in SES-02850, and the 23 March filing date. It misses the other six call signs' terms and file numbers, the notices SES-02842, SES-02853 and SES-02852, the 15-year-term point, and the pending status of the round-two applications.
- 110 In December 2024 Swarm Technologies (SpaceX's VHF subsidiary) filed to let its licens… The Sunnyvale row omits the withdrawn original application SES-LIC-20230728-01922 and lists only amendment 02720, so fact 20 is missing. The Sussex timing sentence is muddled, since 30 April is after 25 April, but the answer still identifies Sussex and mentions the 30 April publication date.

- 111 On 16 April 2026 SpaceX Services surrendered by letter five Ka/E-band gateway earth-s… The answer declined to list any surrendered licences, so all facts (the five call signs, file numbers, site IDs, terms, grant dates and STA details) are missing. It also incorrectly suggested no surrender appeared in the FCC notices, when the surrender is in Report SES-02855 (22 Apr 2026), which it did not check.
- 113 SpaceX Services' quad-band Gen1/Gen2 gateways in Roma, Harlingen, Hidalgo, Falfurrias… The answer missed the 22 Sep 2026 re-grants (term 23 Sep to 21 Nov, SES-02899) for Roma, Harlingen, Hidalgo and Dallas, and said they were not found granted, which contradicts fact 9. It also omitted the Gen1/Gen2 antenna counts and frequency bands, the Falfurrias dual-band antennas, and the point that Roma, Harlingen and Hidalgo have no 42 GHz STAs. It tied the Iridium ruling only to Roma, though it said the paragraph is repeated across the notice.
- 122 Environmental groups sued the FAA in 2023 over the Starship/Super Heavy programmatic … The answer never mentions the court's rejection of the unlawful-delegation theory (fact 9). It also omits the 18 November 2025 Minute Order that prompted ECF 73 and gives only 'Nov. 18/19' for the filing date (fact 14), and it does not say that no notice of appeal appears on the docket (fact 22).
- 123 FCC 26-26 adopted an initial dataset of GSO reference links that NGSO systems such as… Missing the stated reason for removing the legacy links (no one for an NGSO operator to coordinate with). Also missing the SES 12.6 dB outlier rejection with ACM links at 0 dB, the kept 25-degree elevation criterion and no ESIM links, and the explicit para 69 delegation of authority.
- 125 The chair and ranking member of the House Science, Space, and Technology Committee wr… The answer gives the 25 Feb date but not what the February letter asked (suspend or narrow the NPRM), so fact 1 is missing. It also omits the context facts: the unanswered February letter, the section 310/301/302/303(r)/307/309 ties, and the 23 July release date.
- 126 On 22 July 2025 Ofcom published a joint application from Inmarsat Global Limited and … The answer never states the decision date (15 October 2025) or the zero consultation responses, and it does not cite footnote 9 of the decision. It also hedges on the Starlink licence number, saying only that a different Kuiper annex records 1239247 rather than committing it from the GX10 annex. The coordination partners are named correctly, but via the consultation document rather than the annex, and the Eutelsat OneWeb/Network Access Associates explanation is inferred from the consultation, not from the decision.
- 134 Under the 6 October 2026 D2D authorization, SpaceX will provide supplemental coverage… The answer covers the core waivers, the Protection Zone coordination condition, the 9.10(t) obligation and the OOBE limit with its 5 MHz window. It omits the satellite-or-base-station control result, the 25.115/25.115(q) waiver, the accept-interference and terminate duty, the 47 earth stations count, the coordination trigger, the interference investigation duty and the non-transferability of the lease waiver.
- 138 The FCC's April 2026 NGSO-GSO sharing order replaced EPFD limits with performance cri… Fact 8 is missing because the answer gives the 0.1% criterion but omits that it is more protective than the 0.4% NGSO-NGSO figure. Several context facts (1, 6, 10, 11, 14-16, 20) are not stated. All core and the other required facts are correct and no trap is asserted.

Keenable SELECT: Claim not in sources

- 15 FCC-26-47, adopted 22 July 2026, replaces Part 25 with Part 100. The day after the vo… The answer says the post-sunset citation means the archived Part 25 text on an FCC transition page. Fact 6 says it continues to mean the corresponding Part 100 rule, and the answer relegates that to an 'overlay', so it is contradicted. Facts 7 (requirements largely unchanged) and 8 (Part 100 subparts B/C/D) are not stated.
- 18 On the ACMA register, Starlink Australia holds area-wide FSS licences 11240792 (Bulla… The answer could not retrieve the register pages and committed to none of the checklist facts. The band limits (27.5-30 GHz), both effect and expiry dates, and which term has ended (11240791) are all missing.
- 45 El decreto de 9 de enero de 2025 otorga a Starlink Chile SpA una concesión de servici… The answer asserts a specific publication date of 25 February 2025 as the start of the term, which fact 6 says should not be invented. It also omits the reporting duty (facts 10 and 11), the 30 business-day opposition period (fact 14) and the 1/22/24 month deadlines (fact 15).
- 52 The December 2022 Gen2 grant required SpaceX to coordinate with earlier NGSO systems … Fact 8 is contradicted: the answer gives a numeric threshold (100 post-failure object years) from later DA orders, although the introductory paragraph does not state one. Facts 10-12 (collision mitigation reporting, NASA coordination, NSF/observatory coordination) are not mentioned. Fact 1 is only partly stated (the answer gives release date and file numbers but not the paragraph) and was graded correct. Fact 5 is correct only loosely, since the answer says 'including operators licensed in earlier Ku- and Ka-band rounds', which goes beyond the paragraph.
- 55 New Zealand decided in 2026 how 27.5-28.35 GHz would be shared between mobile and fix… The answer says existing-gateway applications opened on 7 April 2026, but the checklist says 2 April 2026 (fact 7), and the DATA states no open date. It also omits the pause on other licensing during the window (fact 6) and never says this is not a Starlink licence (fact 11).
- 73 Does the insurance on a launch license protect only the licensee? Does a customer's c… Fact 11 is contradicted: the answer lists space flight participants as a line in the 50914(a)(4) list, which the checklist says the printed list does not include. All core and required facts are correct, and neither trap is asserted.
- 98 DA-26-36 authorizes Gen2 W-band operations in 92.0-94.0, 94.1-95.0, 95.0-100.0, 102.0… All facts are stated, including the 10/20/25 degree elevation angles. The answer asserts that the order sets no elevation requirement, only recites SpaceX's proposal, which matches the trap and conflicts with the expected answer that the order requires these angles.
- 107 A Starlink tem três frentes abertas na Anatel sobre o Direito de Exploração de Satéli… The answer gives CP 29's DOU page as 62, while the checklist says 63, so fact 18 is contradicted. The DOU page in the DATA window also shows 62, so the answer is consistent with its source. The other facts are covered, though the Gen2 price of R$ 102.677 and MA 928/2024 are not mentioned.
- 116 On 28 September 2026 the Space Bureau granted SpaceX Services a batch of 60-day STAs … The answer treats the pending STAs for Phoenix, Atlanta, Dallas and Hillsboro as not in force, so it names Atlanta and Hillsboro as the two sites with no other STA. Facts 7, 9, 15, 19, 21 and 26 are contradicted, and the correct pair, Wills Point and Falfurrias, is not identified. Facts 10, 13, 16 and 27 (disambiguation notes) are missing.

Keenable router: Claim not in sources

- 45 El decreto de 9 de enero de 2025 otorga a Starlink Chile SpA una concesión de servici… The answer asserts a specific publication date of 25 February 2025 as the start of the term, which fact 6 says should not be invented. It also omits the reporting duty (facts 10 and 11), the 30 business-day opposition period (fact 14) and the 1/22/24 month deadlines (fact 15).
- 52 The December 2022 Gen2 grant required SpaceX to coordinate with earlier NGSO systems … Fact 8 is contradicted: the answer gives a numeric threshold (100 post-failure object years) from later DA orders, although the introductory paragraph does not state one. Facts 10-12 (collision mitigation reporting, NASA coordination, NSF/observatory coordination) are not mentioned. Fact 1 is only partly stated (the answer gives release date and file numbers but not the paragraph) and was graded correct. Fact 5 is correct only loosely, since the answer says 'including operators licensed in earlier Ku- and Ka-band rounds', which goes beyond the paragraph.
- 57 Under the Communications Authority of Kenya's telecommunications market-structure rev… The answer never gives the 1 November 2025 date and instead says applications open 'upon gazettement of the Revised Market Structure', which the shown sources do not support. It also omits that the date is not a stop-service order and does not mention the market-structure page's separate listing of LRA from the international gateway licence.
- 69 A space flight participant, or a third party, wants to sue in state court for injury … The answer says 50906(i) deems a permit a license and thereby extends 50914(g) to experimental permits, which contradicts fact 6; the DATA window does not support this. It never addresses the state-court forum clause (fact 2) or that crew members are not a separate category (fact 4).
- 98 DA-26-36 authorizes Gen2 W-band operations in 92.0-94.0, 94.1-95.0, 95.0-100.0, 102.0… All facts are stated, including the 10/20/25 degree elevation angles. The answer asserts that the order sets no elevation requirement, only recites SpaceX's proposal, which matches the trap and conflicts with the expected answer that the order requires these angles.
- 107 A Starlink tem três frentes abertas na Anatel sobre o Direito de Exploração de Satéli… The answer gives CP 29's DOU page as 62, while the checklist says 63, so fact 18 is contradicted. The DOU page in the DATA window also shows 62, so the answer is consistent with its source. The other facts are covered, though the Gen2 price of R$ 102.677 and MA 928/2024 are not mentioned.
- 116 On 28 September 2026 the Space Bureau granted SpaceX Services a batch of 60-day STAs … The answer treats the pending STAs for Phoenix, Atlanta, Dallas and Hillsboro as not in force, so it names Atlanta and Hillsboro as the two sites with no other STA. Facts 7, 9, 15, 19, 21 and 26 are contradicted, and the correct pair, Wills Point and Falfurrias, is not identified. Facts 10, 13, 16 and 27 (disambiguation notes) are missing.

Keenable search: Claim not in sources

- 26 L'Arcep a-t-elle autorisé Starlink à utiliser en France le réseau UIT USASAT-NGSO-3X?… The answer says the 2022 decision covered 10.95–12.70 GHz, which contradicts fact 6 (10.70–12.75 GHz); the DATA window does not support that figure. The 54.5 dBW maximum EIRP for ESIM is not stated (fact 13 missing).

- 57 Under the Communications Authority of Kenya's telecommunications market-structure rev… The answer never gives the 1 November 2025 date and instead says applications open 'upon gazettement of the Revised Market Structure', which the shown sources do not support. It also omits that the date is not a stop-service order and does not mention the market-structure page's separate listing of LRA from the international gateway licence.
- 69 A space flight participant, or a third party, wants to sue in state court for injury … The answer says 50906(i) deems a permit a license and thereby extends 50914(g) to experimental permits, which contradicts fact 6; the DATA window does not support this. It never addresses the state-court forum clause (fact 2) or that crew members are not a separate category (fact 4).
- 112 Build a status table, as of 9 October 2026, of SpaceX's space-station filings that th… Row 1 is given an unsupported call sign S00798, where the notice shows none. Row 2 is called granted by DA 26-488 / SAT-02000, contradicting the on-notice-only status in Report SAT-01988 of 3 Apr 2026. Row 4's upper frequency of 275 GHz conflicts with the 122.25-164.0 GHz limit. The answer also omits the row 1 frequency bands and waivers and several context facts.
- 138 The FCC's April 2026 NGSO-GSO sharing order replaced EPFD limits with performance cri… Fact 13 is contradicted: the answer treats the grant's 4° as a different metric and calls it about a 2° avoidance angle, narrower than the rule, when it is stricter than the rule's 3°. That 2° equivalence is the answer's own inference and is not in the sources. Context facts 1, 6, 10, 11, 14, 15, 16 and 20 are not stated.
- 139 The FCC adopted its Satellite Spectrum Abundance order on 30 September 2026 (released… The answer denies that the order says 525 MHz and says the Sept. 9 draft rather than the order is the source, and it claims the released order reversed the NGSO-downlink interference footing (contradicting facts 1, 2, 5). It also states a 30-day effective date (contradicting the 60-day rule) and omits the 100.212/100.275 exceptions.

Keenable SELECT: Used the wrong source

- 50 La décision Arcep n° 2022-1102 du 25 mai 2022 autorisait-elle déjà les stations terri… The answer cites decision 2024-2687 (Dec 2024, STEAM-1B) instead of 2023-0680 of 28 March 2023 with STEAM-1, so facts 2, 3, 6 and 8 are contradicted and trap 2 (STEAM-1B) is asserted. The 54.5 dBW PIRE and the non-authorization of ESIM in 2022 are correct; non-interference and consultation dates are missing.
- 112 Build a status table, as of 9 October 2026, of SpaceX's space-station filings that th… Row 2 is stated as granted (SAT-02000, DA 26-488, 15 May 2026), which contradicts the checklist's on-notice status. The answer also omits the SAT-01988 notice of 3 Apr 2026. Row 1 altitudes, bands and waivers, the pleading cycle, the earlier STA, the filing dates and the EchoStar condition are missing. The answer gives call sign S00798 for row 1, where the checklist says none, but the DA 26-113 footnote in the data supports it.
- 130 KDDI株式会社は2024年12月、Starlink衛星を使う衛星ダイレクト通信用無線局の免許を総務省から受けました。関東総合通信局の報道資料の日付、免許人、免許した無線… The answer gives the Kanto press release date as 12月26日, taken from a blog repost's date, when it is 12月25日 (fact 1). It therefore explains the 12/25 confusion wrongly, saying 12/25 was KDDI's announcement date and not the press release date

(fact 7), though it still correctly calls the claim inaccurate. Facts 10, 16 and 17 are missing.

Keenable router: Tool error / timeout

- 18 On the ACMA register, Starlink Australia holds area-wide FSS licences 11240792 (Bulla… The answer declined to provide any of the requested data, so all facts are missing: the 27.5-30 GHz band, both licences' effect and expiry dates, and the conclusion that 11240791 has ended. It did not assert either trap, and its statements about what it could not retrieve are consistent with the sources.
- 105 Between 2022 and 2024 Ofcom granted, then saw surrendered, then varied Starlink's UK … No run: one Keenable arm failed on this prompt, and the router replay needs a finished answer from both arms before Jev picks one. Counted as not correct.
- 115 Using the FCC Experimental Licensing System records as filed, build a table of SpaceX… No run: one Keenable arm failed on this prompt, and the router replay needs a finished answer from both arms before Jev picks one. Counted as not correct.

Keenable SELECT: Outdated information

- 11 Starlink asked Ofcom for UK gateway authority in Ka band at two urban sites, and earl… The answer treated the Ka application as still at consultation stage, citing only the March 2026 consultation, and missed the July 2026 statement deciding to grant two licences subject to the fee. It gave the consultation-stage Ka frequencies rather than the granted 27.5-28.0525, 28.4445-29.0605 and 29.5-30 GHz ranges. It never says the fee must be paid before the licences take effect. It also gave no E-band direction, missing space-to-Earth 71-76 GHz and Earth-to-space 81-86 GHz.
- 58 The Nigerian Communications Commission register lists SpaceX against 6,000 satellites… The answer reports the row as 6 years ending 7 November 2026 with 893 satellites, contradicting the checklist's 7 years, 31 December 2028 end date, and 3,594 launched satellites (facts 2, 6, 7, 10, 11). It also misses the review/extension and the day/month/year point; it does not list 4,408/3,594 as the three-figure contrast correctly. The cited page appears to be an older version of the register.

Keenable router: Used the wrong source

- 50 La décision Arcep n° 2022-1102 du 25 mai 2022 autorisait-elle déjà les stations terri… The answer cites decision 2024-2687 (Dec 2024, STEAM-1B) instead of 2023-0680 of 28 March 2023 with STEAM-1, so facts 2, 3, 6 and 8 are contradicted and trap 2 (STEAM-1B) is asserted. The 54.5 dBW PIRE and the non-authorization of ESIM in 2022 are correct; non-interference and consultation dates are missing.
- 112 Build a status table, as of 9 October 2026, of SpaceX's space-station filings that th… Row 2 is stated as granted (SAT-02000, DA 26-488, 15 May 2026), which contradicts the checklist's on-notice status. The answer also omits the SAT-01988 notice of 3 Apr 2026. Row 1 altitudes, bands and waivers, the pleading cycle, the earlier STA, the filing dates and the EchoStar condition are missing. The answer gives call sign S00798 for row 1, where the checklist says none, but the DA 26-113 footnote in the data supports it.

Keenable search: Tool error / timeout

- 18 On the ACMA register, Starlink Australia holds area-wide FSS licences 11240792 (Bulla… The answer declined to provide any of the requested data, so all facts are missing: the 27.5-30 GHz band, both licences' effect and expiry dates, and the conclusion that 11240791 has ended. It did not assert either trap, and its statements about what it could not retrieve are consistent with the sources.
- 115 Using the FCC Experimental Licensing System records as filed, build a table of SpaceX… The run failed with a timeout error and no answer. Graded wrong by the harness rule, not by the judge model.

Keenable SELECT: Tool error / timeout

- 105 Between 2022 and 2024 Ofcom granted, then saw surrendered, then varied Starlink's UK … The run failed with a timeout error and no answer. Graded wrong by the harness rule, not by the judge model.

Keenable search: Outdated information

- 21 These four SpaceX file numbers are easy to conflate: the Gen2 call sign, the direct-t… The answer relied on the 2022 and 2024 Gen2 orders, so it missed DA-26-36 and its 15,000-satellite grant (it said 7,500). It also missed the DA-26-398 dismissals and asserted that none of the four was dismissed. It also omitted that the data-center acceptance did not waive milestones or the surety bond, and that the Eloy STA is not a license and has expired. The D2C disposition of DA 26-1078 is supported by the data but is not on the checklist.

WHERE A RIVAL WAS RIGHT AND KEENABLE WAS NOT

Exa, Parallel, or Grok native got these right. Keenable search, SELECT, and the router all missed.

Prompt	Right
12 Is the Eloy quad-band gateway still running under its July STA?	Exa
18 Are both Starlink Australia area licences still in force?	Exa, Grok native
19 Did ACMA license W-band earth stations in Melbourne, Perth, and Sydney?	Exa, Parallel, Grok native
35 Are these six Starlink authorizations permanent rights to interference protection?	Exa, Grok native
42 Did the June 2026 filing grant Starlink a South African licence?	Exa, Grok native
44 Does the January 2026 grant still exclude both of those V-band uplinks?	Exa, Parallel, Grok native
45 Does 27.5-28.35 GHz let Starlink put user terminals inside a Chilean city?	Exa, Parallel, Grok native
51 Did the RDI grant SpaceX Netherlands a concession for the whole of the Netherlands?	Exa, Grok native
53 Were the March 2026 earth-station actions ordinary licenses still in force in October?	Exa, Grok native
55 Do satellite gateways share 27.5-28.35 GHz inside New Zealand cities with mobile?	Exa
57 May a foreign satellite operator keep serving Kenya with no landing rights?	Exa, Parallel
61 Did the October 2025 Vandenberg record issue the license?	Exa, Parallel, Grok native
62 Has the FAA notice already waived NEPA for a Falcon license?	Parallel, Grok native

Prompt	Right
64 Does the Vandenberg record find no environmental harm?	Parallel, Grok native
76 Did the Boca Chica finding license 25 launches a year?	Parallel
83 Does one payload-class finding clear every later satellite?	Parallel, Grok native
104 ¿Qué ampara cada uno de los tres títulos del IFT de Starlink México?	Exa, Parallel
105 Which UK gateway sites did Ofcom grant, see surrendered, then vary, with which licence numbers?	Parallel
122 How did the 2023 Starship NEPA lawsuit end, by which orders and judge?	Parallel
123 How many GSO reference links were adopted, and what did the September 2026 notice change?	Exa, Parallel, Grok native
126 What does the GX10 application annex say about Starlink, and what did Ofcom decide?	Exa, Parallel, Grok native
138 What GSO arc avoidance angle does FCC 26-26 set, and how does SpaceX's waiver condition differ?	Parallel

Summary

The judge's most common reason for a Keenable miss is incomplete list, on Keenable search, 48 times. This run does not show Keenable ahead overall. To ask for a place inside Grok or Cursor, search, SELECT, and the router would each need more correct answers than Exa, Parallel, and Grok native.
